 for Archibald Constable and Co. Edinburgh; Long-  
 man, Hurst, Rees, Orme, and Brown, London. Of  
 whom may be had, by the same author, 1. The Garden-  
 er's Nursery, or Monthly Directory of Operations in  
 every branch of Horticulture. 2do. Third edition. 14s.  
 boards. 2. The Villa Garden Directory; or Monthly  
 Index of work to be done in Town and Villa Gardens,  
 Shrubberies, and Parterres; with Hints on the Treat-  
 ment of Shrubs and Flowers usually kept in the Green-  
 house, the Lobby, and the Drawing-Room. Third Edition.  
 Footscap 8vo. 7s. 6d. boards.

*Acid's Geometry.*  
 In 8vo. 2d Edition, corrected and improved, 10s. 6d. bds.

**THE ELEMENTS OF PLANE GEOMETRY,**  
 containing the first six Books of Euclid, from  
 the Text of Dr. Simpson, Esq., late Professor of Mathe-  
 matics in the University of Glasgow, with Notes, Critical  
 and Explanatory. To which are added, Book VII. in-  
 cluding several important Propositions which are not in  
 Euclid; with the Quadrature of the Circle, the  
 theory of Hypotheses, the Maxima and Minima of Geo-  
 metrical Quantities, &c. and Book VIII. consisting of  
 Practical Geometry; also Book IX. of Planes and their  
 Intersections; and Book X. of the Geometry of Solids.  
 By THOMAS KEITH. Printed for Longman, Hurst,  
 Rees, Orme, and Brown, London. Latest published, by  
 the same author, 1. A New Treatise on the Use of the  
 Globes; the 3d edition, in 12mo. with copper-plates, price  
 6s. boards. 2. An Introduction to the Theory and Prac-  
 tice of Plane and Spherical Trigonometry, &c. A new  
 Edition. In 1 Vol. 8vo. price 12s. boards.

**THE EDINBURGH REVIEW; or Critical  
 Journal, No. LXV. Price 6s. Contents.**—Iran-  
 shah, a Romance, by the author of Waverley; Finance;  
 Seybert's Statistical Account of the United States of  
 America; Greenough's Principles of Geology; the Poor  
 Laws; Abuse of Charities; Account on the Adulteration  
 of Food; Barry Cornwall's Poems; Taxation and the  
 Corn Laws; the Recent Harms; Demosithenes. Printed  
 for Archibald Constable and Co. Edinburgh; and  
 Longman, Hurst, Rees, Orme, and Brown, London. Of  
 whom may be had all the preceding Numbers.

Newly printed, in 8vo. price 6s. 6d. boards.  
**VALLI, the LIBERTINE'S SON; a Poem,**  
 in 4 Parts. By JAMES KENNEY.

"I have shown a being finely organized, under in-  
 fluences the most malignant. I have followed up a  
 chain of misery in that cultivated state of society, which  
 so involves our sensibilities in the complexity of our moral  
 relations, at the same time that it so highly renders  
 them—if the enjoyment of good be exquisite, terrible  
 is the action of evil." *Extract from the Preface.*

Printed for Longman, Hurst, Rees, Orme, and Brown,  
 London.

12mo. in boards, price 2s.

**RETROSPECTION; a Rural Poem.** Incribed  
 by permission, to the Right Hon. Lord Bagen. By  
 THOMAS WHITEBY, author of the Priory of Burken-  
 head. Published by John Souter, 73, St. Paul's Church  
 Yard; and Hatched and Son, 10, Piccadilly.

In 1 vol. 12mo. price 7s. boards.  
**TERENCE'S ANDRINI; a Comedy, in five  
 Acts; and Suetonius's Life of Terence, translated  
 into English Prose, with numerous Critical and Explanatory  
 Notes.** By W. R. GOODLUCK, Jan. Printed for  
 Longman, Hurst, Rees, Orme, and Brown, Paternoster  
 Row.

In 2 vols. 12mo. with plates, price 10s. 6d.  
**LES JEUNES FEMMES, Par J. N. BOU-  
 ILLY, Auteur des Contes et Conseils à ma Fille.**  
*Les dévotions point ses Conseils. Le bonhomme sans affecté.*  
 Printed for John Warren, 10, Old Broad Street.

In 8vo. illustrated by Plates, price 12s. boards.  
**AN ACCOUNT OF THE various MODES OF  
 SHOEING HORSES,** employed by different Na-  
 tions. More particularly a Comparison between the  
 English and French methods. With observations on  
 the Diseases of the Feet, connected with Shoeing. By  
 JOSEPH GOODWIN, Esq. Veterinary Surgeon to his  
 Majesty, and Member of the Royal College of Surgeons.  
 Printed for Longman, Hurst, Rees, Orme, and Brown,  
 Paternoster Row; and J. Porter, Pall-mall.

Price, price 7s. boards.  
**A VOYAGE TO INDIA.** By the Rev. JAMES  
 CARDINA, A.M. Author of A Description of  
 Ceylon, and minister of St. Paul's Chapel, Aberdeen.  
 Printed for A. Brown and Co. Aberdeen; and  
 Longman, Hurst, Rees, Orme, and Brown, London.  
 Of whom may be had, by the same author, A Sermon,  
 preached at St. Paul's Chapel, Aberdeen, for the benefit  
 of the Shipwrecked Seamen's Fund No. 50, Seaved,  
 price 1s.

On the 10th of March was published,  
**STEPHEN'S GREEK THESAURUS, No. IX.**  
 in which the Subscribers will find the plan of  
 Editing so arranged, as to insure a more speedy com-  
 pletion of the work. An Advertisement is prefixed,  
 relative to its future progress, &c. The price of each  
 Number is 1s. 5s. large paper 2l. 10s. 6d. which will  
 shortly be increased to 1l. 2s. and 2l. 10s. The Copies  
 are strictly limited to the number of Subscribers. A  
 few copies belonging to deceased subscribers may be  
 had on application to Mr. A. J. Valpy, Turbot's Court.

*Mure's Greek Grammar improved.*  
 In 8vo. price 6s. 6d. boards.

**ELEMENTA LINGUE GRÆCÆ; novis,  
 periorum, regulis Tradita; brevitate sua memo-  
 riæ facilibus.** Studio JACOBI MOER, L.D. Partem  
 posteriorum, in quo adjectis G. NEILSON, A.T.D. &c.  
 Acc. Heb. et Græc. Prof. Printed for G. and W. B. Whit-  
 taker, 12, Ave. Marie-lane, London; and Stirling and  
 Blade, Edinburgh. Of whom may be had, just pub-  
 lished, Proseida Græca, sive Metrorum Græcorum Ex-  
 positio; necnon Dissertatio Anglice scripta, de usu di-  
 gamma in Homer carminibus; gineumque regulis  
 Hexametrorum, proculpius.—Studio Georgii Dunbar,  
 S. K. S. F. Third Edition, 8vo. price 6s. boards.

In 8vo. second edition, price 6s.

**ILLUSTRATIONS ON THE POWER OF EM-  
 TIC TARTAR, in the Cure of Fever, Inflammation,  
 and Asthma, and in preventing Consumption and Ap-  
 oplexy.** By WILLIAM BALFOUR, M.D. Printed for  
 Peter Hill and Co. Edinburgh; Longman and Co. London;  
 and Hedges and McArthur, Dublin.

**A GEOLOGICAL PRIMER, in Verse, with a  
 Poetical Geography, or Feasting and Fighting,  
 and sundry right pleasant Poems: to which is added, a  
 Critical Dissertation on King Coll's Lever, addressed to  
 the Professors and Students at the University of Oxford.**  
 In 8vo. price 4d. Printed for Longman, Hurst, Rees,  
 Orme, and Brown, London.

**A SKETCH OF THE ECONOMY OF MAN.**  
 By WHITLOCK NICHOLL, M.D., M.R.S. A.  
 F.L.S. &c. &c. &c. 8vo. price 10s. London: Printed for  
 Longman, Hurst, Rees, Orme, and Brown, Paternoster  
 Row.

London: Printed for the Proprietors, by W. POPE,  
 65, Chancery Lane: Published every Saturday,  
 by W. A. SCRIPPS, at the Literary Gazette Office, 302,  
 (Exeter Change Strand, where Communications, &c. post  
 paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 168.

SATURDAY, APRIL 8, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Memoirs of the Court of Westphalia under Jerome Buonaparte; with Anecdotes of his Favourites, Ministers, &c. London. 1820. Bvo. pp. 271.*

This is a translation of a flippant and amusing French work, which gives an account of the six years' reign of Mr. Jerome Buonaparte in Westphalia. Were the time not so long, and were there not bloody episodes in it of individual wrong and general suffering, we could fancy the whole a farce, wherein the action was bad and the actors infamous. Jerome having borrowed something more than 80,000*l.* at Paris, set out for his kingship, and in December 1807, arrived at the capital, Cassel. Our author thus describes some of the circumstances...

Some individuals of the household went as before, to Cassel; amongst whom was Laf., attendant of the civil list, and Meyr., grand marshal of the palace, and subsequently count Wellingrode. Laf... belonged to a mercantile family of Marseilles, and might be fairly considered as one of the most negative and inefficient characters in the kingdom. Bezoug having once shown him an elaborate essay on the political and statistical situation of the kingdom, he examined it with a vacant stare, and on some one present calling his attention to a notice of the establishments for public instruction, he asked, doubtless out of mere distraction, "Well, what is all that about?"

Meyr... had been a cabin-boy on board a Marseilles coasting vessel; nor is it known how he became patronized by the Bonaparte family. He had certainly accompanied Jerome during his naval exploits, and obtained his confidence.

The king and queen reached Napoleonsville on the 20th of December: this place being about half a mile from the capital, they did not make their grand entry until next day. Immediately after the event, a royal decree nominated Simeon to the ministry of justice and interior; Bezoug to the financial department; Jolivet to the treasury; General L... to the war department; a briefless lawyer of Paris, who had come to take his chance in Westphalia, was made director general of the police, in a country of which he did not understand the language; a person named M... was appointed secretary of state *pro tempore*, in the absence of M. Muller, who had been already nominated. M... was about the same age as Jerome,

and belonged to a family in easy circumstances at Paris. His youth had been passed in very dissipated society, and there was scarcely any office calculated to minister to the pleasures of Jerome, that he had not the credit of performing since their intimacy commenced. Such was the grave personage who signed the first organic laws of an austere and religious people!

Amongst the other individuals who accompanied the king, were Lee... afterwards Count de Furst... and secretary of state; Bouch... prefect of the palace; Mor... and Gir... two *ad-de-camps*. Lee... originally from Martinique, possessed no other talent except that of being a good courtier; he was very intimate with his master, whose confidence he contrived to gain, as well as the place of first chamberlain. Bouch... had sold toothpicks and suspenders in the coffee houses of Hamleburgh; his family had been formerly acquainted with that of the Emperor, in Corsica: he was by no means devoid of good nature, though in other respects, full of vanity and ostentation.

There was a crowd of needy adventurers in Westphalia at this period, attracted by the hope of making fortunes; they came from all parts of France, as to another land of promise. Cassel was encumbered with these sort of people, and it was not without considerable uneasiness that the Germans viewed this flock of expectants, like so many hawks, hovering over their prey. Such were the circumstances under which Mr. D... found his way to Cassel: we shall have to present this adventurer to the reader's notice under the successive titles of clerk in the war office, commissary, inspector of reviews, chief of division, counsellor of state, intendant of the treasury, &c. &c. Some persons, then at Cassel, had formerly known D... at Paris, in the humble employment of a writer in the office for lighting the streets. Having subsequently become a contractor, he failed of success, and being dunned by his creditors, he came to hide himself in the army of Germany. Certain persons, whom nothing escapes, well remember how suddenly he became a great personage, and the worn-out olive coloured surcoat which he wore on his arrival, the sole and only coat he then possessed. Such was the delirium of this ambitious character, whom we shall soon see performing one of the most important parts in these memoirs.

A little farther on we are told...

Cassel now presented a singular spectacle: foreigners were introduced in the midst of Germans; a French colony of both sexes, every age and condition, many of the individuals composing it, crowding in from Paris,

amongst the phlegmatic Hessians, bringing with them their inconstancy, vices, and follies, was not a scene by any means unworthy the pencil of an acute observer.

The capital had already become better lighted than formerly, the internal police was also improved; restaurants, coffee-houses, plays, and concerts, not to mention other objects of luxury, were substituted for the dull monotony of the old system. The worthy Germans thought all this very fine, but they were astonished at seeing gambling-houses and other receptacles, hitherto unheard of, at the residence of their sovereign. Habit is, however, a second nature; the young women who had only felt an interest in their domestic concerns, and the cares of house-keeping, now thought of the Theatre, and seemed anxious to feast their eyes with the lascivious dances of the French ballet.

The persons attached to the court had not, however, as yet publicly manifested the excess of their turpitude; the hypocrisy of a number of corrupt courtiers, in the midst of a laborious and sober people, was an involuntary homage which vice rendered to virtue. They plainly saw that this was not their proper ground; and if there were any orgies with the theatrical geutry, or intrigues with the nymphs of court, they contrived at least to save appearances.

Jerome himself seemed almost a saint; those in his confidence could no longer recognize the same person, with the exception of a few trifling errors.

With such companions, counsellors, partizans, and followers, it is not surprising that this short reign was one of immeasurable folly and vice. While Napoleon expressed every stiver from Westphalia, for his ambitious purposes; poor Jerome re-squeezed the leech for means to provide his pleasures, support his actors, gratify his prostitutes, and pension their relatives and husbands. At the end of the first quarter, three quarters revenue was anticipated; Jews raised loans, swindlers levied contributions, mount-banks burlesqued official duties, and harlots revelled on the accumulated spoils. Minister succeeded minister in every department so quickly, that though his Majesty's rule was exceedingly brief, he made as many state-dignities, in his time, as monarchs of the longest reign. Among these, however, figured Bulow, afterwards finance minister of Prussia; Simeon, now the minister of the interior, in France; and

Beugnot, also better known since that period : of the latter the following is related :—

A crowd of applicants and greedily expectant, from all quarters, besieged the different public offices; Frenchmen and Germans were seen soliciting on every side. Beugnot was greatly amused by the piteous and contrite air of all those ill-fated candidates who were desirous of approaching him, with the same anxiety that a convalescent seeks the mild influence of the sun's rays in spring.

One of the most characteristic traits amongst the Germans is, that the superior is proud, haughty, disdainful, and sometimes unkind towards his inferior, whilst the latter is humble even to meanness. How ridiculous was it not to see the unfortunate barons of Germany crouch to the earth before the little advocate of Bar-sur-Aube!

What affronts were they not obliged to put up with, merely to reach the anti-chamber! and how many bows did they not make on arriving there! One of these poor devils, having got over all the difficulties of entry, was, at length, fortunate enough to see the minister, who was standing with his back to the fire—His excellency sees and speaks to him; there is no longer any doubt of his fortune being made. 'Do you understand latin, Baron?' asked Beugnot. 'Yes, your excellency,' replied the German. 'Oh! you know latin, do you! tell me then how to say, I put on my small-clothes, in latin?'—The baron had studied at Göttingen, Jena, and Tübingen; he had read Huncer, Virgil, and Cicero; yet he hesitates! what a dilemma! 'Ah! Baron,' cried the minister, 'I plainly see that you do not understand latin!' Upon this the surrounding sycophants burst out into a loud laugh; the brutal salley was a charming witicism; because whatever the 'Dog in office' says, must be a good thing, although it were absolute nonsense.

We will not unravel the thread of the story, which places in detail before us, the sovereignty of Prince Jerome. A few characteristic touches will lead our readers, according to their tastes, either to think they have enough, or to refer to the original picture. About 1809, while the plundering system was in full force, we learn that—

In the midst of these infamous proceedings, feasts and rejoicings succeeded each other without interruption. Nevertheless, Jerome became royally wearied; so true it is, that the intoxication of vice is not of long continuance, and that its illusions soon give place to satiety. It was doubtless with the intention of varying this monotonous scene that the troops were assembled in a pleasure camp near Cassel. Jerome directed the manoeuvres, while his generals made the most laborious exertions to execute them. The ladies of the court and city came in their carriages to the camp; they breakfasted, dined, gambolled under the tents; and witnessed the evolution: it was really charming!...Bernardotte and the Prince

Royal of Wurtemberg were accidentally at Cassel. The first was going to place himself by the side of the King of Sweden; the other travelled, having nothing better to do.

It is said that the latter was not insensible to the charms of Madame L... but he was surprised to find that Jerome had a prior claim: Jerome in his turn, discovered a rival in a young and handsome clerk of the war office, while the clerk's deputy was a life guardsmen. This affair made some noise, and was spoken of in the scandalous circles of Cassel; people only whispered it about at first, and the police was on the alert for a whole fortnight to trace the authors.

The Prince of Wurtemberg intended to make some handsome presents, but this ended in smoke; the King of Westphalia had promised a jewel box, and thought no more of it. The clerk and guardsmen were obliged to relinquish their pursuit rather suddenly. Some time afterwards Jerome became reconciled, paid the debts of the lady, and gave her husband I know not what scif, with the title of Count. I do not recollect what arms this illustrious nobleman adopted, but certainly they were those most appropriate to his domestic history.

His wife belonged to a good Italian family, and was not without some attractions. With respect to propriety and conduct, she had just enough to prevent her from becoming a street walker.

Accounts of affairs more gross and indecent than this, are to be found in the volume; but we are not fond of extracting puriency. Minor examples shall suffice for us.

The governor of the pages also took on himself the charge of amorous purveyor, for it seemed to be the easiest road to honours and dignities. He had succeeded in rousing the slumbering passions of Jerome by procuring some new candidates for the smiles of royalty. This act of kindness did not go unrewarded: the influence of Dab... evidently declined. It is true that his complaisance and the nature of his services, scarcely compensated for his rudeness and ill breeding. He had, during a field-day at the pleasure camp, carried this habitual disposition so far as to tell his majesty to go to the devil! The sovereign pretended not to hear him, but some of those officious friends who abound in courts, did not fail to repeat this insult, or omit seasoning it with the acrid sauce of a courier. Jerome was, therefore, obliged to banish him; but Dab... anticipated this event by tendering his resignation.

The king's favourite is assassinated:

The pleasures of the court were not however interrupted by this dismal episode. Amongst the ladies of Cassel was a Madame Coll... whose occupations were various. Although she was procuress to the nobles, lent money on pledges to gamblers, a dealer in millinery, toys, &c. she contrived, notwithstanding, to keep up a communication with the court, and sold shawls on credit to the ladies of the bed-chamber.

One of these shameless women, who are

to be found in most continental cities, wished to dispose of her daughter, a young girl of fifteen. Jerome had seen, and admired her.

The mother, as may be imagined, opposed herself with *ifs* and *buts* of every description: she must have a pension for herself, her daughter, bribes for her relations and friends; a dowry, a husband, and the lord knows what besides. The most able negotiators about the court had failed; all the Scapins were in despair; no one but the Count de Hoc... was capable of conducting this difficult affair. The glory of success was his alone. It was stipulated by the

minister of war, that a husband should be provided for the lady, a place for the husband, and, in addition to this, a marriage portion, also a sum of money for the mother and daughter. But the most arduous task yet remained unaccomplished, this was to find a husband who would willingly conduct the bride from the altar to the royal chamber, and yield up his right of priority. Such a one was to be found, doubt it not, gentle reader. Madame Coll..., whom we may justly call Mme. la Ressource, found one d'Esc... who was employed in the post-office, and who willingly devoted himself to promote the pleasures of the king. The victim, ornamented with flowers, was silently conducted to the sanctuary, and the convenient husband, having signed his dishonour, returned whence he came. The chamberlain Münchenhausen, having thought proper to make remarks on this little adventure, found, one evening on his return home, a soldier with an order to conduct him to a regiment as a conscript. The chief of the police was the inventor of this piece of wagger; it was thought an excellent joke at court, and excited infinite laughter.

*Eheu jam satis!* But to show that the infamy in politics was equal to the infamy in amours, we select the relation of an intrigue to degrade Bulow from the Ministry of Finance.

The police was ordered, by means worthy of its calling, to seize on the pretended important papers which were to unveil the conduct of M. de Bulow, and which were said to be placed in his study.

Bere... gave the charge of executing this commission to a Frenchman, who was commissary general of the police at Cassel. This man transferred the business to one of his assistants, and gave him verbal instructions. Nothing better was imagined than to suborn the valet de chambre of M. de Bulow, in order to gain access to the cabinet of the minister; but this man, instead of betraying his master for a few pieces of gold, informed him of the plot. M. de Bulow had thus a fair opportunity of entrapping the police agents in their own snare, and he did not fail to avail himself of the occasion.

The valet seemed to enter into the views of the suborner, and received the bribe offered to him. Arrangements are accordingly made, and on the appointed day, the agent of the police arrives at the hour specified, and, in order to prevent being surprised, is shut up in the minister's study.

Already he seizes on letters, boxes, and portfolios, when M. de Bulow, who is concealed in an interior cabinet, appears suddenly, and cries: "Stop thief!" In vain he is told that it is the agent of police, this only makes M. de Bulow cry out ten times louder; a number of people, purposely placed, serve as witnesses to prove the offence, and a declaration is drawn up: while M. de Bulow hastens to demand justice of the king. In the mean time the pretended thief is conducted to prison. Jerome was well aware that he had compromised his dignity on this occasion; he dared not countenance the conduct of the police, and therefore seemed to consider the matter in a very serious light; he sent therefore to the ministers for their opinions. The Count de Fürst, and the minister of war, in contradiction to M. de Bulow, advised that no further steps should be taken in the business. But Simonet, who was not aware of the original scheme, represented the consequences of such a violation with so much vehemence, that the king was constrained to act against those who had executed his orders. However, they deserved to be punished for their awkwardness. The commissary general of police and his agent were driven from Westphalia; Berck..., dismissed from the police, became cabinet secretary, and General Boze..., commander of the gendarmier, took his place.

This little triumph of M. de Bulow rendered his influence more formidable than ever. The Germans considered him as an oracle: the French feared him; and the king let him have his own way, because he furnished money.

Probably the further view of this gang of Scapins may be advantageously referred to a work which reveals them in a lively manner; and therefore we shall take our leave with two or three anecdotes. When his Westphalian Majesty resisted rather strenuously some of the impositions of his stouter brother,—

It is said that the latter, on reading a despatch from Jerome in which he very energetically supported his dignity, exclaimed: "Oh, oh! if my brother had three hundred thousand men, I dare say, he would declare war against me."

One day when the new decoration of the order of the crown, in Westphalia, was shewn to the Emperor, and on which the lion of Cassel, the horse of Brunswick, and several other emblems were represented, he observed to those around him: "There are a great many beasts in this order!"

One day when the treasurer of the crown insisted on the grant of a tolerably large sum, alleging that it was indispensably necessary to satisfy the demands of the comedians: "This is all very well, Sir," replied Malsbourg, (Lord Treasurer); "but ought I not to pay those 'who cry before those who sing'?"

The conclusion of the reign of Jerome was worthy of it. In 1813 Czer-

nicheff and his Cossacks, put his majesty and court to flight, and took possession of Cassel, upon which occasion he "*made the French comedians perform*," as the fitting termination to a dynasty of which, from beginning to end, they had constituted so essential a part.

A few grammatical errors require correction; and the affectation of concealing names under initials, &c., is absurd. The volume is however light and entertaining. The author writes with spirit, and in great as well as small matters, decides with all the confidence of his country. His best quality is that of liveliness.

*Dramatic Scenes, and other Poems.* By Barry Cornwall. Second edition. London, 1820.

We have much pleasure in reflecting, that when this delightful author first glanced upon the public eye, the *Literary Gazette* greeted his softly brilliant rising in the poetical horizon, with acclamations such as an enthusiastic race of eastern worshippers use when they behold the earliest coming of the lovely moon. Had we any fear, it was that private partiality might unawares warp our judgment, and cause us, perhaps, to express feelings growing out of many roots, which the intrinsic merits of the single fruit before us would not seem to warrant. We imagined that from other considerations of which we were conscious, we could not so sufficiently appreciate the production, as to be entirely fair in our criticism; and we therefore waited with some anxiety to see how far our brother reviewers agreed with or differed from our sentiments. They have unanimously coincided with us; and by common consent, the young Poet has been established in an elevated niche in the temple of fame, though as yet he has only presented two slight volumes to the world. These, we feel assured, are but the prelude to some swelling act; and surely, if Mr. Cornwall be possessed of any ambition, the laurels lavished on his first efforts must stimulate his genius to deeds still more worthy. We shall then be more pleased and more proud than ever to hail his increasing glory: at present, it is only our purpose to remind him of the expectations he has excited by quoting a few passages from the new edition of his *Dramatic Scenes*.

The following lines, of a soliloquy in the poem of Werner, were not in the original publication, and are eminently beautiful.

—Or I

Will lie beneath the shade of columns or tombs Forgotten, where the ashes of those men Who filled the world with fame, sleep now in-  
—uried,

Or on Athenian ground, or storied Troy,  
Or marble Thebes upon whose walls long since  
The amorous Memnon in the morning light  
Sang to the young Aurora—for amongst  
Those haunts the spirits of the elder time  
Wander torridly; and we will talk  
Beneath the quiet of the midnight sky,  
Of things and days departed; till the sound

Shall fall like melancholy music on  
My soul—O, happier, far and far away,  
Beside some silent lake, encompassed round  
By mighty hills, I'll lay me down at last,  
An iller on that solitary shore,  
And upon every cloud and passing thing  
And every wind that stirs, or feathered bird  
That dips its plunage in the waters, I  
Will through the lazy noon-tide moralize;  
And so I'll learn tranquillity.

The beginning of the soliloquy is also very fine—

This is a dreary world. The sun has made  
A cloudy set, and as he died, his eye  
Looked red and troubled, and did tell of storms  
To-morrow. A dark world—Still do I tread  
The ground I was wont, and yet, I feel  
A wild and buoyant spirit here that seems  
To mingle with the circling element,  
And lift me upwards, whispering I am  
In something different from man. I am:  
For I have run beyond my course, and left  
The world behind, and now I stand above  
The reach of mortal accident. I wished  
To be immortal, for my soul was proud  
And grasping; want and awe hung on my heart,  
And I was bruised by foul authority;  
And that I saw beyond my fellows and  
Could read the secrets of the skies, and look  
Into the profound which spreads beyond the  
tomb

Its dim illimitable regions, I  
Was spurned and hated; but no more. I am  
Immortal now; hundreds of untold years  
That now lie sleeping in the gulf of time,  
Shall rise and roll before me ere I die.  
My glance can reach the heart, and my hand

rain  
Gold-showered, and invisible spirits stand  
Always around me: I can walk the waves,  
And ride the winged winds, and bid them fly  
On my dark errands, and I have the power  
To call the dead up from their stony rooms  
To do me service—I have a haunt beside  
The bright home of the sun, aye, and can blind  
The red Orion when he eyes the seas,  
And strive to scatter from his cloudy arms  
Tempest and storm: and so I am—a wretch.

We add two of the shorter poems—  
THE MAGDALEN.

I do remember it. 'Twas such a face  
As Guido would have loved to dwell upon;  
But oh! the touches of his pencil never  
Could paint her perfect beauty. In her home  
(Which once she did desert, I saw her last;  
Propped up by pillows, swelling round her like  
Soft heaps of snow, yielding, and fit to bear  
Her faded figure—I observed her well:  
Her brow was fair, but very pale, and look'd  
Like stainless marble; a touch methought would  
soil

Its whiteness. O'er her temple one blue vein  
Ran like a tendril; one through her shadowy  
hand

Branched like the fibre of a leaf—away.  
Her mouth was tremulous, and her cheek wore  
then

A flush of beautiful vermillion,  
But more like art than nature; and her eye  
Spoke as became the youthful Magdalen,  
Dying and broken-hearted.....

SONNET.

Oh, for that winged steed, *Bellerophon*!  
That Pallas gave thee in her infinite grace  
And love for innocence, when thou didst face  
The treble-shaped Chimæra. But he is gone  
That struck the sparkling stream from Helicon;

And never hath one risen in his place,  
 Scamped with the features of that mighty race.  
 Yet therefore grieve I—seeing how easily  
 The plumed spirit may its journey take  
 Through yon blue regions of the middle air;  
 And note all things below that own a grace,  
 Mountain, and cataract, and silent lake,  
 And wander in the fields of poetry,  
 Where avarice never comes, and seldom care.

*The Sketch Book of Geoffrey Crayon,  
 Gent.* London, 1820. 8vo. pp. 354.

The first notice taken of this work in England, appeared in the *Literary Gazette*, (No. 140) of September 25th; and in two subsequent Numbers, we copied from it as many papers. A polite letter from the author, informing us that in consequence of the favourable opinion of his work expressed very generally by the periodical press, it was his intention to reprint it in this country, induced us to desist from further extracts, which to take in anticipation of its being published, would, we thought, be an act of injustice towards Mr. Irving: for such, we learnt, was the name of Geoffrey Crayon.

In the *Literary Gazette's* alluded to, we paid the tribute of our applause to the American writer, whose sketches had a freshness and beauty about them with which we were exceedingly gratified. It is therefore unnecessary for us to repeat these favourable sentiments; especially as the volume itself may now be consulted for their confirmation. We shall merely say that the essays are various and agreeable; that their matter is amusing or pathetic, as required by the subject; that their style is the best transatlantic which we have yet seen; and that they display an amiable and cultivated mind, free from violent prejudices, and endued with very considerable talent. Except in a paper on English Writers, we discover no trace of the less pleasing side of the American character. There the author, (page 101), complains as we conceive without reason, boasts without foundation, and threatens without effect. Literature is of no nation; and the wise of every country despise those scribblers who would divide science into parties, and split learning into factions. Surely Mr. Irving has by this time dismissed the last slight touches of that impression which induced him to fancy that an American author would meet with an unfair reception from a British public. His own experience must have convinced him that we are far above such paltry feelings: for his *Sketch Book* has been quoted most widely, and every

voice has been raised to hail the appearance of a performance so honourable to its author, and so creditable to his native land. In that opinion we cordially join; and giving only one example from the work (suggested rather by its not having been quoted so much as others than by its superiority), we recommend it entirely to our readers.

#### THE ART OF BOOK-MAKING.

I have often wondered at the extreme fecundity of the press, and how it comes to pass that so many heads, on which nature seems to have inflicted the curse of barrenness, yet teem with voluminous productions. As a man travels on, however, in the journey of life, his objects of wonder daily diminish, and he is continually finding out some very simple cause for some great matter of marvel. Thus have I clanked, in my peregrinations about this great metropolis, to plunder upon a scene which unfolded to me some of the mysteries of the book-making craft, and at once put an end to my astonishment.

I was one summer's day loitering through the great saloons of the British Museum, with that listlessness with which one is apt to saunter about a museum in warm weather; sometimes loitering over the glass cases of minerals, sometimes studying the hieroglyphics on an Egyptian mummy, and sometimes trying, with nearly equal success, to comprehend the allegorical paintings on the lofty ceilings. Whilst I was gazing about in this idle way, my attention was attracted to a distant door, at the end of a suite of apartments. It was closed, but every now and then it would open, and some strange-favoured being, generally clothed in black, would steal forth, and glide through the rooms, without noticing any of the surrounding objects. There was an air of mystery about this that piqued my languid curiosity, and I determined to attempt the passage of that strait, and to explore the unknown regions that lay beyond. The door yielded to my hand, with all that facility with which the portals of enchanted castles yield to the adventurous knight errant. I found myself in a spacious chamber, surrounded with great cases of venerable books. Above the cases, and just under the cornice, were arranged a great number of quaint black looking portraits of ancient authors. About the room were placed long tables, with stands for reading and writing, at which sat many pale, cadaverous personages, poring intently over dusty volumes, rummaging among mouldy manuscripts, and taking copious notes of their contents. The most lushed stillness reigned through this mysterious apartment, excepting that you might hear the racing of pens over sheets of paper, or, occasionally, the deep sigh of one of these sages, as he shifted his position to turn over the pages of an old folio; but doubtless arising from that hollowness and statuteness incident to learned research.

Now and then one of these personages would write something on a small slip of

paper, and ring a bell, whereupon a familiar would appear, take the paper in profound silence, glide out of the room, and return shortly loaded with ponderous tomes, upon which the other would fall tooth and nail with famished voracity. I had no longer a doubt that I had happened upon a body of magi, deeply engaged in the study of occult sciences. The scene reminded me of an old Arabian tale of a philosopher, that up in an enchanted library, in the bosom of a mountain, that opened only once a year; where he made the spirits of the place obey his commands, and bring him books of all kinds of dark knowledge, so that at the end of the year, when the magic portal once more swung open on its hinges, he issued forth so versed in forbidden lore, as to be able to soar above the heads of the multitude, and to control the powers of nature.

My curiosity being now fully aroused, I whispered to one of the familiars, as he was about to leave the room, and begged an interpretation of the strange scene before me. A few words were sufficient for the purpose. I found that these mysterious personages, whom I had mistaken for magi, were principally authors, and were in the very act of manufacturing books. I was, in fact, in the reading room of the great British Library—an immense collection of volumes of all ages and languages, many of which are now forgotten, and most of which are seldom read. To these sequestered pools of obsolete literature, therefore, do many modern authors repair, and draw buckets full of classic lore, or "pure English, unadulterated," wherewith to swell their own scanty rills of thought.

Being now in possession of the secret, I sat down in a corner, and watched the process of this book manufactory. I noticed one lean, bilious looking wight, who sought none but the most worm-eaten volumes, printed in black letter. He was evidently constructing some work of profound erudition, that would be purchased by every man who wished to be thought learned, placed upon a conspicuous shelf of his library, or laid upon his table; but never read. I observed him, now and then, draw a large fragment of biscuit out of his pocket, and gnaw; whether it was his dinner, or whether he was endeavouring to keep off that exhaustion of the stomach produced by much pondering over dry works, I leave to harder students than myself to determine.

There was one dapper little gentleman in bright coloured clothes, with a chirping, gossiping expression of countenance, who had all the appearance of an author on good terms with his bookseller. After considering him attentively, I recognised in him a diligent getter up of miscellaneous works, which bustled off well with the trade. I was curious to see how he manufactured his wares. He made more stir and show of business than any of the others; dipping into various books, fluttering over the leaves of manuscripts, taking a morsel out of one, a morsel out of another, "line upon line, precept upon precept, here a little and there a little." The contents of his book seemed to be as heterogeneous as those of the witches'

cudron in Macbeth. It was here a finger and there a thumb, too, of frog and blind worm's sting, with his own gossip bloud in like "balsoon's blood," to make the medley "slab and good."

After all, thought I, may not this pilfering disposition be implanted in authors for wise purposes; may it not be the way in which providence has taken care that the seeds of knowledge and wisdom shall be preserved from age to age, in spite of the inevitable decay of the works in which they were first produced. We see that nature has wisely, though whimsically, provided for the conveyance of seeds from clime to clime, in the maws of certain birds; so that animals, which, in themselves, are little better than carrion, and apparently the lawless plunderers of the orchard and the corn field, are, in fact, nature's carriers to disperse and perpetuate her blessings. In like manner, the beauties and fine thoughts of ancient and obsolete writers, are caught up by these flights of predatory authors, and cast forth, again to flourish and bear fruit in a remote and distant tract of time. Many of their works also undergo a kind of metempsychosis, and spring up under new forms. What was formerly a powerless history, revives in the shape of a romance—an old legend changes into a modern play—and a sober philosophical treatise furnishes the body for a whole series of bouncing and sparkling essays. Thus it is in the clearing of our American woodlands; where we burn down a forest of stately pines, a progeny of dwarf oaks start up in their place; and we never see the prostrate trunk of a tree, mouldering into soil, but it gives birth to a whole tribe of fungi.

Let us not, then, lament over the decay and oblivion into which ancient writers descend; they do but submit to the great law of nature, which declares that all sublimary shapes of matter shall be limited in their duration, but which decrees also, that their elements shall never perish. Generation after generation, both in animal and vegetable life, pass away, but the vital principle is transmitted to posterity, and the species continues to flourish. Thus, also, do authors beget authors, and having produced a numerous progeny, in a good old age they sleep with their fathers, that is to say, with the authors who preceded them—and from whom they had stolen.

Whilst I was indulging in these rambling fancies, I had leaned my head against a pile of reverend folios. Whether it was owing to the soporific emanations from these works; or to the profound quiet of the room; or to the lassitude arising from much wandering; or to an unlucky habit of napping at improper times and places, with which I am grievously afflicted; so it was, that I fell into a doze. Still, however, my imagination continued busy, and indeed the same scene remained before my mind's eye, only a little changed in some of the details. I dreamt that the chamber was still decorated with the portraits of ancient authors, but that the number was increased. The long tables had disappeared, and in place of the sage magi,

I beheld a ragged, threadbare throng, such as may be seen plying about that great repository of cast-off clothes, Monmouth Street. Whenever they seized upon a book, by one of those incongruities common to dreams, methought it turned into a garment of foreign or antique fashion, with which they proceeded to equip themselves. I noticed, however, that no one pretended to clothe himself from any particular suit, but took a sleeve from one, a cape from another, a skirt from a third, thus decking himself out piecemeal, while some of his original rags would peep out from among his borrowed finery.

There was a portly, rosy, well-fed parson, whom I observed ogling several monody poetical writers through an eye-glass. He soon contrived to slip on the voluminous mantle of one of the old fathers, and having purloined the gray beard of another, endeavoured to look exceedingly wise; but the smirking commonplace of his countenance set at naught all the trappings of wisdom. One sickly looking gentleman was busied embroidering a very flimsy garment with gold thread drawn out of several old court dresses of the reign of Queen Elizabeth. Another had trimmed himself magnificently from an illuminated manuscript, had stuck a nosegay in his bosom, culled from "The Paradise of dainty Devises," and having put Sir Philip Sidney's hat on one side of his head, strutted off with an exquisite air of vulgar elegance. A third, who was but of puny dimensions, had bolstered himself out bravely with the spoils from several obscure tracts of philosophy, so that he had a very imposing front; but he was lamentably tattered in rear, and I perceived that he had patched his small clothes with scraps of parchment from a Latin author.

There were some well-dressed gentlemen, it is true, who only helped themselves to a grin or so, which sparkled among their own ornaments, without eclipsing them. Some, too, seemed to contemplate the costumes of the old writers, merely to imbibe their principles of taste, and catch their air and spirit; but I grieve to say, that too many were apt to array themselves, from top to toe, in the patchwork manner I have mentioned. I should not omit to speak of one genius, in drab breeches and gaiters and an Arcadian hat, who had a violent propensity to the pastoral; but whose rural wanderings had been confined to the classic haunts of Priuore Hill, and the solitudes of the Regent's Park. He had decked himself in wreaths and ribands from all the old pastoral poets, and hanging his head on one side, went about with a fantastical, lack-a-dicalical air, "babbling about green fields." But the personage that most struck my attention, was a pragmatical old gentleman, in clerical robes, with a remarkably large and square, but bald head. He entered the room wheezing and puffing, elbowed his way through the throng, with a look of sturly self-confidence, and having laid hands upon a thick Greek quarto, elapped it upon his head, and swept majestically away in a formidable frizzled wig.

In the height of this literary masquerade, a cry suddenly resounded from every side, of

"thieves! thieves!" I looked, and lo! the portraits about the walls became animated! The old authors thrust out, first a head, then a shoulder, from the canvass, looked down curiously, for an instant, upon the merry throng, and then descended, with fury in their eyes, to claim their rifled property. The scene of scurrying and hubbub that ensued, baffles all description. The unhappy culprits endeavoured in vain to escape with their plunder. On one side might be seen half a dozen old monks, stripping a modern professor; on another, there was sad devastation carried into the ranks of modern dramatic writers. Beaumont and Fletcher, shie by side, raced round the field like Castor and Pollux, and sturdy Ben Jonson, enacted more wonders than when a volunteer with the army in Flanders. As to the dapper little compiler of farragos, mentioned some time since, he had arrayed himself in as many patches and colours as Harlequin, and there was as fierce a contention of claimants about him, as about the dead body of Patroclus. I was grieved to see many men, to whom I had been accustomed to look up with awe and reverence, fain to steal off with scarce a rag to cover their nakedness. Just then my eye was caught by the pragmatical old gentleman in the Greek grizzled wig, who was scrambling away in sore affright with half a score of authors in full cry after him. They were close upon his haunches; in a twinkling off went his wig; at every turn some strip of raiment was peeled away; until in a few moments, from his domineering pomp, he shrunk into a little, puny, "chopp'd bald shot," and made his exit with only a few tags and rags fluttering at his back.

There was something so ludicrous in the catastrophe of this learned Thelion, that I burst into an immoderate fit of laughter, which broke the whole illusion. The tumult and the scuffle were at an end. The chamber resumed its usual appearance. The old authors shrunk back into their picture frames, and hung in shadowy solemnity along the walls. In short, I found myself awake in my corner, with the whole assemblage of bookworms gazing at me with astonishment. Nothing of the dream had been real but my burst of laughter, a sound never before heard in that grave sanctuary, and so abhorrent to the ears of wisdom, as to electrify the fraternity.

The librarian now stepped up to me, and demanded whether I had a card of admission. At first I did not comprehend him, but I soon found that the library was a kind of literary "preserve," subject to game laws, and that no one must presume to hunt there without special license and permission. In a word, I stood convicted of being an arrant poacher, and was glad to make a precipitate retreat, lest I should have a whole pack of authors let loose upon me.

*Sketches from St. George's Fields. By*  
Giorgione di Castel Chiuso. London.  
1820.

This satirical poem purports to be written by an Italian painter, to divert

his melancholy while in the King's Bench prison; but in its progress he forgets his assumed country. It is a smart production, and, though not well designed, surpasses both in composition and in talent, the generality of works of the class to which it belongs. The author seems to be equal to a higher theme than the ignoble one he has chosen; he might be the painter of beauty, but has contented himself with sketching some clever scenes of the impure place, where his head quarters were (we hope only for a short period) established. As the little volume only comes forth this day, we shall not prolong our comments, but proceed to afford an idea of its fashion, by extracting a few of its miscellaneous pages. Some of its contents it is a happiness not to understand; and of the meaning of many of its allusions "ignorance is bliss." The first part commences thus: 'The winds of March, with many a sudden gust, About Saint George's Fields had whirled the dust, And stir'd the massive bars that stand beneath The spikes that wags call'd Ellenborough's teeth; Whether we grinders call them, or canine, Those teeth, Chief-Justice Abbot! now are thine—'

But woe to him that calls your lordship curish.)  
'Twas six o'clock precise;  
An eager visaged inmate of that place,  
Where dinner rarely comes from length of grace,  
Walk'd near the warden's coffee-house, and

As should be a cook in busy pride,  
With laced tray, and hung his flickering nose  
O'er vizards declined for the Don and H-se.  
Not half so fragrant were the wondrous nest  
The phoenix builds in Araby the blest,  
Nor Atter-Gul, whose scent so exquisite  
Fits swarms the maids of Schiraz with delight,  
Nor even the breath that fills Cecilia's sigh,  
As Ranger thought the vapour fitting by.  
The scent that hungry thought best of best  
Steamed from a savoury steak with onions

dress'd.  
The rich aroma, climbing to his brain,  
Call'd up of eating thoughts a hungry train,  
Awaked the memory of days gone by,  
When Long's long bill of fare fatigued his eye;  
When George's Carte was search'd for something

new—  
In ravel consommé or superb rognon,  
Some such piquante, the wonder of the hour,  
To stimulate his palate's jaded power.

An old friend is brought in prisoner, and Ranger and Belcour, who had seen better times, renew their acquaintance in limbo. A bed room is hired for the latter.

No horse more closely girds the coffin'd dead,  
Than the four walls hemm'd in the little bed:  
Still it was clean, and might his own be made;  
At least so long as in advance he paid;  
Therefore the bargain Belcour ratified,  
And took the signory full eight feet wide.

Not half so low from old Bellario's cave  
The sonnets of Cymbeline, their heads to care,  
Stoop, when they bid good-morrow to the sun,  
(You've seen the thing at Covent Garden door)

As Belcour when returning bent his neck,  
Admonish'd by the ceiling's stubborn clock.

That point secured, the coffee-room they gain'd.

The cloth was laid; with appetite unchain'd,  
Fierce as a wolf, and as a falcon keen,  
Dire havoc Ranger made in fat and lean.  
Not with more quick dispatch Grimaldi's jaws  
Work for the gallery's thunders of applause,  
When thro' those portals of tremendous size  
The cheese-cakes vanish from admiring eyes,  
Than now the chops of mutton disappear'd,  
Till thrice the well-replenish'd dish was clear'd.

Ranger becomes the cicerone of the place, and explains its customs to his friend. The first morning the newcomer is obliged to sit for his picture, i. e. have his features scrutinized by the turnkeys, so that he may be known from a stranger, and not have egress in case of attempting a sortie.

Rose Belcour, dress'd, and soon the fool found.  
About the door a throng of carles stood,  
A grinning and ill-favour'd brotherhood,  
That scoff and gibe at every weight that wears  
Linen less black, or better coat, than theirs.  
For these our Belcour was too fair a mark to  
"Make way," crys one, "he's going to the

Park,  
His horses wait; he's going for a ride—"

"Fool! 'tis his Tilbury," another cried;  
"Do! think his lordship rides without his  
spurs?"

"A curse confound such base unmanner'd curs."  
Between his teeth impatient Belcour mutter'd,  
As each his wit so truly attic utter'd;  
Then 'mid the laughter of the brutal throng  
Dark frowning, thro' the door he moved along.  
Within the upper lobby Morris sat,  
And touch'd with easy complaisance his hat;  
And cried, not deigning from his seat to stir,  
"We hope you're pretty comfortable, sir."

"Those chairs before the door are rather new,  
But, love ye! so they do to all that come."  
Short was the conference; the Turnkey's look  
Quick cognizance of Belcour's features took;  
And never, from that hour, might he pass by  
Unnoted by that well-observing eye.

The inmates of the gaol are thus described.  
Here ruin'd lawyers ruin'd clients meet;  
Here doctors their consumptive patients greet,  
Sick of one malady that mocks all skill,  
Without the true specific golden pill.

Here find'st tailors, never to be paid,  
Turn eyes on many a coat themselves have made;  
And bailiffs, caught by their own arts at last,  
Meet those their copies yesterday made fast.

There walks a youth whose father, for reform,  
Has shut him up where countless viruses swarm.  
But little is that parent skill'd to trace  
The springs of action,—little knows the place,  
Who sends an ailing mind to where disease  
Its inmost citadel of health may seize.

Faint are the calls of Decency, when broad  
And naked, Vice can show her front unawed;  
Where thrives what'er the vilest of our kind  
Can teach to brutify and sink the mind;  
Where weary Reason finds her watch to keep,  
And the tir'd conscience finds a troubled sleep;

Where every cheek and barrier is removed,  
Of countenances fear'd, and bosoms loved;  
Where bold and bad examples lead the way,  
And, every hour, facilities betray;  
Where ferriest impatience fires the blood  
Distemper'd by the maddening neighbourhood;

Where hope of some short joy the sanguine draws.

And vanity is fed by bad applause,  
The brute his wonted offal seeks, the fool  
Falls, with his weight, or, push'd by ridicule,  
O, never yet was youth's unstrengthen'd mind  
Made pure by herding with the baser kind.  
Here shifts are necessary soon, to live;  
These to the mind a lasting colour give:  
Such hold some vices in their practice take,  
No force avails, their influence to shake.  
Some taints there are that in the frame defy  
The keenest knife and fiercest cautery.

See you pale wretch,—observe his vacant stare,

His lustre-lacking eye, and matted hair;  
His squalid hands, his soil'd and tatter'd dress—  
Symbols, at once, of want and low excess;  
Two months ago he was an airy thing,  
Light, crisp, and elegant, and free of wing,  
Grac'd in manners, stylish in attire.

In converse full of wit, of zest, and fire,  
Soon sank his spirits, faded ev'ry grace,  
Before the withering influence of the place:

Not of that order of high minds was he  
Whose efforts rise with growing misery:  
From wine he sought false courage, and the glow  
That gave a hollow respite to his woe;

Soon larger draughts were needful, in the sleep  
That kills all memory each sense to steep,  
Then vile potations of pernicious train

Were swallowed, Reason from his brain to wash.  
Behold him, now, confirmed the perfect sort,  
That knows no heaven beyond a porter-pot.

We add but one other specimen: it is a graphic view, and given in the reply of a ci-devant fashionable to a brother prisoner.

If you complain, have I not cause to fume,  
Fix'd in a dog-hole, much misshap'd a room.  
In one dark corner on the dingy floor  
My bed, uncurtain'd, rears behind the door;

A crazy pitcher in another stands,  
Whose crack demands the lift of cautious hands.  
My table rocks, unless one leg, too short,  
Is steadied by a tatter'd book's support.

On either side a paralytic chair,  
Rush-bottom'd one—once cover'd—once—with

hair,

Bids you manœuvre, ere you sit, to know  
Which corner is securely propped below.

But little ink is requisite to clear  
The scanty inventory of my gear;

A stripe of curtain,—that too in its ware,  
Fluttering before a broken window pane;

A closet holding half a sack of coals;  
A lidless casket, furnish'd well—with holes.

Of utes just half a pair, constrain'd to do—  
When I've a fire—the work of poker too.

Two tea-cups, odd, with saucers oddly match'd;  
Two pewter spoons, one with initials scratch'd;

A scrap of glass, scarce large enough to show  
My chin's dimensions when my beard I mow.

'Mid things like these a bottle does not stand ill,  
The belly water holds, the peck a candle.

With goods like these my palace well accord's,  
Whose ceiling bears the mark of many lords,

That, resolute to leave behind a name,  
Have traced their letters with the candle's flame.

The surface, peeling from the scaly wall  
Of many colours, gives a patch of all;

Green, salmon-colour, modest grey, and blue,  
With tawdry yellow mottled, staid to view,  
And here and there a brick stands peeping through,

Midst crannies, whence issue forth each night  
The vermin hordes that plague, and make me  
long for light.

"I bear all this—then be not you cast down; But, my dear fellow—lend me half a crown."

Some very neat engravings ornament this publication, which, if weeded of half a dozen improprieties, might be more freely mentioned, on account of the ability which it evinces. It is lamentable that a person of the writer's talents, should possess the experience necessary for the work; and it is to be regretted, that he has suffered some of the taints of his unfortunate situation to stain pages, otherwise deserving of praise. So true it is, that he who toucheth pitch will be defiled. A story of a bailiff tricked into an expensive dinner at Brunet's hotel, by a person in possession of a day-rule, or protection from arrest, is pretty much in the Colman style.

SUTHER'S LIFE OF JOHN WESLEY. 2 vols. 8vo. (continued.)

Methodism must now be considered as having taken root in the land. Meeting Houses were erected in various parts, settled upon Wesley as the head and sole director of the society. Funds were raised, and a plan of finance established. Preachers and assistants provided. To this stage Methodism had arrived in 1742, when its founder lost his mother. Two of Wesley's sisters were miserably married, a third to a clergyman named Whitelamb, and the fourth died of a broken heart. Wesley preached seven evenings in succession from the townhouse of his father at Epworth, and the historian says "Some remarkable circumstances attended Wesley's preaching in these parts. Some of his opponents, in the excess of their zeal against enthusiasm, took up a whole wagon load of Methodists, and carried them before a justice. When they were asked what these persons had done, there was an awkward silence; at last one of the accusers said, 'Why, they pretended to be better than other people; and, besides, they prayed from morning till night.' The magistrate asked if they had done nothing else.—'Yes, Sir,' said an old man, 'an't please your worship, they have converted my wife. Till she went among them she had such a tongue! and now she is as quiet as a lamb!'— Carry them back, carry them back," said the magistrate, and let them convert all the scolds in the town." "Methodism as we have just stated had assumed form and consistence. Meeting-houses had been built, societies formed and disciplined, funds raised, rules enacted, lay preachers admitted, and a regular system of itinerancy begun. Its furious symptoms had subsided, the affection had reached a calmer stage of its course, and there were no longer any of those outrageous exhibitions which excited scandal and compassion, as well as astonishment. But Wesley continued, with his constitutional fervour, to preach the doctrines of instantaneous regeneration, assurance, and sinless perfection." The populace however began to persecute

the new sect; and, though frequently protected by the local magistracy, and by the laws, some instances occurred in which the former forgot their duties, and the latter were outraged. Wesley himself, had more than once very narrow escapes with life and limb; and his followers were often treated with great brutality. As the rebellion of 1745 approached, they suffered in proportion to the belief that they were disaffected and dangerous. In Cornwall, especially, the founder was maltreated; and Nelson, Maxfield, and others, were pressed, imprisoned, and ill-used. Fictitious preaching thus became a service of great danger; and it is worth while to record, that itinerancy was very different from what it would be in the present day, for then there were no turnpikes in England, and no stage-coach which went farther than York. In many parts of the northern counties, neither coach nor chaise had ever been seen, and Wesley usually travelled on horseback, accompanied by one of his preachers, and reading as he rode. Some idea of the hardships endured may be gathered from the following extract.

"At the commencement of his errantry, he (Wesley) had sometimes to bear with an indifference and insensibility in his friends, which was more likely than any opposition to have abated his ardour. He and John Nelson rode from common to common, in Cornwall, preaching to a people who heard willingly, but seldom or never proffered them the slightest act of hospitality. Returning one day in autumn from one of these hungry excursions, Wesley stooped his horse at some brambles, to pick the fruit. 'Brother Nelson,' said he, 'we ought to be thankful that there are plenty of blackberries, for this is the best country I ever saw for getting a stomach, but the worst that ever I saw for getting food. Do the people think that we can live by preaching?' They were detained some time at St. Ives, because of the illness of one of their companions; and their lodging was little better than their fare. 'All that time,' says John, 'Mr. Wesley and I lay on the floor: he had my greatcoat for his pillow, and I had Burket's Notes on the New Testament for mine. After being here near three weeks, one morning, about three o'clock, Mr. Wesley turned over, and finding me awake, clapped me on the side, saying, 'Brother Nelson, let us be of good cheer, I have one whole side yet; for the skin is off but on one side.'"

It is worth adding, that Wesley was finely alive to the effects of natural situation in the spots which he selected for his preaching; inasmuch that some of his landscapes are drawn with all the enthusiasm of a feeling and skilful artist.

It may be supposed that the Methodist labours were most effectual among the middle and lower orders. Wesley, "writing to some Earl, who took a lively interest in the revival of religion, which, through the impulse given, directly or indirectly, by Methodism, was taking place, he says, 'To speak rough truth, I do not desire any intercourse with any persons of quality in England. I mean, for my own sake. They

do me no good, and, I fear, I can do none to them.' To another correspondent he says, 'I have found some of the uneducated poor who have exquisite taste and sentiment; and many, very many of the rich, who have scarcely any at all.'—'In most genteel religious people there is so strange a mixture, that I have seldom much confidence in them. But I love the poor; in many of them I find pure genuine grace, unmixed with paint, folly, and affectation.' And again, 'How unspeakable is the advantage in point of common sense, which middling people have over the rich! There is so much paint and affectation, so many unmeaning words and senseless customs among people of rank, as fully justify the remark made 1700 years ago, *Senatus communis in illud fortunat rarus*.'—'Tis well,' he says, 'a few of the rich and noble are called. Oh! that God would increase their number. But I should rejoice, were it the will of God, if it were done by the ministry of others. If I might choose, I should still, as I have done hitherto, *preach the gospel to the poor*.' Preaching in Monk-town church, (one of the three belonging to Pembroke,) a large old ruinous building, he says, 'I suppose it has scarce had such a congregation in it during this century. Many of them were gay genteel people; so I spake on the first elements of the gospel: but I was still out of their depth. Oh, how hard it is to be *shallow* enough for a polite audience!' Yet Wesley's correspondences with the few persons over whom he obtained any influence in higher life, though written with honest and conscientious freedom, is altogether untinged with any of that alloy which too frequently appeared when he was addressing those of a lower rank.

"But though Wesley preferred the middling and lower classes of society to the rich, the class which he liked least were the farmers. 'In the little journals which I have lately taken,' he says, 'I have thought much of the huge encomiums which have been for many ages bestowed on a country life. How have all the learned world cried out,

*O fortunati nimium, bona si non norint, Agricole!*

But, after all, what a flat contradiction is this to universal experience! See the little house, under the wood, by the river side! There is *rural life* in perfection. How happy, then, is the farmer that lives there!—Let us take a detail of his happiness. He rises with, or before the sun, calls his servants, looks to his swine and cows, then to his stable and barns. He sees to the ploughing and sowing his ground in winter or in spring. In summer and autumn he hurries and sweats among his mowers and reapers. And where is his happiness in the mean time? Which of these employments do we envy? Or do we envy the delicate repast which succeeds, which the poet so languishes for?

*O quando faba, Pythagoræ cognata, sinisque Unctis astis pinguis possint olivula mundis*

Oh the happiness of eating *beans well greased with fat bacon*; nay, and *cabbage* too!

Was Horace in his senses when he talked thus? or the servile herd of his imitators? Our eyes and ears may convince us there is not a less happy body of men in all England than the country farmers. In general their life is supremely dull; and it is usually unhappy too; for, of all people in the kingdom, they are the most discontented, seldom satisfied either with God or man. Wesley was likely to judge thus unfavourably of the agricultural part of the people, because they were the least susceptible of Methodism." At this era of Methodism, even where it was well established, and, on the whole, flourishing, there were great fluctuations, and Wesley soon found how little he could depend upon the perseverance of his converts. Early in his career he took the trouble of enquiring into the motives of seventy-six persons, who, in the course of three months, had withdrawn from one of his societies in the north.—The result was curious. Fourteen of them said they left it because otherwise their ministers would not give them the sacrament;—these, he observed, were chiefly Dissenters. Nine, because their husbands or wives were not willing they should stay in it. Twelve, because their parents were not willing. Five, because their master and mistress would not let them come. Seven, because their acquaintance persuaded them to leave it. Five, because people said such bad things of the Society. Nine, because they would not be laughed at. Three, because they would not lose the poor's allowance. Three more, because they could not spare time to come. Two, because it was too far off. One, because she was afraid of falling into fits—her reason might have taught Wesley a useful lesson. One, because people were so rude in the street. Two, because *Thomas Vaux* was in the Society: One, because he would not turn his back on his baptism. One, because the Methodists were *were* Church-of-England-men. And one, because it was time enough to serve God yet. The character of the converts, and the wholesome discipline to which they were subject, is still farther exhibited, by an account of those who, in the same time, had been expelled from the same Society:—they were, two for cursing and swearing, two for habitual Sabbath-breaking, seventeen for drunkenness, two for retailing spirituous liquors, three for quarrelling and brawling, one for beating his wife, three for habitual wilful lying, four for railing and evil speaking, one for idleness and laziness, and nine-and-twenty for lightness and carelessness.—It would be well for the community if some part of this discipline were in general use."

The aid of lay-preachers was very unpalatable to Wesley at first; but it was forced upon him by circumstances, and in the individual cases zeal was the only qualification which he required. "If the aspirant possessed no other requisite for his work, and failed to produce an effect upon his hearers, his labour was soon cooled, and he withdrew quietly from the field; but such cases were not very frequent. The gift of voluble utterance is the commonest of all gifts; and

when the audience are in sympathy with the speaker, they are easily affected \*; the understanding makes no demand, provided the passions find their food. But, on the other hand, when enthusiasm was united with strength of talents and of character, Wesley was a skilful preceptor, who knew how to discipline the untutored mind, and to imbue it thoroughly with his system." "No fonder of a monastic order ever more entirely possessed the respect, as well as the love and admiration of his disciples; nor better understood their individual characters, and how to deal with each according to the measure of his capacity. Where strength of mind and steadiness were united with warmth of heart, he made the preacher his counsellor as well as his friend: when only simple zeal was to be found, he used it for his instrument as long as it lasted. An itinerant, who was troubled with doubts respecting his call, wrote to him in a fit of low spirits, requesting that he would send a preacher to supersede him in his circuit, because he believed he was out of his place. Wesley replied in one short sentence, 'Dear brother, you are indeed out of your place; for you are *reasoning*, when you ought to be *praying*.' And this was all. Thus tempering his authority, sometimes with playfulness, and always with kindness, he obtained from his early followers an unhesitating, a cheerful, and a devoted obedience. One of them, whom he had summoned from Bristol to meet him at Holyhead, and accompany him to Ireland, set out on foot, with only three shillings in his pocket. It is a proof how confidently such a man might calculate upon the kindness of human nature, that, during six nights out of seven, this innocent adventurer was hospitably entertained by utter strangers, and when he arrived he had one penny left. John Jane (such was his name) did not long survive this expedition: he brought on a fever by walking in exceeding hot weather; and Wesley, recording his death in his journal, concludes in this remarkable manner:—"All his clothes, linen and woollen, stockings, hat, and wig, are not thought sufficient to answer his funeral expenses, which amount to 1*l.* 17*s.* 3*d.* All the money he had was 1*l.* 4*s.*—Enough for any unmarried preacher of the gospel to leave to his executors!"

Mr. Southey gives us here brief epitomes of the *'Experiences'* of some of the early coadjutors in Methodist proselytism, such as John Oliver, John Pawson, Alexander Mather, Thomas Olivers, John Haime, Sampson Staniforth, George Story, &c. whose lives present considerable variety, and

\* Sewal relates, with all simplicity and sincerity, in his History of the Quakers, that his mother, a Dutch woman, preached in her native language to a congregation of English Friends, and that though they did not understand a single word, they were nevertheless edified by the discourse.—A man returned from attending one of Whitefield's sermons, and said it was good for him to be there: the place, indeed, was so crowded, that he had not been able to get near enough to hear him; "but then," "I saw his blessed wig!"

amusing biographical incident. The wives of itinerant preachers came to be allowed 4*s.* per week, during the absence of their husbands, and 1*l.* per quarter for each child. When the husband was at home, 1*l.* 6*s.* a day was allowed for his board, at the rate of 6*d.* for dinner, and 4*d.* for breakfast, tea, and supper. When invited out the allowance was deducted. In 1748, Kingswood School, near Bristol, was also, through the bounty of Lady Maxwell, established for the education of fifty boys, and some very small provision was made for the preachers themselves. The annual conferences began in 1744, when J. Wesley, C. Wesley, four other clergymen, and four lay co-operators, met for the first time on the affairs of the society.

"Wesley never departed willingly or knowingly from the doctrines of the Church of England, in which he had been trained up, and with which he was conscientiously satisfied after full and free enquiry. Upon points which have not been revealed, he was within the scope of reason, he formed opinions for himself, which were generally clear, consistent with the Christian system, and creditable, for the most part, both to his feelings and his judgment. But he laid no stress upon them, and never proposed them for more than they were worth." "The true gospel," said he, "touches the very edge both of Calvinism and Antinomianism, so that nothing but the mighty power of God can prevent our sliding either into the one or the other." Many of his associates and followers fell into both. He always declared himself clearly and strongly against both; though at the expense of some inconsistency, when he preached of a sanctification which left the subject liable to sin, of an assurance which was not assured, and of an imperfect perfection. It was his opinion that there is a chain of beings advancing by degrees from the lowest to the highest point,—from an atom of unorganized matter, to the highest of the archangels; an opinion consonant to the philosophy of the barbs, and confirmed by science, as far as our physiological knowledge extends. He believed in the ministry both of good and evil angels; but whether every man had a guardian angel to protect him, as the Romanists hold, and a malignant demon continually watching to seduce him into the ways of sin and death, this he considered as undetermined by revelation, and therefore doubtful. Evil thoughts he held to be infused into the minds of men by the evil principle; and that "as no good is done, or spoken, or thought by any man, without the assistance of God working together in and with those that believe in him; so there is no evil done, or spoken, or thought, without the assistance of the Devil, 'who worketh with energy in the children of unbelief.' His notions of diabolical agency went further than this: he imputed it to many of the accidents and discomforts of life,—disease, bodily hurts, storms and earthquakes, and nightmare: he believed that epilepsy was often, or always the effect of possession, and that most madmen were demonesiacs. A belief in witchcraft naturally

followed from these premises; but, after satisfying his understanding that supernatural acts and appearances are consistent with the order of the universe, sanctioned by Scripture, and proved by testimony too general and too strong to be resisted, he invalidated his own authority, by listening to the most absurd tales with implicit credulity, and recording them as authenticated facts. He adhered to the old opinion, that the devils were the gods of the heathen; and he maintained, that the words in the Lord's Prayer, which have been rendered *evil*, mean, in the original, *the wicked one*, 'emphatically so called, the prince and god of this world, who works with mighty power in the children of disobedience.'

"One of his most singular notions was concerning the day of judgment. He thought it probable that its duration would be several thousand years, that the place would be above the earth, and that the circumstances of every individual's life would then be brought forth in full view, together with all their tempers, and all the desires, thoughts, and intents of their hearts. This he thought absolutely necessary for the full display of the glory of God, for the clear and perfect manifestation of his wisdom, justice, power, and mercy. 'Then only,' he argued, 'when God hath brought to light all the hidden things of darkness, will it be seen that wise and good were all his ways; that he saw through the thick cloud, and governed all things by the wise counsel of his own will; that nothing was left to chance or the caprice of men, but God disposed all strongly, and wrought all into one connected chain of justice, mercy, and truth.' Whether the earth and the material heavens would be consumed by the general conflagration, and pass away, or be transmuted by the fire into that sea of glass like unto crystal, which is described in the Apocalypse as extending before the throne, we could neither affirm nor deny, he said; but we should know hereafter. He held the doctrine of the millennium to be scriptural; but he never fell into those wild and extravagant fancies, in which speculations of this kind so frequently end. The Apocalypse is the favorite study of crazy religionists; but Wesley says of it, 'Oh, how little do we know of this deep book! at least, how little do I know! I can barely conjecture, not affirm, any one point concerning that part of it which is yet unsatisfied!'

"He entertained some interesting opinions concerning the brute creation, and derived whatever evils inferior creatures endure, or inflict upon each other, from the consequence of the Fall. In Paradise they existed in a state of happiness, enjoying will and liberty: their passions and affections were regular, and their choice always guided by their understanding, which was perfect in its kind. 'What,' says he, 'is the barrier between men and brutes,—the line which they cannot pass? It is not reason. Set aside that ambiguous term; exchange it for the plain word understanding, and who can deny that brutes have this? We may as well deny that they have sight or hearing. But it

is this: man is capable of God; the inferior creatures are not.'

(To be concluded.)

*Poetical Tributes to the Memory of his late Majesty.* Anon. London, 1820. pp. 22.

These tributes consist of an Elegy and a Monody; the former was offered to us in MS. and our opinion of its merits was shown by admitting it into the Literary Gazette. The Monody breathes the same feeling and pathos; and if we transcribe only a brief passage or two, the reason is, that we would not subtract too much from the novelty of so small a work by disproportioned quotation.

No! 'tis the thousand touching ties,  
The progeny of lengthen'd days,  
That to thy people's heart supplies  
Remembrance of thy treasure'd praise.  
We trace thee thro' each stage of life,  
Or bless'd by peace, or wrung'd by strife,  
The hour of dread, the day of pride,  
When Victory shone, tho' Nelson died,  
When war her later ensigns furled,  
And Britain rais'd a prostrate world.  
We follow thro' each private scene,  
With our own being thine unite,  
For few another King have seen,  
Few look'd beneath an earlier light.

Thou wert the King—confirm'd in pow'r  
Ere many a prattling babe began  
To lip thy name, whose present hour,  
Hath enter'd the last stage of man.

Thou wert the King; thy glorious name  
Said the young warrior forth to fame,  
Whose guardian's hand now silvery gray,  
Bends 'neath the pressure of decay.

That grandeur of a numerous race,  
With flatterer's tongue can just retract  
The time, when he to beauty's car  
The promise of his youth could bring,  
'Oh! thou shalt be as Charlotte dear,  
I will be faithful as my King.'

Benignant monarch—friend of man,  
Be *that* thy praise thro' every age;  
Nor that denick, which time may scan  
Thro' history's remotest page;

That to thy promise strictly just,  
No power could lure thee from thy trust:  
Unscar'd—untempted, still thy feet  
The thorny path of duty trod,  
Prepar'd with all events to meet,  
And fearing nothing, but thy God.

This poem is subscribed B. H. Twickenham; the other, C. C. T. Cambridge, whence we presume that they are the production of different writers. Both appear to us to be elegant and touching.

*An Elegy on the Death of his late Majesty.* By Mrs. Cockle. 4to. pp. 8.

This is a tribute from a female pen, on the same melancholy occasion with the foregoing. It dwells upon the recognition among blessed souls of those who were dearest to the monarch on earth. A short extract allusive to the

Princess Charlotte will suffice to show how this is done.

And she too comes to lead him on his way,  
England's own star of gladness—she who shone,  
In the pure brightness of her morning ray,  
The last—the lovely—the lamented One.  
She was embraced like Him within the hearts,  
And with strong grasp affection held her there,  
Like some dear thought with which we would not part,  
That seems to mingle in each silent pray'r.

*Scoreby's Account of the Arctic Regions,*  
8c.  
(Continued.)

We must pass over the proofs of a north-west passage, so clearly derived from the currents in these seas; the theory on the waves; and the particular notices of all the various sorts of ice; merely observing, with respect to the latter, that its extensive body,—

Which, with occasional tracts of land, occupies the northern extremity of the earth, and prevents all access to the regions immediately surrounding the Pole, fills, it appears, on an average, a circle of above 2000 geographical miles diameter; and presents an outline which, though subject to partial variations, is found, at the same season of each succeeding year, to be generally similar, and often strikingly uniform.

The place where whales occur in the greatest abundance, is generally found to be in the 78th or 79th degree of north latitude, though from the 72d to the 81st degree they have been met with. These singular animals, which, on account of their prodigious bulk and strength, might be thought entitled to reign supreme in the ocean, are harmless and timid. They seem to prefer those situations which afford them the most secure retreats. Among the ice, they have an occasional shelter; but so far as it is permeable, the security is rather apparent than real. That they are conscious of its affording them shelter, we can readily perceive, from observing, that the course of their flight when scared or wounded, is generally towards the nearest or more compact ice. The place of their retreat, however, is regulated by various circumstances; it may sometimes depend on the quality and quantity of food occurring, the disposition of the ice, or exemption from enemies. At one time, their favourite haunt is amidst the huge and extended masses of the field ice; at another, in the open seas adjacent. Sometimes the majority of the whales inhabiting those seas, seem collected within a small and single circuit; at others, they are scattered in various herds, and numerous single individuals, over an amazing extent of surface.

In 1817, Captain Scoresby visited the East side of West Greenland; a coast never approached except by ships beset in the ice, since Hudson's voyage, in 1607. He saw the land from the mast head, and had not a fog intervened, thinks that the ice was open

enough to have allowed them to reach the shore of this long lost country.

Some of the particulars respecting the polar ice, are remarkable. For example—

Bay ice, which for weeks has been an increasing pest to the whale fisher, is sometimes removed in the space of a few hours. The destruction is in many cases so rapid, that to an unexperienced observer, the occurrence seems incredible, and rather an illusion of fancy, than a matter of fact. Suppose a ship immovably fixed in bay-ice, and not the smallest opening to be seen: after a lapse of time sufficient only for a moderate repose, imagine a person rising from his bed,—when, behold, the insurmountable obstacle has vanished! instead of a sheet of ice expanding unbroken to the verge of the horizon on every side, an undulating sea relieves the prospect, wherein floats the wreck of the ice, reduced to a small fraction of its original bulk!

The atmosphere of this region is perhaps more extraordinary. Captain S. relates that—

In the year 1814, when a temperature of zero occurred, we reached the latitude of 70°, without experiencing any cold below 30°; but in less than twenty-four hours, the thermometer fell 25°, and indicated a temperature of 5°. Thus, between the time of my leaving the deck at night, and arising the following morning, there was an increase in the cold of about 20°. This remarkable change was attended with singular effects. The circulation of the blood was accelerated.—a sense of parched dryness was excited in the nose,—the mouth, or rather lips, were contracted in all their dimensions, as by a sphincter, and the articulation of many words was rendered difficult and imperfect; indeed, every part of the body was more or less stimulated or disordered by the severity of the cold. The hands, if exposed, would have been frozen in a few minutes; and even the face could not have resisted the effects of a brisk wind, continued for any length of time. A piece of metal when applied to the tongue, instantly adhered to it, and could not be removed without its retaining a portion of the skin; iron became brittle, and such as was at all of inferior quality might be fractured by a blow; brandy of English manufacture and wholesome strength, was frozen; quicksilver, by a single process, might have been consolidated; the sea, in some places, was in the act of freezing, and in others appeared to smoke, and produced, in the formation of *frost-rime*, an obscurity greater than that of the thickest fog. The subtle principle of magnetism seemed to be, in some way or other, influenced by the frost; for the deck compasses became sluggish, or even motionless, while a cabin compass traversed with celerity. The ship became enveloped in ice; the bows, sides, and lower rigging were loaded; and the rudder, if not repeatedly freed, would, in a short time, have been rendered immovable. A considerable swell at this time prevailing, the

smoke in the cabin, with the doors closed, was so intolerable, that we were under the necessity of giving free admission to the external air to prevent it. The consequence was, that in front of a brisk fire, at the distance of a yard and a half from it, the temperature was 25°; water spilt on the table froze, and, indeed, congelation took place in one situation, at the distance of only two feet from the stove. Hoar-frost also appeared in the sailor's bed cabins, arising from their breath, and was deposited upon their blankets.

Ellis, who wintered in Hudson's Bay in 1746-7, in a creek of Haye's River, latitude 57° 30', remarked several curious effects of cold. In the creek where the vessel lay, much ice appeared on the 5th of October; on the 8th it was covered with a sheet of ice; and on the 31st, the river was frozen over quite hard. By the 3d of November, bottled beer, though wrapped in tow and placed near a good constant fire, was found to be frozen solid; and in the course of the winter, beer casks placed in the ground, at the depth of several feet, froze almost solid, and some of them burst; many of the sailors had their faces, ears, and toes frozen; iron adhered to the fingers; glasses used in drinking stuck to the mouth, and sometimes removed the skin from the lips or tongue; and, a sailor, who inadvertently used his finger for stopping a spirit bottle, in place of a cork, while removing it from the house to his tent, had his finger fast frozen in the bottle; in consequence of which, a part of it was obliged to be taken off, to prevent mortification.

The antiseptical property of frost is rather remarkable. Animal substances, requisite as food, of all descriptions, (fish excepted), may be taken to Greenland, and there preserved any length of time, without being smoked, dried, or salted. No preparation, indeed, of any kind, is necessary for their preparation, nor is any other precaution requisite, excepting suspending them in the air when taken on shipboard, shielding them a little from the sun and wet, and immersing them occasionally in sea-water, or throwing sea-water over them after heavy rains, which will effectually prevent putrescence on the outward passage; and in Greenland, the cold becomes a sufficient preservative, by freezing them as hard as blocks of wood. Beef, mutton, pork, and fowls, (the latter neither plucked nor drawn), are constantly taken out from England, Shetland, or Orkney, and preserved in this way. When used, the beef cannot be divided but by an axe or a saw; the latter instrument is generally preferred. It is then put into cold water, from which it derives heat by the formation of ice around it, and soon thaws; but if put into hot water, much of the gray is extracted, and the meat is injured without being thawed more readily. If an attempt be made to cook it before it is thawed, it may be burnt on the outside, while the centre remains raw, or actually in a frozen state. The moisture is well preserved by freezing, a little from the surface only evaporating, so that if cooked when three, four, or five months old, it will frequently

appear as profuse of gravy as if it had been but recently killed. But the most surprising action of the frost, on fresh provision, is in preserving it a long time from putrefaction, even if it is thawed and returns into a warm climate\*. I have eaten unsalted mutton and beef nearly five months old, which has been constantly exposed to a temperature above the freezing point for four or five weeks in the onset, and occasionally assailed by the septical influences of rain, fog, heat, and electricity, and yet it has proved perfectly sweet.

A further antiseptical effect is produced by the cold of the polar countries, on animal and vegetable substances, so as to preserve them, if they remain in the same climate, unchanged for a period of many years. "It is observable," says Martens, in his "Voyage to Spitzbergen," "that a dead carcase doth not easily rot or rancune, for it has been found, that a man buried ten years before, still retained his perfect shape and dress." An instance corroborative of this remark is given by M. Blenn, who, in his *Atlas Historique*, informs us, that the bodies of seven Dutch seamen, who perished in Spitzbergen in the year 1633, when attempting to pass the winter there, were found twenty years afterwards, by some sailors who happened to land about the place where they were interred, in a perfect state, not having suffered the smallest degree of putrefaction.

Wood and other vegetable substances are preserved in a similar manner. During my exploration of the shores of Spitzbergen, in the year 1818, several huts, and some coffins built entirely of wood, were observed. One of the latter appeared, by an adjoining inscription, to contain the body of a native of Britain, who had died in the year 1788; and though the coffin had lain completely exposed, excepting when covered with snow, during a period of thirty years, the wood of which it was composed, not only was undecayed, but appeared quite fresh and new. It was painted red; and the colour even seemed to be but little faded. Things of a similar kind, indeed, have been met with in Spitzbergen, which have resisted all injury from the weather during the lapse of a century.

There is nothing remarkable in the appearance of the sun at midnight, excepting, that when its altitude is very small, it may be viewed with the naked eye, without producing any painful sensation; but when it is more than four or five degrees above the horizon, it generally appears as effulgent as with the same elevation in Britain. The force of the sun's rays is sometimes remark-

\* In the year 1808, a leg of mutton which was taken out to Greenland in the ship *Resolution*, returned to Whitley unsalted. It was then allowed to remain on board of the ship, exposed to the sun during two remarkably hot days, when the thermometer in the shade was as high as 80°. After this, it was presented to an epicure in the town; and although it was reduced to about half its original dimensions by the loss of fat, &c. it was declared, when cooked, to be the most exquisite morsel that he had ever tasted.

able. Where they fall upon the snow-clad surface of the ice or land, they are, in a great measure, reflected, without producing any material elevation of temperature; but when they impinge on the black exterior of a ship, the pitch on one side occasionally becomes fluid, while ice is rapidly generated on the other; or while a thermometer, placed against the black paint work on which the sun shines, indicates a temperature of 80 or 90 degrees, or even more, on the opposite side of the ship a cold of 20 degrees is sometime found to prevail.

This remarkable force of the sun's rays, is accompanied with a corresponding intensity of light. A person placed in the centre of a field or other compact body of ice, under a cloudless atmosphere and elevated sun, experiences such an extraordinary intensity of light, that, if it be encountered for any length of time, is not only productive of a most painful sensation in the eyes, but sometimes of temporary, or even, as I have heard, of permanent blindness. Under such circumstances, the use of green glasses affords a most agreeable relief. Some of the Indians in North America defend their eyes by the use of a kind of wooden spectacles, having, instead of glasses, a narrow perpendicular slit, opposite to each eye. This simple contrivance, which intercepts, perhaps, nine-tenths of the light that would reach a naked eye, prevents any painful consequences from the most intense reflection of light that ever occurs.

The state of the winds is very curious.—

Advancing towards the polar regions, we find the irregularities of the winds increased, and their locality more striking;—storms and calms repeatedly alternate, without warning or progression; forcible winds blow in one place, when at the distance of a few leagues, gentle breezes prevail;—a storm from the south, on one hand, exhausts its impetuosity upon the gentle breeze, blowing from off the ice, on the other, without prevailing in the least;—ships within the circle of the horizon may be seen enduring every variety of wind and weather at the same moment; some under close-reefed topsails, labouring under the force of a storm; some becalmed and tossing about by the violence of the waves; and others plying under gentle breezes, from quarters as diverse as the cardinal points. The cause of some of these phenomena, has, in the last chapter, been referred to the frigorific influences of the ice, the accuracy of which opinion, experience and observation confirm.

Lightening seldom occurs to the northward of the arctic circle, and when it does, is hardly ever accompanied by thunder. Hail is very rarely seen; a fact which tends to prove the electrical origin of that aqueous concretion. Snow falls almost daily in April, May, and June. Its particles are astonishingly varied, and most wonderful in their forms, when viewed through the microscope.

Snow of a reddish or brownish colour is not unfrequently seen. The brownish stain which occurs on shore, is given by an earthy substance brought from the mountains, by

the streams of water derived from thawing ice and snow, or the fall of ruin; the reddish colour, as far as I have observed, is given by the mute of birds; though, in the example met with by Captain Ross in Baffin's Bay, the stain appears to have been of a vegetable nature. The little auk (*Alca alle*), which feeds upon shrimps, is found, in some parts of the polar seas, in immense numbers. They frequently retreat to pieces of ice or surfaces of snow, and stain them all over red with their mutes. Martens saw red snow in Spitzbergen, which he considered as being stained by rain-water running down by the rocks.

In our next we shall extract some of the most interesting zoological intelligence, connected with the whole and other inhabitants of the polar regions.

#### ANALYSIS OF THE JOURNAL DES SAVANS, FOR DECEMBER, 1819.

Art I. Deux Lettres, &c. Two Letters to Lord Aberdeen, on the Authenticity of the Inscriptions of Fourmont, by M. Raoul Rochette.

M. Fourmont, member of the Academy of Inscriptions and Belles Lettres, was commissioned by Louis XV. to travel through Greece, to collect inscriptions, fragments of antiquity, and manuscripts. This academicalian employed three years on his travels, and came back with a rich harvest of monuments of all kinds. His return made a great sensation; people conceived rather exaggerated hopes of the result of his journey; and he himself, it must be owned, did not a little contribute to encourage these hopes, from not having a very clear idea of the value of the monuments which he had brought with him. He soon went so far as to flatter himself with possessing an ancient copy of the laws of Solon. Nobody, however, entertained any doubt of the veracity of the traveller, and of the authenticity of the inscriptions which composed his collection. Illustrious men of letters, Freret, Torrenuzza, Barthelmy, the authors of the "Nouvelle Diplomatique" Pacciandi Lanzi quoted, translated and enumerated with confidence some of these inscriptions.

That spirit of scepticism, however, which had endeavoured to cast doubts on monuments which are placed beyond the reach of attack, such as the inscriptions of Cyrene of Ancona, the famous eugubian tables, and even the Parian marbles, did not long refrain from trying to impugn the inscriptions of Fourmont. The form (then without authority) of the letters which were met with in some of those inscriptions; the peculiarities of language they contained, and which it was difficult to explain; some new facts which were thought to be contradictory to facts well known, were so many reasons to suspect Fourmont of having designed to impose on the learned world, by monuments forged according to his own fancy. What especially contributed to give weight to this opinion, was a letter from Fourmont to M. de Maurepas, in which he confesses having

caused marbles to be broken, mutilated and buried, after having copied the characters carved on them.\* This barbarous proceeding may have been suggested to Fourmont by a mistaken zeal, to insure to his country the honour of being the first to publish such rare monuments; but people rather saw in it a precaution to conceal his frauds, and to destroy the traces of his imposture.

These doubts were already much diffused in the learned world, and the prejudice (for we may call by this name an opinion, the grounds of which had not been duly weighed,) against the authenticity of the inscriptions of Fourmont began to take root, when a learned English belleuist, M. R. Payne Knight, at the end of his book on the Greek Alphabet, attacked in form the inscriptions of Sparta and Amyclæ, which are the most ancient. As he had made no use of the inscriptions of Fourmont in the course of his work, he thought himself called upon to explain the reasons which had induced him entirely to neglect them.

Hitherto the arguments of Mr. R. P. Knight had remained unanswered: the authority of so distinguished a writer had not a little contributed to confirm the opinion already established; and the inscriptions of Fourmont, instead of enriching the number of printed collections of this kind, have remained buried in the port-folios of the Royal Library.

Within a few years, however, more favorable opinions were beginning to be entertained of these inscriptions: the letters which had appeared the most strange, the forms of speech which had seemed the most suspicious, were found again upon Grecian vases, medals, and marbles, which were gradually discovered. The inscriptions which Fourmont took for a copy of the laws of Solon, were found to be extremely curious inscriptions relative to the internal government of Athens, and shewing the same peculiarities of language and orthography as the Choiseul marbles, discovered since the death of Fourmont; their authenticity could not be liable to the smallest doubt. As the falsehood of the whole had been inferred from a small number of doubtful traits, people were now inclined to believe the authenticity of the greater part of these inscriptions, from the incontestable authenticity of some of them, so that the Academy of Berlin had an exact copy taken, which it preserves in its archives, and intends to publish.

Meantime the difficulties raised by Mr. R. P. Knight were not yet removed; many persons; though allowing the authenticity of a great number of these inscriptions, retained their doubts respecting the most ancient; namely those of Sparta and Amyclæ; and persisted in believing that the objections of Mr. R. P. Knight were unanswerable. Lord Aberdeen, in a letter, which Mr. T. Walpole has inserted in his Memoirs relative

\* Mr. Dodwell, in his Travels in Greece (Vol. I. p. 406), informs us that the remembrance of this infamous proceeding of Fourmont is still preserved in the environs of Sparta. See Lit. Gaz. of last year.

to Turkey, has very lately revived a part of them.

It is on occasion of this letter that Mr. Raoul Rochette has been induced to address to Lord Aberdeen two letters, in which he examines, one by one, and repels the assertions of Mr. R. P. Knight. The general impression which results from the reading of these letters is, that Mr. Knight has suffered himself to be carried rather too far by the desire of taking from the inscriptions of Fournont all authority; which alone can explain how inaccurate and false assertions can have escaped a man so ingenious and so well informed.\*

After this introduction Mr. Letronne enters into a detailed examination of Mr. R. Rochette's refutation of the opinion of Mr. Knight; he thinks that the author of the letters has shewn Mr. R. P. Knight's objections to be ill-founded. It must be observed that Mr. R. Rochette does not in any way prejudice the question of the authenticity of the inscriptions of Fournont. The form of his work is wholly negative; he combats the arguments that have been used against their authenticity; he merely seeks to place the question on the same footing as it was before an unfavourable prejudice had arisen and taken root. He wishes it may be believed that Fournont was a man of no great ability, but not a forger; leaving it to a future time to furnish positive proofs of the veracity of that traveller.

## ORIGINAL CORRESPONDENCE.

### RUSSIAN EXPEDITION TO THE FROZEN OCEAN.

Lieutenant Lasarew, of the Imperial Navy, who made a voyage last year into the Frozen Ocean, with the brig *Novaja Zemlja*, has just published an account of his expedition. The brig was fitted out at Archangel. The crew consisted of fifty persons, including the Commander Lasarew, two lieutenants, a midshipman, a surgeon, pilot, &c. The brig sailed from Archangel June 9th, O. S. The plan was, to go first to Waygat Straits, and then to sail round Nova Zembla, and take a survey of the coast. After incredible difficulties, with which they had to contend owing to the immense accumulation of ice, they at length reached the entrance of Waygat Straits, on the 27th of July; but were unable to enter it, on account of the ice. The coast was frequently seen from the vessel; but it was so blocked up with solid ice that it was impossible to go on shore. The continued fogs and the cold proved injurious to the health of the crew. The navigators do not discover any sign of vegetation: the country was covered with snow. It seems indeed that there is a greater accumulation of ice in that part of the sea than there formerly was; for the Russian hunters do not go to Nova Zembla, but rather to the

\* This is the opinion of Messrs. R. Rochette and Letronne; from whom, with all due humility, we beg leave most essentially to differ.—*Edith. L. G.*

more remote Spitzbergen, to chase the white bear, &c.

After the brig had reached 72° 2' North latitude, and 50° 8' East longitude (from Greenwich), and had surveyed some points of the coast, the season for navigating those seas being passed, she returned to Archangel. In sailing in different directions between the ice, the brig reached 73° 26' North latitude, in longitude 48° 54' East from Greenwich, on the 9th of August. The thermometer of Reaumur fell on that day from half a degree above, to two and a half deg. below zero. Three of the crew died during the voyage; and on their return to Archangel, on the 4th September, O. S., there were only six of the sailors able to do the duty of the ship, so that the officers were obliged to perform the duty of sailors.

### GERMAN DRAMA.

The name of Grillparzer, though not very familiar to English ears, is heard with pleasure in the literary circles of Germany; and though the author is a young man, he has made considerable progress in public opinion. Of all his productions, that which seems to have excited the greatest admiration, is a tragedy founded on the classic story of Sappho and Phaon. From the enthusiasm with which it has been received on the continent, we are gratified in being able to announce that a translation of it is on the eve of publication, by a gentleman whose name is not unknown in the literary world. We have been favoured with the following extracts from this play, and submit them to our readers, in the supposition that they may create an interest in them to peruse the whole. Phaon is giving an account of the impression which the first sight of Sappho made upon his mind—

I cannot but remember that thy form  
In godlike attributes still stood before me,  
When'er this trembling hand dared touch the lyre.

When, mid the joyous circle of my friends,  
Within the precincts of my parents' hearth  
I sat, Theano, my good sister, brought  
Thy zephyr, enlured among the household gods;  
To sing thy glorious minstrelsy, O Sappho!  
How quickly childhood's self was mute, and how,  
How the girls circled round, solicitous  
That not one homely syllable be lost.  
But when she, breathless with emotion, sang  
In glowing numbers of the love-sick youth,  
All the fond praises of the queen of love,  
And of the maid who wept the lifelong night,  
How did attention charm each ear, and swell  
Each bosom with desire; how did they chide  
Each breath of air that seemed an interruption!  
Then did Theano, resting on her arm,  
With eye upturned on vacancy, exclaim,  
What are the features of this wondrous woman?  
Methinks 'er now I see her: by the Gods!  
I'd point her out to thee, though mingled with a thousand.

Then was the chain of every tongue set loose,  
And each one put his fancy on the rack  
To deck thee with some lovely attribute:  
One gave Minerva's eye, one Hebe's arm,  
A third the magic girdle of love's queen.  
But I alone arose, and wandered forth  
Into the silent solitude of night,  
Where Nature's pulse seemed sweetly slumbering;

There did I stretch my arms for thee;  
Then, as the silver radiance of the moon  
Played on my forehead, and the night-breeze cooled

The fever of my brow, then thou wert mine;  
Then thou wert truly mine! and then I felt  
Thy near approach, and Sappho's image swam  
Upon the light and lovely clouds of heaven.

And when my father sent me to the games  
Of famed Olympia, how some inward voice  
In whispers told me Sappho should bear off  
Th' immortal wreath of music and of song!  
To see my heart burned within me with desire,  
To hear her lovely form! My courser sunk  
Exhausted ere Olympia rose before me.

I came; but not the rapid-coursing cars,  
The wrestler's art, nor the disk's joyous game,  
Could entrance win into my prisoned soul.  
I cared not who might bear away the crown;  
I was to gain the loveliest and the best.

In seeing her who was the crown of women.  
But when the great and awful day arrived,  
Destined to view the rivalry of song,  
Alcæus and Anacreon stood forth,  
But sang in vain; they could not loose the spell  
That bound my senses up. But, hark! the voice

Of mingled murmur rises from the throng,  
That separating leave a vacancy.

She comes! she comes! and in her hand a lyre  
Of polished gold. Above the multitude,  
Mute with astonishment, she stood: her robe  
Of white, that flowed down to her delicate feet,  
Showed like a streamlet o'er a bed of lilies.  
Green palm of laurel interwoven, formed  
The border of her robe, and imaged glory.  
Happy device! that thus at once expressed  
The poet's object and his recompense.

And, like the crimson-coloured clouds of morn,  
Veiling the bright pavilion of the sun,  
A purple mantle flowed around her shoulders;  
While thro' the raven tresses of her forehead,  
Shone her white brow, whose arch of majesty  
Proclaimed superiority and triumph.  
Something within me whispered it was she:  
It was herself! How the rejoicing throng  
Confirmed my fond imaginings, and raised  
The name of Sappho to the clouds of heaven!  
Then came thy song, and with it victory.

And, in the moment of extatic rapture,  
When from thy hand the lyre down dropped, I rushed

Through the close multitude, and caught thine eye,

Then shrink abashed, and covered with confusion.

Thou know'st the sequel better than myself,  
For still I seem wrapt in a reverie,  
And ask myself what is reality,  
And what the splendid colouring of a vision!

The other extract is from the last scene, where, previous to her precipitating herself into the sea, she generously gives the hand of Phaon to her rival.

O ye, the sacred denizens of heaven!  
Who have endowed me with such numerous blessings,  
The gift of song, and all its inspiration;  
A heart to feel, a mind to think, and power  
To image to myself a form like his.

Ye have endowed me with these noble gifts,  
And for these blessings, I return ye thanks.  
Ye've sown my poetry in distant realms,  
To bud and blossom to eternity.  
My golden songs are on the tongues of strangers,  
And only with the earth my fame shall perish.  
I thank ye! Ye have given your poetess

To sip, but drink not of life's flower-crowned cup.

Lo! here I stand, obedient to your mandates,  
And from my lips dash down the flower-wreath-  
ed cup.

I have t'er done as you commanded me;  
Deny me not life's final recompence.  
Those who belong to you know not disease;  
Know not the weakness of mortal sickness;  
In the full prime and blossom of existence,  
You summon them to your celestial mansions.  
Grant that my destiny be like to theirs!  
Oh, suffer not your priestesses to become  
A name of scorn unto your enemies,  
To fools, who in their own conceit are wise!  
You have destroyed the flower—break now the  
stem!

Oh let me finish life as I began it;  
Preserve me from the terrors of this trial,  
I feel myself too weak to wrestle longer;  
Give me my crown, acquit me in the field,

(With an air of inspiration.)  
The flame of yonder altar burns more bright;  
Aurora bursts from the unfolding east;—  
At last my prayers are heard; ye gods, I thank  
ye!

Come Phaon and Melitta! here!—A friend  
From a far country kisses thee.

(Kissing Phaon's brow.)  
Thy mother  
From the tomb sends this kiss to thee.

(Kissing Melitta.)  
And now,  
Here at the altar of immortal Venus,  
Let the dark fate of love be consummated.

(Hurries towards the altar.)  
[Rhapsody, one of her attendants.]  
What do I see? what inspiration breathes  
O'er her features? The celestial splendour  
Of the immortals seems to circle round her!

[Sappho hurries to an elevation of the shore,  
stretches forth her hands, and blesses  
the *Loera*.]

Give love to men and reverence to the gods!  
Enjoy your blessings, but forget not Sappho!  
Thus I discharge the final debt of life—  
Bless them, ye Gods! and take me to yourselves!  
[She precipitates herself from the rock.]

## ARTS AND SCIENCES.

### MISCELLANEOUS.

*Hydrophobia*.—Signior Salvatori, at Petersburgh, asserts that the inhabitants of Gadici have discovered a remedy for *Hydrophobia*. Near the ligament of the tongue, it is said, of the creature bitten and becoming rabid, pustules of a whitish hue make their appearance, and open spontaneously about the thirteenth day after the bite; at which period the first symptoms of true *hydrophobia* occur. If these pustules are opened on the ninth day after the bite, the ichor spit out, and the parts well washed with salt water, the fatal effects of the disorder are prevented.—*Bibl. Ital.*

*Natural Phenomena*.—On the 3d of August the shock of another earthquake was experienced in India. In Java, on the 8th of March, it rained so heavily for 24 hours, that many hills in the territory of Diagorogo burst with the weight of water with which they were saturated. On the 29th a severe earthquake was felt. The shock, thrice repeated, was so violent as to clash the sabres hanging on the walls of the barracks against each other, as if persons were fighting with them.

*IRON BOAT*.—A passage boat of malleable iron now plies on the Forth and Clyde Canal. It is called *The Fulcan*, and succeeds to admiration. The length is 63 feet; beam, 13 feet; depth, 5 feet; draught of water when launched, 22 inches abaft, and 19 inches forward—when fitted with cabins, &c. 37 and 25 inches—when laden with 200 passengers and their baggage, under 48 inches, on an even keel. The weight of iron employed was twelve tons, 11½ cwt. which is less than a wooden vessel of the same dimensions. The iron is of the kind called *Scrap*.

Dr. Marcet has confirmed by experiment Dr. Wollaston's hypothesis, that all sea-water contains a small portion (say 1-2000th part) of potash. Dr. W. thinks it exists in the state of sulphate.

*AMBER*.—Dr. Brewster maintains, from a multitude of examinations, that amber is an *indurated vegetable juice*.

*Coal Gas*.—Mr. Clegg has contrived a new apparatus, by which he can produce 25,000 cubic feet of coal-gas from one chaldron of Newcastle Wall's-End coal, without generating either tar or ammoniacal liquor; being 15,000 cubic feet more than was formerly produced. The coal is introduced by a mechanical process, in strata, not exceeding half an inch in thickness. In this way the retorts are kept at a uniform heat, and the coal is completely and rapidly decomposed; so that the whole of the hydrogen combines with the charcoal, constituting olefiant gas; and the matter which usually escaped in the form of tar and ammoniacal liquor, is also perfectly decomposed. The expense of producing 50,000 cubic feet of gas in 24 hours, on the old plan, is 3817½; upon the new plan, 1123½; and the expense of producing an equal quantity of light from oil, 19,010.

## LEARNED SOCIETIES.

### OXFORD, APRIL 1.

In a full convocation holden on Thursday, March 23, it was decreed, for the purpose of recording the grateful sense entertained by the University of the many acts of favour and munificence which his Majesty has been graciously pleased to confer upon it, that a Term should be granted, to be considered and counted as statutorily kept for any one Degree for which the Candidate may wish to claim it, to all those who were actual Members of the University, on the 29th of January, being the day of his Majesty's accession to the throne.

On Wednesday, March 22, the Rev. T. Loveday, M. A. Fellow of Magdalen College, was admitted Bachelor in Divinity. On Monday, March 27, the last day of Lent Term, the following Degrees were conferred:—

*Doctors in Medicine*.—Jeremiah Gladwin Cloves and Francis Willis, Brasenose Col.

*Masters of Arts*.—Rev. Archibald Charles Henry Morrison, Wadham College; Augustus Agill Colville, Student of Christchurch; Frederick Dawson, Oriel College.

The whole number of Degrees in Lent Term was—D. D. three; D. Med. three; B. D. ten; M. A. incorp. one; M. A. twenty; B. A. thirty-four. Determiners one hundred and ninety-nine. Matriculations, one hundred and sixteen.

### CAMBRIDGE, MARCH 31.

Sir Charles Smith, of Trinity College, was on Friday last admitted to the degree of Honorary Master of Arts.

## FINE ARTS.

### HISTORICAL PORTRAITS.

The present exhibition of the British institution in Pall Mall, is to be followed by another, which will prove highly gratifying to the public. The Directors intend to form a collection of the portraits of as many of the eminent characters connected with the English History as they can get together; of course they do not profess to be able to obtain a complete series; but from what we learn, a sufficient number has been already offered to insure a highly interesting exhibition. We imagine that every person who has a well authenticated portrait in his possession, of any distinguished ancestor, will be ready to lend it for the purpose above-mentioned.

The British Gallery will continue open during another week. We intended to have concluded our critique with some notice of the sculpture, and a few general remarks; but our limits forbid.

*ROYAL ACADEMY*.—Sir Thomas Lawrence has been elected President of the Royal Academy, in the room of the late Mr. West. Though more generally known as a portrait than as a historical painter, the extrinsic beauty, grace, and character which his individual likenesses so often possess, seem to raise them to a higher rank than is usually assigned to that branch of the art; while his *Satan* furnishes a noble example of the extent of his powers were he to devote them to works of the grandest kind. We might notice here, that portrait painting is rather viewed anomalously by men of different opinions; and between the extremes to which its pretensions are exposed, hardly obtains that just medium award to which it is entitled. The mass look upon it with more than its fair proportion of favour, as its preponderance in all our exhibitions fully proves; but, on the other hand, many deny it the honour which it justly deserves; for excellence in this kind requires no mean talent, nor slight cultivation. Rembrandt, Vandyck, and Reynolds, would be immortal through portraiture, had they never done any thing else; and if the greatest attainments in perspective, chiar-oscuro, expression, attitude, colour, draping, foreshortening, design, contribute essentially to the formation of a master, there are none of these which may not be carried to perfection by a painter of portraits.

We are informed, that the new President is likely to put forth his titles to the distinction he has reached, in a striking manner, at the ensuing exhibition, by presenting to the public the celebrated pictures which he has been executing on the continent. Seven or eight of the most renowned and elevated personages in Europe, of the life size\*, and in Sir Thomas's best style, are, we understand, ready for Somerset House, where they will undoubtedly add largely to the interest of the approaching annual display.

The mortal remains of Mr. West were publicly interred in St. Paul's on the 29th ult. The funeral, owing to the circumstances of the times, was not so splendidly attended as it would otherwise have been. Still however it was an impressive, solemn, and gorgeous spectacle.

\* These are portraits of the Emperor of Russia, Emperor of Austria, King of Prussia, Count Nesselrode, General Czernicheff, Prince Metternich, Prince Schwarzenberg, Prince Hardenberg, the Archduke Charles, the Pope, Cardinal Gonsalvi, the Duc de Richelieu, &c. &c. The likenesses of the Pope and Gonsalvi are, we hear, remarkably fine. The countenance of his Holiness is one of the noblest ever seen. That of Gonsalvi, though nearly a mass of red, (his dress being scarlet, and himself seated in a common chair, with a crimson curtain or drapery) is represented as wonderfully harmonious, and by no means offensive to the eye by its glare. His Majesty, for whom these pictures have been painted, will, we have no doubt, with his accustomed liberality and royal favour towards the arts, grant permission to have as many as the rules permit in the next exhibition.

## ORIGINAL POETRY.

[By Correspondents.]

To Mr. Martin, the Baker, on his late Victory over the scientific Cabbage.

BY MR. BREAKWINDOW.

Thou Master of the Rolls, whose potent fist  
Has swept the garden stuff clean off the list,  
Accept this tribute without jeer or gibe,  
From one fond votary of the milking tribe:  
Long mayst thou, man of crumb, make claret  
flow,

And bury thy fist in flesh as well as dough\*;  
Knead all the coxes as tight and close  
As the Cabbage who did gather  
Himself compact, to avoid the blows,  
Like chickweed in rainy weather.†

Since Randall's mighty genius gone,  
The ring's scarce worth the looking on;  
Crib gets the maul,  
And can't come out.

And Turner's now too fat to fight,  
And Carter's slum\*;  
No more can hum,

\* Towards the middle of the fight, the report says, Martin literally buried his fist in the body of Cabbage.

† Chickweed, it is well known, possesses this barometer-like quality.

‡ Slum, anglicised gnomon. The attractions of this self-elected Champion have pretty well expired.

And Donnelly's bid the world "good night."  
So to thee we look now, scientific Martin,  
To shew the coxes the tricks thou'rt smart in.

## THE DRAMA.

DRURY LANE.—*Hamlet*. The young gentleman whom we mentioned a fortnight since, performed *Hamlet* at this Theatre, on Thursday—a day too late in the week for detailed criticism in our publication. He seems to be new, at least to a large stage; and consequently his bye-play is often ungraceful. A stoop, almost habitual, adds to this imperfection. In person and countenance the new actor is otherwise well suited to the part; being tall and gentle, with an expressive face and a fine dark eye. His great deficiency, however, for a task of the magnitude and difficulty of that which he undertook, is the want of passion and force. He struck out little of the fire of *Hamlet*, and seldom rose so high as to merit even partial plaudits. On the other hand, he displayed, in a considerable degree, the rare merit of acting naturally; and thus made an impression on the audience, though far removed from that which a master in the art would produce. In the management of his voice he was unfortunate; and, probably endeavouring to pitch it to the extent of the space around him, he delivered himself in three or four several keys, from the base of an assumed falsetto, to the altitude of his own tones. His play-scene was the best; but, even that finished ineffectively: the rest were similarly unequal. The reception was kind.

COVENT GARDEN.—On Monday a pantomime, originating in the famous nursery tale of *Underella*, was produced at this Theatre for the Easter Holidays. It is a very brilliant and superb thing, and meets unanimous and deserved approbation. The introductory part, before the *Harlequinade* begins, is excellent; the fairy-godmother, the best fairy we ever saw upon the stage; and the prince's saloon, where the ball is given and the adventure of losing the slipper ensues, one of the most beautiful scenes imaginable. As a punishment for the neglect of her injunctions, the fairy transforms the parties, and they roam about performing the usual tricks, till the slipper is found. No correction is attempted in this branch of the business; and the pantomime adds another to the long modern list of such as depend entirely on machinery and dancing, but are defective in what ought to be their grand principle, viz. a motive for the various devices, shifts, and acts of the dramatic personae. We cannot see why a piece of this kind should not be contrived, in which an assignable reason might be given for all the mischievous inventions of the clown, and all the transformations of *Harlequin*. So constructed, a pantomime would be far more amusing than it is, as a mere jumble of senseless scenes.

The Monastery has already furnished a piece (arranged by Mr. T. Hoake) for Covent Garden Theatre.

## VARIETIES.

*Grand Image*.—When the Peishwa's baggage was captured at Nassick, in May 1818, a golden image of the idol Vishnu was found among his family gods and jewels. It was made in 1707, of the finest gold of Ophir, and weighs 370 tolas. Vishnu is reposing on the five-headed serpent (eternity); whose heads are spread into a kind of canopy over the deity; and from each mouth issues a forked tongue. Vishnu is contemplating and willing the creation of the world; and the creative power, Brahma, in his usual four-faced form, is seen springing from the umbilical region on a lotus. On his right breast is a gem named Bhugulita.

*Phœnician Navigator*.—Some workmen recently digging a cave in the environs of the Cape of Good Hope, discovered the hull of a vessel, built of cedar, and supposed to be the remains of a Phœnician galley. Should this hypothesis be verified, it would prove that the adventurous Tyrians had reached the southern point of Africa.

The largest cataract in Europe has been discovered in the interior of Iceland.

A morse or sea-horse, ten feet long, found its way to the Hebrides, in 1817, and was killed. The inhabitants considered it as a supernatural creature, between their imaginary entity, the *Each Nisg*, or Water Horse, and a non-entity, the *Selch Nisg*, said to be seen in some of the island lakes, and 12 miles in length.

At Glasgow, an institution is about to be formed for the encouragement of the fine arts. An Annual Exhibition, and Gallery form parts of the plan.

## METEOROLOGICAL JOURNAL.

MARCH, 1820.

Thursday, 30.—Thermometer from 31 to 60.  
Barometer from 30, 11 to 30, 20.  
Wind S. W. and N. by W.—Clouds passing till noon, the rest of the day clear.  
Friday, 31.—Thermometer from 29 to 62.  
Barometer from 30, 17 to 30, 15.  
Wind N. E. and W. by S. 1.—Generally clear.  
A white frost, and a fog in the morning.

APRIL, 1820.

Saturday, 1.—Thermometer from 31 to 59.  
Barometer from 30, 20 to 30, 15.  
Wind W. by S. 1. and 4.—Generally cloudy, sunshine at times.

Sunday, 2.—Thermometer from 42 to 64.  
Barometer from 30, 24 to 30, 27.  
Wind W. by S. 2. and 4.—Clouds generally passing, clear at times.

Monday, 3.—Thermometer from 45 to 65.  
Barometer from 30, 30 to 30, 38.  
Wind N. and E. by N. 4.—Cloudy till the evening, when it became clear.

Tuesday, 4.—Thermometer from 31 to 60.  
Barometer from 30, 19 to 30, 07.  
Wind E. by S. 1.—Clear.

Wednesday, 5.—Thermometer from 31 to 70.  
Barometer from 30, 01 to 29, 82.  
Wind E. 4 and S. by W. 1.—Generally clear, clouds passing at times.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

The Editor can, he fears, do nothing in the winter months by L. L.: certainly nothing with his present information, which does not enable him even to decide.

Mr. Galt; C. J. R.: *Alphons*, &c. in our next. Erratum.—In our last Number, in the *Epigram* translated from the French, last line but one: for Rascal's term, Rascal's a term.

Miscellaneous Advertisements,  
(Connected with Literature and the Arts.)

## British Galleries, Pall Mall.

The Exhibition of the Works of Modern Artists will, by particular desire, continue open until Saturday, the 15th instant.... By order!

JOHN YOUNG, Keeper.

Admission 1s.—Catalogue 1s.

MR. HAYDON'S PICTURE of "Christ's Entry into Jerusalem," is now open for Exhibition, at Bullock's Street Room, upstairs to the right, from ten till six.—Admission 1s. Catalogue 6d.  
\* Fear not Daughter of Zion; behold thy King cometh, sitting on an ass's colt."

## Artists' General Beneficial Institution.

The Subscribers and Friends to this Institution will celebrate the Sixth Anniversary in Freemason's Hall, on Wednesday, the 12th of April next, his Royal Highness the Duke of Somerset, Patron of the Institution, in the Chair. Dinner on Table at half past five. Tickets at one guinea each, to be had at the bar of the Tavern, of the Stewards, and of the Secretary, No. 65, Upper Charlotte Street, Fitzroy-square. This Institution, founded in 1814, has on its constitution, no exclusive privileges; its Members consist of Benefactor Subscribers, whose object is by an appeal to public liberality, to extend relief to all distressed Artists, whose works are known and esteemed by the public, and to their Widows and Orphans. Merit and distress form the only claim to its benefits.

(Signed) JOHN YOUNG, Hon. Sec.

**MUSIC**—The new very highly admired patent portable Harp, called DITAL HARP, constructed upon quite a new principle of action, and which produces all the brilliancy, sweetness of tone, and every effect of the Pedal Harp, although not one third the size; they accompany the voice, also the Piano-forte, &c. most charmingly, are very elegant, and so easy to learn, that, (by the directions published for learners) Ladies completely instruct themselves in a very little time. The above instruments are constantly ready, in beautiful variety, for the inspection and choice of the Nobility, Gentry, and polite Musical World, at Mr. LIGHT'S, the inventor and patentee, No. 8, Foley Place, Cavendish Square. The prices of the Dital Harps are but from 16 to 20 guineas, handsome cases included; and their weight on the average only 14lb. which renders them so extremely convenient in travelling abroad, &c. N. B. Ladies who may choose to take a few Lessons, may be attended either at Mr. L.'s own house, or at home; the Piano-forte, Singing, and the whole Theory of Music, likewise taught.

**CHRONOLOGICAL CHART**, shewing in one view, "The Contemporary Sovereigns of Europe, from the Norman Conquest of England, to the present time." Price 3s. plain, 7s. finely coloured, and 10s. 6d. Canvas and Rollers. Published by R. J. Holdsworth, 14, (north side) St. Paul's Church-yard, and may be had of all booksellers.

\* As a companion in the study of Modern History, we can strongly recommend it as useful to ask on the walls of a library or school-room.—See *Monthly Magazine*, April 1, 1820.

In order to guard the Public against the shameless Deceptions, spurious Imitations, and gross Impostures, the Author of *Dr. Sympson's Search of the Picture*, thinks it right to state that none of the works attributed to him are genuine, except those illustrated by Rowlandson, and published by Arkman, 101, Strand.

in 12mo. price 7s. 6d. boards, the 2d edition, revised, of  
**PRIVATE EDUCATION; OR A PRACTICAL**  
**PLAN for the Studies of YOUNG LADIES,** with  
 an Address to Parents, Private Governors, and their  
 Pupils, by ELIZABETH APLFORD.

"This work is judiciously adapted to become a useful manual in the hands of persons who are desirous of securing for their tender charge all the advantages of elegant literature, and the accomplishments of polished manners, without putting to capricious hazard those pure and firm principles which can alone render them useful in this world and happy in the next.

Printed for Henry Colburn and Co. Conduit Street.

In eleven volumes, price 10s. 6d. each.  
**HORÆ HOMILETICÆ; OR DISCOURSES** (in the Form of Sermons) upon the Whole Scriptures, by the Rev. C. WILKINSON, M. A. Fellow of King's College, Cambridge. Printed for T. Cadell and W. Davies, Strand; Hatchard and Son, Piccadilly; Deighton and Sons, and Nicholson, Cambridge; Parker, Oxford; Blackwood, Edinburgh; and Cumming, Dublin.

N. B. Six Volumes are ready for delivery now; the other five, it is hoped, will be ready on the first of May.

In 3 vols. 12mo. price 11. 1s.  
**CERIALINE; OR, Modes of Faith and Practice. A Tale. BY A LADY.** Printed for T. Cadell and W. Davies, Strand; and W. Blackwood, Edinburgh.

"This is the best written novel, except *Anastasia*, which has been published in London for several years. The story is not much, but very pathetic and skilful, so far as it goes. The conversational style one of the best I have seen—clear, natural, and unaffectedly elegant, and full of the spirit of good society. Religion is up-brought in the writer's mind; but in these pages religion wears a character so pleasing, that no novel reader will turn from it as on account of their serious imports. It is said to be written by a Lady—if so, she must be a charming woman, full of grave thoughts and graceful feelings—the very model of an accomplished, reflective, and an affectionate English matron."—*Blackwood's Edinburgh Magazine*.

Second edition, price 10s. 6d. boards.  
**SURGICAL ESSAYS.** Second Part. By ASTLEY COOPER, F. R. S. and B. TRAVERS, F. R. S. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same authors, *Surgical Essays*, Part I. 10s. 6d. boards.

*Bigland's Ancient and Modern History.*  
 Fifth edition, 12mo. price 6s. boards.  
**LETTERS on the STUDY and MODERN HISTORY;** containing Observations and Reflections on the Causes and Consequences of those Events which have produced conspicuous changes in the Aspect of the World, and the general state of human affairs. By JOHN BIGLAND, author of "A Geographical and Historical View of the World," "Letters on Natural History," &c. &c. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and G. and W. B. Whittaker, Ave-Marie Lane.

*Works of Sir Walter Scott, Bart.*  
**THE POETICAL WORKS of SIR WALTER SCOTT,** Bart. now first collected. 12 Volumes. fols. cap octavo; with a Portrait of the author, engraved by C. Heath, 3s. 12s. boards. Miscellaneous Poems. By Sir Walter Scott, Bart. 8vo. 14s. boards. Sir Tristram, a Metrical Romance of the thirteenth century. By Thomas of Ercildoune, called the Rhymer. Edited from the Auchinleck MS. by Sir Walter Scott, Bart. Fourth edition. 8vo. 5s. boards. The Minstrelsy of the Scottish Border. Consisting of the Historical and Romantic Ballads, founded on local Traditions; with an Introduction and Notes. Fifth edit. 3 vols. 8vo. 11. 16s. boards. The Lay of the Last Minstrel. Thirteenth edit. 8vo. 10s. 6d. boards. Ballads and Lyrical Poems. Fifth edit. 8vo. 7s. 6d. boards. Marmion, a Tale of Floddien-Field. Ninth edit. 8vo. 14s. boards. The Lady of the Lake, a Poem. Eleventh edit. 8vo. 14s. boards. Rokeby, a Poem. Sixth edit. 8vo. 14s. boards. The Vision of Don Roderick.—The Field of Waterloo.—and other Poems. 8vo. 10s. 6d. boards. The Lord of the Isles, a Poem. Fifth edit. 8vo. 14s. boards. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and Archibald Constable and Co. Edinburgh.

In 3 vols. 12mo. price 11. 4s. boards.  
**THE MONASTERY; a Romance.** By the Author of *Waverley*, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London; Constable and Co., and John Ballantyne, Bookseller to the King, Edinburgh.

SATURDAY, APRIL 15, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The Fall of Jerusalem : a Dramatic Poem.* By the Rev. H. H. Milman. London, 1820. 8vo. pp. 167.

A poem by the author of *Fazio* and of *Samor*, cannot fail to raise a strong feeling of curiosity in the literary world ; and we hasten to gratify as much of that feeling as we can by this early contribution to a general knowledge of "The Fall of Jerusalem." Our expedition must plead for our imperfections ; and what remarks we venture to offer (in an immethodical manner, as they occur,) will we trust be viewed with indulgence, as suggested by the single perusal of a production which we are sure, from our first impressions, will stand the test of many readings, and lighten under the latest. "The Fall of Jerusalem" is, indeed, a noble poem, far surpassing, in our opinion, the preceding works of Mr. Milman. ... Meeting, as of necessity it must, a comparison with the noblest language of divine inspiration ; ... set side by side with the Book of Job, or Prophecy of Isaiah, ... it seems to us, if less sublime than the latter, to be equally beautiful ; and if less deeply pathetic than the former, to be equally tender and affecting. And let it be remembered that we are here speaking of analogies between human and inspired writings ; between the conceptions of modern genius and the most splendid effusions of gifted antiquity.

The groundwork of the drama is in Joseph, who is one of its interlocutors. The events of the siege of the Holy City by the Romans under Titus, are compressed into a period of about thirty six hours ; and to the historical characters of Simon the assassin, Judas the tyrant, and Eleazar the zealot, among the Jews are added (for the sake of dramatic interest,) several fictitious persons, namely, Miriam and Salome, daughters of Simon, and Ananias, son of John. Great skill is displayed in marking and connecting, not only the circumstances employed in the action, but the peculiar traits and habits of the prominent individuals. Simon, a stern and strict Pharisee, obstinately blinded in expectation of supernatural assistance to save them, and fancying himself prophetic in his visions of coming ruin, is opposed to John, a sensual Sad-

duce, who believes that death is " the bell and the end-all here." Miriam, a secret Christian, sweet, devout, loving, and melancholy, is the contrast to her sister Salome, a creature of force and passion, participating in her father's fierceness, zeal, and superstition. The touching loves and stolen meetings of Miriam with the amiable Javan, at the fountain of Siloe, counterpoise the stormy and unblessed union of Salome with the warrior Ananias ; and forms a delightful episode and relief to the general horror. In like manner does the construction of the piece combine the highest poetical excellences with the finest opposition in situations, and much of the truth of history, as well as prophetic fulfilment. The bridal songs for Salome, mingling with the sack of Jerusalem, are an example of this, and produce a grand and terrible effect. We are unwilling to detain readers from our extracts, and shall therefore abstain from further comment ; only noticing another subject for admiration, which struck us as conferring much spirit and originality upon the poem. We allude to the novelty of the motives, sentiments, and grounds of action peculiar to the Jewish nation ; this gives a freshness and raciness to the whole, which has conspired to augment exceedingly our enjoyment in the contemplation of "The Fall of Jerusalem."

The scene opens on the Mount of Olives : Titus and his army advancing the siege : the conqueror reasoning on the "Stoic philosophy," intimates that his mercy, and desire to spare the city, are overborne by the influence of a superior power, whose workings he cannot expound. He answers those who persuade him to avert the "abomination of desolation."—

It must be—  
And yet it moves me, Romans ! it confounds  
The counsels of my firm philosophy,  
That Ruin's merciless ploughshare must pass  
O'er.

And barren salt be sown on yon proud city.  
As on our olive-crowned hill we stand,  
Where Kedron at our feet its scanty waters  
Distils from stone to stone with gentle motion,  
As through a valley sacred to sweet peace,  
How boldly doth it front us ! how majestically !  
Like a luxuriant vineyard, the hill side  
Is hung with marble fabrics, line o'er line,  
Terrace o'er terrace, nearer still, and nearer  
To the blue heavens. Here bright and sumptuous palaces,

With cool and verdant gardens interspersed ;  
Here towers of war that frown in massive strength,  
While over all hangs the rich purple eve,  
As conscious of its being her last farewell  
Of light and glory to that fated city.  
And, as our clouds of battle, dust, and smoke  
Are melted into air, behold the Temple,  
In undisturbed and lone serenity  
Finding itself a solemn sanctuary

In the profound of heaven ! It stands before us  
A mount of snow fretted with golden pinnacles :  
The very sun, as though he worshipp'd there,  
Lingers upon the gilded cedar roofs ;  
And down the long and branching porticoes,  
On every flowery-sculptured capital,  
Glitters the homage of his parting beams.  
By Hercules ! the sight might almost win  
The offended majesty of Rome to mercy.

This glorious poetical picture at the commencement prepares us for the horror of the catastrophe ; as does also the earliest description of Javan by the waters of Siloe, waiting for Miriam—

Javan, Sweet fountain, once again I visit thee !  
And thou art flowing on, and freshening still  
The green moss, and the flowers that bend to thee,  
Modestly with a soft unobtrusive murmur,  
Rejoicing at the blessings that thou bearest.  
Pure, stainless, thou art flowing on ; the stars  
Make thee their mirror, and the moonlight  
beams

Course one another o'er thy silver bow :  
And yet thy flowing is through fountains of blood,  
And armed men their hot and weary hours  
Slake with thy limpid and perennial coolness.  
Even with such rare and singular purity  
Meet'st thou, oh Miriam, in yon cruel city.  
Men's eyes, o'ercreased with the sights of war,  
With tumult and with grief, repose on thee  
As on a refuge and a sweet refreshment.

But ah ! why com'st thou not ? these two  
long nights  
I've watch'd for thee in rain, and have not felt  
The music of thy footsteps on my spirit—  
I'd cease at a distance.

Javan !  
Javan. It is her voice ! the air is fond of it,  
And cautiously delays its tender sounds  
From the ear that thirsteth for them.—Miriam !  
Nay, stand thus in thy timid breathlessness,  
That I may gaze on thee, and thou not chide me  
Because I gaze too fondly.

She entreats the wonted succour which he has been accustomed to bring for her father, and, endeavoring to persuade her to quit the place over which the curse of the Almighty hangs, he paints the miseries of Roman conquest in the following powerful words—

Even now our city trembles on the verge  
Of utter ruin. Yet a night or two,  
And the fierce stranger in our burning streets  
Stands conqueror : and how the Roman con-  
quers,

Let Giscliala, let fallen Jotapata  
Tell, if one living man, one innocent child,  
Yet wander o'er their cold and scatter'd ashes,  
They slew them, Miriam, the old grey man,  
Whose blood scarce tinged their swords—nay  
turn not from me,  
The tears thou should'st feel as though I wrung  
theu  
From mine own heart, my life-blood's dearest  
drops—  
They slew them, Miriam, at the mother's breast,

The smiling infants;—and the tender maid,  
The soft, the loving, and the chaste, like thee,  
They show her not till—

*Miriam.* Javan, 'tis unkind!  
I have enough at home of thoughts like these,  
Thoughts horrible, that freeze the blood, and  
make

A heavier burden of this weary life.  
I hoped with thee 't have pass'd a tranquil hour,  
A brief, a hurried, yet still tranquil hour!  
—But thou art like them all! the miserable  
Have only Heaven, where they can rest in peace,  
Without being mock'd and taunted with their  
misery.

Miriam's reply appears tame: it is probably owing to the burning glow of Javan's address. In a subsequent passage, she hymns a prayer for her infidel father, in an exalted and sacred tone.

*MIRIAM, alone.*

Oh Thou! thou who canst melt the heart of stone,

And make the desert of the cruel breast  
A paradise of soft and gentle thoughts!  
Ah! it will ever be, that thou wilt visit  
The darkness of my father's soul! Thou knowest  
In what strong bondage Zeal and ancient Faith,  
Passion and stubborn Custom, and fierce Pride,  
Held th' heart of man. Thou knowest, Merciful!  
That knowest all things, and dost ever turn  
Thine eye of pity on our guilty nature.

For thou wert born of woman! thou didst  
come.  
Oh Holiest! to this world of sin and gloom,  
Not to thy dread omnipotent array;  
And not by thunders strew'd  
Was thy tempestuous road;

Nor indignation burnt before thee on thy way.  
But thee, a soft and naked child,  
Thy mother undefiled,  
In the rude manger laid to rest  
From of thy virgin breast.

The heavens were not commanded to prepare  
A gorgeous canopy of golden air;  
Nor stoop'd their lamps th' enthroned fires on high:

A single silent star  
Came wandering from afar,  
Gliding unbeck'd and calm along the liquid sky;  
The Eastern Sages leading on  
As at a kingly throne,  
To lay their gold and odours sweet  
Before thy infant feet.

The earth and Ocean were not hush'd to hear  
Bright harmony from every starry sphere;  
Nor at thy presence brake the voice of song  
From all the cherub choirs,  
And seraphs' burning lyres  
Pour'd th' thro' the host of heaven the charmed  
clouds along.

One angel troop the strain began,  
Of all the race of man  
By simple rhapsodies heard alone,  
That soft Hosanna's tone.

And when thou didst depart, no ear of flame  
To hear thee hence in lambent radiance came;  
Nor visible Angels mourn'd with drooping  
plumes:

Nor didst thou mount on high  
From fatal Calvary  
With all thine own reverend outshining from  
their tombs.

For thou didst bear away from earth  
Not one of human birth,  
The dying felon by thy side, to be  
In Paradise with thee,  
Nor o'er thy cross the clouds of vengeance  
brake:

A little while the conscious earth did shake  
At that foul deed by her fierce children done!  
A few dim hours of day  
The world in darkness lay;  
Then bask'd in bright repose beneath the cloud-  
less sun;

While thou didst sleep within the tomb,  
Consenting to thy doom;  
Ere yet the white-robed Angel shone  
Upon the sealed stone.

And when thou didst arise, thou didst not  
stand  
With devastation in thy red right hand,  
'Flagging the guilty city's murderous crew;  
But thou didst haste to meet  
Thy mother's coming feet,  
And bear the words of peace unto the faithful  
few.

Thou calmly, slowly didst thou rise  
Into thy native skies,  
Thy human form dissolved on high  
In its own radiance.

Our next quotation is selected on account  
of its poetic imagery. Simon and John are  
contending when the high-priest interposes,  
and thus addresses them—

*HIGH-PRIEST.*

Break off! break off! I hear the Gentile horn  
Winding along the wide entrenched line.  
Hear ye it not? hill answers hill, the valleys  
In their deep channels lengthen out the sound.  
It rushes down Jericho's heights, the depths  
Of Hinnom answer. Hark! again they blow,  
Chiding you, men of Judah, and insulting  
Your bare and vacant walls, that now oppose  
not

Their firm array of javelin-hurling men,  
Slingers, and coverers of the liquid fire.  
*Amorah.* Blow! Blow! and rend the heavens,  
thou deep voiced horn!  
I hear thee, and rejoice at thee. Thou sum-  
mer

To the storm of battle, thou that dost invite  
With stern and welcome importunity  
The warrior soul to that high festival,  
Where Valour with his armed hand administers  
The cup of death!

The character of Simon is potentially drawn  
by him-self in the ensuing colloquy, at a con-  
ference with the besiegers.

*Simon.* Peace, John of Galilee! and I will  
answer

This purple-mantled Captain of the Gentiles;  
But in for other tone than he is wont  
To hear about his silken couch of feasting  
Avoid his pauper'd parasites.—I speak to thee,  
Titus, as warrior should accost a warrior.  
The world, thou boastest, is Rome's slave; the  
sun

Rises and sets upon no realm but yours;  
Ye plant your plant foot in either ocean,  
And vaunt that all which ye o'erstride is Rome's.  
But think ye, that because the common earth  
Surfeits your pride with bountage, that our land,  
Our separate, peculiar, sacred land,  
Portion'd and seal'd unto us by the God  
Who made the round world and the crystal  
heavens;

A wondrous land, where Nature's common  
course  
Is strange and out of use, so oft the Lord  
Invades it with miraculous intercession;  
Think ye this land shall be an Heathen heritage,  
An high place for your Moloch? Haughty  
Gentile!

Even now ye walk on ruin and on prodigy.  
The air ye breathe is heavy and o'ercharged

With your dark gathering doom; and if our  
earth

Do yet in its disdain enquire the footing  
Of your arm'd legions, 'tis because it hours  
With silent throes of expectation, waiting  
The signal of your scattering. Lo! the moun-  
tain

Bend o'er you with their huge and lowering  
shadows,

Ready to rush and overwhelm: the winds  
Do listen panting for the tardy presence  
Of him that shall avenge. And there is scorn,  
Yea, there is laughter in our fathers' tombs,  
To think that Heathen conqueror dost aspire  
To lord it over God's Jerusalem!  
Yea, in Hell's deep and desolate abode,  
Where dwell the perish'd kings, the chief of  
earth;

They whose idolatrous warfare erst assail'd  
The Holy City, and the chosen people;  
They wait for thee, the associate of their hopes  
And faithful fall, to join their ruin'd conclave.  
He whom the Red Sea 'whelm'd with all his  
host,

Pharaoh, the Egyptian; and the kings of Ca-  
naan;

The Philistine, the Dagon whipper;  
Moab, and Edom, and fierce Amalek;  
And he of Babylon, whose multitude,  
Even on the hills where gleam your myriad  
spear,

In one brief night the invisible Angel swept  
With the dark, noiseless shadow of his wing,  
And morn beheld the fierce and riotous camp  
One cold, and mute, and tombless cemetery,  
Sennacherib, all, all are risen, are moved;  
Yea, they take up the taunting song of welcome  
To him who, like themselves, hath madly warr'd  
'Gainst Zion's walls, and miserably fall'd  
Before the avenging God of Israel!

Joseph endeavours to soften the councils  
of his countrymen, to which they turn a deaf  
ear, and wound him with a javelin: Titus  
alleges every lingering thought of mercy,  
and the march of calamity is accelerated.  
A conflict ensues of which Salome is a willing  
witness. She thus briefly, but exquisitely  
portrays her lover among the combatants.

*Salome.* And thou! oh thou, that movest to  
the battle

Even like the mountain stag to the running  
river,

Pause, pause, that I may gaze my fill!—  
The Jews are defeated: meanwhile a pro-  
cession of virgins go up to the temple to im-  
plore the divine protection. They are thus  
described by Miriam.

Behold them here!

Behold them, how unlike to what they were!  
Oh! virgin daughters of Jerusalem!  
Ye were a garden once of Hermon's firs,  
That bashfully upon their tremulous stems  
Bow to the wooing breath of the sweet spring.  
Graceful ye were! there need not the tone  
Of tabor, harp, or lute, to modulate  
Your soft harmonious footsteps; your light  
tread

Fell like a natural music. Ah! how deeply  
Hath the cold light of misery prey'd upon you.  
How heavily ye drag your weary footsteps,  
Each like a mother mourning her one child.  
Ah me! I feel it almost as a sin,  
To be so much less sad, less miserable.

A chorus is here sung, which is rather un-  
equally written; but the conclusion, compar-  
ing the present state of the chosen people  
with their peril when pursued by Pharaoh,

and begging for a similar interposition of providence is very charming.

The slow approach of darkness to end the woes of the day is invoked by Miriam with great eloquence, nature, and pathos.

Al! me! ungentle Eve, how long thou lingerest!  
(Oh! when it was a grief to me to lose  
You azure mountains, and the lovely vales  
That from our city walls seem wandering on  
Under the cedar-tufted precipices;  
With what an envious and a hurrying swiftness  
Didst thou descend, and pour thy mantling dews  
And dew-like silence o'er the face of things;  
Strouuding each spot I loved the most with sud-  
denest

And deepest darkness; making mute the groves  
Where the birds nestled under the still leaves!  
But now, how slowly, heavily, thou fallest!  
Now, when thou mightest hush the angry din  
Of battle, and conceal the murderous fœs  
From mutual slaughter, and pour oil and wine  
Into the aching throats of wounded men!  
But it is therefore only that I chide thee  
With querulous impatience? will the night  
Once more, the secret, counsel-keeping night,  
Veil the dark path which leads to Siloe's  
fountain?

Which leads—why should I blush to add—to  
Javan?

In the midst of wreck, Abiram, the false  
prophet, pretends to inspiration, and de-  
mands the union of Salome and Amariah,  
a proposal which is enthusiastically hailed as  
calculated to heal the feuds between their  
parents. While their nuptial revels are ce-  
lebrating within, Javan sketches a fearful  
picture of the outside of the devoted city.

Too true! this night, this fatal night, if Heaven  
Strike not their conquering host, the foe at-  
chieves

His victory. Round the shatter'd walls  
There is the smother'd hum of plated arms.  
With stealthy footsteps, and with muffled arms,  
Along the trenches, round the lowering engines,  
I saw them gathering: men stood whispering  
men,

As though revealing some portentous secret;  
At every sound cried, Hiss! and look'd re-  
proachfully

Upon each other. Now and then a light  
From some far part of the encircling camp  
Breaks suddenly out, and then is quenched as  
suddenly.

The forced unnatural quiet, that pervades  
those myriads of arm'd and sleepless warriors,  
Presages earthly tempest; as yon clouds,  
That in their mute and ponderous blackness  
hang

Over our heads, a tumult in the skies—  
The earth and heaven alike are terribly calm.

Miriam again resists his entreaties to fly,  
and answers in these pious words:—

O!i, dearest, think awhile!  
It matters little at what hour o' the day  
The righteous falls asleep, death cannot come  
To him untimely who is fit to die:  
The less of this cold world, the more of heaven,  
The briefer life, the earlier immortality.  
But every moment to the man of guilt  
And bloodshed, one like—ah me! like my  
father,

Each instant rescued from the grasp of death,  
May be a blessed chosen opportunity  
For the everlasting mercy.—Think what 'tis  
For time's minutes past to delay  
A sinner's death, a murderer's—

But we must not linger on the middle  
graces of the poem: the consummation de-  
mands some of our space. Javan's predi-  
cative song will lead us to it.

I feel it now, the sad, the coming hour;  
The signs are full, and I never shall the sun  
Shine on the cedar roofs of Salem more;

Her tale of splendour now is told and done:  
Her wine-cup of festivity is spilt,  
And all is o'er, her grandeur and her guilt.

Oh! fair and favour'd city, where of old  
The balmy airs were rich with melody,  
That led her pomp beneath the cloudless sky,  
In vestments flaming with the orient gold;  
Her gold is dim, and mute her music's voice,  
The Heav'n o'er her perish'd pomp rejoice.

How stately then was every palm-deck'd street,  
Down which the maidens danced with tinkling  
feet;

How proud the elders in the lofty gate!  
How crowded all her nation's solemn feasts  
With white-robd Levites and high-mixed  
Priests;

How gorgeous all her temple's sacred state!  
Her streets are razed, her maidens sold for  
slaves,

Her gates thrown down, her elders in their  
graves;

Her feast-hall hidden 'mid the Gentile's scorn,  
By stealth her priest-hood's holy garments worn;  
And where her temple crown'd the glittering  
rock,

The wandering shepherd folds his evening flock:  
When shall the work of death begin?

When come th' avengers of proud Judah's sin?  
Acedama! accurs'd and guilty ground,  
Girl wend the city in thy dismal bound,

Her price is paid, and she is sold like thou;  
Let every ancient monument and tomb  
Enlarge the border of thy vaulted gloom,

Their spacious chambers all are wanted now:  
But nevermore shall yon lost city need  
Those secret places for her future dead;

Of all her children, when this night is pass'd,  
Devoted Salem's darkest, and her last,  
Of all her children none is left to her,

Save those whose house is in the sepulchre.  
Yet, guilty city, who shall mourn for thee?  
Shall Christian voices wail thy devastation?

Look down! look down, avenged Calvary,  
Upon thy late yet dreadful expiation:  
Oh! long forgotten, though slow accomplish'd  
fate,

"Her house is left unto her desolate;"  
Proud Cesar's ploughshare o'er her ruins driven.  
Fulfil at length the tardy doom of heaven;  
The wretched viad's drops at length are pour'd  
On the rebellious race that crucified thy Lord!

We now approach the closing scene; and  
here Mr. Milman has expended all his  
strength. The portentous and prodigious  
night which witnesses the destruction of  
Jerusalem, is rendered more ghastly and  
appalling by the untimely marriage of Ama-  
riah and Salome. The—

"Error wantoning with man's perplexity,"  
is made a thousand-fold more hideous by  
the unnatural festivity. We shall best con-  
sult the genius of this part of the poem by  
transcribing alternately (as indeed they occur)  
bridal stave \* and agony of suffering, or pre-  
dication of vengeance.

\* For his fine ideas of these wedding cere-  
monies, the author is indebted to Calvert, Harmer,  
and other illustrators of Scripture.

*Voice within.* Woe! woe! woe!  
*First Jew.* Alas!  
The son of Hananiah! is't not he?

*Third Jew.* Whom saist thou?  
Second Jew. Art thou a stranger in Jerusalem,  
That thou rememberest not that fearful man?

*Fourth Jew.* Speak! speak! we know not  
all.

*Second Jew.* Why thus it was:  
A rude and homely dreser of the vine,  
He had come up to the Feast of Tabernacles,  
When suddenly a spirit fell upon him,  
Ere! or good we know not. Ever since,  
(And now seven years are past since it befell,  
Our city then being prosperous and at peace),  
He hath gone wandering through the darkling  
streets

At midnight, under the cold quiet stars;  
He hath gone wandering through the crowded  
market

At noonday under the bright blazing sun,  
With that one ominous cry of "Woe, woe,  
woe!"

Some scoff'd; and mock'd him, some would give  
him food;  
He neither curs'd the one, nor thank'd the  
other,

The Sanhedrin had scourge him, and myself  
Beheld him lash'd, till the bare bones stood out  
Through the main'd flesh, still, still he only  
cried,

Woe to the City, till his patience wear'd  
The angry persecutors. When they freed him,  
'Twas still the same, the incessant Woe, woe,  
woe.

But when our siege began, awhile he ceased,  
As though his prophecy were fulfilled; till now  
We had not heard his dire and boating voice.

*If I think.* Woe! woe! woe!  
*Joshua, the Son of Hananiah.* Woe! woe!

A voice from the East! a voice from the West!  
From the four winds a voice against Jerusalem:  
A voice against the Temple of the Lord!

A voice against the Bridegrooms and the Brides!  
A voice against all people of the land!  
Woe! woe! woe!

*Second Jew.* They are the very words, the  
very voice  
Which we have heard so long. And yet, me-  
think,

There is a mournful triumph in the tone  
We'er heard before. His eyes, that were of old  
Fixed on the earth, now wander all abroad,  
As though the tardy consummation  
Afflicted him with wonder.—Hark! again.

*Chorus of Maidens.*  
Now the joyful song is thine,  
Bride of David's kingly line!  
How thy dove-like bosom trembleth,  
And thy shrouded eye resembleth  
Violets, when the dews of eve  
A moist and tremulous glitter leave  
On the beauteous sealed lid!

Close within the bride-rell hid,  
Motionless thou sit'st and mute;  
Save that at the soft salute  
Of each entering maiden friend  
Thou dost rise and softly bend.

Hark! a bricker, merrier glee!  
The door unfolds,—'tis he, 'tis he.  
Thus we lift our lamps to meet him,  
Thus we touch our lutes to greet him,  
Thou shalt give a fonder meeting,  
Thou shalt give a tenderer greeting.

*Joshua.* Woe! woe!  
A voice from the East! a voice from the West! &c.

The high-priest enhances these awful  
warnings, he tells the multitude,

It was but now  
I sat within the Temple, in the court  
That's consecrate to mine office—Your eyes  
wander—

*Jews.* Go on!—  
*High-priest.* sudden Why hearken, then—Upon a

The pavement seem'd to swell beneath my feet,  
And the Veil shiver'd, and the pillars rock'd.  
And there, within the very Holy of Holies,  
There, from behind the winged Cherubim,  
Where the Ark stood, noise, hurried and tumultuous,

Was heard, as when a king with all his host  
Doth quit his palace. And anon, a voice,  
Or voices, half in grief, half anger, yet  
Nor human grief nor anger, even it seem'd  
As though the hoarse and rolling thunder spake  
With the articulate voice of man, it said,  
'Let us depart!'

*Jews.* Most terrible! What follow'd?  
Sprak on! speak on!

*High-priest.* I know not why, I felt  
As though an outcast from the abandon'd  
Temple,

And fled.  
Jesu. Oh God! and Father of our Fathers,  
Dost thou desert us?

Again the nuptial chaunt breaks in; but  
soon after the harrassed people sink into a  
preternatural repose, thus granily depicted  
by Miriam.

Ah me! how strange!  
This moment, and the hurrying streets were full  
As at a festival, now all so silent  
That I might hear the footsteps of a child.  
The sound of dissolute mirth hath ceased, the  
lamps

Are spent, the voice of music broken off.  
No watchman's tread comes from the silent wall,  
Nor are there no lights nor voices in the towers.  
The hungry have given up their idle search  
For food, the gazers on the heavens are gone,  
Even Fear's at rest—all still as in a sepulchre!  
And thou liest sleeping, oh Jerusalem!  
A deeper slumber could not fall upon thee,  
If thou wert desolate of all thy children,  
And thy razed streets a dwelling-place for owls.

I do mistake! this is the Wilderness,  
The Desert, where winds pass and make no sound,  
And not the populous city, besieged

And overhung with tempest. Why, my voice,  
My motion, breaks upon the oppressive stillness  
Like a forbidden and disturbing sound.

The very air's asleep, my feeblest breathing  
Is audible—I'll think my prayers—and then—  
—Ha! 'tis the thunder of the Living God!  
It peals! it crashes! it comes down in fire!

Again! it is the engine of the foe,  
Our walls are dust before it—Wake—oh wake—  
Oh Israel!—Oh Jerusalem, awake!

Why shouldst thou wake? thy foe is in the  
heavens.

Yes, thy judicial slumber weighs thee down,  
And gives thee, oh! lost city, to the Gentile  
Defences, unresisting.

It rolls down,  
As though the Everlasting rage'd not now  
Against our guilty Zion, but did mingle  
The universal world in our destruction;  
And all mankind were destined for a sacrifice  
On Israel's funeral pile.

Relentless massacre ensues: the Jews  
flee to the Temple, and are slaughtered by  
thousands. Those who read our extract  
from Mr. Mill's History of the Crusades  
detailing a similar event, may fancy what it

is in Mr. Millman's verse. We can only  
shortly illustrate it—

*Chorus of Jews flying towards the Temple.*  
Fly! fly! fly!

Clouds, not of incense, from the Temple rise,  
And there are altar-fires, but not of sacrifice.

And there are victims, yet nor bulls nor goats;  
And Priests are there, but not of Aaron's kin;  
And he that doth the murderous rite begin,  
To stranger Gods his hecatomb devotes;

His hecatomb of Israel's chosen race  
All fully slaughter'd in their Holy Place.

Break into joy, ye barren, that ne'er bore!  
Rejoice, ye breasts, where ne'er sweet infant  
hung!

From you, from you no smiling babes are  
strung.

Ye die, but not amid your children's gore.  
But howl and weep, oh ye that are with child,  
Ye on whose bosoms unwear'd babes are laid;  
The sword that with the mother's blood is

dyed!

Still with the infant gluts the insatiate blade.  
Fly! fly! fly!

Fly not, I say, for Death is every where,  
To keen-eyed Lust all places are the same:  
There's not a secret chamber in whose lair  
Our wives can shroud them from th' abhorred

shame.  
Where the sword falls, the fire will find us there,  
All, all is death—the Gentile or the flame.

On to the Temple! Brethren, Israel on!  
Though every slippery street with carnage  
swims,

Ho! spite of famish'd hearts and wounded  
limbs,

Still, still, while yet there stands one holy stone,  
Fight for your God, his sacred house to save,  
Or have its blazing ruins for your grave!

Miriam, after an admirable dialogue with  
an old man who had witnessed the crucifixion  
of Christ, is saved by Javan in disguise, and  
these two Christians are all who escape from  
captivity or slaughter. The death of Sa-  
lome is also most powerfully affecting: she  
is stabbed by her bridegroom, to prevent  
pollution from the Roman spoilers.

She faints! Look up, sweet sister! I have  
slanch'd

The blood awhile—but her dim wandering eyes  
Are fixing—she awakes—she speaks again.

*Salome.* Ah! brides, they say, should be re-  
tired, and dwell

Within, in modest secrecy; yet here  
Am I, a this night's bride, in the open street,  
My naked feet on the cold stones, the wind  
Blowing my raiment off—it's very cold—

Oh, Amariah! let me lay my head  
Upon thy bosom, and so fall asleep.

*Miriam.* There is no Amariah here—'tis I,  
Thy Miriam.

*Salome.* The Christian Miriam.

*Miriam.* Oh! that thou wert too Christian!  
I could give thee

A cold and scanty baptism of my tears.  
Oh! shrink not from me, lift not up thy head,  
Thy dying head, from thy lord's sister's lap.

*Salome.* Off! set me free! the song is almost  
done.

The bridegroom's at the door, and I must meet  
him.

Though my knees shake and tremble. If he  
come,

And find me sad and cold, as I am now,  
He will not love me as he did.

*Miriam.* Too true,  
Thou growest cold indeed.

*Salome.* Night closes round,  
Slumber is on my soul. If Amariah  
Return with morning, glorious and adorn'd  
In spail, as he is wont, thou'lt wake me, sister?

—Ah! no, no, no! this is no waking sleep,  
It bursts upon me—Yes, and Simon's daughter,  
The bride of Amariah, may not fear,  
Nor shrink from dying. My half-failing spirit  
Comes back, my soft love-melted heart is

strong:

I know it all, in mercy and in love  
Thou'st allowed me to death—and I will bless  
thee,

True lover? noble husband! my last breath  
is thine in blessing—Amariah!—Love!

And yet thou shouldst have said to close mine  
eyes,

Oh Amariah!—and an hour ago  
I was a happy bride upon thy bosom,  
And now am—Oh God, God! if he have  
er'd,

And should come back again, and find me—  
dead!

We have exceeded our limits, and must  
conclude abruptly, reserving the final hymn  
for our next. From such poetry, it would be  
absolutely sinful to detract by detailing the  
trifling blemishes which have crept into the  
heat of composition. Half a dozen lines in  
which the euphony is imperfect; one or two  
grammatical inaccuracies; the repetition of  
"yeas" and "evens" rather frequently; and  
hardly an instance of inferior style, are all  
that hyper-criticism could point out. Upon  
the general consideration we would express  
our opinion, that *Miriam* deserves too much  
—natural feelings never dwell on abstract  
analyses.

But the Fall of Jerusalem is one of the  
noblest production of its class in the English  
language.

*A Narrative of a Journey into Persia, and  
Residence at Teheran, &c.* From the  
French of Mr. Tancoigne, attached  
to the Embassy of General Gardane.

8vo. pp. 402. London, 1820.

Appearing after Mr. Morier's admir-  
able work, this volume, the author of  
which possessed neither the talents nor  
the opportunities for observation en-  
joyed by the English traveller, will  
seem to those who have read the latter,  
at once imitative and menagre. In other  
respects, it is a plain, unassuming, and  
correct account; weeded of much of the  
usual rhodomontade of French travel-  
ling, and, as far as it goes, a sensible  
description of obvious things.

General Gardane's Embassy left Constan-  
tinople, in September, 1807, and the caravan  
traversed Armenia, by the accustomed route  
of Nicomedia, Nicaea, Angora, Joscatt, To-  
cat, Erzerum, and Balazizil in Turkey; Khoi,  
Tauris, and Sultanie in Persia; to Teheran  
the capital. The itinerary is rapid; and Mr.  
Tancoigne endeavours to make amends by  
dwelling more than is necessary in such  
a publication on an abridgment of the ancient  
history of Persia. We follow his remarks on  
the present state of the people and country;  
to which again is super-added a translation

of the first book of the Gulistan of Saadi. Few particulars relative to the Embassy are given, and the author's return furnishes nothing in the way of novelty.

Hud we not reviewed Mr. Morier at considerable length, we should have been better able to quote from Mr. Tancoigne; but in truth, we can hardly find extracts for our purpose, without incurring the fault of repetition.

Baiazid is the last town of Turkey, in the Armenian portion of Asia: it is three hundred and sixty leagues from Constantinople, and three from the Persian frontier. Built like an amphitheatre, on the declivity of a very steep rock, its position is impregnable, and in proper hands could never be taken, except by famine. This town contains from twelve to fifteen thousand inhabitants, of which the greater part are Armenians. All the houses are built of clay, and it is impossible to take a step in the streets without ascending or descending at the risk of your neck. The Pacha's palace is situated in the highest part of the town, on a fortified rock. A mosque, built on the declivity of the hill, is the only edifice worth remarking.

This evening we paid a visit to the governor, Ibrahim Pacha: he received the general in a large hall, by the gloomy light of two wax candles. The appearance of the place, and the people who surrounded it, might have induced us to suppose we were in a cave of robbers. Ibrahim fears the Curdes, and seldom leaves his palace: he is a Pacha of two tails; but his power does not extend beyond the town, as the robbers who infest his pachalik, do not acknowledge the authority of the Grand Signior, merely paying a small tribute to the King of Persia, to avoid being molested by that prince.

The first Persian village we saw, is called Kilisa Kendi: it is inhabited by poor Armenians and Curdes, who are under greater restraint there than in Turkey.

On the following day we saw numerous encampments of this wandering people. Notwithstanding their robberies on the territory of the Grand Signior, they are moderate and circumspect on those of the King of Persia. As already stated, they pay a tribute to this monarch, who has taken them under his special protection. The Curdes, natural subjects of the Grand Signior, are too distant from the capital of the Ottoman empire to have any thing to fear from a weak government, the influence of which merely extends to a few leagues in circumference. Close to the Persian frontier, they have every thing to fear from the armies of the prince who governs in this district; and, by a compact equally advantageous to the two parties, they have placed themselves under subjection to the king, who can employ them with advantage in his wars against the Turks.

At Teheran, the legation was allowed to witness the ceremony of making presents to the king on the *newroz*, or new year, a period at which, as was once a pretty general custom in Christ-

endom, the governors of provinces offer their peshkehs, or voluntary tributes, to the sovereign.

The Chah Zadeh Muhammed Veli Mirza, who governs Khorassan, was the first that presented himself: he bowed profoundly before the king his father, and presented fifty superb horses of his province, an equal number of mules and camels, Cachemire shawls, several bags of turquoises, &c. the latter objects were on broad wooden trays, carried by the officers of his household. After these presents had passed before the king, they were sent into the interior of the palace.

Prince Muhammed Ali Khan, governor of Kerman Chah, not being at court, sent the offering by his vizir: it consisted of Cachemire shawls, arms, such as lances, muskets, pistols, and a great number of camels and mules laden with carpets and fine felts.

The vizir of Muhammed Kouli Mirza, another chah zade, who commands in Mazenderan, then presented in the name of his master, more Cachemire shawls, stuffs of gold, silver and silk, wooden spoons of delicate workmanship, arms, camels, and mules.

Those of the chah zade, Hussein Ali Mirza, who governs the province of Farsistan, were also remarkable in their kind. Amongst other objects, we saw a great quantity of sugar and syrups, mules and camels laden with coffee and tambako, or smoking tobacco, from Chiraz.

But the tribute of the Emin ud Dewlet, Hadji, Muhammed Hussein Khan, Beylerbey of Isphahan, surpassed all the former in magnificence. Besides superb Turkoman horses and rich stuffs, it also included that precious metal, so eagerly sought by all mankind; and for which the king of Persia is said to have a very decided predilection. Fifty mules, ornamented with Cachemire shawls and streamers, carried each one thousand toman in money, a sum equal to about 45,000*l*.

Every year at the same period, these presents are renewed; and by this an idea may be formed of the immense riches which the private treasure of the king of Persia must contain. Games of all kinds succeeded to the presentation of the tributes, which were sent into the king's palace, according as they passed in review before his majesty.

First came men running on stilts of more than twenty feet high; others performing feats of strength and balancing, turning on the slack rope, or carrying on their heads, a pile of earthen pots, surmounted with a vase of flowers, then dancers and combats of rams that were excited against each other. These exercises were followed by rope-dancing, performed by two young children. I am sorry for our performers on the rope, but they are still very far from equalling the dexterity of these, as you shall perceive.

The rope was of hair, and consequently less flexible than a hempen one: being strained on two strestles of more than forty feet in height, it ascended almost imperceptibly as high as the top of the king's kiosk. After having made several gambols with the

assistance of their poles on the part of the rope which was horizontal, one of the two dancers, ten years old at most, mounted completely as high as the terrace which crowns the pavilion, and then descended backwards from a height of more than eighty feet. We remarked with pleasure, that several men placed beneath the cord, followed all the movements of the child, ready to receive him in a large blanket if his foot had happened to have slipped. We did not suppose the Persians were capable of such an attention, especially in the king's presence. These dancers are called in Persian, Djan-haz, meaning, him who plays or risks his soul. This expression, contemptuous in itself, intimates that games of this kind are discouraged by religion; and is nearly synonymous with that of excommunication, with which our actors were once complimented. The term of Serhaz, which signifies a man who stakes his head, might have been applied to them with still greater propriety; but amongst the Persians it has a more noble acceptation, and is applied peculiarly to soldiers.

Naked men armed with maces, and wrestlers, appeared afterwards before the king. The first resembled savages, they struck their clubs together, but without injuring each other. It was not so with the second; their combats have something so revolting, and hideous, that I am loth to mention it to you. The conqueror, that is to say, he who succeeded in throwing his adversary on his back, went to the foot of the kiosk to receive a piece of money which the king threw down to him.

These spectacles, worthy of a nation of children, though not more frivolous than many European pastimes, but which are nevertheless full of attraction here, were prolonged until nightfall; the king retired during half an hour, to say his evening prayer, and then returned for the fireworks. I have but seldom seen any equal to these, even in France: they extended over all the great court of the palace, which is three hundred paces long, and five hundred broad, also on some of the terraces that surround it. They commenced with the Bengal flames, which had a very fine effect; then they let off in confusion a prodigious quantity of cases, crackers and rockets. Suns, figures of men and animals, trees and houses of fire, every instant presented new scenes; and there was nothing wanting but more order and symmetry to render the spectacle magnificent. The next day was appropriated to horse-racing.

These extracts will serve as an example of the work: from the author's translation of Saadi, we also select the following . . .

"A horde of Arabian robbers desolated a district; they had intercepted the road of the caravans, beaten the armies of the prince, and intrenched themselves on the summit of a mountain, which was made their retreat and asylum. The ministers of the king assembled to consult on the means of stopping their ravages, supposing that it

that measure, it would soon be able to resist those depredators. One alone may easily pluck up the tree which has been recently planted; but if it has been left to take root, the force of a crowd will no longer suffice. With a mere shovel a fountain may be stopped at its source; but, when it is become a river, an elephant can no longer pass it. It was determined that emissaries should be sent to watch the moment when the rebels would leave their caverns, to ravage the country: several able generals were at the same time placed in the passes of the mountain. One night when the robbers returned from an expedition after burning a village, they laid by their arms, as usual, and deposited their booty. Their first enemy was sleep. Already had the sun replaced the shades of night, and Jonas re-entered the belly of the whale, when the brave warriors quitted their ambush, and tied the miscreants' hands behind their backs. On the following morning they were conducted to the presence of the king, who ordered them to be put to death. Amongst those villains was a young man in scarcely arrived at maturity, and whose cheeks were yet only covered with a light down. One of the vizirs prostrated himself before the king, and said, 'this young man is without experience, his youth has been the cause of his being misled: I intreat your majesty to grant him pardon to your slave.' The king turned his head at first, and refused to accede to the prayer of this generous intercessor.—Whoever does not follow the example of honest men, is of a bad disposition, the education given to the ill disposed, produces as little effect as a walnut for a cupola; it is necessary to cut down the last scion of the wicked, and extirpate the roots of their family. To extinguish a fire and forget to quench the embers, to kill a serpent and spare its young ones, is not the conduct of a prudent man.—If a cloud could scatter the rain of life, never would the branches of the willow be eaten. Beware of associating with the worthless, for thou canst never extract sugar from a common reed. The vizir listened to these words with respect and submission, and though he was grieved to the soul, he could not avoid approving of their wisdom. He, however, added, 'that which has been said by the master of the earth's surface (whose reign be eternal), would be the exact truth, if this young man had been born amongst the wicked, and that he had been totally corrupted; but your slave hopes that he will be improved in the company of worthy people, and that his manners will be softened, because he is still but a child; vice and ferocity are not rooted in him. It is seen in the Koran that all men come into the world with a disposition to Islamism, and that they subsequently do not become Jews, Christians or Guebres, but through the fault of their parents.'

The courtiers supported the intreaties of the vizir so warmly, that the king, at length, pardoned the criminal, saying, 'I remit his punishment, though I do not perceive any great advantage from it.' Knowest thou

that which Sal said to Rustem the Curd? 'Never suppose thine enemy feeble and without resources; I have often seen the water of a fountain scumy at its source, but at a distance it hath borne away a camel and its load.' The youth was led away, placed in the care of a learned tutor employed to educate him, to instruct him in eloquence, and in the art of serving kings, and to render him, at some future period, worthy of his equal. One day the vizir had occasion to speak of his favourite to the king; he praised his good qualities and sense; asserted that his education had made him quite a different man, that his manners were entirely changed, and that he no longer retained any vestige of his former vices. The king smiled and said: 'The son of the wolf will end by becoming a wolf, even though he should be some day powerful amongst men.' A year or two passed. The young man ran away to join a gang of robbers, and so identified himself with them, that, at length, he murdered the vizir and his two children. In a moment he forgot all he owed to his generous benefactor, rebelled and took the post which his father held amongst the robbers. The king taking the finger of astonishment between his teeth, exclaimed, 'How can a good sword be made of bad steel? The wicked can never become good by education. Oh, sages! rain, the advantages of which are denied by none, gives equal nourishment to the tulip in a garden, and the brambles of the marshes!—Hyacinths are not produced in a quagmire. Do not lose the fruits of thy toil. It is as criminal to do good to the wicked, as to injure worthy persons.'

A king happened to be in a ship with a slave, who saw the sea for the first time. This unfortunate man, who did not consider himself in safety, wept, groined, and trembled in all his limbs; the very efforts made to tranquillize him, were unavailing: the king, at length, lost patience. A sage, who had embarked in the same vessel, said to the prince, 'if your majesty should order me, I can readily find means to silence this fellow.' 'You will render me a great service,' the king replied. The sage caused the slave to be immediately thrown into the sea, let him swallow a certain quantity of water, had him afterwards drawn out by the hair, and brought on board the ship. The slave seated himself in a corner, and said no more. The expedient of the philosopher pleased the king, who could not, however, avoid enquiring of him, what there was so wise in his conduct. The following was his reply: 'this unhappy man was not in a state to appreciate the advantages of a ship, because he had never fallen into the sea. Now that he has learned it, he will be tranquil and contented!—Oh thou who art satiated, thou despiser of barley loaf; that which is disdained by thee, is the object of all my wishes. The *azoff* would be hell for the horrors of paradise; but interrogate the damned, and they will tell you that the *azoff* is paradise.

We are sorry to dismiss this work

The *azoff* is, according to the Mahometans, a wall which separates paradise from hell,

with so little said in praise of its intelligence; but, in fact, it adds nothing to our knowledge of Persia, and is extremely defective on those points for which we most naturally look in modern travels. The orthography of proper names is frequently erroneous; and upon the whole we must state, that the labours of Mr. Tancoigne have only very negative merit.

SOUTHEY'S LIFE OF JOHN WESLEY. 2 vols. 8vo. (continued.)

"Methodism having widely diffused itself, it soon became expedient to divide the country into circuits. There were, in the year 1791, twenty in England, two in Wales, two in Scotland, and seven in Ireland. In 1791, the year of Mr. Wesley's death, they had increased to seventy-two in England, three in Wales, seven in Scotland, and twenty-eight in Ireland. Every circuit had a certain number of preachers appointed to it, more or less, according to its extent, under an assistant, whose office it was to admit or expel members, take lists of the societies at Easter, hold quarterly meetings, visit the classes quarterly, keep watch-nights and love-feasts, superintend the other preachers, and regulate the whole business of the circuit, spiritual and temporal.

"The helpers were not admitted indiscriminately: *gifts*, as well as *grace* for the work, were required. An aspirant was first examined concerning his theological knowledge, that it might be seen whether his opinions were sound: he was then to exhibit his gift of utterance, by preaching before Mr. Wesley; and afterwards to give, either orally or in writing, his reasons for thinking that he was called of God to the ministry. The best proof of this was, that some persons should have been convinced of sin, and converted by his preaching."

The use of snuff or spirituous liquors was prohibited to preachers, and in general their lot was severe, and their hardships many and great. The principal evil of Methodism is stated to have been the formation, not merely of classes for religious purposes, but of bands. Of these we find the following notice—"This subdivision, while it answered no one end of possible utility, led to something worse than the worst practice of the Romish church. The men and the women, and the married and the single, met separately in these bands, for the purpose of confessing to each other. They engaged to meet once a week at least, and to speak, each in order, freely and plainly, the true state of their souls, with the faults they had committed in thought, word, or deed, and the temptations they had felt during the week. They were to be asked 'as many, and as searching questions as may be, concerning their state, sins, and temptations?' These four, in particular, at every meeting: 'What known sin have you committed since our last meeting? What temptations have you met with? How was you delivered? What have you thought, said, or done, of which you doubt whether it be sin or not?' And

before any person entered into one of these bands, a promise of the most unreserved openness was required. "Consider, do you desire we should tell you whatsoever we think, whatsoever we fear, whatsoever we hear, concerning you? Do you desire that, in doing this, we should come as close as possible, that we should cut to the quick, and search your heart to the bottom? Is it your desire and design to be on this, and all other occasions, entirely open, so as to speak every thing that is in your heart without exception, without disguise, and without reserve?" The nature, and the inevitable tendency of this mutual inquisition, must be obvious to every reflecting mind; and it is marvellous, that any man should have permitted his wife or his daughter to enter into these bands, where it was not possible for innocence to escape contamination."

"The watch-night was another of Wesley's objectionable institutions. It originated with some reclaimed colliers of Kingswode, who, having been accustomed to sit late on Saturday nights at the ale-house, transferred their weekly meeting, after their conversion, to the school-house, and continued there praying and singing hymns far into the morning. Wesley was advised to put an end to this; but, 'upon weighing the thing thoroughly, and comparing it with the practice of the ancient Christians,' he could see no cause to forbid it; because he overlooked the difference between their times and his own, and shut his eyes to the obvious impropriety of midnight meetings. So he appointed them to be held once a month, near the time of full moon."

"He also appointed three love-feasts in a quarter: one for the men, a second for the women, and the third for both together; 'that we might together eat bread,' he says, 'as the ancient Christians did, with gladness and singleness of heart. At these love-feasts (so we termed them, retaining the name, as well as the thing, which was in use from the beginning,) our food is only a little plain cake and water; but we seldom return from them without being fed not only with the meat which perisheth, but with that which endureth to everlasting life.' A travelling

Wesley has himself recorded an instance of mischief arising from these bands. "I searched to the bottom," says he, "a story I had heard in part, and found it another tale of real woe. Two of our society had lived together in uncommon harmony, when one, who met in band with E. F. to whom she had mentioned that she had found a temptation toward Dr. F., went and told her husband she was in love with him, and that she had it from her own mouth. The spirit of jealousy seized him in a moment, and utterly took away his reason. And some one telling him his wife was at Dr. F.'s, on whom she had called that afternoon, he took a great stick, and ran away, and meeting her in the street, called out Strumpet! strumpet! and struck her twice or thrice. He is now thoroughly convinced of her innocence; but the water cannot be gathered up again. He sickens there—I do thoroughly forgive you, but I can never love you more." After such an example, Wesley ought to have abolished this part of his institutions.

preacher presides at these meetings: any one who chooses may speak; and the time is chiefly employed in relating what they call their Christian experience. In this point, also, Mr. Wesley disregarded the offence which he gave, by renewing a practice that had notoriously been abolished, because of the abuses to which it led."

"He prided himself upon the singing in his meeting-houses: there was a talent in his family both for music and verse; and he availed himself, with great judgment, of both. A collection of hymns was published for the Society, some few of which were selected from various authors; some were his own composition; but far the greater part were by his brother Charles. Perhaps no poems have ever been so devoutly committed to memory as these, nor quoted so often upon a death-bed. The manner in which they were sung tended to impress them strongly on the mind: the tune was made wholly subservient to the words, not the words to the tune. The Romanists are indebted for their church-music to the Benedictines, an order to which all Europe is so deeply indebted for many things. Our fine cathedral service is derived from them."

Wesley was prevented by his ignorance of their language, from disseminating his doctrines generally among the Welch, and that susceptible population degenerated into Jumpers, under native teachers. In Scotland he was not successful, though Whitefield, who, on the invitation of Ralph and Ebenezer Erskine, the first leaders of secession from the kirk, had preceded him ten years in that country, startled the people by his vehement oratory. But Wesley's mild and persuasive eloquence availed little, and he does not seem to have forgiven the slight. He accuses the ministers of not fasting on the fast days in the sacrament week, and he compares the funerals to what was spoken of Jehoiakim: "he shall be buried with the burial of an ass." He adds in another place, when he had a thin audience at Glasgow, that it was truly said "the Scotch dearly love the word of the Lord, on the Lord's day!"

The account of Wesley in Ireland is prefaced with some general observations, so curious as to claim extraction. The author says—

"Melancholy and anomalous as the civil history of Ireland is, its religious history is equally mournful, and not less strange. Even at the time when it was called the Island of Saints, and men went forth from its monasteries to be the missionaries, not of monachism alone, but of literature and civilization, the mass of the people continued savage, and was something worse than heathen. They accommodated their new religion to their own propensities, with a perverted ingenuity, at once humorous and detestable, and altogether peculiar to themselves. Thus, when a child was immersed in baptism, it was customary not to dip the right arm, to the intent that he might strike a more deadly and ungracious blow therewith; and under an opinion, no doubt, that the rest of the body would not be res-

possible at the resurrection, for any thing which had been committed by the unhaptized hand. Thus, too, at the baptism, the father took the wolves for his gossips; and thought that, by this profanation, he was forming an alliance, both for himself and the boy, with the fiercest beasts of the woods. The son of a chief was baptized in milk; water was not thought good enough, and whiskey had not then been invented. They used to rob in the beginning of the year as a point of devotion, for the purpose of laying up a good stock of plunder against Easter; and he whose spoils enabled him to furnish the best entertainment at that time, was looked upon as the best Christian,—so they robbed in emulation of each other; and reconciling their habits to their conscience, with a hardihood beyond that of the boldest cannibals, they persuaded themselves that, if robbery, murder, and rape had been sins, Providence would never put such temptations in their way; nay, that the sin would be, if they were so ungrateful as not to take advantage of a good opportunity when it was offered them."

"These things would appear incredible, if they were not conformable to the spirit of Irish history, fabulous and authentic. Yet were the Irish, beyond all other people, passionately attached to the religion wherein they were so miserably ill instructed. Whether they were distinguished by this peculiar attachment to their church, when the supremacy of the Pope was acknowledged throughout Europe, cannot be known, and may, with much probability, be doubted; this is evident, that it must have acquired strength and inveteracy when it became a principle of opposition to their rulers, and was blended with their hatred of the English, who so little understood their duty and their policy as conquerors, that they neither made themselves loved, nor feared, nor respected."

"Ireland is the only country in which the Reformation produced nothing but evil. Protestant Europe has been richly repaid for the long calamities of that great revolution, by the permanent blessings which it left behind; and even among those nations where the papal superstition maintained its dominion by fire and sword, an important change was effected in the lives and conduct of the Romish clergy. Ireland alone was so circumstanced as to be incapable of deriving any advantage, while it was exposed to all the evils of the change. The work of sacrifice and plunder went on there as it did in England and Scotland; but the language of the people, and their savage state, precluded all possibility of religious improvement. It was not till nearly the middle of the seventeenth century, that the Bible was translated into Irish, by means of Bishop Bedell, a man worthy to have Sir Henry Wotton for his patron, and Father Paolo Sarpi for his friend. The church property had been so scandalously plundered, that few parishes could afford even a bare subsistence to a

• The best living at Connought was not worth more than forty shillings a year; and some were as low as sixteen!

Protestant minister, and therefore few ministers were to be found. Meantime the Romish clergy were on the alert, and they were powerfully aided by a continued supply of fellow-labourers from the seminaries established in the Spanish dominions; men who, by their temper and education, were fitted for any work in which policy might think proper to employ fanaticism. The Franciscans have made it their boast, that, at the time of the Irish massacre, there appeared among the rebels more than six hundred Friars Minorite, who had been instigating them to that accursed rebellion while living among them in disguise."

In this country Wesley was at first well received, and tells us that he preached his first sermon in Dublin to "as gay and as senseless a congregation as he had ever seen!" They soon however became objects of persecution, and got the nick-name of swaddlers, which is thus strangely accounted for.

"Cennick, preaching on Christmas-day, took for his text these words from St. Luke's Gospel: 'And this shall be a sign unto you: ye shall find the babe, wrapped in swaddling clothes, lying in a manger.' A Catholic who was present, and to whom the language of Scripture was a novelty, thought this so ludicrous, that he called the preacher a Swaddler, in derision; and this unmeaning word became the nickname of the Methodists, and had all the effect of the most opprobrious appellation."

In Cork disgraceful riots ensued, and both the brothers (Wesleys) were roughly treated; while in Dublin, Whitefield was nearly stoned to death. Yet it was from among the Roman Catholics that Wesley obtained one of the most interesting and (during his short life) most efficient co-adjutors, Thomas Walsh, the son of a carpenter at Bally Linn. He publicly abjured the Romish Church, and became the most distinguished apostle of methodism in Ireland.

"There is a letter of advice from Mr. Wesley to one of his Irish preachers (written in 1769), which gives a curious picture of the people for whom such advice could be needed. — "Dear brother," he says, "I shall now tell you the things which have been, more or less, upon my mind, ever since I was in the North of Ireland. If you forget them, you will be a sinner, and so will the people; if you observe them, it will be good for both. Be steadily serious. There is no country upon earth where this is more necessary than in Ireland, as you are generally encompassed with those who, with a little encouragement, would laugh or trifle from morning till night. In every town visit all you can, from house to house; but on this, and every other occasion, avoid all familiarity with women: this is deadly poison, both to them and to you. You cannot be too wary in this respect. Be active, be diligent; avoid all laziness, sloth, indolence; fly from every degree, every appearance of it, else you will never be more than half a Christian. Be cleanly: in this let the Methodists take pattern by the Quakers. Avoid all nastiness, dirt, slovenliness, both in your

person, clothes, house, and all about you. Do not stink above ground!

'Let thy mind's sweetness have its operation

'Upon thy person, clothes, and habitation.'

HERBERT.

Whatever clothes you have, let them be whole; no rents, no tatters, no rags; these are a scandal to either man or woman, being another fruit of vile laziness. Mend your clothes, or I shall never expect to see you mend your lives. Let none ever see a ragged Methodist. Clean yourselves of lice: take pains in this. Do not cut off your hair; but clean it, and keep it clean. Cure yourself and your family of the itch: a spoonful of brimstone will cure you. To let this run from year to year, proves both sloth and uncleanness: away with it at once; let not the North be any longer a proverb of reproach to all the nation. Use no snuff, unless prescribed by a physician. I suppose no other nation in Europe is in such vile bondage to this silly, nasty, dirty custom, as the Irish are. Touch no drain: it is liquid fire; it is a sure, though slow, poison; it saps the very springs of life. In Ireland, above all countries in the world, I would scarcely abstain from this, because the evil is so general; and to this, and snuff, and smoky cabins, I impute the blindness which is so exceeding common throughout the nation. I particularly desire, wherever you have preaching, that there may be a Little House. Let this be got without delay. Wherever it is not, let none expect to see me."

#### The Percy Anecdotes.

The fifth Number of this neat little work appeared on the 1st instant; and furnishes us with the following examples, from among a hundred stories, illustrative of the spirit of *Enterprise*, to which it is devoted. A prettily engraved portrait of Mungo Park adorns the title page.

*Black Agnes.*—During the war which Edward III. maintained in Scotland, part of the English army, led on by Montague, besieged Dunbar, which the Countess of March, commonly called *Black Agnes*, defended with uncommon courage and obstinacy. This extraordinary woman exhibited her scornful levity towards the besiegers, by ordering her waiting maids to brush from the walls the dust produced by their battering engines, and this in sight of the English; and when a tremendous warlike engine, called a sow, approached the walls, the countess called out, "Montague, beware! your sow shall soon cast her pigs!" which she verified, for an immense mass of rock, thrown from a lofty tower, accompanied her threat, and crushed the ponderous missile, and the besiegers which it contained.

*Slide of Alpach.*—For many centuries the rugged flanks and deep gorges of Mount Pilatus were covered by impenetrable forests: lofty precipices encircled them on all sides. Even the daring hunters were scarcely able to reach them, and the inhabitants of the valley never conceived the idea of disturbing

them with the axe. These immense forests were therefore allowed to grow and perish, the most intelligent and skilful considering it quite impracticable to avail themselves of such inaccessible stores.

In November, 1816, Mr. John Rulph, of Reutlingen, in Switzerland, and three Swiss gentlemen, entertaining more sanguine hopes, drew up a plan of a slide founded on trigonometrical measurements; and having purchased a certain extent of the forests from the Commune of Alpach for six thousand crowns, began the construction of it.

The slide of Alpach is formed of about twenty-five thousand large pine trees deprived of their bark, and united together without the aid of iron. It occupied about one hundred and sixty workmen during eighteen months, and cost nearly one hundred thousand francs (1466l.). It is about three leagues, or forty-four thousand English feet long, and terminates in the Lake of Lucerne. It has the form of a trough about six feet broad, and from three to six deep. Its bottom is formed of three trees, the middle one of which has a groove cut out in the direction of its length for receiving small rills of water, for the purpose of diminishing the friction. The whole of the slide is sustained by about two thousand supports, and, in many places, is attached in a very ingenious manner to the rugged precipices of granite. The direction of the slide is sometimes straight and sometimes zig zag, with an inclination of from 10° to 18°; it is often carried along the sides of precipitous rocks, and sometimes over their summit; occasionally it goes under ground, and at others over the deep gorges by scaffoldings one hundred and twenty feet high.

Before any step could be taken in its erection, it was necessary to cut several thousand trees to obtain a passage through the impenetrable thickets; and as the workmen advanced, men were posted at certain distances in order to point out the road for their return. Mr. Rulph was often obliged to be suspended by cords, in order to descend precipices many hundred feet high to give directions, having scarcely two good carpenters among them all, the rest having been hired as occasion offered. All difficulties being at length surmounted, the larger pines, which were about one hundred feet long, and ten inches thick at their smaller extremity, ran through the space of three leagues, or nearly nine miles, in two minutes and a half, and during their descent appeared to be only a few feet in length. The arrangements were extremely simple. Men were posted at regular distances along the slide; and as soon as every thing was ready, the man at the bottom called out to the next one above him, "Lachez," (let go); the cry was repeated, and reached the top of the slide in three minutes: the man at the top of the slide then cried out to the one below, "Il vient," (it comes); as soon as the tree had reached the bottom and plunged into the lake, the cry of "Lachez" was repeated as before. By these means a tree descended every five or six minutes. When a tree, by accident, escaped from the trough of the

slide, it often penetrated by its thickest extremity from eighteen to twenty-four feet into the earth; and if it struck another tree, it cleft it with the rapidity of lightning.

Such is the brief account of a work undertaken and executed by a single individual, and which has excited the wonder and astonishment of every one who has seen it, and a high degree of interest in every part of Europe. We regret to add, that this magnificent structure no longer exists, and scarcely a tree is to be seen on the flanks of Mount Pilatus. Political events having taken away the demand for timber, and another market having been found, the operation of cutting and transporting the trees necessarily ceased.

*Cornish Wanderer.*—Mr. Wilson, a gentleman of Cornwall, who inherited an estate of about 1000*l.* per annum in that county, at the age of twenty-three, and in the year 1741, the year after his father's death, set off for the continent on his travels. He rode on horseback with one servant, over the greatest part of the world. He first viewed every European country; in doing which, he spent eight years. He then embarked for America; was two years in the northern part, and three years more in South America, where he travelled as a Spaniard, which he was enabled to do, from the facility with which he spoke the language. The climate, prospects, &c. of Peru, enchanted him so much, that he hired a farm, and resided on it nearly twelve months. His next tour was to the East; he passed successively through all the territories in Africa, to the south of the Mediterranean, Egypt, Syria, and all the dominions of the Grand Signior; went twice through Prussia, through the northern and southern provinces; over Hindostan, and part of Siam and Pegu, and made several excursions to the boundaries of China. He afterwards, on his return, stopped at the Cape of Good Hope, and penetrated some distance into Africa; and, on his return to the Cape, he took the opportunity of a ship going to Batavia, and thence visited most of the Islands in the Great Indian Archipelago. Returning to Europe, he landed at Carliz, and travelled over land to Moscow, in his way to Kamschatka. In 1783, he was at Moscow, healthy and vigorous, and though then in his sixty-sixth year, was preparing for a journey to Siberia.

*Leander outdone.*—A young man, a native of the island of Saint Croix, in the course of the summer of 1817, swam over the Sound from Cronenburgh to Graves, and thus considerably outdid the unfortunate Leander, whom love nightly tempted to traverse the Hellespont. The direct distance from Abydos to Sestos is only an English mile; and allowing for the drifting effect of the current, not more to a swimmer than four miles. But the distance between Cronenburgh and Graves is at least six English miles. When Lord Byron and Lieutenant Ekenhead repeated the feat of Leander, they took an hour and ten minutes in doing it; the Dane did not accomplish his task in less than two hours and forty minutes. A Danish officer and three men followed him in a boat, and never lost sight of him. In the

middle of the Sound he had to contend with a high sea which dashed over him.

*A striking exception.*—In 1643, St. Preuil, the governor of Amiens, who depended much on a stratagem that he had conceived for seizing upon Arras, was anxious to engage a soldier named Courcelles to execute it. "I have made choice of you," said he to him one day, "as the most prudent soldier that I know, for a blow that will make your fortune. The business is to surprise Arras, and hear how I have planned it. You shall disguise yourself as a peasant, and go and sell fruit in the place. After you have done this some time, you must quarrel with some person, and kill him with a poignard. You must suffer yourself to be taken; you will be tried on the spot, and be condemned to be hanged. You know the custom of Arras is, to have their executions out of the city. It is on this circumstance that my design depends. I will place an ambuscade near the gate, by which you shall be brought out. My people will render themselves master of those who shall come out who belong to the spectacle. I will march in the instant to their assistance, and make myself master of the place; which as soon as I am, I shall rescue you. This is my project: what do you say to it?" "It is fine," replied Courcelles; "but the thing deserves some consideration." "It does," said Saint Preuil; "think of it, and to-morrow let me have your resolution." The next day Courcelles waited on his commander. "Well, my brave fellow," said St. Preuil; "what do you think of my project now?" "Sir," replied Courcelles, "it is admirable; only I should like that you would give me the command of the ambuscade, and take yourself the basket of fruit."

#### ARCTIC ZOOLOGY.

(Extracted from Scoresby's valuable publication.)

Erroneous opinions have been entertained respecting the Whale (the *Balaena mysticetus*) having been of a much larger size in former times than now: from a comparison of the preceding accounts of all credible witnesses, the author says—

Hence I conceive we may satisfactorily conclude, that whales of as large size as found now, as at any former period since the Spitzbergen fishery was discovered; and I may also remark, that where any respectable authority affords actual measurements exceeding 70 feet, it will always be found that the specimen referred to, was not one of the *Mysticetus* kind, but of the *B. Physalis*, or the *B. Musculus*, animals which considerably exceed in length any of the common whales that I have either heard of, or met with. When fully grown, therefore, the length of the whale may be stated as varying from 50 to 65, and rarely, if ever, reaching 70 feet; and its greatest circumference from 30 to 40 feet. It is thickest a little behind the fins, or in the middle, between the anterior and posterior extremities of the animal; from whence it gradually tapers

in a conical form, towards the tail, and slightly towards the head. Its form is cylindrical from the neck, to within ten feet of the tail, beyond which it becomes somewhat quadrangular, the greatest ridge being upward, or on the back, and running backward nearly across the middle of the tail. The head has somewhat of a triangular shape. The under-part, the arched outline of which is given by the jaw-bones, is flat, and measures 16 to 20 feet in length, and 10 to 12 in breadth. The lips, extending 15 or 20 feet in length, and 5 or 6 in height, and forming the cavity of the mouth, are attached to the under-jaw, and rise from the jaw-bones, at an angle of about 80 degrees, having the appearance, when viewed in front, of the letter U. The upper jaw, including the 'crown-bone,' or skull, is bent down at the extremity, so as to shut the front and upper parts of the cavity of the mouth, and is overlapped by the lips in a squamous manner at the sides. When the mouth is open, it presents a cavity as large as a room, and capable of containing a merchant-ship's jolly-boat, full of men, being 6 or 8 feet wide, 10 or 12 feet high (in front), and 15 or 16 feet long. The fins, two in number, are placed between one-third and two-fifths of the length of the animal, from the snout, and about two feet behind the angle of the mouth. They are 7 to 9 feet in length, and 4 or 5 in breadth. The part by which they are attached to the body, is somewhat elliptical, and about 2 feet in diameter; the side which strikes the water is nearly flat. The articulation being perfectly spherical, the fins are capable of motion in any direction; but, from the tension of the flesh and skin below, they cannot be raised above the horizontal position. Hence the account given by some naturalists, that the whale supports its young by its fins, on its back, must be erroneous. The fins, after death, are always hard and stiff; but, in the living animal, it is presumed, from the nature of the internal structure, that they are capable of considerable flexion. The whale has no dorsal fin. The tail, comprising, in a single surface, 80 or 100 square feet, is a formidable instrument of motion and defence. Its length is only 5 or 6 feet; but its width is 18 to 24 or 26 feet. Its position is horizontal. In its form it is flat and semi-lunar; indicated in the middle; the two lobes somewhat pointed, and turned a little backward. Its motions are rapid and universal; its strength immense. The eyes are situated in the sides of the head, about a foot obliquely above and behind the angle of the mouth. They are remarkably small in proportion to the bulk of the animal's body, being little larger than those of an ox. The whale has no external ear; nor can any orifice for the admission of sound be discovered until the skin is removed.

On the most elevated part of the head, about 16 feet from the anterior extremity of the jaw, are situated the blow-holes, or spiracles; consisting of two longitudinal apertures 6 or 8 inches in length. These are the proper nostrils of the whale. A moist vapour, mixed with mucus, is discharged

from them, when the animal breathes; but no water accompanies it, unless an expiration of the breath be made under the surface.

The mouth, in place of teeth, contains two extensive rows of "fins," or whalebone, which are suspended from the sides of the crown-bone. These series of fins are generally curved longitudinally, although they are sometimes straight, and give an arched form to the roof of the mouth. They are covered immediately by the lips attached to the lower jaw, and enclose the tongue between their lower extremities. Each series or "side of bone," as the whalefishers term it, consists of upwards of 300 laminae; the longest are near the middle, from whence they gradually diminish away to nothing at each extremity. Fifteen feet is the greatest length of the whalebone; but 10 or 11 feet is the average size, and 13 feet is a magnitude seldom met with. The greatest breadth, which is at the gum, is 10 or 12 inches. The laminae, composing the two series of bone, are ranged side by side, two thirds of an inch apart, (thickness of the blade included,) and resemble a frame of saws in a saw-mill. The interior edges are covered with a fringe of hair, and the exterior edge of every blade, excepting a few at each extremity of the series, is curved and flattened down, so as to present a smooth surface to the lips. In some whales, a curious hollow on one side, and ridge on the other, occurs in many of the central blades of whalebone, at regular intervals of 6 or 7 inches. May not this irregularity, like the rings in the horns of the ox, which they resemble, afford an intimation of the age of the whale? It so, twice the number of running feet in the longest lamina of whalebone in the head of a whale not full grown, would represent its age in years. In the youngest whales, called *Suckers*, the whalebone is only a few inches long; when the length reaches 6 feet or upwards, the whale is said to be *size*. The colour of the whalebone is brownish-black, or bluish-black. In some animals, it is striped longitudinally with white. When newly cleaned, the surface exhibits a fine play of colour. A large whale sometimes affords a ton and a half of whalebone. If the "sample blade," that is, the largest lamina in the series, weigh 7 pounds, the whole produce may be estimated at a ton; and so on in proportion. The whalebone is inserted into the crown-bone, in a sort of rabbet. All the blades in the same series are connected together by the gum, in which the thick ends are inserted. This substance, (the gum,) is white, fibrous, tender, and tasteless. It cuts like cheese. It has the appearance of the interior or kernel of the cocoa-nut.

The tongue occupies a large proportion of the cavity of the mouth, and the arch formed by the whalebone. It is incapable of protrusion, being fixed from root to tip, to the fat extending between the jaw-bones. A slight beard, consisting of a short scattered white hair, surmounts the anterior extremity of both jaws. The throat is remarkably strict.

Two paps in the female, afford the means

of rearing its young. The milk of the whale resembles that of quadrupeds in its appearance. It is said to be rich and well-flavoured.

Immediately beneath the skin lies the blubber or fat, encompassing the whole body of the animal, together with the fins and tail. Its colour is yellowish-white, yellow, or red. In the very young animal it is always yellowish-white. In some old animals, it resembles in colour the substance of the salmon. It swims in water. Its thickness all round the body, is 8 or 10 to 20 inches, varying in different parts as well as in different individuals. The lips are composed almost entirely of blubber, and yield from one to two tons of pure oil each. The tongue is chiefly composed of a soft kind of fat, that affords less oil than any other blubber; in the centre of the tongue, and towards the root, this fat is interwoven with fibres of a muscular substance. The under jaw, excepting the two jaw-bones, consists almost wholly of fat; and the crown-bone possesses a considerable coating of it. The fins are principally blubber, tendons, and bones; and the tail possesses a thin stratum of blubber. The oil appears to be retained in the blubber in minute cells, connected together by a strong reticulated combination of tendinous fibres. The blubber, in its fresh state, is without any unpleasant smell; and it is not until after the termination of the voyage, when the cargo is unstowed, that a Greenland ship becomes disagreeable.

Four tons of blubber by measure, generally afford three tons of oil; but the blubber of a sucker contains a very small proportion. Whales have been caught that afforded nearly thirty tons of pure oil; and whales yielding twenty tons of oil, are by no means uncommon. The quantity of oil yielded by a whale, generally bears a certain proportion to the length of its longest blade of whalebone.

A stout whale of sixty feet in length, is of the enormous weight of seventy tons; the blubber weighs about thirty tons, the bones of the head, whalebone, fins and tail, eight or ten; carcass thirty or thirty-two.

The flesh of the young whale is of a red colour; and when cleared of fat, broiled, and seasoned with pepper and salt, does not eat unlike coarse beef; that of the old whale approaches to black, and is exceedingly coarse. An immense bed of muscles surrounding the body, is appropriated chiefly to the movements of the tail.

The number of ribs, according to Sir Charles Giesecke, is thirteen on each side. The bones of the fins are analogous, both in proportion and number, to those of the fingers of the human hand. From this peculiarity of structure, the fins have been denominated by Dr. Flemming, "swimming paws." The posterior extremity of the whale, however, is a real tail; the termination of the spine or os coccygis, running through the middle of it almost to the edge.

The whale seems dull of hearing. A noise in the air, such as that produced by a person shouting, is not noticed by it, though at the distance only of a ship's length; but a very slight splashing in the water, in calm weather,

excites its attention, and alarms it. Its sense of seeing is acute. Whales are observed to discover one another, in clear water, when under the surface, at an amazing distance. When at the surface, however, they do not see far. They have no voice; but in breathing or blowing, they make a very loud noise. The vapour they discharge, is ejected to the height of some yards, and appears at a distance, like a puff of smoke. When the animals are wounded, it is often stained with blood; and, on the approach of death, jets of blood are sometimes discharged alone. They blow strongest, densest, and loudest, when "running," when in a state of alarm, or when they first appear at the surface, after being a long time down. They respire or blow about four or five times a minute.

The usual rate at which whales swim, even when they are on their passage from one situation to another, seldom exceeds four miles an hour; and though, when urged by the sight of any enemy, or alarmed by the stroke of a harpoon, their extreme velocity may be at the rate of eight or nine miles an hour; yet we find this speed never continues longer than for a few minutes, before it relaxes almost to one-half. Hence, for the space of a few minutes, they are capable of darting through the water, with the velocity almost of the fastest ship under sail, and of ascending with such rapidity as to leap entirely out of the water. This feat they sometimes perform as an amusement apparently, to the high admiration of the distant spectator; but to the no small terror of the unexperienced fishers, who, even under such circumstances, are often ordered, by the foolhardy harpouner, to "pull away" to the attack. Sometimes the whales throw themselves into a perpendicular posture, with their heads downward, and, rearing their tails on high in the air, beat the water with awful violence.

In both these cases, the sea is thrown into foam, and the air filled with vapours; the noise, in calm weather, is heard to a great distance; and the concutric waves produced by the concussions on the water, are communicated abroad to a considerable extent. Sometimes the whale shakes its tremendous tail in the air, which, cracking like a whip, resounds to the distance of two or three miles.

When it retires from the surface, it first lifts its head, then plunging it under water, elevates its back like the segment of a sphere, deliberately rounds it away towards the extremity, throws its tail out of the water, and then disappears.

In their usual conduct, whales remain at the surface to breathe, about two minutes, seldom longer; during which time, they "blow" eight or nine times, and then descend for an interval usually of five or ten minutes; but sometimes, when feeding, fifteen or twenty. The depth to which they commonly descend, is not known, though from the "cldy" occasionally observed on the water, it is evidently, at times, only trifling. But, when struck, the quantity of line they sometimes take out of the boats, in a perpendicular descent, affords a good measure of the depth. By this rule, they

have been known to descend to the depth of an English mile; and with such velocity, that instances have occurred, in which whales have been drawn up by the line attached, from a depth of 700 or 800 fathoms, and have been found to have broken their jawbones, and sometimes crow-bone, by the blow struck against the bottom. Some persons are of opinion, that whales can remain under a field of ice, or at the bottom of the sea, in shallow water, when undisturbed, for many hours at a time. Whales are seldom found sleeping; yet, in calm weather, among ice, instances occasionally occur.

The food of the whale consists of various species of actinie, clones, scapie, meduse, cancri, and helices; or at least some of these genera are always to be seen whenever any tribe of whales is found stationary and feeding. In the dead animals, however, in the very few instances in which I have been enabled to open their stomachs, squille or shrimps were the only substances discovered. In the mouth of a whale just killed, I once found a quantity of the same kind of insect.

When the whale feeds, it swims with considerable velocity below the surface of the sea, with its jaws widely extended. A stream of water consequently enters its capacious mouth, and along with it, large quantities of water insects; the water escapes again at the sides; but the food is entangled and sifted as it were, by the whalebone, which, from its compact arrangement, and the thick internal covering of hair, does not allow a particle the size of the smallest grain to escape.

(To be continued.)

## ORIGINAL CORRESPONDENCE.

A. Adam Street, Adelphi, April 6th, 1820.

Sir,—Your correspondent who has given a sketch of Mr. West's memoirs, from my account of his life and studies, has inadvertently fallen into an error, which makes him seemingly guilty of a falsehood in an attempt to question the authenticity of a fact. In noticing the circumstance of Mr. West's mother having been thrown into premature labour, by the effect of an "inspired preacher's" sermon, he says, that I absurdly inferred from that accident "that the child was born to great future destinies;" but I make no such inference, nor do I offer any opinion of my own on the subject. I therefore beg the favour of you to notice this mistake, which, as it stands at present, has a very malicious appearance; and I perceive it has arisen from ascribing to me an expression of Patterson the preacher.

I have the honour to be, Sir,

Your very obedient humble servant,  
To the Editor, &c. JOHN GALT.

## ARTS AND SCIENCES.

Alexandria, (Egypt) Jan. 30th.

The canal of Ramanieh, which leads from Cairo to Alexandria, is just finished. The Vice-Roy, Mehemed Ali Pasha, by his own

desire, was the first to sail along it, with the view of ascertaining that his plans had been strictly fulfilled. In several places he himself sounded the depth and measured the width of the canal. The merchants of Alexandria propose giving a grand fete in honour of the completion of this vast enterprise, and to testify their gratitude to the Pasha.

An account of curious Halos, and Parhelia, that were observed at Edmonton, Wednesday, April 6th, 1820.—From 8 to 9, A. M.

About a ½ past 8, I observed a very fine and strongly coloured curve in the heavens representing the upper part of an inverted Uhalo: its distance from the sun by admeasurement was found to be 45°. This semidiameter is uncommonly great, as the semidiameter seldom exceeds 22°, but this led me to look more attentively, when I observed one fainter in colour, whose semidiameter was found to be 22°—this soon became nearly equal in colour to the appearance, and two parhelia were seen, one to the eastward and one to the westward, alternately very strong: the upper part now became much stronger, and formed a double curve, one towards the zenith, and the other towards the horizon: the lower halo became much stronger and larger, and represented a double curve also, but of a different form; and the parhelia to the westward was not found upon the halo as they generally are, but without it, when it had this wonderful appearance.

Edmonton.

C. H. ADAMS.

## FINE ARTS.

CENOTAPH TO THE PRINCESS CHARLOTTE.

We have been politely admitted to a view of Mr. Wyatt's model of a design for this monument of national love and sorrow, which, it will be remembered, is that for which so general a subscription of sums not exceeding ten guinea has been made. To say that we admire this performance, would poorly express our feelings, and be a very faint and inadequate testimony to the genius of the artist. He has achieved a sublime work. Original, simple, wonderfully affecting—we are filled with surprise at the talent which has conceived and executed so noble a production within so brief a period. To say what it is, we know no way so good as to describe (what we can but insufficiently do) its effects upon us. We were struck with a deep awe, which, as we contemplated the group, gradually gave way to a sensation of intense though tender grief. The heart's

transition was from an indefinite gloom to a rational sorrow; and we seemed to be pondering, not upon a marble cast, but upon that holy text which speaks of the moment "When this corruptible shall put on incorruption, and this mortal shall put on immortality;" or that which gives the blessed assurance of a time "When the Lord God shall wipe away all tears from all eyes." Indeed, something of this spirit must have guided the artist. There are two compartments in his design, the one of earth the other of heaven. In the inferior there are five figures; and singular to state, the countenances of all hidden under draperies. The chief figure is dead upon a bier, and four are weeping and mourning around in various attitudes. We are not afraid to say, that their expression is equal to what could have been obtained by showing faces in the sleep of death, in tears, and in agony; at least they produced as strong an emotion upon our minds. The superior group displays the disembodied soul rising from the tomb, and aspiring to its Maker's throne. The form is exquisite, and the bust a likeness of the late princess, of surpassing beauty and fidelity. On each side an angel glorifies this ascension; and one of them is to bear an infant—the only detail of the monument not yet finished.

As this notice is intended merely as a piece of public news in the Arts, we should at this public abstain from a critical examination of its subject. But it affords us infinite pleasure to add, that we are also prevented from following that course (if it imports blame as well as commentary) by the sincere and unbounded gratification which Mr. Wyatt's genius has afforded us. The colder feelings of art and all its rules are absorbed in the simplicity and grandeur of this conception. We could not look at details while filled with that abstract consciousness of the sublime and beautiful which all truly great performances, (whether in language, music, painting, or sculpture) inspire: and now, concluding what we had to say on the idea which has dwelt with us since we first saw this work, we take leave to congratulate the country on its accomplishment, and the author on the fame which he may rest assured will reward his labours.

## ARTISTS' GENERAL BENEVOLENT FUND.

The anniversary of this excellent charity was observed on Wednesday. The duke of Sussex presided, and above 400l. was subscribed in the room. Not having time this week, we purpose, if needful, to render some account of the proceedings in our next.

## BRITISH GALLERY.

Although the Gallery closes this evening, and our notice cannot direct much public attention to their pictures, it is but justice to the undermentioned contributors to put their names on record: an oversight, in making up our last publication, alone prevented us from paying them a more timely tribute.

No. 100. The Young Village Carpenter.—W. S. Watson.

A clever cabinet picture. No. 192. A

first attempt at Sketching, the same. A fine piece of reflected light, and altogether sweet and harmoniously coloured.

116. *Pilot going Out.*—J. F. Ellis.

Mr. Ellis is within a step of excellence; the water is too green, but its character is good.

136. *A Study.*—By W. Emerson.

A well painted study, notwithstanding our joke a few weeks since. (See Literary Gazette.)

154. 157. *Cupids.*—F. Ferriere.

Exquisite imitations of bronze.

155. *The Cup of Tea.*—W. M. Sharpe.

Much Flemish character given to an English subject. There is some defect in the drawing of the accessories, but the principal figure is admirable. We forgot to notice the delightful colour of the satin in Mr. Sharpe's other picture, to which this forms so striking a contrast, and shows that his pencil is equally powerful in the humble dwelling and in the superb mansion.

187. *Study of a Head.*—A. Geddes.

A finer study of armour than of a head. The former is beautifully painted, with a Rembrandt-like effect: the latter is a shadow.

230. *School-boy.*—T. C. Thomson.

Strongly reminds us of Wright of Derby. Very natural, and not inferior to the most admired pictures of the artist whose name we have mentioned.

233. *Puppies at play.*—M. T. Ward.

An exceedingly spirited representation, deserving of favourable notice.

243. *Morning: Fishermen Returned.*—John Burnett.

Clear, though rather gaudy in colour. The fish are well executed, and, considering the subject as out of the artist's usual style, it certainly adds to his deserved reputation.

246. *The Upar, or Poison Tree.*—Francis Danby.

The conception is grand, and does not belong to a common mind. Still the picture is far from pleasing, on account of the dismal subject.

279. *Landscape: Anacreontic Revels.*—W. Linton.

A gay, beautiful, and airy scene. It is full of light, as it ought to be, and the tenderness of the pencilling strikes us as peculiarly fascinating and appropriate.

295. *Fier on Loch Tay.*—P. Nasmyth.

In this artist's own manner; and very charming. We know no painter whose shadows are so pure as Mr. Nasmyth's; what is reflected in them is as clear as his positive colours, though not an iota too bright.

No. 308. *Card Players.*—J. Carver.

Taken as a specimen of this artist's abilities, affords a fair criterion whereby to judge them. It is more immediately studied from nature than his other pictures, and has consequently more truth, and a better effect.

240. *Venus, Cupid, and the Graces.* No.

14. *The Daughter of Herodias, &c.* No.

25. *A Peasant.* No. 35. *A Sketch, &c.*—R. T. Bone.

No. 240. This composition appears to be brought together for the purpose of displaying the artist's skill in the management of the colouring; so far he has succeeded;

but we think at the expense of other qualities in art equally requisite for such subjects. No. 14. as a sketch, promises well. No. 25. is something more; it is a very pleasing performance.

#### ST. PAUL'S CATHEDRAL.

C. J. R. informs us, that on the day when Mr. West's funeral took place, the price of admission to St. Paul's Cathedral was raised from two pence to one shilling; and, justly indignant at so shameful a practice, he wishes to know who authorize and who benefit by the job. This abuse has been too frequently arraigned in public to admit of any hope of its reformation, as the parties concerned, (the Dean and Chapter it is said) appear to set the paltry profit derived from naking a show of a national church above the disgrace attached to the traffic. As churchmen, we consider their conduct to be scandalous; and even as showmen it is reprehensible, for not only do they allow the more ostensible monuments in the Cathedral to be covered with filth and dirt, instead of keeping them clean for the inspection of their customers, but they suffer the noblest ancient relics to perish—witness the tomb of Dr. Donne, so deeply interesting in all its circumstances.

#### ORIGINAL POETRY.

##### TO MISS

By R. H. mortally wounded at a Tea-table, on the — day of December, 1819.

'Tis not alone thy hazel eye,  
Flashing about its shafts of fire,  
(By which so many beaux must die)  
That I admire:

'Tis not alone thy lady's grace,  
Or look so filled with sweet expression,  
That on my heart, Love's helpless page,  
Makes deep impression:

'Tis not the vermeil tint that dyes  
Thy young cheek like the bursting rose;  
Nor thy soft bosom, heaved by sighs,  
Or in repose:

'Tis not the chestnut braid that runs,  
Binding thy forehead fair and proud,  
And o'er thine eyes (those summer suns)  
Hangs like a cloud:

'Tis not the swan-like beauty clear,  
That lies upon thy waving hair;  
From that (and yet I love it dear)  
I might escape:

'Tis not thy voice, like music heard  
At distance by the water's side;  
Nor thy sweet "cunning talk," preferred  
By me to all beside:

'Tis not—and yet it is—'tis all  
That I have said, and none deny—  
Which makes—will make me love thee well,  
Until I die,

R. H.

[By Correspondents.]

##### MEMORY.

Borne on the Ocean's heaving breast,  
Mark you stately vessel sail;  
How in floating canvass drest,  
Courts she every wanton gale:

Soft the propitious breezes blow;  
Fast she makes the wish'd for shore;  
Glitt'ring bright in splendid show,  
Rich with India's golden ore.

Gently foams the receding tide,  
'Neath the golden-glided prow;  
Pleas'd the joyous waves divide  
Still behind no track they show.

Yet at some far-distant day  
Memory will the scene retrace;  
Mark the wanton breezes play;  
Hail the vessel's easy grace.

Boatman thus on life's broad stream,  
Man in all his beauty move;  
Bliss with sweet contentment's beam,  
Bliss with all his bosom love.

Swift each passing year rolls on;  
Still contentment glads his mind;  
Soon each passing year is gone—  
Gone, nor leaves a track behind.

Then sly fond memory's powers  
Pleasures long since past review;  
Lead him back to youth's bright hours,  
And each blissful scene renew.

ALPHIUS.

#### BIOGRAPHY.

Professor Kephelides, in Breslau well known by his interesting Tour in Italy and Sicily, (from which several articles appeared in the Literary Gazette, previous to the publication of the work), died lately at Breslau, after a tedious indisposition, in the 33d year of his age.

The German papers mention the death of the Imperial Austrian Court Secretary, Daniel Ribini, a man distinguished by his various literary and philosophical acquirements. He was a native of Presburg, and received his education at Göttingen. His extensive acquaintance with the most eminent literary characters of foreign countries: his visits to the banks of the Thames and the Danube, to Sweden and Italy, improved and matured the excellent qualifications with which nature had endowed him. He pursued with enthusiasm the study of natural history, chemistry, mechanics, hydraulics, hydrostatics, optics, and astronomy; and he could converse with equal facility in the English, Italian, and Hungarian languages.

#### THE DRAMA.

DRURY LANE.—The Easter Monday's novelty was produced here on Saturday, in the shape of a "broad-farical-pantomimical-drama," entitled *Shakespeare versus Harlequin*, and founded on Garrick's piece, to satirize the introduction of pantomime into this country, and revenge himself of that success, which diminished the attractions of the regular drama, of which he was so grand a pillar. On the first night this alteration, or restoration (whatever it may be called), was indifferently received; but it has since been reduced and condensed so as to obtain a more favourable audience. It will therefore fret its hour upon the stage, neither the best nor the worst of its clus, suffered when not hissed, and endured when not applauded. It offers nothing for criticism.

The opera of Artaxerxes has been well got up at this house, with Ibrahim, Mladame Vestris, Incelon, Miss Carew, and Mrs. Bland, in the principal parts.

Kean is to play other characters before he tries Lear. Dowton, or some one for him, has published a letter to Elliston, declining the *perous* distinction of having his name in large letters in the playbills. One would really suppose that in the idea of "the playmen" the fate of empires depended on these capitals. If not quite so much importance is attached to this silly, it was probably meant as a slap at the silly ambition of Kean.

The new Hamlet has vanished like his father's ghost, and could not be brought to "walk again."

The following odd, and apparently absurd intimation, has been published in the bills. We confess that it is inexplicable to us, as we did not know of the enmity of the free list to Shakespeare.

"Under the apprehension that the immortal Shakespeare may meet with opponents, the Proprietor begs leave to announce, that it is his duty, for the interest and protection of the property committed to his care, that the *Free List* should be suspended during the performance of King Lear, the Public Press excepted."

**COVEY GARDEN.**—There has been a little too much reading of parts at this theatre during the week. *Performers*, like other people, ought to perform their duty; and appeals to the public for indulgences of the kind we allude to, ought to be of very rare instead of very frequent occurrence. At present we refrain from particularizing, hoping that, according to the adage, a nod may be as good as a wink—the proverb is somewhat musty.

Henri Quatre, a musical romance compounded from many Parisian dramas by Mr. Morton, is announced for next week.

**King Lear.**—On Thursday Mr. Booth sustained the arduous character of Lear; and if applause be the test of merit, sustained it successfully. For ourselves, we think that he belongs to a school unfit for the performance of the part, which is perhaps the most difficult in the whole wide range of the Drama. Lear is testy, wayward, passionate; but his frailties are of a royal nature: he is still "every inch a king." There is then a dignity in his wildest moods, and a majesty in his most tempestuous sorrows, which we do not find in Mr. Booth, or those who pursue a similar line of acting. A masterly touch or two will not convert a coarse daub into a fine painting; neither can a few points of effect render a pantomimic action congenial to the woes of the most afflicted of monarchs. Mr. Booth made what are called some hits; but his Lear was not the ideal which every refined understanding draws from Shakespeare. Indeed, it is but justice to say that the play itself was not Shakespeare's, but that clumsy patch-work which the public tolerated when its sensibility required tragedy to be stripped of all its pathos and terrors. Mr. Booth's dress in the latter scenes, and the making up of his face,

with beard, &c. were *outré*. The other parts, including C. Krimble's inimitable Edgar, and Macready's Edmund, to which this fine performer gave new vigour, and Fawcett's Kent, were excellently done. At the conclusion there was an uproar about bringing Lear on the stage: we were sorry that so silly a custom should be initiated at a second theatre. Upon the whole we were ready to retire, exclaiming—

"Oh! for a last memorial to the age!  
One classic drama to reform the stage!"

**SADLER'S WELLS.**—This is a pleasant little theatre, and has gained our good word. The manager, (Mr. Howard Payne) has exerted himself to gratify the public, and has succeeded. "Thus should desert in arts be crowned." The pantomime company here is very strong; and we willingly

—Let our muscles play,  
And give our cheeks a holiday—

at the feats of Messrs. Bologna, Grimaldi, and Barnes, that illustrious trio in mime and grimace. Nor must the pretty Miss Vallancy be forgotten. In addition, however, to the pantomimic evolutions, the public may see the celebrated story of "Calas" dramatised: the tale is of a Father who was actually executed in Paris (though innocent) for the supposed murder of his son. Calas has been stripped by the author, of its more painful termination, and the discovery of the guilty person takes place before, instead of after the execution of the father. This is perhaps the better plan, though we are not for falsifying fact in general. The story is told with a good deal of truth and unpretending pathos at Sadler's Wells. If these enticements be not enough to induce a reasonable person to visit this theatre, be it known, that there is another performer, of the name of BRUN, who enacts wonders both on land and in water: he has four legs, to be sure, but he is, nevertheless, not a prodigy, except in the way of understanding. He is quite the *beau idéal* of a dog, being handsome, faithful, and gallant. He fights with the men, and protects the women and children. He is, as it were, the Quixotte of dogs, though we thought once that his *night* errantry was not so spontaneous as that of his famous prototype. Be this as it may, the dog is an excellent dog, and merits well the plaudits which he receives, and the supper which, (we hope) always awaits him, in requital of his labours.

## VARIETIES.

An Englishman at Paris, traversing the catcombs, was told, that if he wandered from the black line traced on the ceiling, he would be lost: "Never fear," said he, "I will halloo out *sixpence*, and all Paris will hear me!"

**Great Attraction.**—At one of the Cafés of the city, where novelty is all in all, they have got a giantess to preside at the bar, instead of a beautiful lemonade-maker. They call the house, in consequence, the Bellona, and the representative of the goddess, a fine

woman of six feet two or three inches in height, does the honours of the saloon.

Virginius, a tragedy, written by a gentleman of that city, has been successfully produced at the Glasgow theatre.

A medal has been struck in Paris with the effigies of the Duke of Berry on one side, and on the other, the following inscription, composed by the Academy:—

Pugione  
Percussus perit  
13 Feb. 1820.  
Gallia sperem suam,  
Conflux amatoem,  
Militia Ducem,  
Populus patrem  
perdiderit.

The investigation and description of antiquities are at present zealously prosecuted throughout France. The Academy of Inscriptions and Belles-Lettres is constantly receiving from all parts of the French kingdom, memoirs, designs, and various interesting materials and documents. The latest reports on the above subject that have reached the Institute are drawn up by M. M. Ducherrenil and de Gerville, for the department of La Manche; M. Fingé, for the arrondissement of Nogent; and M. Saint-Amans, for the department of Lot-et-Garonne. M. Bavaire, of Doubs, is proceeding with his work on the Sequani. M. Dumège, a learned archaeologist of Toulouse, has sent to the French Academy several very curious memoirs on the monuments of that city. At Amiens, the Academic Society is proceeding with similar investigations, and the happiest results may be expected from the co-operation of its members.

Arnault, the author of *Germanicus*, who has returned from banishment, has written a new tragedy, *Les Gueffes et les Gibellins* which is now studying by the actors of the French Theatre, and the representation of which is impatiently expected by the public.

A. Mr. Lefebvre has invented a pack of cards which contains the elements of botany. He has followed a system of his own, which he has developed in several discourses laid before the Institute. He places all the flowers in the world in four classes. Poly-pedales, Monopedales, Perigones, and compound flowers. These supply the place of the four suits, diamonds, clubs, spades, and hearts. The other divisions are likewise the same as at cards, viz. twelve matadors or figures; and the plain cards, from ace to ten. The latter are expressed by the stamina of the flowers; and Linnaeus's 12 last classes supply the place of king, queen, and knave, on each of the four principal divisions. These cards are called, "Boston de Flore."

It is stated that the mines whence the Greeks and Romans originally derived their emeralds, have been re-discovered near Mount Zabarah, in the vicinity of the Red Sea; and 6/6 of the mineral dug from them for the Pasha of Egypt. But the emerald was also obtained abundantly in ancient times from the eastern parts of Asia.

The tragedy of Hamlet has been transformed into a *melo-drame* at the Porte Saint Martin.

Molière's *Philinte*, has been revived at the Theatre Français. Damas, who takes the character of Alceste, evinces in some scenes the superior talent which Molière displayed in that admirable part. Michelot, in the part of *Philinte*, deserves all the applause he receives. The piece is very attractive.

A pompous fellow made a very inadequate offer for a valuable property, and calling the next day for an answer, enquired of the gentleman if he had *entertained his proposition*. "No," replied the other, "your proposition entertained me."

*Polymorphoscope*.—A small mirror called by this name is now made at Paris, which reflects not only the face of the lady who looks into it, but by means of painting contrived in a peculiar manner, shows her in the various kinds of dress and taste, so that she may see what becomes her best, and be guided accordingly in the choice of her head-dress.

A French poet, who has recently added to his reputation by the publication of a work of considerable merit, asked one of his friends what he thought of it. "I have arrived at the fifteenth canto," replied the friend, "and I do not hesitate to affirm, that I never read more beautiful and harmonious poetry in the French language."—"I beg pardon," replied the author, "there is one thing in the language which I must confess is superior." "Oh! perhaps you mean *Phœbe* or *Athene*?" "No, I mean my sixteenth canto."

*Mount St. Bernard*.—The number of rations of food, given to travellers who passed this mountain in 1819, was 30,852.

In the register at the convent, in which travellers write their names, and sometimes also, observations, short sentences, &c. there is under the date of July 13, last year, the following Latin verses, inscribed by an English traveller, Mr. Butler, who passed the mountain on that day.—

Hæc ubi plana vides Berninæ in monte viator!  
Pennis quondam templi fœce Jovis;  
Hospitum vetus et prisca venerabile Sedes  
Nunc collitur vici sanctorum ara Dei.  
Scilicet hæc pietas, robore, sibi summa sedem,  
Deque via fœtis, rodere gaudet opem;  
Excipit et comit hospitio refectique mediæ.  
Et curat docta sacra membra manu;  
Milgat et Crumæ glaciem; mollique prius,  
Et facti æternæ ree calore nives.

At the time that M. de Cambrey was prefect of the department of the Gise, some peasants accidentally discovered near Oenoy, under a stone, a great number of Roman coins in an urn. They were of great value, (the whole being estimated at 40 to 50,000 francs, though since much dispersed) and extremely rare; for, with the exception of a few earlier, they began with Trajan, and came down, almost without any breach, to Alexander Severus. There were 60 of Commodus, several pieces of Crispinus, of Septimius Severus and his family, of Pertinax, &c. &c. The prefect bought a considerable number of them, shortly after which he was called to Paris, and thought that he could not testify his respect to Napoleon in a better manner than by presenting him with twelve

of the most rare gold coins. There happened to be an Ambassador from the United States at the audience, and Napoleon seized the opportunity to transfer to him this valuable and scientifically important gift, saying, "Sir, take this with you to America, and tell your countrymen that these are the fruits which our peasants reap in their fields." M. de Cambrey, who had flattered himself with increasing by his present the riches of the French collection of medals, was as angry as sorry that he had made so bad a use of them, and kept, without saying anything, those which he had not yet given the Emperor.

On the 21th ult. a funeral ceremony was performed in the Jewish synagogue of the Rue St. Avoir, in Paris, to the memory of the late Duc de Berri. A *de profundis*, and a dead march by M. Halévy, a young Jewish composer, produced a most impressive effect. M. Halévy is a pupil of Cherubini, and he recently obtained the grand prize of musical composition at the French Institute. The synagogue was entirely hung with black. The orchestra was composed of many of the most distinguished artists of the French capital, together with many Jewish performers, both artists and amateurs.

## LITERARY NOTICES.

### MODERN GREEK LITERATURE.

Measures are now taking for the foundation of a great college at Zagori, in Epiræ. The voluntary subscriptions towards this establishment, already amount to 70,000 francs. The learned Greek priest, Neophytus Doucas, has subscribed for his own share, 10,000 francs. The printing press established at Chios, is now in full operation. The finest production that has issued from it is an admirable Discourse, delivered by Professor Bambus, on the opening of the course of lectures for this year, in the great College at Chios; this Discourse is printed with much elegance. In a short time many important works will issue from the press at Chios, all destined to contribute to the regeneration of this classic country. Mr. Komnass, one of the most distinguished literati of Greece, and first professor in the great College at Smyrna, has just published the two last volumes of his *Course of Philosophy* which may be said to constitute an era in the annals of modern Greece. It is a summary of all that is remarkably beautiful and useful in the philosophy of Germany, and has been received with unanimous approbation by all well-informed Greeks, who are rejoiced to see the torch of modern philosophy lighted up among their countrymen.

*Contents of the Journal des Savans for Feb. 1820.*

G. W. Freytag. *Selecta ex Historia Hæbi* et *edice Aradico Bibliothecæ regie Parisiensis*.—Reviewed by M. Silvestre de Sacy. Visconti. *Mémoire sur les ouvrages de Sculpture qui appartiennent au Parthénon*.—M. Quatremère de Quincy.

Quatremère de Quincy. *Lettres à M. Canova, sur les Marbres d'Elgin*.—M. Letronne.

L. Jommis Baucher. *Eusebii Chronicon*.—M. Saint Martin.

Dom Clément. *L'Art de vérifier les Dates*.—M. Daunou.

P. H. Duedal. *Projet de Boisement des Basses Alpes*.—Tessier.

*Havary, March, 1820*.—A lithographic establishment has now been formed here, at the head of which is M. Letronne, from Paris, a pupil of David. He has advertised a work of which great expectations are entertained. It is a collection of portraits of the kings and other celebrated characters of Poland, which is to be published in folio, and in numbers.

W. Von Schmidt Phiselsdeck, Counsellor of State to his Majesty the King of Denmark, has just published a work, which is spoken of in the highest terms; the title of it is "Europe and America; or the future relations of the civilized world."

## METEOROLOGICAL JOURNAL.

APRIL, 1820.

Thursday, 6—Thermometer from 39 to 53.

Barometer from 29, 60 to 29, 57.

Wind S. W. 2.—Generally cloudy, with rain at times: the greater part of a very fine halo was formed about 3 o'clock in the afternoon. Two fine double rainbows about 4 and 6 o'clock: a shower of large hailstones about 3.

Rain fallen, 2 of an inch.

Friday, 7—Thermometer from 31 to 55.

Barometer from 29, 54 to 29, 68.

Wind S. W. 2 and 4.—Generally clear, with clouds passing.

Rain fallen, 925 of an inch.

Saturday, 8—Thermometer from 29 to 51.

Barometer, from 29, 57 to 29, 41.

Wind S. b. W. 1.—Generally cloudy, and raining.

Rain fallen, 1125 of an inch.

Sunday, 9—Thermometer from 37 to 52.

Barometer from 30, 42 to 30, 61.

Wind W. and N. W. 2 and 4.—Generally cloudy till noon, the rest of the day generally clear.

Rain fallen, 125 of an inch.

Monday, 10—Thermometer from 29 to 58.

Barometer from 29, 64 to 29, 55.

Wind S. b. E. 1.—A white frost and a fog in the morning, and afterwards generally raining.

Rain fallen, 85 of an inch.

Tuesday, 11—Thermometer from 42 to 57.

Barometer from 29, 63 to 29, 60.

Wind S. W. 3.—Generally cloudy, with showers of rain at times.

Rain fallen, 25 of an inch.

Wednesday, 12—Thermometer from 39 to 59.

Barometer from 29, 59 to 30, 01.

Wind S. and S. W. 1.—Generally cloudy, rain at times. Rain fallen, 2 of an inch.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

J. G. M. is assured, that the assertion to which he alludes is unfounded. The Gentleman in question never saw the article; and though an extravagant private friend, and valued occasional contributor, has no connection whatever with the *Literary Gazette*.

Erasmus in the last Number.—In our account of Sir T. Lawrence's pictures (*Goniat*) for common chair read crimson chair.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

**MR. HAYDON'S PICTURE** of "Christ's Entry into Jerusalem," is now open for Exhibition, at Bullock's Great Room, upstairs to the right, from ten till six.—Admission 1s. Catalogue 6d.  
"Fear not Daughter of Zion; behold thy King cometh, sitting on an ass's colt."

BULLOCK** respectfully announces to the Public, that his extensive Premises, the Egyptian Hall, in Piccadilly, are now open for the reception and sale, by Auction and Private Contract, of Property of every description connected with the Arts, ornamental and useful Furniture, and Natural History in all its branches. The next Public Sale will comprise four days of scarce Prints, to commence on Monday, the 15th instant; the other different Properties Mr. Bullock has already received directions to bring to Auction, and of which catalogues are preparing, will continue about four days in each successive week during the season, and will consist of extensive and valuable collections of Pictures, Prints, Books, beautiful framed Bricks, Unquadrated, Entomology, Shells, Minerals, Precious Stones, British Fauna, complete Fish, Ebony, Bone-ware and India Japan Cabinets, Commodities and Screens, Scur, Dradon, and Oriental Enamel China, Antique Marble Statues, and Groups of the School of Canova, &c. Granite Phorphyry, Verd Antique, and other Italian Marble Slabs, Monies, Bronzes, Raphael Ware, Etruscan Vases, useful and ornamental Furniture, India Paper, and numerous intellectual Articles of Virtue. Due notice of the prospective sales will be given in future advertisements, and the different articles may be viewed, and catalogues had two days preceding, with a prospectus of the terms on which property of every description is received for public and private sale.

By Mr. Bullock, at his Egyptian Hall, Piccadilly, on Friday, April 21st, precisely at one.

**A valuable Collection of Prints by Ancient and Modern Masters**, of the different Schools, comprising many rare and fine productions, the sole and genuine property of a private gentleman; among which are a brilliant set of Alexander's Battles, by Adrian and Fedisch, after Le Brun; also a fine choice Drawings, in colors, by eminent Artists, particularly a most beautiful set of illuminated Drawings, after the original Pictures by Raphael in the Vatican.

To be viewed and catalogues had two days preceding. By Mr. Bullock, at his Egyptian Hall, Piccadilly, on Thursday, April 20th, at one precisely.

**By Order of the Executors**, a collection of Prints and Drawings, by old Masters, fine Engravings by modern Italian Artists, and a fine choice of Pictures, by Raphael Mengs, Raphael's Pictures in the Vatican, by Volpato, also some Drawing Boards, Painters' Facels, Color Boxes, and Engravers' Tools, the genuine property of Sydenham Edwards, Esq. deceased.

To be viewed and catalogues had two days preceding.

**Valuable Library of Books**, By Mr. Bullock, at his Egyptian Hall, Piccadilly; on Wednesday, April 26th, at one precisely.

**A very Valuable and Splendid LIBRARY** of Books and Books of Prints, a part of the property of a private gentleman, in the best condition, and chiefly in elegant bindings; comprising, in folio and quarto, Woodburn's rare Portraits, 2 vols.; Watts' Works, 6 vols.; Customs of Hindostan, Turkey, Austria, Russia, and Great Britain, 6 vols.; Lord Valentia's Travels, 3 vols.; Lord Orford's Works, 9 vols.; Pennant's London, 2 vols.; Smith's Antiquities of London; Walpole's Royal and Noble Authors; Ireland's Hogarth; Church's Cabinet of Quadrupeds; Histoire des Fleuves, 6 vols.; Johnson's Dictionary, 2 vols.; Handel's Songs, 9 vols.; and Salt's Visions.

Ottewill, Malone's Shakespeare, 16 vols.; Holcroft's Lister, 4 vols.; Parliamentary, 108 vols.; and many other interesting and valuable Works.

To be viewed two days preceding, when catalogues may be had.

By Anonim, by Mr. Bullock, at his Egyptian Hall, Piccadilly, on Monday, April 17, 18, and 19, punctually at one.

**THE** entire and extensive collection of **TRAITS**, Works of the old Masters, and Novel-landscapes, the genuine property of an eminent private Collector, comprising near 5000 Portraits, by Blooding, Cross, Faithorne, Holbar, Logan, Massall, Paul, White, &c. &c.; and amongst the old masters, a very rare assemblage of the works of Albert Durer, Lucas of Leyden, &c. with a remarkably fine collection of the little masters, particularly the brilliant works of the Vicenza family; Veruca's Works, nearly complete; Oxford Almanacks, almost a complete series; Books of Prints, Portraits, &c. To be viewed three days preceding, and catalogues had, (Sundays excepted.)

### BOOKS PUBLISHED THIS DAY.

*Archdeacon Cox's Biographical and Historical Works.*

**1. MEMOIRS of JOHN DUKE of MARIBOROUGH**; with his Original Correspondence, collected from the Family Records at Blenheim, and other authentic Sources. In 6 vols. 8vo. with an Atlas, 5l. 5s.

**2. History of the House of Austria**, from the Foundation of the Monarchy, by Rodolph of Hapsburgh, to the Death of Leopold the Second, 1218, to 1792. 3 vols. 8vo. price 2l. 15s. 6d. boards.

**3. Memoirs of the Life and Administration of Sir Robert Walpole**, Earl of Orford, drawn from original Correspondence and Authentic Papers never before published. In 4 vols. 8vo. 2l. 7s. boards.

**4. Memoirs of the Kings of Spain of the House of Bourbon**, from the Accession of Philip the Fifth to the Death of Charles the Third, 1705-1788, from original Documents, and secret Papers, many of which have never before been published. The 2d Edition. In 5 vols. 8vo. 3l. in 4s. A few Copies in 3 vols. 8vo. 6l. 6s. In imp. 8vo. 12l. 12s. 6d.

**5. Tom's Nonmouthshire**. 2 vols. 4to. with plates, 4l. 5s. boards.

**6. Northern Tour**. 5 vols. 8vo. 2l. 2s. boards.

**7. Memoirs of Horatio Lord Walpole**, in 2 vols. 8vo. 1l. 12s. in boards. The 2d Edition.

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

### Horsley's Biblical Criticism.

Next week will be published, in 4 vols. 8vo.

**BIBLICAL CRITICISM ON THE BOOKS OF THE OLD TESTAMENT, AND TRANSLATIONS OF SACRED SONGS, AND NOTES** (Critical and Explanatory). By SAMUEL HORSLEY, LL. D. 1. R. S. F. A. S. Late Bishop of St. Asaph. London: Printed for Longman, Hurst, Rees, Orme, and Brown; and F. C. and J. Rivington. Of whom may be had, by the same author, Sermons, 3 vols. 8vo. price 1l. 7s. 6d. Nine Sermons, on the Evidence of our Lord's Resurrection, in 8vo. price 10s. 6d. boards. A Translation of the Psalms of David; with Notes, in 2 vols. 8vo. price 12s. boards.

In 2vo, illustrated with five Plates, price 14s. boards.

**AN ENQUIRY**, illustrating the NATURE of TUBERCULATED ACCRETIONS OF SEROUS MEMBRANES; and the Origin of Tubercles and Tumours in different Textures of the Body. By JOHN FABRIUS, M. D. Physician in the General Infirmary at Glasgow. Printed for Longman, Hurst, Rees, Orme, and Brown, London; Hodges and McArthur, Dublin; and Constable and Co. Edinburgh.

"This is a highly important work. It contains an accurate and circumstantial description of a very painful chronic affection of the abdominal viscera, of which no systematic account has hitherto been given, although isolated cases of it are to be found in the works of the older writers. But this is not all. On the subject of tubercles and other morbid growths, it unfolds original views, which promise to shed new light on the whole range of those obscure chronic diseases usually denominated cancer, and to add materially to the science of general pathology."—*Edinburgh Medical Journal*, No. 63. Jan. 1, 1820.

The 2nd Edition, in 2 vols. 8vo. 21s.

**TRAVELS IN EGYPT, SYRIA, CYPRUS, the MUREA, GREECE, ITALY, &c. &c.** in a Series of Letters, interspersed with numerous Anecdotes of distinguished Persons, by JOHN BRAMSEN, Esq.

"These sketches have all the freshness of reality about them, and will be found to contain much interesting and useful information, particularly to those who may have it in their power to visit the author in his interesting route; performed in company with the eldest son of Sir John Maxwell, the author possessed the advantage of the best introductions, and fully availing himself of them, he has described the fashionable circles of Vienna, Rome, Naples, and other cities, with great vivacity and effect. His account of the Monarchs, their modes of living, &c. is full of curious facts, which have not come within the observation of any other Traveller.

Printed for Henry C. Burns and Co. Conduit Street.

In 12mo. price 3s. 6d.

**THE MOTHER'S MEDICAL ASSISTANT**; containing Instructions for the Prevention and Treatment of the Diseases of Infants and Children. By Sir ARTHUR CLARKE, M. D. &c. &c. author of an Essay on Bathing. Printed for Henry Colburn and Co. Conduit Street; of whom may be had in a few days a 2d. edition of Sir A. Clarke's Essay on Bathing.

Price 2s. boards. In one large vol. 8vo.

**THE ENTHUSIASM of the METHODISTS** and PAMPHLET considered. By Bishop Lavington. With Notes, Introduction, and Appendix. By Rev. R. POLWHELE. This is a reprint from the scarce edition now selling for a very high price. The author's principal design is to draw a comparison, by way of caution to all Protestants, between the wild and pernicious enthusiasms of some of the most eminent Saints in the English Communion, and those of the Methodists in our Country; which latter he calls a set of pretended reform, animated by an enthusiastic and fanatical spirit. Printed by A. J. Valpy; and sold by G. and W. B. Whittaker; Sherwood and Co.; Simpkin and Co.; R. Priestley, London; and all other booksellers.

**THE EDINBURGH MAGAZINE, and LITERARY MISCELLANY**, being a New Series of the Scots Magazine for March 1820, in this day published, price 2s. Contents.—Illustrations of the Topography of Troy, with a Review of the Opinions of preceding Writers (illustrated by an Engraving). The Fly-leader, No. 1. Remarks on a Sicilian Story and other Poems, by Barry Cornwall. College for Ladies. Cleland's Rise and Progress of the City of Glasgow. I am my Brother; a Comedy, in one Act, translated from the German of C. W. Counters. Milton and Shakespeare. Observations on Penal Laws. Remarks on "The Monastery." Literary and Scientific Intelligence. Head of Meunon. State of Education in France. Wrought Iron Bridges. Portable Hot Water. The Moving Mountain. Conversion of Bags into Sugar. Imperial Museum. Museum of the Crown Prince of Saxia. Persian Manuscripts, &c. Russian Periodical Publications. The Tarquinius. The Universities of Sweden. Measurement of an Arc of the Meridian in Denmark. Petrification of Wood. Volcanic Fly. Cure for Plague. Earthquakes. Petrified City. The Savage of Java. Works preparing for Publication. Monthly List of New Publications. Monthly Register, &c. Edinburgh: Printed for Archibald Constable and Co.; and Longman and Co. London.

Just imported by Treutzel and Wurtz, 30, Boho Square, **VIE Privée de VOLTAIRE** et de MME. DU CHATELLET, pendant un Séjour de six mois à Cirey; par Mad. de GRATIGNY, Auteur des Lettres Péruviennes, Suivie de cinquante Lettres inédites en vers et en prose, de Voltaire. Vol. in 8vo. avec portrait, 1820. 10s. L'Hermite en Province, Suite de l'Hermite de la Chaussée d'Antin, par M. de Jorcy, &c. Proustome ou une nuit, avec fig. 8s. L'Hermite de Londres, ou Observations sur les Mœurs et l'Etat de l'Angleterre au Commencement du 18me Siècle, par M. de Jorcy. Tom. 1. avec Grav. 1820. 6s. Mémoires de M. de Coulanges, Suivis de Lettres inédites de Madame de Sévigné, de son fils, de l'Abbé de Coulanges de Lafontaine, &c. vol. in 8vo. 16s.

In 16vo, price 15s. boards.

**THE ANNUAL BIOGRAPHY AND OBITUARY, for 1820.** With Silhouette Portraits. Comprehending Memoirs of Professor Playfair; Mr. Watt, Engineer; the Bishop of Peterborough; Sir Philip Francis, Bart. Dr. Wolcot, (Peter Pindar); John Palmer, Esq.; Mr. Alderman Coombe; Major Scott; Admiral Sir Robert Calder; Sir Philip Maguire, Bart.; B. Brydson, Esq.; Lord Washington; Mr. James Brindley; A. Graham, Esq.; George Wilson Medley, Esq.; Col. Tatham; H. C. Jennings, the celebrated Antiquary; Mr. Rillington, &c. &c. The whole is interspersed with a variety of original documents, together with an account of recent Biographical works, and a Index of persons lately deceased. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, Vols. 1, 11, and 111, for 1817, 1818, and 1819, price 15s. each.

4to. 3s. 6d. a Second Edition of

**OBSERVATIONS Introductory to a Work on ENGLISH ETYMOLOGY,** with a small specimen, (letter M.) of Etymologies of English Words. By JOHN THOMSON, M.A.R. Printed for John Murray, Albemarle Street.

*Edinburgh Philosophical Journal.*

Handsome printed paper, containing twelve sheets letter-press, and illustrated with five Engravings, price 7s. 6d. sewed, Number IV., of the **EDINBURGH PHILOSOPHICAL JOURNAL**, conducted by Dr. Brewster and Professor Jameson. Contents.

**Astronomy.** Captain Katter on the Pendulum. Mr. Runkler on the Solar Eclipse of 1820. Dr. Rillington on the Oscillation of the Eclipse. Dr. Olsson on the Transparency of the Comet of 1819.

**Optics.** Dr. Brewster on the Absorption of Polarized Light. Ditto on the Optical Properties of Amber. Mr. J. Watt on his Perspective Machine.

**Magnetism.** Colonel Beaufort on the Variation of the Needle. Variation of the Needle at Lyons.

**Electricity.** Humboldt on Electrical Eels.

**Chemistry.** Dr. Macculloch on the Chemical Properties of Water. Dr. Macculloch on the Chemical Properties of Potash in Sea Water. Mr. Reid on Steam-Innocuous on Sugar from Linen. Sausure on the Decomposition of Starch.

**Meteorology.** Rev. Mr. Gordon on a Meteor. Journal for 1819. Singular State of the Barometer and Thermometer in Jan. 1820. Storm at Montreal. Dr. Brewster on the mean Temperature of the Earth.

**Mineralogy.** Professor Jameson on Rocks formed by Hot Springs, &c. Dr. Hibern on the Rocks of Skotland. Dr. Ross on the Volcanic Rocks of France and Scotland. Dr. Gillie on the Trap Formation, in Brecknockshire. Gerhard on Granular Rocks. Sir G. Mackenzie on Merges Observations on Iceland.

**Zoology.** Dr. Fleming on the Change of Colour in Birds. New Italian Works on Comparative Anatomy. Mr. Gualtheri on the Frogs. On a new Fossil species of Gluttolite. Mr. Macgillivray on the Sea Horse in the Helix. On Intestinal Worms. Dr. Trail on the White Swallow. Dr. Jacob on a new Membrane in the Human Eye.

**Botany.** Lymbey's Arrangement of the Algae. Mr. Stewart on Buxbaumia Aphylla. M. Nies on Mosses. Gallesio's Theory of the Reproduction of Vegetables. Dr. John on Potash in Vegetables.

**Navigation.** Captain Hall in voyaging down a Ship's Tract. Mr. Gualtheri on a Table for Correcting the Sun's Altitude. Mr. Scoresby on Measuring the Heights of Cliffs, &c.

**Useful and Fine Arts.** Dr. Goase on the Formation of Medallions by Petrifying Springs. Mr. Caddell on Mosaic. Ditto on Antique Marble, &c. at Rome. Mr. Robinson on an Iron Passage Boat. Dracconetti's new Dye. Mr. Clegg's new method of Producing coal Gas.

**General Science.** Mr. Scoresby on the seven Icebergs of Spitzbergen. Mr. Tarrt on the Earthquakes in N. Carolina. Mr. Goodwyn's method of Calculating Interest. Dr. Ferguson on the Marsh Polyp. List of Scottish Patents. Printed for Archibald Constable and Co., Edinburgh; and Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, the preceding numbers.

*Delphin School Editions, on a New Plan.*

Just Published, &c. by

1. **JUVENAL AND PERSIUS;** containing Ruperis and Kenig's Text, Delphin Notes, and without the Ordo.

2. Virgil, Heyne's Text, do. do. 10s. 6d.

3. Cæsar, Oberlin's Text, do. 10s. 6d.

4. Homer's Iliad; a new Edition, with English Notes, 12s. 6d. boards.

This is a very compact and useful edition of the Iliad for the Use of Schools. The force of the Particles, a distinguishing heave of the Grecian Language, is well pointed out. It will be found, beyond all comparison, the best edition for the use of Schools, at present extant. *Anglo-British Review*, Sep. 1819.

This is, perhaps, the most useful edition of the Memorabilia, that has yet made its appearance. It is also critical in an eminent degree, and contains a judicious and well-written account of the dialogue, together with a dissertation upon the Homeric metre, principally selected from the writings of Professor Dunbar and Mr. B. P. Knight. The notes are partly original, and partly taken from Heyne, Clarke, and Knight. The author has judiciously culled the heavy, critical matter of his work by quotations from Pope's admirable translation, and adorned it with a few parallel passages from the Roman poets, and from our illustrious countryman Milton.—*New Magazine*, Oct. 1818.

Printed by A. J. Valpy; and sold by G. and W. D. Whitaker; Longman, and Co.; Baldwin and Co.; Lexington and Co.; F. C. and J. Rivington, London; Macrae and Co. Edinburgh; Cumming and Co. Dublin; and all other booksellers.

Of each volume may be had, bound.  
Horace, with English Principles. (Oscianum) Notes to the Odes, &c. 5s. 6d.  
Horace, no Notes, 3s. 6d.  
A neat edition of Virgil, 12mo. 3s. 6d.  
Edition, 4s.  
The same, with English Notes, from Delphin, &c. no interpretation, 7s. 6d.  
Græco, without Verses or Phrases, 7s. 6d.  
Homer's Iliad, from the Text of Heyne, 7s. 6d.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Travels in various Countries of the East: being a Continuation of Memoirs relating to European and Asiatic Turkey, &c.* Edited by the Rev. Robert Walpole, M. A. Lond. 1820. Second volume. 4to. pp. 603.

Several of the latter Numbers of the Literary Gazette for the year 1817, and of those of the beginning of 1818, declare how highly we appreciated the first volume of this excellent work. Since that period the best critics of France, Germany, and Italy, have re-echoed our sentiments: there has been but one opinion of its merits, and the only objection that we have seen alleged has been to the arrangement, not to the value of its contents. To this Mr. Walpole has, in the preface to his new volume, given a very satisfactory answer; and, as we think, a still more gratifying one by rendering the whole publication equally interesting with its precursor.

We have therefore nothing to say in introducing it to our readers; ... for it would be tedious, however just, to repeat the phrases of panegyric. We shall merely notice, that there are thirty-four papers, (the chief of which, we mean, shall furnish separate reviews in our weekly sheet,) throwing unusual light upon oriental and ancient literature, affording much information whereby to understand the most difficult passages of Scripture, illustrating the geography of Asia and Africa, developing Greece in its antiquities and modern state, ... in short, forming a collection of rare intelligence and extraordinary value, which either for instruction or entertainment, must be highly acceptable to the scholar and man of taste.

[Our ensuing columns are derived from the papers numbered IX. X. XI. and XII., and relate to the travels and biography of Mr. Browne, of whom the British Public knows less than it ought.]

William George Browne was the son of a respectable wine merchant in London, the descendant of an ancient family of that name in Cumberland, and was born on Great Tower Hill, July 25, 1768. His constitution was originally feeble, and his health during infancy precarious. He was educated

privately till he went to Oxford at the age of seventeen, and entered of Oriel College. Here he applied himself to classical reading, made some progress in the mathematics, and took a wide range in miscellaneous literature. On quitting the university he entered at the Temple, hired chambers, and attended the courts of law. But he soon relinquished this pursuit, and contenting himself with the moderate fortune left by his father, indulged in that spirit of adventure which seems to have been implanted in his nature. Previous to 1791 he devoted himself principally to the cultivation of general literature, modern languages, and something of the fine arts, together with botany, chemistry, and mineralogy; but entering with great enthusiasm into the revolutionary mania which then sprang up in France, he wasted much of his time and vigour upon politics, and republished several tracts enforcing his views of the subject at his own expense, for the advancement of his favourite schemes. Fortunately the desire to travel superseded this passion; and stimulated by the perusal of Bruce's *Abyssinia*, he resolved to lose no further time in carrying his exploratory plans into effect.

Having determined on proceeding into the interior of Africa by the Egyptian route, Mr. Browne left England in 1791, and in the January following arrived at Alexandria. After a two months residence he took a journey westward into the Desert, to discover the unknown site of the temple of Jupiter Ammon. He followed a circuitous route along the sea coast to the Oasis of Siwah, where his attention was attracted by the remains of a remarkable and very ancient edifice of Egyptian architecture, respecting which tradition was entirely silent. Though inimical to his pursuit, he candidly expressed his opinion that this was not the Temple of Jupiter; and penetrating, amid considerable dangers, three days farther into the Desert, vainly searching for that object, he returned in April to Alexandria. He next visited Rosetta, Damietta, and Cairo, in which city he resided at different periods eleven months, diligently studying the Arabic language, and making himself intimately acquainted with oriental customs and manners. On the 10th of September he left Cairo, and sailed up the Nile as far as Thebes. He employed some days in surveying those venerable ruins, probably the most ancient in the world, which extend for three leagues on each side of the river, and shew the circumference of the city to have been about 27 miles. Higher up the river, he examined Assuan (Syene) the ancient boundary of the Roman Empire, and visited the celebrated cataracts, or rather rapids, of the Nile. The Mamluk war prevented his penetrating into Nubia, and he

turned again towards Cairo, but was diverted at Genie, on his way, into a journey thence towards the Red Sea and Cosair, to see the immense stone quarries described by Bruce. To avoid the perils of this road, he assumed the oriental dress and character; and his enterprise was amply rewarded. He passed through immense excavations, appearing to have been formed in the earliest ages; from which many of the great Egyptian monuments were obtained, and which furnished statues, columns, and obelisks, without number, to the Roman Empire, at its utmost elevation of luxury and power. He viewed with astonishment those exhaustless quarries of granite, of porphyry, and of verd antique, (now abandoned, and become the abode of banditti and wandering tribes) which supplied the most costly materials of ancient art, and to which modern Rome owes some of her principal existing decorations. In the Spring, Mr. B. traversed the rest of Egypt; and in May (1793), set out with the Great Soudan caravan with the purpose of penetrating into Africa by Dar-Fur, on the west of Abyssinia, and so on through the latter country to the source of the grand western branch of the Nile, the Bahr-el-abiad, or White river. During this journey, the thermometer was occasionally at 116° in the shade; but nevertheless, after incredible hardships, our persevering countryman reached Dar-Fur about the end of July.

“It appeared, immediately on Mr. Browne's arrival, that he had been entirely misinformed as to the character of the government, which he had understood to be mild and tolerant. From his first entrance into the country, owing in part to the treachery and intrigues of the servant he had brought from Cairo, but principally to the natural bigotry and violence of the reigning sovereign, he was treated with the utmost harshness and severity; and this circumstance, together with the fatigues of his late journey, and the effects of the rainy season, (so formidable to European constitutions,) produced, very speedily, a dangerous and almost fatal illness, from which he recovered very slowly, and with great difficulty.

“His first object, after the partial restoration of his health, was to obtain permission to quit the country; for which purpose he attempted a negotiation with a principal minister of the sultan, which was, wholly without effect. After this failure, and after having been plundered in various ways of the greater part of his effects, he resigned himself to his fate; and establishing his residence in a rhy-built house or hotel at Coblé, the capital town of Dar-Fur, he cultivated an acquaintance with the principal inhabitants, and acquired such a knowledge of the Arabic dialect used in that country as to enable him

to partake of their society and conversation."

Nearly three years elapsed, however, before the enprize of this African tyrant suffered him to depart; and it was not till the Spring of 1796, that he revisited the banks of the Nile, spent with suffering, and not having tasted animal food for four months. One of his amusements while in Dar-Fâr deserves to be mentioned.

"He purchased two lions, whom he tamed and rendered familiar. One of them, being bought at four months old, acquired most of the habits of a dog. He took great pleasure in feeding them, and observing their actions and manners. Many moments of languor were soothed by the company of these animals."

In 1797, he travelled in Syria and Palestine, and visited Acre, Tripoli, Damascus, the ruins of Balbec, Aleppo, and, journeying thence through Asia Minor, Constantinople. On the 16th of September, 1798, he arrived in London after an absence of nearly 7 years, which it may be seen from our rapid sketch, were passed in an extraordinary manner, whether we consider the countries visited, or the hardships endured by the traveller.

Unfortunately for the public curiosity, Mr. Browne had lost some of his most valuable journals; but still enough remained to form that volume of *Travels in Africa, Egypt, and Syria*, which he published in 1800; which, notwithstanding its novelty, and geographical value, has (owing to its abrupt and artificial style and other more serious objections) never become popular.

No sooner was his publication completed, than the author resumed his rambling life. In the summer of 1800 he quitted England, and taking Berlin and Vienna on his way, arrived at Trieste, where he remained some time. Athens, Smyrna, and again Constantinople, were the objects of his research; and a very interesting tour from the Turkish capital across Asia Minor to Antioch followed. Subsequently, he visited Cyprus, Egypt, Salanika, Mount Athos, Albania, the Ionian Islands, and Venice, where he rested some time, in 1802-3. From Venice, in the latter year, he went to Sicily, explored the classical remains of that island, and examined the volcanic Archipelago known by the name of the Lipari. Returning reluctantly to London, he made some arrangements for publishing the fruits of these travels; but never carried the design into execution. It is from the MSS. so prepared that our ensuing extracts are made. In London, Mr. Browne lived retiredly, giving his time to study, and the society of a few select friends. His general demeanour was cold, unamiable, and repulsive.

In 1805-6, though not much delighted with native scenery, Mr. Browne made a tour of Ireland, and was much gratified with his excursion.

"After several years had been thus passed by Mr. Browne, his ruling passion returned; his present course of life became insipid and irksome, and he began to meditate new expeditions. His imagination naturally recur-

red to some of those adventurous schemes which he had formed in early life; and he seems once to have had thoughts of applying, at this period, to the Directors of the East India Company, for permission to travel into Thibet. But after due consideration of this and other projects, he fixed at length upon the Tartar city of Samarcand and the central region of Asia around it, as the objects towards which his attention should now be directed.

"Having made the necessary arrangements in this country, for a long absence, he took his departure from England in the summer of 1812, and proceeded, in the first place, to Constantinople; from whence, at the suggestion of Mr. Tenant, he made a diligent, but fruitless, search for the meteoric stone, which is mentioned by the Parian Chronicle and the Natural History of Pliny to have fallen at Egospotamus in the ancient Thrace. From Constantinople he went, about the close of the year, to Smyrna; and thence, in the spring of 1813, proceeded in a northerly direction, through Asia Minor and Armenia, (the Persian road) to Erzerûm and reached Tabriz, on the first of June. No traces of this journey have been found among his papers.

"Towards the end of the summer of 1813, having completed the preparations for his journey, he at length took his departure from Tabriz, accompanied by two servants, for Teherin, the present capital of Persia; intending to proceed from thence into Tartary. He passed on the second day through a part of the Persian army which was encamped at the distance of 36 miles from Tabriz. What subsequently happened can only be known from the testimony of those who accompanied him. After some days, both the servants returned with an account that, after advancing to a place near the river Kizil Ozan, about 120 miles from Tabriz, the party had been attacked by banditti; and that Mr. Browne had been dragged a short distance from the road, where he was plundered and murdered, but that they were suffered to escape. They brought back with them a double barrelled gun and a few other effects, known to have been in Mr. Browne's possession. At the instance of Sir Gore Ouseley, soldiers were immediately dispatched to the spot described; with orders to bring back Mr. Browne's remains, and to make a strict search for the murderers. On their return, they reported to the government that they had failed in both these objects; but that they had fully ascertained the fact of Mr. Browne's death, and had found some portions of his clothes, which, having been made at Constantinople, were very distinguishable from those worn in Persia. They added, that they had been unable to discover any traces or remains of the body, which was believed to have been abandoned to beasts of prey. Notwithstanding this report, the search for his remains appears to have been afterwards continued; and some bones, said to be those of Mr. Browne, were brought to Tabriz; which, having been deposited in a cedar chest, were interred, with due respect, in the neighbourhood of the town. The spot

was happily chosen near the grave of Therron, the celebrated French traveller, who died in this part of Persia about a century and half before."

"So perished a very enterprising and altogether extraordinary man, at a period when much was to be expected from his labours, and when we may say the eyes of the three quarters of the ancient world were fixed upon his adventurous career.

"In his person he was thin, and rather above the middle size, of a dark complexion, and a grave and pensive cast of countenance. His manners towards strangers were reserved, cold, and oriental; but he could occasionally relax from this gravity, and his society and conversation had great charms for the few friends with whom he would thus unbend himself.

"His moral character was deserving of every praise. He was friendly and sincere, distinguished for the steadiness of his attachments, and capable of acts of great kindness. Though far from being affluent, he was liberal and generous in no common degree. He was perfectly disinterested, and had high principles of honour; and (what is very important, with reference to his character as a traveller and geographical discoverer) was a man of exact and scrupulous veracity.

"He had no brilliancy or quickness of parts; but he was a great lover of labour, and cultivated his favourite studies with intense and unremitting assiduity. He was a man of erudition, and may be ranked among the learned Orientalists of modern times. But that which principally distinguished him, and in which he was certainly unrivalled, was a familiar and intimate acquaintance with the manners and customs of Eastern nations, and the minute details of their domestic life, extending even to their prayers and ablutions. It was this knowledge, the result of long and patient observation, which enabled him to personate the Oriental character with an exactness and propriety which has rarely, perhaps, been equalled."

"The leading principle of his character was a lofty ambition, a desire of signaling himself by some memorable achievement. On opening his will, which was made a few days before he left England, a paper in his handwriting was found enclosed, containing a remarkable passage from one of Pindar's odes, highly expressive of that generous ambition and contempt of danger and death, which are the true inspiring principles of great enterprises. Probably his most intimate friends had not been fully aware, before the appearance of this paper, of the real force of his character, and of those powerful and deep feelings, which the habitual reserve and coldness of his manners effectually concealed from observation."

The passage is in the first of the *Olympic Songs*, verse 129, and is thus translated by West—

"In the paths of dangerous fame  
Trembling onwards never tread;  
Yet since all of mortal frame  
Must be numbered with the dead,  
Who in dark inglorious shade  
Would his useless life consume

And with needless years decay'd  
Sink unhonour'd to the tomb?  
I that shameful list disdain,  
I this doubtful list will prove."

The following miscellaneous extracts are taken from Mr. Browne's MS. remains: on his journey across Asia Minor he thus describes a very remarkable people:—

"In my visits to the Turkman tents, I remarked a strong contrast between their habits and those of the Bedouin Arabs. With the latter, the rights of hospitality are inviolable; and while the host possesses a cake of bread, he feels it a duty to furnish half of it to his guest; the Turkman offers nothing spontaneously, and if he furnish a little milk or butter, it is at an exorbitant price. With him it is a matter of calculation, whether the compendious profit of a single act of plunder, or the more ignoble system of receiving presents from the caravans for their secure passage, be most advantageous. The Arab values himself on the *haab* *we nab*, that is, his ancient pedigree; the Turkman, on his personal prowess. With the former, civility requires that salutations be protracted to satiety; the latter scarcely replies to a *Salam oleikem*.

"The muleteers, who had preferred this devious path to the high road, to avoid the Delis, were now alarmed at the frequent visits of the Turkman. They described me to them as an officer of Chappan Oglou's retinue, employed to communicate with the English fleet on the coast; an explanation which appeared to satisfy them; and fortunately I was able to support that character. It is to be observed that Chappan Oglou has a large military force at his disposal, and administers justice with a rod of iron. His vengeance pursues, on eagle-wing, the slightest transgression against his authority. Our precautions at night were redoubled; and I divided the time into two watches, which I ordered my servant to share with me; but the disposition to sleep having speedily got the better of his vigilance, a pipe, although carefully placed under the carpet on which I myself slept, was stolen unperceived before morning.

"The dress of the Turkman consists of a large striped and fringed turban, fastened in a manner peculiar to themselves; or sometimes of a simple high-crowned cap of white felt. A vest, usually white, is thrown over the shirt; the Aga's superadd one of cloth; and in general, and in proportion to their rank and wealth, they approximate to the dress of the capital. But the common people wear a short jacket of various colours. A cincture is indispensably required, in which are fixed an enormous yatagan, and a pistol. Many of them wear half boots, red or yellow, laced to the leg; the dress of the women is a coloured vest, and a piece of white cotton cloth on the head, covering part of the face. They are masculine and active, performing all the harder kinds of labour required by the family. Their features are good, but not pleasing. The men are generally muscular, and well-proportioned; tall, straight, and active. Their teeth are white and regular; their eyes are often ex-

trremely piercing; and there is an air of uncommon boldness in their countenances and mode of address. Their complexions are clear, but sun-burnt. In a word, they have every thing that denotes exhaustless health and vigour of body. A general resemblance is visible between them and the populace of Constantinople; but the latter appear effeminate by the comparison. Every action and every motion of the Turkman is marked by dignity and grace. Their language is clear and sonorous, but less soft than that of the capital; expressing, as may be conceived, no abstract ideas, for which the Turkish is indebted to the Arabic alone; but fitted to paint the stronger passions, and to express, in the most forcible and laconic terms, the mandates of authority. Their riches consist of cattle, horses, arms, and various habiliments. How lamentable to think, that with persons so interesting, and a character so energetic, they unite such confined habits of idleness, violence, fraud, and treachery: From the rising of the sun till his disappearance, the males are employed only in smoking, conversing, inspecting their cattle, or visiting their acquaintance. They watch at night for the purpose of plunder, which among them is honourable, in proportion to the ingenuity of the contrivance, or the audacity of the execution. Their families are generally small, and there seems reason to believe that their numbers are not increasing."

The picture of the present state of Antioch has excited peculiar interest in our minds, from so recently contemplating its ancient glory and calamitous struggles in Mills' History of the Crusades.

"Early on the following morning we proceeded to Antioch, once the opulent, the luxurious, the refined mistress of Syria; now presenting no monument of ancient grandeur, except the skeleton of its ample walls. The plain over which the road leads to Antioch, is covered with myrtles, and other flowering and odoriferous shrubs. The khans, or caravanserais, at Antioch, are not sumptuous buildings, but they are secure, and adapted to the use of the merchants. The three best are Khan el Nakir, Khan el Beiz, and Khan el Gidil. I had an interview with the Mitisellim, who has been long fixed here. He received me with great politeness. His administration was said to be distinguished by justice and severity. He was very temperate; and his pleasures were understood to be strictly confined to his harem. He had never indulged in the use of opium or strong liquors."

"The Christians of the Greek ritual, now established in Antioch, are about a hundred and fifty families; the Armenians, twenty families; and there are about forty Jews. The number of Mohammedans is not so easily ascertained. The troops of every description now in the service of the Mitisellim do not exceed four thousand, and are probably not more than three thousand five hundred; these are known under the general name of Tuffenkijé, or "bearers of fire arms." There are ordinarily four or five hundred Yeuktheris (or Janisaries), who

are at present most of them in Egypt with the Vizir.

"The staple commodity of Antioch is well known to be silk."

"A great quantity of grapes is produced in the neighbourhood. They are used for food, converted into Dipse, (a kind of jelly made of the juice of grapes,) or dried as raisins. Little wine is prepared; but what I have tasted there was perfectly well flavoured; it may be kept any length of time, and is improved by a period of seven or eight years. It is strong, and perhaps rather too sweet."

The following is a more detailed account of a Turkish marriage than we remember to have read elsewhere.

"It is well known that the usages of the country do not admit of the intended bride being seen by the husband before marriage. The woman may, however, more easily satisfy her curiosity regarding the person of the man; though even that is not always possible. This state of restraint gives rise to several practices, tending to facilitate mutual approximation. Among them are to be enumerated the existence of professed *match makers*, who make the occupation profitable to themselves, in a manner not difficult to be understood. The excellent qualities of the future bride and bridegroom are repeated to the persons concerned, of course with great exaggeration. Accordingly, if the parties be credulous or inexperienced, a connection takes place, which, in many cases, is terminated by divorce in a few days afterwards."

"Some account of the forms which are observed, with little variation, in matrimonial contracts, may not be wholly uninteresting. Each of the parties chooses a wakil, or procurator, and two witnesses, who are to agree before the Imam, or priest, on the sum to be given by the man, towards furnishing at least one room of the house with cushions, carpets, and other necessary articles; and likewise on the Nikah, which is not paid immediately, but is demandable by the woman in case of a divorce. The paper, setting forth the particulars of this agreement, is drawn up and signed by the witnesses; hence the married woman is called *kitabî*, *wife by writing*. The Imam receives a proper present; often a henish, or outer vesture: the other parties are gratified by presents of smaller value. From this time to the day of marriage, a fête is celebrated; and the house of the bridegroom is kept open to every person of the mahâl, or parish; and even strangers are allowed to enter. Sometimes dishonest persons gain admission, and carry off such portable articles as are exposed to their depredations; they have been known to slip off the amber mouth pieces of the pipes, and escape with them."

"The common expenses of a marriage, in Constantinople, costs a man, on a moderate estimate, a full year of his income, and sometimes more. Thus, to a person of middle rank, they will amount to 2000 or 2500 piastres."

"When the day of marriage arrives, the bridegroom is conducted to the apartment of

the bride, by the Imam, and the rest of the company; the Imam places his back against the door, and commences a kind of prayer, to which, when terminated, the company present reply, Amen; after which they all retire to their own houses.

"The bridegroom knocks at the door three times, which is then opened by the Yeni châtin, or bride maid, who replies to the 'Salam aleikum' of the bridegroom, conducts him to the bride, and puts her right hand in his. She then quits the room to bring in the suffra, or eating table, which is placed near at hand; furnished commonly with a roasted fowl and some other trifles.

"While she is absent, the husband tries to uncover his wife's face, which is over-shadowed with a long veil; to the removal of which the established rules of decorum require that she should offer some resistance. He presents to her some ornament, generally of jewellery, which she accepts after proper hesitation; and at length consents to abandon her veil. They sit down at table, and the husband divides the fowl with his hands, offering a portion to the woman, which she receives. Much time is not consumed in eating, and the suffra being removed, they wash. The Yeni châtin then brings the bowl, which she spreads on the floor. She takes out the bride to her mother and the women, who are in the next room, where she is undressed; after which the Yeni châtin brings her back to her husband, places her right hand in his, and leaves them together.

"The last ceremony is that of the bride being conducted in form to the bath. This takes place at the expiration of six or seven days.

"The custom of *throwing the handkerchief* is frequently in the popular month, and supposed to be reported from undisputed fact. I have never been able to ascertain that such a practice was in use in the Harems of the Girat, or among any other class of women at Constantinople, or in any of the towns of the East. In the West of Turkey, indeed, a custom prevails, which, transmitted by report through the medium of the Germans or Venetians, may possibly have given rise to the prevalent opinion on the subject.

"In a part of Bosnia, young girls of the Mohammedan faith are permitted to walk about in the day-time, with their faces uncovered. Any man of the place, who is inclined to matrimony, if he happens to be pleased with any of these girls, whom he sees in passing, throws an embroidered handkerchief on her head or neck. If he have not a handkerchief, any other part of his dress answers the same purpose. The girl then retires to her home, regards herself as betrothed, and appears no more in public. I learned from a Bosniak of veracity, that this is an usual preliminary to marriage, in the place where he was born."

Mr. Browne negatives the belief that temporary marriages are permitted by the Mohammedan laws. The annexed particulars are curious—

"There is a kind of fine porcelain, or China-ware, much esteemed in the East,

from the prevalent credulity which is common there respecting its supposed properties. It is distinguished by the name of *Mir tabân*, and is said to indicate poison, if any exist in the food. From this prejudice, a plate or other vessel, composed of this material, is sometimes sold for three or four hundred piastres. The absurdity of the idea is evident; but it might be curious to know how it originated."

"The bread made in private houses in Cyprus is unequalled, except perhaps by that which is prepared for the table of the Sultan, at Constantinople. It is composed of what is called '*fiore di farina*.' The flour is divided into three parts, to obtain the kind which is proper for manipulation. The first separated is the coarse and husky part; the next, the white impalpable powder; after which operation remains the *fiore di farina*, which is neither very finely pulverized, nor remarkably white, and is by far the smallest quantity of the whole mass. This is found to contain the purest part of the wheat, and to make the finest bread."

Our last examples relate to the decline of the Ottoman Empire, a view of which the author takes, and instances among others the following principal causes:—

"Among the various causes which have contributed to the ruin of the Turkish provinces, the arbitrary and independent jurisdictions conceded under the names of *Mocatta* and *Altzin* hold a conspicuous place: to understand their nature the following remarks may be necessary.

"The revenues of a certain district, perhaps ten or twelve villages, are to be disposed of. The person who wishes to farm them, after ascertaining their value with all practicable accuracy, goes to a minister, and offers what he thinks proper for the term of one, two, three, or four years. As the government is always indigent, the offer of ready money is generally accepted; and nothing more is required to enable the farmer to exercise unlimited authority over the district in question, and to augment his revenue by every means of fraud, violence, and extortion. Thus, what was originally supposed to produce fifteen purses, he perhaps makes to yield forty. The peasantry is thereby ruined: but this does not enlarrass the *Mocatteji* or *Miltexin*, who is concerned only with what the district will yield during the term for which he holds it. A more absurd system for the administration of provinces cannot possibly be imagined: it is adapted only to the possessions of a horde of rapacious banditti, who expected to be expelled in a year or two from the provinces they had overrun.

"The farmer must oppress in order to reimburse himself for his enormous expenses; or he must fail. The peasant being rated in proportion to the gross produce of the lands he cultivates, cannot possibly do more than glean a scanty subsistence, which may be obtained by slight exertions and the most wretched system of husbandry; and thus, whilst there is, on the one hand, a strong positive motive to oppress, the stimulus to production, on the part of the landholders, is

the most feeble and negative that can be imagined. The practical effects of this system are seen in the depopulation of the country, and the increase of robbers and rebels, the great body of whom, it is known, are composed of peasantry and other subjects of the Porte, who have been thus stripped of their possessions."

"Among the little and ineffectual expedients adopted in a falling empire, the depreciation of the current coinage is generally one. This has been rapidly progressive during the two last reigns in the Ottoman empire. It is superfluous to add, that none of the currency goes out of the territory: its value is very various, even within the limits of it. The *fendouk* and *mauld* are exchangeable in some parts of Asia for a less number of paras than in the capital; in Aleppo for a greater; but their highest value in exchange is in Kahira: in the Upper Egypt they pass for something less. Foreign coinage, particularly Venetian sequins, Dutch and Imperial gold, and Imperial and Spanish silver, are sought after with great avidity. In Antioch and Aleppo, in 1801, the Venetian sequin passed for a sum much exceeding what an equal weight of pure gold would have been exchanged for. The gold of Selim III. contains one fourth part alloy; but some means are used by which a better colour is given to it than that of other gold; marine acid probably enters into the wash used for this purpose. Its indented edges are produced by filing, and not by milling. The nominal silver, it is believed, does not contain much more than a third of that metal; even the paras have been depreciated during the present reign. I was disappointed in endeavouring to obtain more satisfactory details respecting the mint. An English guinea, in 1801, was worth seventeen piastres and a half.

"It is perhaps worth remarking, that the receipts for the Miri, in Anatolia, were within the last two centuries given in a manner similar to the Exchequer tallies among us. The Intendant of a pashalik, at the beginning of the year, caused a number of small sticks to be prepared, exactly resembling each other. One was given to the person of whom the Miri was demanded, and a notch was cut for every payment he made of it. The whole being paid, the second stick was delivered into his hands, which served as an acquittance."

The oppressive mode of farming and collecting the revenues adds to the above evils; and our readers will be astonished to learn, that with all this dreadful system for draining the last para from so great a population of some of the finest regions on the earth, the entire revenue of the Porte is not estimated at more than 90 millions of piastres, or six millions sterling!

*Poems.* By Bernard Barton. London, 1820. 8vo, pp. 288.

This volume will, we believe, be published on Monday; and we are led to take so early a notice of it, as much on account of its merit, as of the rather

peculiar circumstance of its being the production of one of the Society of Friends. We hail this as a strong proof of the progress of liberality—of true liberality, and not of that spurious principle which has usurped the name, and converted a virtue nominally into a real vice. It has been told, probably without foundation, that when the amiable Quaker Poet, Scott of Amwell, was upon his death-bed, some sour bigots exhorted him to repent of his sin of poetry. He died and made no sign; and in that world to which the enthusiasm of poetic inspiration is the nearest approach in this,.... in that heaven where the hymning of praises is the highest enjoyment of blest spirits; he now, we firmly trust, enjoys the reward of a well-spent life, refined, exalted, and improved, by one of the purest studies of mankind.

It has been said, that there was something in Quaker doctrines inconsistent with the Bardic character; and it has been held by many, that in Quaker habits and manners there was an insuperable barrier to poetical cultivation. If these opinions have not been overthrown before, the author now under review has set them at rest for ever. He has shown us fancy in a sober brown garb, tenderness in a broad beaver, and nature in a staid demeanour.

We confess that we are so well pleased with this general beauty belonging to his work, that we may not be quite impartial judges of its defects. But more fastidious criticism will set us right if we err on the side of candour; and we will rely on the ensuing quotations and remarks, to rescue us from the suspicion of undue favour. The publication, we think, extends to a greater length than is expedient, considering the modern fashion; and if Friend Barton had limited his excursion to a moiety of its contents, he would have assumed a more popular form, without endangering the fame which his compositions may obtain. His claims to extracts are, however, increased by this circumstance; and, intending to allow them as far as our limits permit, we shall not occupy their room by further preface.

Some feeling dedicatory verses are addressed to Maria Hack, whose literary talents are warmly appreciated by the writer. He then, after a few brief introductory remarks in prose, enters upon his miscellaneous career with stanzas, supposed to be written in a burial ground of the Society of Friends. They

laud the simplicity of these receptacles for the dead, and condemn the erection of—

“*Storied urn or animated bust*”  
to the memory of those whose resurrection shall be their great memorial. We differ from the author’s sentiment on this subject; and not only love the selfish gratification of adorning the graves of those dear to us while living, but are persuaded that many a volatile, if not guilty soul, has been reclaimed to a sense of the instability of human affairs and the great business of eternity, by such funeral documents. Let us, nevertheless, suffer Mr. B. to speak for himself, which he does in these eloquent lines...

And, therefore, would I never wish to see  
Tombstone, or epitaph obtruded here.  
All has been done, requir’d by decency,  
When the unprison’d spirit sought its sphere:  
The lifeless body, stretch’d upon the bier  
With due solemnity, was laid in earth;  
And Friendship’s parting sigh, Affection’s tear,  
Clam’d by pure love, and deeply cherish’d  
worth,

Might rise or fall uncheck’d, as sorrow gave  
them birth.

There wanted not the pall, or nodding plume,  
The white-robb’d priest, the stated form of prayer;

There needed not the livery’d garb of gloom,  
That grief, or carelessness alike might wear;  
’Twas felt that such things “had no business there.”

Instead of these, a silent pause, to tell  
What language could not; or, uncon’d by care

Of rhetoric’s rules, from faltering lips  
there fell

Some truths to mourners dear, in memory long  
to dwell.

Then came the painful close—delay’d as long  
As well might be for silent sorrow’s sake;  
Hallow’d by love, which never seems so strong,  
As when its dearest ties are doom’d to break.  
One farewell glance there yet remain’d to take:

Scarce could the tearful eye fulfil its trust,  
When, leaning o’er the grave, with thoughts awake

To joys departed, the heart felt it must  
Assent unto the truth which tells us—we are dust!

The scene is past!—and what of added rod  
The dead to honour, or to soothe the living,  
Could then have mingled with the spirit’s mood,

From all the empty show of man’s contriving?

What worthier of memory’s cherish’d living  
With miser care? In hours of such distress  
Deep, deep into itself the heart is diving;  
Aye! into depths, which reason must confess,

at least mine owns them so, awful and fathomless!

Then, be our burial-grounds, as should become

A simple, but a not unfeeling race.

Let them appear, to outward semblance,  
dumb,

As best befits the quiet dwelling-place  
Appointed for the prisoners of Grave,  
Who wait the promise by the Gospel given,—

When the last trump shall sound,—the trembling base

Of tombs, of temples, pyramids be riven,  
And all the dead arise before the hosts of Heaven!

The next piece is entitled “the Valley of Fern,” and displays considerable feeling and art in impressing local imagery and beauty upon a landscape, certainly not intrinsically either imposing or beautiful. We know not how the ideas of Quakers are now regulated with regard to paintings; whether pictures continue to be held in abomination by any portion of that sect;... but if they are, we must say that Mr. Barton has exposed himself to some reproach for drawing a very sweet landscape. For several natural reflections, he thus writes... (reminding us, en passant, of Akenside)...

For the bright chain of being, though wisely extended,

Unites all its parts in one beautiful whole;  
In which Grandeur and Grace are enchantingly blended,

Of which GOD is the Centre, the Light, and the Soul?

And holy the hope is, and sweet the sensation,  
Which this feeling of union in solitude brings;

It gives silence a voice—and to calm contemplation,

Unseals the pure fountain whence happiness springs.

Then Nature, most lov’d in her loneliest recesses,  
Unveils her fair features—

We do not copy the remainder of the verse, from fear that a ludicrous thought which struck us may occur to others; and we are half ashamed of its intrusion.

We know all we see in this beautiful creation,  
However enchanting its beauty may seem,

Is doom’d to dissolve, like some bright exhalation,

That dazles, and fades in the morning’s first beam.

The gloom of dark forests, the grandeur of mountains,

The verdure of meads, and the beauty of flowers;

The seclusion of valleys, the freshness of fountains,

The sequester’d delights of the forest’s bowers:

Nay, more than all these, that the might of old ocean,

Which seems as it was on the day of its birth,  
Must meet the last hour of convulsive commotion,

Which, sooner or later, will uncreate earth.

Yet, acknowledging this, it may be that the feelings

Which these have awaken’d, the glimpses they’ve given,

Comb’d with those inward and holy revelations  
That illumine the soul with the brightness of heaven,

May still be immortal, and destin’d to lead us,  
Hereafter, to that which shall not pass away;

To the loftier destiny God hath decreed us,  
The glorious dawn of an unending day.  
And thus, like the steps of the ladder ascended  
By angels, (beheld with the patriarch's eye,)  
With the perishing beauties of earth may be  
blended

Sensations too pure, and too holy to die.

On this passage we have but one observation to offer, and it is equally applicable to every line in the book... the whole tends to the enlargement of the human faculties, to the moral amelioration, and to the everlasting happiness of the reader. Mr. B., among the crowd of modern poets who have sown poison with their flowers, and infected the effusions of their genius with active corruption, stands clear in his great account, and to the extent of his powers has contributed only to the weal of his fellow creatures. He, at least, may lay his hand on his heart, and say, "I have not abused God's gift." We pass over a good many pages of shorter poems, and select the following, as curious in many particulars.

#### SILENT WORSHIP.

Though glorious, O God! must thy temple have been,

On the day of its first dedication,

When the Cherubim's wings widely waving were seen

On high, o'er the ark's holy station;

When even the chosen of Levi, though skill'd

To minister, standing before Thee,  
Retir'd from the cloud which the temple then fill'd,

And thy glory made Israel adore Thee:

Though awfully grand was thy majesty then;

Yet the worship thy gospel discloses,

Less splendid in pomp to the vision of men,  
Far surpasses the ritual of Moes.

And by whom was that ritual for ever repeal'd?

But by Him, unto whom it was given

To enter the Oracle, where is reveal'd,

Not the cloud, but the brightness of heaven.

Who, having once enter'd, hath shown us the way,

O Lord! how to worship before thee;

Not with shadowy forms of that earlier day,

But in spirit and truth to adore thee!

This, this is the worship the Saviour made known,

When she of Samaria found him

By the patriarch's well, sitting weary, alone,

With the stillness of noon-tide around him.

How sublime, yet how simple the homage he taught

To her, who inquir'd that founttain,

If JENOUAN at Solyma's shrine would be sought?  
Or ador'd on Samaria's mountain?

Woman! believe me, the hour is near,

When He, if ye rightly would hail him,

Will neither be worship'd exclusively here,

Nor yet at the altar of Salem.

For God is a Spirit! and they, who aught

Would perform the pure worship he loveth,

In the heart's holy temple will seek, with delight,

That spirit the Father approveth.

And many that prophecy's truth can declare,

Whose bosoms have livingly known it;

Whom God hath instructed to worship him there,

And convinc'd that his mercy will own it.

The temple that Solomon built to his name,

Now lives but in history's story;

Extinguish'd long since is its altar's bright flame,

And vanish'd each glimpse of its glory.

But the Christian, made wise by a wisdom divine,

Though all human fabrics may falter,

Still finds in his heart a far holier shrine,

Where the fire burns unquench'd on the altar!

This may, we presume, be considered to be a genuine Quaker poem; and it is not on that account the more truly poetical. The author, in our opinion, is unfortunate in the measures which he has adopted in several of his compositions. They are like Burns'; and more congenial to light, or at the utmost, to common, than to gravesubjects. "Meditations in Great Bending's Church-yard," is in a much better style, and possesses a pathetic tone of suitable melancholy—

Then art thou such a spot as man might choose

For still communion: all around is sweet,  
And calm, and soothing; when the light breeze wows

The lofty lines that shadow thy retreat,

Whose interlacing arches, as they meet,

O'er top, and almost hide the edifice

They beautify; no sound, except the bleat

Of innocent lambs, or notes which speak

Of happy birds unseen.

Yes, thou, stern Death! art, after all, the best

And truest teacher, an unflattering one,

And yet we shun thee like some baneful pest.

In youth, we fancy life is but begun:

Then active middle-age comes hurrying on,

And leaves us less of leisure; and, alas!

Even in age, when slowly, murky run

The few last sands which linger in the glass,

We mourn how few remain, how rapidly they pass.

But 'tis not thee we fear, if thou wert all;

'Thou might'st be brav'd, although in thee is much

To wither up the nerves, the heart appal:

Not the mere icy chillness of thy touch,

Nor nature's hopeless struggle with thy clench

In tossing agony: in *thyself*, alone,

Thou hast worse pangs; at least I deem them such,

Than any mere corporeal sense can own,

Which, without future fears, might make the bravest groan.

For, *neer* thou all, in thee there is enough

To touch us to the quick: to part with all

We love, might try a heart of sternest stuff,

And in itself would need what man could call

Of strength and courage; but to feel the thrall

Of rending ties twice closer round the heart;

To see, while on *our own* eyes shadows fall

Darker, and darker, tears of anguish start

In *too'd* *ones* looking on us; saying, "Must we part!"

This is indeed enough. I never stood

But once beside a dying bed; and there

My spirit was not in the fittest mood,  
Perhaps, to be instructed, *have* to BEAR!

And *this* is *anew* that to be taught us, where

We fancied it impossible: I say

But once it yet has been my lot to share

Such scene; and that, though now a distant day,

Convinc'd me what it was to pass from life away.

Yet there was comfort in that death-bed scene:

Piety, resignation, hope, faith, peace—

All that might render such an hour serene,

Attended round, and in the slow decrease

Of life's last lingering powers, for calm release

Prepar'd the sufferer; and, when life was flown,

Though not abruptly could our sorrows cease,

We felt that sorrow for ourselves alone;

Not for the quiet dead, around whom there was thrown—

Calmness, as 'twere a canopy: the spirit

Seem'd, like the prophet in his parting hour,

(When he threw back, to him who was to inherit

His gift, the mantle, as his richest dower,)

To have left behind it somewhat of the power

By which the *o'er*shadowing clouds of death were riven;

So that, round those who gaz'd, they could not lower

With rayless darkness; but a light was given

Which made e'en tears grow bright: "twas light from heaven!"

The subjoined Sonnet to "Winter,"

and Monday, will be found of similar merit.

Thou hast thy beauties: sterner ones, I own,

Than those of thy precursors; yet to thee

Belong the charms of solemn majesty

And naked grandeur. Awful is the tone

Of thy tempestuous nights, when clouds are blown

By hurrying winds across the troubled sky;

Pensive, when softer breezes faintly sigh

Through leafless boughs, with irrevocable

Thou hast thy decorations too; although

Thou art austere: thy studded mantle, gay

With icy brilliants, which as proudly glow

As erst Golconda's; and thy pure array

Of regal ermine, when the drifted snow

Envelops nature: till her features seem

Like pale, but lovely ones, seen when we dream.

#### STANZAS.

We knew that the moment was drawing nigh,

To fulfil every fearful token;

When the silver cord must loosen its tie,

And the golden bowl be broken;

When the fountain's vase, and the cistern's wheel,

Should alike to our trembling hearts appeal.

And now shall thy dust return to the earth,

Thy spirit to God who gave it;

Yet affection shall tenderly cherish thy worth,

And memory deeply engrave it,

Not upon tables of brass or stone,

But in those fond bosoms where best 'twas known.

Thou shalt live in mine, though thy life be brief

For friendship thy name shall cherish;

And be one of the few, and the dearly-loved

dead,

Whom my heart will not suffer to perish

Who in loveliest dreams are before me brought

And in sweetest hours of waking thought,

But oh! there is one, with tearful eye,  
Whose fondest desires fail her;  
Who indeed is afraid of that which is high,  
And fears by the way assail her;  
Whose anguish confesses that tears are vain,  
Since dark are the clouds that return after rain!  
May He, who alone can scatter those clouds,  
Whose love all flesh dispelleth;  
Who, though for a season his face be shrouds,  
In light and in glory dwelleth,  
Break in on that moaner's soul, from above,  
And bid her look upwards with holy love.

The following is one of our favourites; and for a fine lesson told in an easy and affecting manner, deserves to be transplanted into books framed for the instruction of youth.

## THE IVY.

Dost thou not love, in the season of spring,  
To twine thee a flowery wreath,  
And to see the beautiful birch-tree fling  
Its shade on the grass beneath?  
To glory leaf and its silvery stem;  
Oh! dost thou not love to look on them?  
And dost thou not love, when leaves are greenest,  
And summer has just begun,  
When in the silence of moonlight thou leanest,  
Where glist'ning waters run,  
To see, by that gentle and peaceful beam,  
The willow bend down to the sparkling stream?  
And oh! in a lovely autumnal day,  
When leaves are changing before thee,  
Do not nature's charms, as they slowly decay,  
Shed their own mild influence o'er thee?  
And hast thou not felt, as thou stoost to gaze,  
The touching lesson such scene displays?  
It should be thus, at an age like thine;  
And it has been thus with me;  
When the freshness of feeling and heart were  
mine,  
As they never more can be:  
Yet think not I ask thee to pity my lot,  
Perchance I see beauty where thou dost not.  
Hast thou seen, in winter's stormiest day,  
The trunk of a blighted oak,  
Not dead, but sinking in slow decay,  
Beneath time's restless stroke,  
Round which a luxuriant ivy had grown,  
And wreath'd it with verdure no longer its own?  
Perchance thou hast seen this sight, and then,  
As I, at thy years might do,  
Faw'd carelessly by, nor turned again  
That scathed wreck to view:  
But now I can draw, from that mould'ring tree,  
Thoughts which are soothing and dear to me.  
O smile not! nor think it a worthless thing,  
If it be with instruction fraught;  
That which will closest and longest cling,  
Is alone worth a serious thought!  
Should aught be unlovely which thus can shed  
Grace on the dying, and leaves not the dead?  
Now, in thy youth, beseech of Him  
Who giveth, unsparring not,  
That his light in thy heart become not dim,  
And his love be unforgotten;  
And thy God, in the darkest of days, will be  
Greenness, and beauty, and strength to thee!

In order to show how accurate an observer of nature in its most captivating forms Mr. B. is, we conclude with a few lines from Playford, a descriptive poem... they are very like Wordsworth.

And grassy and green may the path he see  
To the village church that lends;  
For its glossy hue is as verdant to view  
As you see it in lowly meads.  
And he who the ascending pathway scales,  
By the gate above, and the mossy pales,  
Will find the trunk of a leafless tree,  
All bleak, and barren, and bare;  
Yet it keeps its station, and seems to be  
Like a silent monitor there:  
Though wasted and worn, it smiles in the ray  
Of the bright warm sun, on a sunny day;  
And more than once I have seen  
The moonbeams sleep on its barkless trunk,  
As calmly and softly as ever they sunk  
On its leaves, when its leaves were green;  
And it seem'd to rejoice in their light the while,  
Reminding my heart of the patient smile  
Resignation can wear in the hour of grief,  
When it finds in religion a source of relief,  
And stript of delights which earth had given,  
Still shines in the beauty it borrows from  
heaven!

From "Recollections," evidently inspired by a real grief, we take our last quotation; and to that add our last remark... that the author displays not only a goodness of heart, but a vivid perception of natural and moral beauties, and possesses a command of language to clothe his views in pleasing and instructive verse.

Oh, there are hours! ay moments, that contain  
Feelings, that years may pass and never bring;  
Which, whether fraught with pleasure or with pain,  
Can hardly be forgot: as if the wing  
Of time, while passing o'er, had power to fling  
A dark'ning shade, or tint of happier hue,  
To which fond memory faithfully should cling  
In after life: I felt, and own'd it true,  
While I stood still, and look'd upon that moon-  
light view.

I thought of some, who once beheld, like me,  
The peaceful prospect then before me  
spread;  
And its still loveliness appear'd to be  
One of those visions morning slumbers shed  
Upon the pensive mourner's pillow'd head:  
Its beauty, less distinct, but far more dear,  
Seem'd to invoke the absent, and the dead!  
And by some spell to bring the former near,  
Although it could not call the latter from their  
sphere.

Nor did I wish it.—No, dear MARY! no:  
How could I ever wish thou shouldst resign,  
For any bliss this being can bestow,  
Pleasures eternal, deathless, and divine:  
Yet, when I saw the pale moon coldly shine  
On the same path and turf which thou  
hadst trod,  
Forgive my vain regret!—Yet, why repine?  
Its beams sleep sweetly on thy peaceful  
sod,  
And thou thyself hast sought thy FATHER and  
thy God!

For thou wert number'd with the "PURE IN  
HEART,"  
Whom CHRIST pronounced blessed! and  
to thee,  
When thou wast summon'd from this world  
to part,

We well may hope the promise'd boon  
would be  
Vouchsaf'd in mercy,—that thy soul should  
see

Him, whom the angelic hosts of heav'n  
adore;  
And from each frailty of our nature free,  
Which clogg'd that gentle spirit heretofore,  
Exulting, sing His praise, who lives for ever-  
more!

Farewell! thou lov'd and gentle one, fare-  
well!  
Thou hast not liv'd in vain, or died for  
naught!

Of thy worth survivor's tongues shall tell,  
And thy long-cherish'd memory shall be  
fraught  
With many a theme of fond and tender  
thought,

That shall preserve it sacred. What could  
years,  
Or silver'd locks, of added good have brought  
Unto a name like thine? Even the tears  
Thy early death has caus'd, thy early worth  
endears!

We ought to refer to "Sleep," "A  
Dream," and "Leiston Abbey," as other  
agreeable examples of the Quaker  
Muse, which we heartily and kindly bid  
"farewell!"

SOUTHEY'S LIFE OF JOHN WESLEY. 2  
vols. 8vo. (concluded.)

In middle life, the wilder enthusiasm of the Wesleys calmed down. Charles, in the 41st year of his age, was married by his brother at Girth in Brecknockshire, to Miss Sarah Gwynne, and a few years after left off itinerancy, settled, and enjoyed domestic life. A match which John resolved on in 1745 was broken off by his brother, and this caused a breach of their cordiality for some time. He afterwards married a widow of the name of Vizzelle with four children, and called the single men of the society together to show his reasons for so doing, in exception to his own general rule laid down in his treatise in recommendation of celibacy. This marriage was unhappy. Mrs. Wesley was jealous, and a perfect shrew; and the preacher was the reverse of a submissive husband. They separated in a violent and injurious manner on her part, and with no regret on his. She lived ten years after. The characters of the two brothers are thus drawn by Mr. Southey.

"But even if John Wesley's marriage had proved as happy in all other respects as Charles's, it would not have produced upon him the same sedative effect. Entirely these two brothers agreed in opinions and principles, and cordially as they had acted together during so many years, there was a radical difference in their dispositions. Of Charles it has been said, by those who knew him best, that if ever there was a human being who disliked power, avoided pre-eminence, and shrunk from praise, it was he: whereas no conqueror or poet was ever more ambitious than John Wesley. Charles could forgive an injury; but never again trusted one whom he had found treacherous. John could take men a second time to his confidence, after

made for continuing the succession and identity of this body, wherein the administration of the Methodist connection was to be vested after the founder's death. They were to assemble yearly at London, Bristol, or Leeds, or any other place which they might think proper to appoint; and their first act was to be to fill up all vacancies occasioned by death or other circumstances. No act was to be valid unless forty members were present, provided the whole body had not been reduced below that number by death, or other causes. The duration of the assembly should not be less than five days, nor more than three weeks, but any time between those limits at their discretion. They were to elect a president and secretary from their own number, and the president should have a double vote. Any member absenting himself without leave from two successive conferences, and not appearing on the first day of the third, forfeited his seat by that absence. They had power to admit preachers and exponents upon trial, to receive them into full connection, and to expel any person for sufficient cause; but no person might be elected a member of their body, till he had been twelve months in full connection as a preacher. They might not appoint any one to preach in any of their chapels who was not a member of the conference, nor might they appoint any preacher for more than three years to one place, except ordained ministers of the Church of England. They might delegate any member or members of their own body to act with full power in Ireland, or any other parts out of the kingdom of Great Britain. Whenever the conference should be reduced below the number of forty members, and continue so reduced for three years, or whenever it should neglect to meet for three successive years, in either of such cases the conference should be extinguished; and the chapels and other premises should vest in the trustees for the time being, in trust, that they should appoint persons to preach therein."

The covenant, (borrowed from the Puritans) was another of Wesley's institutions, and originated so far back as 1735. It is defined by the author to be "one of the most precious practices that ever was devised by enthusiasm; the entering into a covenant in which the devotee promises and vows to the 'most dreadful' God, (beginning the address with that dreadful appellation!) to become his covenant servant; and, giving up himself, body and soul, to his service, to observe all his laws, and obey him before all others, 'and this to the death!' Mr. Wesley was perhaps have been prejudiced in favour of this practice, because he found it recommended by the non-conformist Richard Allein, whose works had been published by his maternal grandfather, Dr. Annisley; so that he had probably been taught to respect the author in his youth. In the year 1735, he first recommended this covenant; and, after explaining the subject to his London congregation during several successive days, he assembled 'as many as were willing to enter into the engagement, at the French church in Spitalfields, and read to them the tremendous formula,' to which eighteen hun-

dred persons signified their assent by standing up. 'Such a night,' he says, 'I scarce ever saw before: surely the fruit of it shall remain for ever!' From that time it has been the practice among the Methodists, to renew the covenant annually; generally on the first night of the new year, or of first year. They are exhorted to make it not only in heart, but in word; not only in word, but in writing; and to spread the writing with all possible reverence before the Lord, as if they would present it to him as their act and deed, and then to set their hands to it. It is said, that some persons, from a fanatical and frightful motive of making the covenant perfect on their part, have signed it with their own blood!"

Wesley's system of education was one of the severest and worst ever advocated: it was a reign of terror from the cradle upwards. Taken altogether, Methodism has produced much good; and done some evil. Its principles are strictly loyal, which in some degree compensates for its schism from the church.

The last chapter in the book which we have thus far epitomized gives a picture of Wesley in his old age. "He was favoured with a constitution vigorous beyond that of ordinary men, and with an activity of spirit which is even rarer than his singular force of health and strength. Ten thousand cares of various kinds, he said, were no more weight or burden to his mind, than ten thousand hairs were to his head: But in truth, his only cares were those of superintending the work of his ambition, which continually prospered under his hands. Real cares he had none; no anxieties, no sorrows which touched him nearly. His manner of life was the most favourable that could have been devised for longevity. He rose early, and lay down at night with nothing to keep him waking, or trouble him in sleep. His mind was always in a pleasurable and wholesome state of activity, he was temperate in his diet, and lived in perpetual locomotion: frequent change of air is perhaps, of all things, that which most conduces to joyous health and long life."

In the course of his life he rode above a hundred thousand miles; and was 69 years of age, when his friends prevailed on him to use a carriage, in consequence of a hurt which produced a hydrocele.

Mr. Wesley still continued to be the same marvellous old man. No one who saw him, even casually, in his old age, can have forgotten his venerable appearance. His face was remarkably fine; his complexion fresh to the last week of his life; his eye quick, and keen, and active: when you met him in the street of a crowded city, he attracted notice, not only by his band and gussock, and his long hair, white and bright as silver, but by his pace and manner, both indicating that all his minutes were numbered, and that not one was to be lost. After his eightieth year, he went twice to Holland, a country in which Methodism; as Quakerism had done before it, met with a certain degree of success. Upon completing his eighty-second year, he says, "is any thing

too hard for God? It is now eleven years since I have felt any such thing as weariness. Many times I speak till my voice fails, and I can speak no longer. Frequently I walk till my strength fails, and I can walk no farther; yet, even then, I feel no sensation of weariness, but am perfectly easy from head to foot. I dare not impute this to natural causes."

"In his eighty-fourth year, he first began to feel decay; and, upon commencing his eighty-fifth, he observes, 'I am not so agile as I was in times past; I do not run or walk so fast as I did. My sight is a little decayed. My left eye is grown dim, and hardly serves me to read. I have daily some pain in the ball of my right eye, as also in my right temple (occasioned by a blow received some months since), and in my right shoulder and arm, which I impute partly to a sprain, and partly to the rheumatism. I find, likewise, some decay in my memory with regard to names and things lately past; but not at all with regard to what I have read or heard twenty, forty, or sixty years ago."

"Other persons perceived his growing weakness before he was thus aware of it himself; the most marked symptom was that of a frequent disposition to sleep during the day. He had always been able to lie down and sleep almost at will, like a mere animal, or a man in a little better than an animal state,—a consequence, probably, of the incessant activity of his life: this he himself rightly accounted one of the causes of his excellent health, and it was, doubtless, a consequence of it also; but the involuntary slumbers which came upon him in the latter years of his life, were indications that the machine was worn out, and would soon come to a stop. In 1788, he lost his brother Charles, who, during many years, had been his zealous confidant, and, through life, his faithful and affectionate friend. Latterly their opinions had differed. Charles saw the evil tendency of some part of the discipline, and did not hesitate to say that he abominated the band-meetings, which he had formerly approved; and, adhering faithfully himself to the church, he regretted the separation which he foresaw, and disapproved of John's conduct, in taking steps which manifestly tended to facilitate it. Indeed, Mr. Wesley laid aside, at last, all those pretensions by which he had formerly excused himself; and, in the year 1787, with the assistance of two of his clerical coadjutors, Mr. Creighton and Mr. Pearl Dickinson, he obtained two of his preachers, and consecrated Mather a bishop or superintendent. But this decided difference of opinion produced no diminution of love between the two brothers. They had agreed to differ; and, to the last, John was not more jealous of his own authority, than Charles was solicitous that he should preserve it. "Keep it while you live," he said, "and after your death, *datur digniori*, or rather, *dignioribus*. You cannot settle the succession: you cannot divine how God will settle it." Charles, though he attained to his eightieth year, was a raelitidian through the greatest part of his life. In consequence, it is believed, of having injured

his constitution by close application and excessive abstinence at Oxford. He had always dreaded the act of dying; and his prayer was, that God would grant him patience and an easy death: a calmer frame of mind, and an easier passage, could not have been granted him; the powers of life were fairly worn out, and, without any disease, he fell asleep. By his own desire he was buried, not in his brother's burying ground, because it was not consecrated, but in the church-yard of Mary-le-bone, the parish in which he resided; and his pall was supported by eight clergymen of the Church of England."

"On the first of February, 1791, he wrote his last letter to America. On the 17th of that month, he took cold after preaching at Lambeth. For some days he struggled against an increasing fever, and continued to preach till the Wednesday following, when he delivered his last sermon. From that time he became daily weaker and more lethargic, and, on the 21 of March, he died in peace; being in the eighty-eighth year of his age, and the sixty-fifth of his ministry."

"During his illness he said, 'Let me be buried in nothing but what is woollen; and let my corpse be carried in my coffin into the chapel.' Some years before, he had prepared a vault for himself, and for those itinerant preachers who should die in London. In his will he directed, that six poor men should have twenty shillings each for carrying his body to the grave; 'for I particularly desire,' said he, 'there may be no hearse, no coach, no ostentation, no pomp except the tears of them that loved me, and are following me to Abraham's bosom. I solemnly adjure my executors, in the name of God, punctually to observe this.' At the desire of many of his friends, his body was carried into the chapel, and there lay in a kind of state becoming the person, the day preceding the interment, dressed in his clerical habit, with gown, cassock, and band; the old clerical cap on his head, a Bible in one hand, and a white handkerchief in the other. The face was placid, and the expression which death had fixed upon his venerable features, was that of a serene and heavenly smile. The crowds which flocked to see him were so great, that it was thought prudent, for fear of accident, to accelerate the funeral, and perform it between five and six in the morning. The intelligence, however, could not be kept entirely secret, and several hundred persons attended at that unusual hour. Mr. Richardson, who performed the service, had been one of his preachers almost thirty years. When he came to that part of the service, 'Forasmuch as it hath pleased Almighty God to take unto himself the soul of our dear brother,' his voice changed, and he substituted the word *father*; and the feeling with which he did this was such, that the congregation, who were shedding silent tears, burst at once into loud weeping."

"Mr. Wesley left no other property behind him than the copyright and correct editions of his works, and this he bequeathed to the use of the connection after his debts should have been paid."

"Such was the life, and such the labours of

John Wesley; a man of great views, great energy, and great virtues. That he awakened a zealous spirit, not only in his own community, but in a church which needed something to quicken it, is acknowledged by the members of that Church itself; that he encouraged enthusiasm and extravagance, and spread superstition as well as piety, could hardly be denied by the candid and judicious among his own people. In its immediate effects the powerful principle of religion, which he and his preachers diffused, has reclaimed many from a course of sin, has supported many in poverty, sickness, and affliction, and has imparted to many a triumphant joy in death."

"The remarkable talents with which the Wesley family were endowed, manifested itself in the third generation as strikingly as in the second. One of the nieces of Mr. Wesley, named Melchisedech, after her mother, was that Mrs. Wright, who attained to such excellence as a modeller in wax, and who is said to have acted with great dexterity in conveying treasurable intelligence to the Americans, during the war. The two sons of Charles were among the most distinguished musicians of their age. Their father, perceiving the decided bent of their genius, very properly permitted them to follow it, and made the science of music their profession. In a letter to his brother, he said, 'I am clear, without doubt, that my son's concert is after the will and order of Providence.' When John printed this letter, after his brother's death, he added, in a note, 'I am clear of another mind.'"

"It was reported that Charles had said, his brother would not outlive him more than a year. The prediction might have been hazarded with sufficient likelihood of its fulfilment; for John was now drawing near the grave."

"We have no wish to add to our long review of this interesting and valuable work, which may now be consulted by readers, having been published within these few days. To complete the sketch of Methodism, abridged in our columns, it may be mentioned, that several separations took place among its original disciples, on various points of doctrine. The first division was led by Maxfield, Wesley's earliest lay-preacher, who joined Bell and other mad enthusiasts, pretending to prophecy and work miracles. Wheatley, a lascivious gospel preacher, headed the next schism, and turned the love-feasts and other nocturnal meetings into monstrous orgies. One Reilly was the organ of another sect, which held the opinions of universalists and latitudinarians;...that Christ had done away original sin, and that sin was a disease wanting a cure...not a crime deserving of punishment. This sect still prevails in America, Reilly having been one of Washington's chaplains."

Other separations of less note have also occurred; but in general the Wesleyan system has far exceeded in prosperity any of its co-rivals."

ANALYSIS OF THE JOURNAL DES SAVANS, FOR DECEMBER, 1819. (*Concluded.*)

Art. II. Histoire de Jeanne d'Albret reine de Navarre, par Mlle. Vaauilliers.

When we gave an account some time ago of the historical Essays on Berny, by the late Mr. Faget de Baure, we regretted that this work did not furnish any details of the life and administration of the mother of Henry IV. The accounts concerning her, scattered in general histories, and in some private memoirs, had not been any where collected. A history of Jeanne d'Albret was, therefore, still a desideratum, which Mlle. Vaauilliers has supplied with much care and success.

Art. III. The Kamoo or the Ocean, an Arabic Dictionary, &c. 2 vols. small folio. Calcutta.

Baron Silvestre de Sacy, in a short notice on this important work, says, "The Editor of the Kamoo could not have undertaken a task more worthy of our entire gratitude, than an edition of this work. We have long expressed the desire to see the Dictionaries of Dejaweri and of Errozabadi rendered accessible, by the press, to all lovers of oriental literature; but we were far from flattering ourselves that this wish would be realized during our life. Not only is it accomplished, at least with respect to the most necessary of the two works, (and we have seen the original of the Kamoo appear at Calcutta, and a Turkish translation of the same work issue from the press of Scutari almost at the same time,) but what is not less fortunate, the Arabic edition has been made with all the care necessary in so important an undertaking. Without doubt all those who cultivate Arabic literature will participate in our sentiments towards the editors of the Kamoo, and towards the Government, which, with a kind of profusion, places every means of success in the hands of men capable of making so good a use of them."

Art. IV. The Dramatic Works, (in German) of Dr. George Reinleick, 3 vols.

This collection contains seven pieces, three of which may be considered as original, three others are avowed imitations of French or Russian pieces, and the seventh, though called original by the author, is so full of passages evidently borrowed, that we hesitate, says Mr. Vauderbourg, so to class it. Though the reviewer enters into a long account of these volumes, we do not intend to follow him; his opinion of them is on the whole unfavourable; and from what he says of the plots, we are inclined to think he is not wrong in his judgment, notwithstanding the caution with which French criticisms on German works, especially dramatic, must be received. It seems too, from Mr. Reinbeck's own account, that none of his plays have obtained general success in Germany, notwithstanding the extreme indulgence of the public. To us it appears that it would have

been very easy to find some German work far more worthy of occupying so many pages in the Journal des Savans.

Art. V. Supplement to the Chinese and Latin Dictionary of Basil de Glemont, published by order of the King of Prussia, by Julius Klaproth.

When we mentioned this work in our 164th Number, we stated that we should take further notice of it when the review was completed.

Mr. Klaproth has placed at the head of his work a "Critical examination of the edition of the Chinese Dictionary of P. Basil de Glemont." This piece, which fills 29 folio pages, contains a view of all the faults and omissions in the printed dictionary, exposed and commented upon with a degree of severity, which Mr. A. Remusat finds excessive, and which would induce him to pass over the critical examination in silence, did it not contain some notions which he thinks new, and of general utility. It is besides necessary, because there is a perfect correspondence between the two parts of the work, the errors and omissions pointed out in the critical examination being corrected or supplied in the supplement. Did not the very great pressure of the matter compel us to be as concise as possible, we should feel real pleasure in closely following Mr. Remusat in his simple and able review of a work which must prove of such great importance to all those who in future apply to the study of Chinese literature. We must observe, that though Mr. R. as we have stated, appears to blame the severity with which Mr. Klaproth has spoken of Mr. Duguignes, the editor of the printed dictionary, he bestows unqualified praise on the indefatigable industry, the profound research, and the judicious arrangement of Mr. Klaproth. Though this work, he adds, is principally intended to complete Mr. Duguignes' edition of the dictionary of P. Basil, it would be equally necessary even if we already possessed the excellent dictionary by Keys, which Mr. Morrison is publishing at Canton. A great number of compound expressions are omitted by Mr. Morrison, as they are in the dictionary of Khang-hi, which the English author has taken as the basis of his labours. Besides, whatever may be his industry, several years must pass before we have his dictionary complete. Since 1815, only 3 numbers, or about one ninth of the first part, has appeared; and from a prospectus which Mr. Morrison has sent to Europe this year, we find that he has suspended the printing of his great dictionary by Keys, to publish an alphabetical dictionary in 4to. of 1000 pages, which will appear at the beginning of next year. This gives still more cause to review with pleasure Mr. Klaproth's Supplement, the printing of which may be finished in a few months.

Art. VI. Reply of Mr. De Luc, author of the History of the Passage of Hannibal over the Alps, to Mr. Letronne; and Mr. Letronne's Observations on that Letter.

In our analysis of the Journal des Savans for January, 1819, we gave a full account of Mr. Letronne's criticism on the work of

Mr. Deluc, whose opinion on the place where Hannibal passed the Alps, we thought then, and still think, he fully disproved, and at the same time satisfactorily shewed where it had really been effected. Mr. Deluc, in his reply, endeavours to invalidate Mr. Letronne's objections, and advances some additional circumstances in his own favor; but we must own that it appeared to us, even before reading Mr. Letronne's observations upon the reply, that Mr. Deluc has still failed in removing the objections to his system.

## ARTS AND SCIENCES.

### T. CAMPBELL'S LECTURES ON POETRY.

We mentioned a few weeks ago, that the distinguished poet whose name we have just written, was to deliver a course of lectures, at the rooms of the Royal Institution, on the art to which he is so great an ornament. He commenced on Wednesday; and in an address of nearly an hour and a half, developed his principles, to the infinite delight of a very numerous assembly. That we can transfer so small a share of that gratification to our readers, we exceedingly regret; but it is out of our power to convey any idea of Mr. Campbell's happy illustrations, and we must confine ourselves to even a very concise outline of his general views and sound opinions.

On setting out he described poetry rather by what it was not than by what it was; and showed its distinction from prose, not only in the characteristic features of imagery, fiction (generally), and harmony, but in the absolutely necessary quality of a regularly recurring measure or rhyme. The difference between elevated prose composition and measured poetry, then, was that in the former the ear of an auditor was not prepared to follow a reciter, whose successive periods might all possess unlike forms and construction; whereas, in the latter case, the ear anticipated the pauses and modulation of the whole when once accustomed to a few of the sentences.

Mr. Campbell next enquired, whether any words were peculiar to poetical composition, or whether the entire range of language was not at the command of the bard. He decided for the last; and held, that provided the application was judicious, and the arrangement harmonious, no expressions whatever ought to be excluded from poetry. Thus a general would not chuse to fight with a few picked men; but to ensure victory would employ his whole army, only taking care to suit the stations of every branch of his force to its talents and powers.

He allowed the same latitude in the choice of subject. The poet ought not indeed to select the high and exalted alone, for that shut him out from much of nature: nor ought he to confine himself to the mean and common, for that would disgust; and poetry, like painting, should keep unimportant things in their proper situation, nor obtrude the disagreeable upon attention, by pressing it too forward in the picture. A due mingling of the elevated with the true was the right

medium, which produced a genuine effect on mankind.

He further said, that art as well as nature furnished subjects for poetry, and such had been chosen by the greatest poets. Quotations from Tickell, Milton, &c. illustrated this sentiment, which our readers may remember, is supported in the prefatory Essay to the Lecturer's "British Poets."

Popular superstitions were also fine topics for poetry; but to be fully felt, the author ought to live at the era when they were accredited; and should himself partially believe in them. Otherwise he exhibited a phantasmagoria at noon, and had to exclude the sun to darken the room.

The last point to which Mr. C. turned in his admirable *coup d'œil*, was to the progress of philosophy and science, as daily diminishing the territories of the poet. Fairy rings were now explained on natural grounds, and hard-hearted chemists took away the giant-cave of Fingal by mere crystallization. But the mind of man would also expand, and the imagination grow with difficulties, and conquer them.

There are, we understand, to be four more lectures; of which we trust to be able to give sketches less imperfect than this of the first.

## LEARNED SOCIETIES.

### OXFORD, APRIL 15.

Wednesday, the first day of Easter Term, the following Degrees were conferred:

MASTER OF ARTS.—Rev. James William Bellamy, St. John's College, incorporated from Queen's College, Cambridge. Rev. William Staunton Marvin; Rev. Rowland Thomas Bradstock, University College; William Morgan, Jun. Deputy of Magdalen College; Rev. John William Hughes, Trinity College; Rev. Thomas Lequeune Jones; Rev. Francis Benson, Queen's College; Hon. Horner Fox Strangways; John Shuldham; Rev. James Six May; Henry Palmer, Esq. Christ Church; Frederick Ackers Dawson; Henry Jonas Barton; Thomas Johnson, Brazenose College.

BACHELORS OF ARTS.—Samuel Brett Shirreff, Wadham College; Edward Everett, Balliol College; William Harrison, Christ Church.

Yesterday the Rev. William Wilson, M. A. Fellow of Queen's, and the Rev. Wyndham Knatchbull, M. A. Fellow of All Souls, were admitted Bachelors in Divinity.

### CAMBRIDGE, APRIL 14.

The Rev. Henry Godfrey B. D. Fellow of Queen's College, was on Sunday last elected President of that society, in the room of the late Very Rev. Dr. Milner.

## FINE ARTS.

### EXHIBITIONS.

Several new exhibitions of pictures are on the tapis. That of Mr. Glover opens in Bond Street on Monday. Mr. Inahey, the celebrated French painter, has brought over

his Pygmalion as the principal of a collection of his works, to display before the British public. Another great production, from the late Louvre Gallery, is about to be presented at Mr. Bullock's fine rooms in Piccadilly. The Water-colour annual show in Spring Gardens is also about to be opened: and as we learn that Sir Thomas Lawrence does not send his distinguished portraits to the Royal Academy, it is not improbable that he may make a separate exhibition of them.

With regard to the Portrait Gallery, (British Institution) Pall Mall, we understand that it will contain the finest series of Vanduys ever seen together, and some remarkably curious specimens of the early arts in this country, among which an undoubted original of Henry IV may be mentioned.

#### FINE ARTS.—FOREIGN.

The king of Naples has had a monument erected on the royal domain of Chiaja, on the side towards Sorrento, the birth-place of Torquato Tasso, in honour of this celebrated poet and philosopher.

The statue of a priestess, with the inscription—*Eumachia L. S. Sacerd. Publ. Fulvior*, has been dug up at Pompeii, out of the middle of a large public building, which, according to the inscription, was, with all the adjacent habitation, built at her expense. It is the most beautiful which has hitherto been discovered there.

#### Venice, March 22.

The public papers have committed a gross falsehood in stating that the English were employed in carrying away our public buildings piece by piece, to re-erect them in England. On the contrary, our government has strictly prohibited the demolition of our palaces, and buys all those standing empty; if they can possibly be used for the public service. Considerable improvements have been made; canals filled up, so that we have broad and convenient streets; the *Merceria* has been restored, and has a fine appearance. The Emperor has ordered for this city an increased income of 150,000 *lire* annually for the repair of churches and monuments. It requires an express permission of government to export the least work of art. Trade indeed languishes, but the government can not alter the course of European commerce. The Emperor has ordered the debts of the city to be liquidated in a limited number of years.

Norway's enchanting scenery, has induced two young skillful artists to publish a collection of the most remarkable prospects between Christians and Bergen, under the title of, "Picturesque Tour to the high Mountains of Norway," accompanied by descriptions in Swedish and French.

#### FAIR EXCHANGE NO ROBBERY !

We are not among those, who, founding themselves on instances of individual assurance, would hibel a whole people with the stigma of impudence; and therefore, in

noticing the following example of Transatlantic Modesty, we beg to be understood by the most sensitive advocates for the moral superiority of the New World, not to insinuate that effrontery is an American characteristic. But we confess, that in Europe we have never met with a proposal altogether so "note" and amusing as the following, which a friend of ours received a few days ago.

"Philadelphia, February 4th, 1820.

"To Mr.

"Sir,—I take the liberty of soliciting the honour of your painted portrait, which I should be proud and happy to receive, and which highly merits a place in my gallery of portraits.

"My institution is extensive and brilliant, and is the only one of the kind in America.

"If I should be favoured with your portrait †, it shall be numbered in the printed catalogues of the gallery, and a copy sent to you.

"Permit me, sir, to enclose, for your kind acceptance, an engraved likeness of one of our distinguished men.

"With every sentiment of respect for your distinguished talents and character,

"I have the honour to be, Sir,

"Your obedient and humble servant,

"JOSEPH DELAPLAINE."

The foresaid engraved portrait, which is that of Alexander Hamilton, by Leney, may be looked at threepence; and in return, the modest exhibitor, Mr. Delaplane, only asks a painting in oil, costing at least from 20 to 50 guineas, to be worth a place in his gallery, and a record in his catalogue! What a fine hint for the Directors of the British Gallery, for collecting portraits for an exhibition in Pall Mall!!!

[We acknowledge a letter from Mr. François Ferrière, the painter of the very beautiful imitations of bronze exhibited at the Royal Academy and British Gallery. He informs us that an artist of considerable talents has become his enemy, because the Literary Gazette spoke so highly of his performance, and had not noticed some productions of his adversary. Alike unknown to us, we can only advise Mr. Ferrière to disregard the detractions of envy. Of his works we spoke as we thought; doing common justice to a foreigner, certainly not at the expense of any other artist; and still consider them to be the clearest specimens of the deceptive ever seen in this country.]

#### ORIGINAL POETRY.

HYMN.

(From *Milman's Fall of Jerusalem*.)

Even thus amid thy pride and luxury,  
Oh Earth! I shall that last coming burst on thee,  
That secret coming of the Son of Man.  
When all the cherub-throning clouds shall shine,  
Irradiate with his bright advancing sign:

When that Great Husbandman shall wave his fan,  
Sweeping, like chaff, thy wealth and pomp away:

† It may be sent to the book-store of Mr. J. Murray, who will forward it to me.

Still to the noontide of that nightless day,  
Shalt thou thy wonted dissolute course main-  
tain.

Along the busy mart and crowded street,  
The buyer and the seller still shall meet,  
And marriage feasts begin their jocund strain:  
Still to the pouring out the Cup of Woe;  
Till Earth, a drunkard, reeling to and fro,  
And mountains molten by his burning feet,  
And Heaven his presence own, all red with  
furnace heat.

The hundred-gated Cities thien,  
The towers and temples nam'd of men  
Eternal, and the thrones of Kings;  
The gilded summer palaces,  
The courtly bowers of love and ease,  
Where still the bird of pleasure sings;  
Ask ye the destiny of them?  
Go gaze on fallen Jerusalem!  
Yea, mightier names are in the fatal roll,  
'Gainst earth and heaven God's standard is  
unfurld.

The skies are shewell'd like a burning scroll,  
And the vast common doom ensepulchres the  
world.

Oh! who shall then survive?  
Oh! who shall stand and live?  
When all that hath been, is no more:  
When for the round earth hung in air,  
With all its constellations far,  
In the sky's azure canopy;  
When for the breathing earth, and sparkling sea,  
Is but a fiery deluge without shore,  
Heaving along the abyss profound and dark,  
A fiery deluge, and without an ark.

Lord of all power, when thou art there  
alone

On thy eternal fiery-wheeled throne,  
That in its high meridian noon  
Needs not the peris'd sun nor moon:  
When thou art there in thy presiding state,  
Wide-accepted Monarch o'er the realm of  
doom:

When from the sea depths, from Earth's  
darkest womb,

The dead of all the ages round thee wait:  
And when the tribes of wickedness are strewn  
Like forest leaves in the autumn of time ire:  
Faithful and true! thou wilt save thine own!  
The saints shall dwell within thy unarming  
fire,

Each white robe spotless, blooming every palm,  
Even safe as we, by this still fountain's side,  
So shall the Church, thy bright and mystic  
bride,

Sit on the stormy gulf a halcyon bird of calm.  
Yes, 'mid you angry and destroying signs,  
O'er us the rainbow of thy mercy shies,  
We hail, we bless the covenant of its beam,  
Almighty to avenge, Almighty to redeem!

[By Correspondents.]

#### MEDITATIVE LINES

On the Death of the late venerable President of the  
Royal Academy.

Farewell below'd and honour'd West!—farewell,  
Benignant being: whose indulgent smile  
And gentle bearings, linger on my heart,  
With such a sweet attraction, I forget,  
In this yet early hour, all other claims  
Of sorrow for thy loss. Thou wert a man,  
Of whom the elements so kindly boast,  
That genius, whose all potent fires too oft  
Consumed the milder qualities of mind,  
In lighting up its prowl attributes,  
Attempt'd to shine alone with lucid beams,  
And flung their radiance with no niggard hand,  
Thro' every path of life—doar, were the hours

\* Note.—Though under the head of the *Fine Arts*, we request our readers to omit the word *fine*, in regard to this article.

Thy social converse gave, and rich the stores  
Accumulated long, which talent, taste,  
Investigation deep, and thought profound,  
Had treasured in thy mind. Age had not chill'd  
Thy genuine sensibility, nor care,  
That upset of the soul, impair'd its powers:  
Still could'st thou mourn the flattering dove's  
distress.

Which struck thy heart in boy-hood's ardent  
hour.

(And on the latest canvas claims a sigh)  
And still with eye new lit, and quivering lip,  
Could'st dwell upon thy mother's rapturous kiss,  
When thy first powers burst on her gladden'd  
scene,

And hail'd her parent to a son of Fame.

Seldom alas! in a heart-hardening world,  
So full of buffeting, so prone to lures  
Of wild ambition, avarice, envy, strife,  
Do such sweet nestlings of the youthful heart,  
(Spring doctor'd, soft humanities of life)  
Retain their hallow'd forms—where cherish'd  
thus,

As in a home congenial, virtue dwells;  
And thus she dwelt with thee, lamented one.—  
Powers like thine own shall paint the artist's  
fame.

Thy genius, talents, industry and toil;  
Thy patient labour mounting to the goal  
By steps of noble daring—trace with joy  
Thy young imagination's flowery field,  
Mature judgment, and experience sage;  
Thy power to charm the eye, to melt the heart,  
Recall from Time's vast deep the vanish'd  
forms

Of patriots, heroes, martyrs, and e'en Him  
Whom Deity enshrin'd—our suffering Lord.  
The gifted bard exultingly may point  
To dying Wolfe, to Scotland's Royal Hunt,  
Calypso's wien majestic, Pharaoh's rage,  
The den of dark Despair, the widow's love  
Of great Germanicus, proud India's pompous  
train,

Boyc'st the battled surge, great Edward's regal  
rites;

The merces and the sacrifice of Him  
Who is the king of kings:—but not for me  
Is such high task decreed.—I but presume  
To drop with trembling hand and fearful eye,  
A floweret from the wild heath's russet bed,  
Upon the tomb of him rever'd in life,  
And lo! beyond the grave.

B. H.

#### IMPROMPTU

On a recent Prosecution; the Prosecutor recom-  
mending the barbarous assaults of his wife to  
mercy.

Since tender D—w for mercy called

On those who much his wife had maul'd;  
Had they quite murdered her, so suited,  
He surely had not prosecuted.

Uxon.

#### BIOGRAPHY.

##### PROFESSOR ESCHENBURG.

This very celebrated and learned writer,  
and amiable man, died lately at Brunswick.  
As we hope shortly to be enabled to present  
our readers with some interesting biography.

\* When Mr. West was very young he had at-  
tained great skill in the use of the bow and ar-  
row, and was one day unfortunately successful  
in bringing down a dove, at which he aimed, ra-  
ther in the thoughtlessness of play than design.

cal details respecting him, we refrain at  
present from any account of his works, and  
shall content ourselves merely with expres-  
sing a wish, that his rich collection of  
"Shaksperian Literature," the fruits of  
fifty years' labour, which we happen to know  
is matchless on the continent, and would  
hardly be equalled even in England, may not  
be dispersed. It is a treasure worthy of being  
added to some public library in this  
country.

#### SKETCHES OF SOCIETY.

##### DECOYING ELEPHANTS.

The following interesting communication  
is addressed to the Editor of the Madras  
Courier, and dated Coimbatore, April 21,  
1819.

Early in February last, about 3000 people  
were assembled in a place of rendezvous on  
the skirts of the Jungle, and the haunts of  
the Elephants being ascertained, a semi-cir-  
cular line of people provided with fire arms,  
tom-toms, &c. and extending for several  
miles, was then formed round them, each  
end of the line reaching a chain of hills, the  
passes through which had been previously  
stopped and guarded by parties of match-lock  
men. The object of this line was to drive the  
elephants towards a particular narrow place  
surrounded with steep hills; and when they  
had once entered, and the passes from it  
properly guarded, it was next to impossible  
for them to escape, and in which there was  
abundance of food and water for several  
days. This, however, was not an easy task,  
as the Elephants frequently attempted to  
force the lines and get off to the eastward—  
but the line gradually closed on them, and  
halted at night and kept up large fires to  
prevent their breaking through; and after 10  
or 12 days labour, at last succeeded in driving  
them into the intended place, where they  
were closely surrounded and kept in for  
several days. In the mean time, at the  
debutche of this pass, several hundred  
people were busily employed digging a  
deep ditch, enclosing about a quarter of  
a mile of ground, leaving only the space of  
a few yards as an entrance untouched.

Two ditches were cut from the entrance,  
to a hill on one side, and to a rock on the  
other, to prevent the elephants passing the  
enclosure. (On the outside of the ditch, a  
matting of branches about 6 feet high was  
placed, to give it a formidable and impos-  
sible appearance, and green bushes and  
branches were also stuck about the entrance  
to conceal the ditch, and to give it as much  
as possible an appearance of Jungle. When  
all this was completed, the people were re-

The mournings of its widowed mate made an im-  
pression on his mind which never erased,  
and occasioned him frequently to introduce the  
dove in his pictures. The simplicity and feeling  
he displayed in relating this and many other in-  
cidents of his early life, will never be forgotten  
by those who heard them; for cold indeed must  
be the heart which did not sympathize with sensibility  
so unaffected, and so closely allied to the  
highest energies of intellect.

moved from that place; and those at the  
other end commenced firing, shouting, and  
making as much noise as possible, with  
drums and cholera horns, which so intima-  
dated the elephants that they made the best  
of their way to the opposite end; and the  
people following close, with the assistance of  
a few rockets, drove them straight into the  
enclosure, when the remaining part was dug  
away and the ditch completed. People were  
immediately posted round the outside of the  
ditch, armed with long spears and match-  
locks, to repel any attempt the Elephants  
might make to cross it.

Next day, eight tame female elephants  
were introduced into the enclosure; the Ma-  
houts couched close on their necks, cov-  
ered with dark cloths. The object of the  
tame ones was to separate one of the wild  
from the herd, and mob him. When this  
was accomplished, four Kut Mahouts, whose  
profession is to catch elephants, creep be-  
tween the legs of the tame ones, and having  
fastened strong ropes to the hind legs of the  
wild fellow, secured him to the nearest tree;  
but the Kut Mahouts then retired towards  
the ditch, and the tame elephants, leaving  
the captive to his struggles, went after others.

In this way 23 elephants were captured in  
six days, without the parties engaged meet-  
ing with the slightest accident, to the great  
amusement of the spectators, who perched  
on trees overhanging the enclosure, witnessed  
the sport without sharing in the danger. The  
sagacity of the tame Elephants—the address  
and courage of the Mahouts in approaching  
the wild ones—the anxious moments which  
passed from the cast of the first rope, until  
the last band was tied—the rage of the  
animals upon finding themselves entrapped,  
and their astonishing exertions to get free—  
afforded altogether a scene of extraordinary  
novelty and interest.

One of the elephants calved in the en-  
closure; and the young one was sufficiently  
stroog to run about with its mother the first  
day. To naturalists, it may be satisfactory  
to know that the young elephant sucks with  
the mouth, and not with the proboscis, as is  
generally supposed.

#### THE DRAMA.

No novelties worth notice this week in the  
dramatic world.

#### VARIETIES.

On the first Tuesday of the present month  
the shock of an earthquake was severely felt  
at Cork and adjacent parts of Ireland.

Madame Bianchi and Mr. Lacy's arrival  
in India has excited a strong sensation in  
the musical world.

At a recent sitting of the French Academy,  
M. Alexander Duval read his comedy in  
verse, entitled *—l'Orateur Anglois, ou l'E-  
cole des Deputés*, preceded by remarks on  
comedy.

At the *Vaudeville*, a parody on *Ma y  
Stuart* has been produced. The scene of  
the difference between the two queens is

hishly amusing. It commences in a very curious strain, and ends with the *tearing of eyes*.

**INDIAN JUGGLER.**—A Juggler, named Jalla, performing at Madras, intimates that among other tricks he "will make disappear any gentleman's shirt from his back without his knowing it."

In Number 167 of the *Literary Gazette*, we mentioned, that a carriage with sails had been exhibited in the *Jardin Marbeuf*, at Paris. It appears that this carriage is of English construction; the object of the inventor is to substitute sails for horses. The mechanism is simple and ingenious. A helix fixed at the hind part of the carriage, serves to guide it; and by the aid of sails fastened on masts, it receives the force necessary for impelling it forward. It is said, that in favourable weather, a carriage constructed on this plan is capable of travelling thirty miles an hour.

The original idea of this machine is by no means new. About the year 1774, the Count de Gribauval, an officer of artillery in the French service, exhibited the model of a mechanical carriage, which was set in motion without the help of horses. In Russia and Sweden, when a boat is surprised by frost in a river or lake, it is placed on skids, and continues to advance by means of its sails. Such is probably the origin of the new invention.

On the 30th of March, the French Academy proceeded to the renewal of its Bureau; M. Laya was appointed Director, and M. Charles Lacretelle, Chancellor.

It appears by a Summary of the Members of the Universities of Oxford and Cambridge, in their Calendars for 1819 and 1820, that the following is the number:—

1819. Oxford. Members of Convocation	1874
_____ on the Books	3984
1820. _____ of Convocation	1873
_____ on the Books	4102
1819. Cambridge. Members of the Senate	1492
_____ on the boards	3698
1820. _____ of the Senate	1352
_____ on the Boards	3953

*Anecdote.*—A short time since a mixed company at one of the cantonments in India were eulogizing the poetical merits of Lord Byron. After a variety of elaborate declamations on the genius displayed in "Childe Harold," in which all were endeavouring to display knowledge, taste, and critical acumen, an enraptured amateur declared, that "Byron was undoubtedly a genuine son of the *Muse of Poetry*;"—the company were entertained by the following burst of praise, from an energetic Milesian; "*Arise, my jewel, now be sage, the Muse of Poetry! by my soul, Lord Byron is a son of the whole nine of the hussies, and moreover had the Graces, for a godmother, my hancy.*" (*Calcutta Journal.*)

*Ana.*—The following singular story is related of the Bermah and Pegue people. The first authority the Peguers had on the Ava dominions was about the year 1609: they were afterwards subdued by the Burnahs, and only seven of each sex escaped the general massacre; but the progeny of these in

1740, with their allies, entered Syrian, and massacred in return all the Burnahs found therein, of every sex and condition.

The French Royal Academy of Sciences held a public sitting on the 27th of March, at which Baron Sané presided. The following documents were read and listened to with the greatest interest:—

1. An Essay on the Progress of the Arts and Sciences relative to naval affairs since the peace, by M. Dupin.

2. On the influence of moral and physical agents on courage; a medical and anecdotal notice, by Baron Percey.

3. A historical eulogy on M. Palisot, Baron of Beauvois, by Baron Cuvier, the Perpetual Secretary.

At its public sitting of the 16th of March, 1818, the Academy proposed the following question, as a subject for the mathematical prize: "To form by the theory of universal gravitation alone, and adopting from observations, only the arbitrary elements, tables of the phases of the moon, as precise as the best tables which we now possess."

The Academy awarded a prize of 3000 francs to each of the two memoirs which were received on the above subject. The first was written by M. Damoiseau, and the second by M. M. Carliui and Piana.

Among the works sent for competition, the Academy considered as worthy of the first rank, each in its kind, M. de Serre's Memoire on the Laws of Osteogeny, and the Essay by M. Edwards, on the influence of the physical agents on animal verber.

The accessit was awarded to the memoir by M. M. Bieschet and Villermé, on the appearances of the Callus; and honourable mention was made of the essays of M. Isidore Bourdon, on the mechanism of respiration.

The statistical prize was deferred. The prize of astronomy, founded by M. Delalande, was divided between M. M. Nicolle and Eucke.

The following is a list of the principal prizes proposed for ensuing competitions:

1. A grand statistical prize, (to be awarded at the public sitting in March 1821) which will consist of a gold medal worth 1060 francs.

2. A mathematical prize for "the best work or memoir on pure or practical mathematics, which shall appear, or shall be communicated to the Academy, during the space of two years, the time allotted for the competition."

The prize will consist of a gold medal, worth 3000 francs, to be adjudged at the public sitting of March, 1822.

3. A prize of experimental physiology, to be awarded at the public sitting of March 1821, and to consist of a gold medal, worth 440 francs, to the printed or manuscript work which shall be declared to have contributed most essentially to the advancement of experimental physiology.

Finally, a mechanical prize, worth 500 francs, which is also to be a judged in March 1821, for the best invention or improvement of the instruments useful for agriculture, the mechanical arts, and the practical and speculative sciences.

## LITERARY NOTICES.

We hear that another book, besides Louis's history of his reign in Holland, emanating from the Buonaparte family, is about to appear: it is a system of education for the ex-king of Rome, drawn up under the eye of his father the ex-emperor, and formed in the cabinet at St. Cloud.

A German view of England in 1816 may shortly be expected, as the king of Prussia's librarian, Dr. Spiker, has published his travels among us, and they are being translated.

*Contents of the Journal des Savans for Mar. 1820.*  
Nurlberg, Codex Nazarens.—Reviewed by M. Silvestre de Sacy.

Bauur-Lornniau, La Jérusalem délivrée.—Raynouard.

Tessier, Mémoire sur l'Importation en France des Chèvres à duvet de Cashemire.—Abel Reimuss.

Dom Clément, l'Art de vérifier les Dates.—M. Daumou.

Sir W. Gell, Itinerary of Greece.—M. Letronne.

Raoul Rochette, Denx Lettres à Milord Aberlemb.—M. Letronne.

Bronsted, Documents relative to the History of Denmark (in Danish).—Raynouard.

Note sur une Inscription Grecque récemment apportée de Delos à Marseilles.—Raoul-Rochette.

## METEOROLOGICAL JOURNAL.

APRIL, 1820.

Thursday, 13.—Thermometer from 41 to 57. Barometer from 30.06 to 29.99.

Wind N. N. E.  $\frac{1}{2}$ .—Cloudy. Rain in the afternoon and evening.

Friday, 14.—Thermometer from 44 to 55. Barometer from 29.77 to 29.81.

Wind N. b. E.  $\frac{1}{2}$ .—Cloudy, and almost generally raining.

Rain fallen .225 of an inch.  
Saturday, 15.—Thermometer from 36 to 56.

Barometer from 29.97 to 30.06.  
Wind N. W. 1. and W.  $\frac{1}{2}$ .—Generally clear,

clouds passing at times, with showers of rain in the afternoon.

Rain fallen .225 of an inch.  
Sunday, 16.—Thermometer from 30 to 62.

Barometer from 30.19 to 30.31.  
Wind S. W. and W.  $\frac{1}{2}$ .—Morning clear,

clouds most of the afternoon, and became clear again in the evening.

Rain fallen .025 of an inch.  
Monday, 17.—Thermometer from 27 to 65.

Barometer from 30.40 to 30.35.  
Wind W. and N.  $\frac{1}{2}$ .—Generally clear.

Tuesday, 18.—Thermometer from 44 to 66.  
Barometer from 30.36 to 30.30.

Wind F. 1.—Clear.  
Wednesday, 19.—Thermometer from 37 to 69.

Barometer from 30.36 to 30.27.  
Wind N. b. E. and S. E.  $\frac{1}{2}$ .—Clear.

Edmonton, Middlesex. JOHN ADAMS.

I believe it is not generally enough known, that the death of a wasp now, and to the end of May, is the destruction of a nest of them for each wasp.

Conclusion of Captain Surphys in our next.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

**MR. HAYDON'S PICTURE** of "Christ's Entry into Jerusalem," is now open for Exhibition, at Bullock's Great Room, upstairs to the right, from ten till six.—Admission 1s. Catalogue 6d.  
"Fear not Daughter of Zion! behold thy King cometh, sitting on an ass's colt."

**Valuable Library of Books.**  
By Mr. Bullock, at his Egyptian Hall, Piccadilly; on Wednesday, April 26th, and following days, at One penny.

**A very Valuable and Splendid LIBRARY** of Books, and Books of Prints, a part of the property of a private gentleman, in the best condition, and chiefly in elegant bindings: comprising, in folio and quarto, Woodman's rare Portraits, 2 vols.; Watts' Works, 6 vols.; Countess of Hindostan, Turkey, Austria, Russia, and Great Britain, 6 vols.; Lord Valentia's Travels, 3 vols.; Lord Orford's Works, 5 vols.; Pevan's London, 2 vols.; Smith's Antiquities of London; Walpole's Royal and Noble Authors; Ireland's Hogarth; Church's History of Quadruped; Histoire des Plantes, Grasses, &c.; Johnson's Dictionary, 2 vols.; Handel's Songs, Poems, and Salt's Vices.  
Others, Malone's Shakespeare, 16 vols.; Holcroft's Lister, 4 vols.; Parliamentary, 108 vols.; and many other interesting and valuable Works.

To be viewed two days preceding, when catalogues may be had.

**THE MEDICAL OFFICERS** of His Majesty's Navy, intend to dine at the FREEMASON'S TAV-  
ERN, Great Queen Street, on Friday, the 26th of April instant, being the Anniversary of the Birth of the late Lord Melville, to celebrate the establishment of the Supplemental Fund, for the Benefit of Widows and Orphan of deceased Members of the Corps. JOHN WILSON CROKER, Esq. M. P. L. D. F. R. S. and President of the Society, in the Chair. Stewards.—F. M. Gannister, M. P.; Isaac Wilson, M. D.; Robert Curwen, M. D.; W. Tait, M. D.; Andrew Douglas, Esq. Surgeon, M. D.; Thomas Robertson, Esq. Surgeon, M. D.; W. Gladstone, M. D. Surgeon to the Naval Academy; K. M. G. M. D.; George Roddam, Esq. Surgeon, R. N.; B. W. Bumpfield, Esq. ditto; George Pennes, Esq. ditto; William McIntire, Esq. ditto; Thomas Storr, M. D.; Thomas Maude, Esq. Dinner on the table at half-past five o'clock precisely.  
[1] No Collection or Subscription to be proposed.  
[2] Tickets 1s. each, to be had of the Stewards, or at the Bar of the Tavern.

[3] Any Member of the Corps desiring to introduce a friend, will be pleased to furnish him with a Ticket.

### BOOKS PUBLISHED THIS DAY.

#### New Novel.

Is the press, and will be speedily published, by G. and W. B. Whittaker, 13, Ave-Marie-lane,  
**LOCHIEL, or The Field of Culloden.**  
A Novel, in three volumes 12mo. This Novel is from the press of an eminent author, whose works have uniformly delighted the public; the incident and illustration of Scottish character will be found highly interesting and amusing.

**New History of Spain.**—Price 7s. 6d. boards.  
**THE HISTORY OF SPAIN**, from the earliest Ages of which we have any authentic Records, to the return of Ferdinand VII. in 1814, accompanied with the Chronological and Genealogical Tables, of the English and Spanish Princes and Caliphs, and a List of the contemporary Sovereigns at the end of each reign; with the political Arrangements of Europe, as settled at the Treaty of Paris, with Notes. By F. THURTELL, author of "A History of France," &c. Printed for G. and W. B. Whittaker, 13, Ave-Marie-lane.

#### In 8vo. 18s.

**THE COMEDIES OF ARISTOPHANES.** By T. MITCHELL, A. M. late Fellow of Sidney-Campus-College, Cambridge. Printed for John Murray, Albemarle-street.

**THE POETICAL WORKS** of the Reverend GEORGE CRABBE. Consisting of, I. Poems—11. The Borough—111. Tales—and IV. Tales of the Hall. 8 vols. 8vo. 2l. 18s. 6d. 5 vols. royal 8vo. 4l. 12s. 7 vols. small 8vo. 2l. 2s. Printed for John Murray, Albemarle Street.

With a Map, two vols. 8vo. 18s.

**A CIRCUMSTANTIAL NARRATIVE** of the CAMPAIGN in SAXONY, in the Year 1813. By BARON OUELLEN, one of the General Officers of the Army. To which are subjoined the Notes of M. Aubert de Verry. Printed for John Murray, Albemarle Street.

In 8vo. 12s. Second Edition.

**THE SKETCH BOOK** of GEOFFREY CRAY-  
ON, Esq. Printed for John Murray, Albemarle Street.

In 8vo. 10s. 6d.

**THE LIFE** of FENELON, with other Bio-  
graphical and Historical Tracts. By CHARLES BUTLER, Esq. Printed for John Murray, Albemarle Street.

In 8vo. 18s.

**PRINCIPLES** of POLITICAL ECONOMY considered, with a View to their Practical Application. By the Rev. T. R. MALTHUS, A. M. R. S. Professor of History and Political Economy in the East India College, Hertfordshire. Printed for John Murray, Albemarle Street.

**TRIVIAL POEMS** and TRIOLETS. By PA-  
TRICK CAREY, 1681. Edited, with a Preface, by Sir WALTER SCOTT, Bart. 4to. 18s. A very few Copies are printed.

"Some specimens from the Poems of Patrick Carey, were published by the present possessor of the manuscript, in the Edinburgh Annual Register, for the year 1810. As they have attracted, from time to time, the notice of our poetical antiquaries, the Editor has been induced to place them beyond the chance of total oblivion, by the present very limited edition. The Reader is here introduced to a Bard of the seventeenth century, as staunch a cavalier, and nearly as good a poet as the celebrated Colonel Lovelace. Of the poems, only one manuscript copy is known to exist. It was presented to Sir Walter Scott, the present possessor. The volume is a small duodecimo, written in a very neat hand, (the author's autograph,) is perfect, and in tolerably good order, though scribbled on the blank leaves, and striped off its silver clasps and ornaments. The proprietor of unique manuscript is apt to over-rate its intrinsic merit; and yet the Editor cannot help being of opinion, that Carey's playfulness, gaiety, and ease of expression, both in satirical verses and political satire, entitle him to rank considerably above the 'mob of gentlemen who write with ease.'—Abbotsford, April.  
Printed for John Murray, Albemarle Street.

A new Edition, 4 vols. cr. 8vo. 1l. 16s.

**ANTAR, a Bedouen Romance.** Translated from the Arabic. By TERRICK HAMILTON, Esq. Principal Secretary to the British Embassy at Constantinople.

7½ Vol. 2, 3, and 4, (never before published) are sold separately. 17s.

Printed for John Murray, Albemarle Street.

In 8vo. 28s.

**TRAVELS** on the CONTINENT; for the Use of Travellers.

"A Traveller will find a very useful Guide through France, Switzerland, Italy, Germany, Portugal, Spain, Holland, Denmark, Sweden, Norway, and Russia; and contains an Account of the Antiquities of Italy; particularly those of Rome, Herculanum, Pompeii, and Paestum; together with minute lists of the most eminent Statues and Paintings which embellish the Continental Galleries. It gives accurate details of the expenses incurred by residing in various parts of France, Italy, &c.; so that persons who visit the Continent from economical motives, may select the most eligible places for permanent residence, and for the use of families, who may wish to avoid the expense attendant upon travelling with a courier; with instructions for invalids. Printed for John Murray, Albemarle Street.

**THE HERMIT IN LONDON**, Vols. 4 and 5, which complete this work, will be published on Monday next, the 24th inst.  
Conduit Street, April 20th.

In 8vo. 16s. 6d. 12mo French, 8s.  
**ROME, NAPLES, & FLORENCE: Sketches** of the actual state of Society and Manners, the Arts, Literature, &c. of these celebrated Cities. By the COUNT DE STENDHAL. *Delphin School Editions, on a New Plan.*

Just Published, 8s. bound.

1. **JUVENAL and PERSIUS;** containing R. Pertin's and Kenig's Text, Delphin Notes, and without the Order.

2. Virgil, Heinsii's Text, do. do. 10s. 6d.

3. Cæsar, Orellii's Text, do. 10s. 6d.

4. Horatius Tibullus; a new Edition, with English Notes, 12s. 6d. bound.

This is a very compact and useful edition of the *Ilind*, for the Use of Schools. The force of the Paraphrase, a distinguishing beauty of the Greek Language, is well pointed out. It will be found, beyond all comparison, the best edition for the use of Schools, at present extant.

*Antiquarian Repository, Sept. 1819.*

This is, perhaps, the most useful edition of the *Marian* hand, that has yet made its appearance. It is also critical in an eminent degree, and contains a judicious and well-written account of the digamma, together with a dissertation upon the Homeric metre, principally selected from the writings of Professor Dunbar and Mr. S. Knight. The notes are partly original, and partly taken from Heyne, Clarke, and Knight. The author has judiciously enlivened the heavy, critical matter of his work by quotations from Pope's admirable translation, and adorned it with a few parallel passages from the Roman poets, and from our illustrious countryman Milton.—*New Magazine*, Oct. 1819.

Printed by A. J. Valpy, 11, Old Bailey, G. and W. B. Whittaker, Longman, and Co.; Baldwin and Co.; Lockington and Co.; F. and J. Rivington, London; Maceradic and Co. Edinburgh; Cumming and Co. Dublin; and all other booksellers.

Of the same may be had, bound.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 171.

SATURDAY, APRIL 29, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### TIMBUCTOO & HOUSA.

*An Account of a Journey from Fas to Timbuctoo, performed in or about the year 1787. A. C. By El Hage Abd Shabeeny.*

The person who communicates the following intelligence is a Muselman, and a native of Tetuan, whose father and mother are personally known to Mr. Lucas the British consul. His name is Assed El Hage Abd Salam Shabeeny. His account of himself is, that at the age of fourteen he accompanied his father to Timbuctoo, from which town, after a residence of three years, he proceeded to Housa, and after residing at the latter two years he returned to Timbuctoo, where he resided seven years, and then came back to Tetuan.

Being now in the twenty-seventh year of his age, he proceeded from Tetuan as a pilgrim and merchant, with the caravan for Egypt to Mecca and Medina, and on his return established himself as a merchant at Tetuan his native place, whence he embarked on board a vessel bound for Hamburg, in order to purchase linens and other merchandize that were requisite for his commerce.

On his return from Hamburg in an English vessel, he was captured and carried prisoner to Ostend by a ship manned by Englishmen, but under Russian colours, the captain of which pretended that his imperial mistress was at war with all Muselmans. There he was released by the good offices of the British consul\*, Sir John Peters, and embarked once more in the same vessel, which by the same mediation was also released; but as the captain either was or pretended to be afraid of a second capture, El Hage Abd Salam was sent ashore at Dover, and is now†, by the orders of government, to take his passage on board a king's ship that will sail in a few days.

In the following communication Mr. Beaufoy proposed the questions, and Mr. Lucas was the interpreter.

\* Confirmed by Sir John Peters.  
† In the year 1795.

Shabeeny was two years on his journey from Tetuan to Mecca before he returned to Fas. He made some profit on his merchandize, which consisted of haicks, a light garment manufactured at Fas, red caps and slippers, euclidean, and saffron; the returns were line India muslin for turbans, raw silk, musk, and gubalia, a fine perfume that resembles black paste. He made a great profit by his traffic at Timbuctoo and Housa; but, he says, money gained among the Negroes (being idolaters) has not the blessing of God on it, but vanishes away without benefit to the owner; while that acquired in a journey to Mecca proves fortunate and becomes a permanent acquisition. On his return with his father from Mecca they settled at Tetuan, and often carried cattle, poultry, &c. to Gibraltar.

He considers himself now as fixed at Tetuan, where he has a wife and children.

Such are the particulars related to us of a person who now comes forward to throw that important light upon African geography which we proceed to concentrate in the following pages. How exceedingly interesting it is we shall not stop to impress, but at once proceed to our task, with feelings of great pleasure and pride at being the first to lay so remarkable a communication before the public. The volume whence it is derived will we presume be published in a few days, ... till then, the Literary Gazette precedes the march to the much-sought and celebrated city of Timbuctoo.

From Fas, Shabeeny went to Taflelt, the place of general meeting for all the merchants and caravans going to Timbuctoo. "The territory of Taflelt contains no towns, but abounds in fortresses with mud walls, which the natives call El Kassar, and which contain from three to four hundred families; in these fortresses there is a public market (in Arabic, Suke) every week, where the inhabitants purchase provisions, &c."

Shabeeny's next stage was to Draha, a province of the circuit of 4 or 5 days journey at the foot of Atlas, and famous for dates, which he reached in six days. In three days from Draha, whose natives are almost black, the caravan, now augmented to 300 or 400 camels, entered the desert or Sahara, which for the first 20 days is a plain

of sand resembling the sea. On the right and left, the country is inhabited by roving Arabs at the distance of three or four days journey from the track of the travellers. At the end of the 20 days, there is a change on the face of the country, particular spots, called *El Hah*, being fertile, and the Seldrah or wild myrtle, on which camels browse, in abundance. There is also a small quantity of grass: and about 8 or 10 inches below the sandy surface a yellow or reddish earth, in strata of four feet in depth, beneath which again there is a brownish earth, and water which springs out of a light sand about 5 or 6 feet lower down. This last tract it also requires 20 days to pass. The country, right and left, is occupied by independent Arabs governed by their own Sheiks.

"From Akka to Timbuctoo, a journey of 43 days, they meet with no trees, except the seldrah, no rivers, towns, or huts. From Draha, which is a country abounding in camels, to Timbuctoo, the charge per camel is from 16 to 21 ducats\*. That so long a journey is performed at so small an expence, is owing to the abundance of camels in Draha. The caravan generally contains from 300 to 400 men, of whom a great part prefer walking to the uneasy motion of the camels."

We now come to the situation and state of Timbuctoo.

"On the east side of the city of Timbuctoo there is a large forest, in which are a great many elephants. The timber here is very large. The trees on the outside of the forest are remarkable for having two different colours; that side which is exposed to the morning sun is black, and the opposite side is yellow. The body of the tree has neither branches nor leaves, but the leaves, which are remarkably large, grow upon the top only: so that one of these trees appears, at a distance, like the mast and round top of a ship. Shabeeny has seen trees in England much taller than these: within the forest the trees are smaller than on its skirts. There are no trees resembling these in the Emperor of Morocco's dominions. They are of such a size that the largest cannot be girded by two men. They bear a kind of berry about the size of a walnut, in clusters consisting of from 10 to 20 berries. Shabeeny cannot say what is the extent of this forest, but it is very large. Close to the town of Timbuctoo, on the south, is a small rivulet in which the inhabitants wash their clothes, and which is about two feet deep.

\* From Fas to Taflelt, 20 days, for 1 ducat per camel. Taflelt to Draha, 6 days, for 11 ducats. Draha to Timbuctoo, 43 days, for 1½ ducats. — 69 days, for 3½ ducats per camel load, which is about the rate of one farthing per quintal per mile.

It runs in the great forest on the east, and does not communicate with the Nile, but is lost in the sands west of the town. Its water is brackish; that of the Nile is good and pleasant. The town of Timbuctoo is surrounded by a mud wall: the walls are built tabia-wise\* as in Barbary, viz. they make large wooden cases, which they fill with mud, and when that dries they remove the cases higher up till they have finished the wall. They never use stone or brick; they do not know how to make bricks. The wall is about 12 feet high, and sufficiently strong to defend the town against the wild Arabs who come frequently to demand money from them. It has three gates; one called Bab Sabara, or the gate of the desert, on the north: opposite to this, on the other side of the town, a second, called Bab Neel, or the gate of the Nile: the third gate leads to the forest on the east, and is called Bab Kibla. † The gates are hung on very large hinges, and when shut at night, are locked, as in Barbary; and are further secured by a large prop of wood placed in the inside slopingly against them. There is a dry ditch, or excavation, which circumscribes the town, (except at those places which are opposite the gates,) about 12 feet deep, and too wide for any man to leap it. The three gates of the town are shut every evening soon after sun-set: they are made of folding doors, of which there is only one pair. The doors are lined on the outside with untanned hides of camels, and are so full of nails that no hatchet can penetrate them; the front appears like one piece of iron.

\* The town is once and a half the size of Tetuan ‡, and contains, besides natives, about 10,000 § of the people of Fas and Morocco. The native inhabitants of the town of Timbuctoo may be computed at 40,000, exclusive of slaves and foreigners. Many of the merchants who visit Timbuctoo are so much attached to the place that they cannot leave it, but continue there for life. The natives are all blacks; almost every stranger marries a female of the town, who are so beautiful that travellers often fall in love with them at first sight."

\* The tabia walls are thus built: they put boards on each side of the wall supported by stakes driven in the ground, or attached to other stakes laid transversely across the wall; the intermediate space is then filled with sand and mud, and beat down with large wooden mallets, (as they beat the terraces) till it becomes hard and compact; the cases are left on for a day or two; they then take them off, and move them higher up, repeating this operation till the wall be finished.

† El Kibla signifies the tomb of Mohamed: in most African towns there is a Kibla-gate, which faces Medina in Arabia.

‡ That is about four miles in circumference. Tetuan contains 16,000 inhabitants; but, according to this account, Timbuctoo contains 50,000, besides slaves, a population above three times that of Tetuan: now, as the houses of Timbuctoo are more spacious than those of Tetuan, it is to be apprehended that Shabney has committed an error in describing the size of Timbuctoo.

§ Who go there for the purposes of trade.

There are Inns or Caravanseras, where strangers lodge, and fondacs where they deposit their merchandize. These fondacs are called Wool by the Negroes, and in 1800 many of them were reuted from the king, whose name was Woolo. In the houses little furniture is seen, besides beds, mats, and carpets covering the whole room, which are about 14 feet by 10.

"Timbuctoo is governed by a native black, who has the title of sultan. He is tributary to the sultan of Housa, and is chosen by the inhabitants of Timbuctoo, who write to the king of Housa for his approbation. Upon the death of a sultan, his eldest son is most commonly chosen. The son of a concubine cannot inherit the throne; if the king has no lawful son (son of his wife) at his decease, the people choose his successor from among his relations. The sultan has only one lawful wife, but keeps many concubines: the wife has a separate house for herself, children, and slaves. He has no particular establishment for his concubines, but takes any girl he likes from among his slaves. His wife has the principal management of his house. The sultan's palace is built in a corner of the city, on the east; it occupies a large extent of ground within an inclosure, which has a gate. Within this square are many buildings; some for the officers of state. The king often sits in the gate to administer justice, and to converse with his friends. There is a small garden within it, furnishing a few flowers and vegetables for his table; there is also a well, from which the water is drawn by a wheel\*. Many female slaves are musicians. The king has several sons, who are appointed to administer justice to the natives. Except the king's relations, there are no nobles nor any privileged class of men as in Barbary †: those of the blood-royal are much respected. The officers of state are distinguished by titles like those of Morocco; one that answers to an Alkaid, i. e. a captain of 700, of 500, or of 100 men; another like that of bashaw. The king, if he does not choose to marry one of his own relations, takes a wife from the family of the chiefs of his council; his daughters marry among the great men. The queen-dowager has generally an independent provision, but cannot marry. The concubines of a deceased king cannot marry, but are handsomely provided for by his successor."

The revenue accrues from land, mercantile duties on goods exposed to sale, and 2 per cent. on produce. The troops are paid by the king of Housa, and armed with pikes, swords, cutlasses, sabres, and muskets. In war they amount to 12 or 15,000; and even in peace the establishment receiving daily pay is 5000: they are all infantry.

\* A wheel similar to the Persian wheel, worked by a mule or an ass, having pots, which throw the water into a trough as they pass round, which trough discharges the water into the garden, and immerses the plants.

† The privileged class of men in Barbary are the Falcaks; but no one in Barbary is noble but the king's relations, who are denominated shereefs.

Punishments are the bastinado, imprisonment, and fine. If a native stabs another he must attend and support him till he is cured, and then suffer fine and bastinado; if he dies, the offender is put to death. The capital inflictions are beheading, hanging, strangling, and bastinadoing to death.

"Behanding is preferred; it is thus performed: the criminal sits down, and a person behind gives him a blow or push on the back or shoulder, which makes him turn his head, and while his attention is thus employed, the executioner strikes it off. Hanging and strangling are seldom used; and bastinadoing to death, is only inflicted when the crime is highly aggravated. Capital crimes are, murder, robbery with violence, and stealing cattle. Small offences, as stealing slaves and other articles, are punished by the bastinado. The lawless estates of criminals are never forfeited. The police is so good, that merchants reside there in perfect safety."

The slaves are all foreign, and their lives entirely at the disposal of their master; but they are entitled to freedom on three grounds, viz. want of food, want of clothes, want of shore. The succession to property and administration of justice are settled in a manner worthy of a civilized people. A man pays a certain sum to the father of his wife, who returns it double in jewels bestowed on his daughter; the girl is sent home, and a night-feast ensues. Rape is punished capitally. "Seduction and adultery are not cognisable by law. The law says, 'a woman's flesh is her own, she may do with it what she pleases.' Prostitutes are common. A man may marry his niece, but not his daughter." Circumcision is not practised.

"Timbuctoo is the great emporium for all the country of the blacks, and even for Morocco and Alexandria."

"The principal articles of merchandize are tobacco, kameeinas ‡, beads of all colours for necklaces, and cowries, which are bought at Fas by the pound §. Small Dutch looking-glasses, some of which are convex, set in gilt paper frames. They carry neither swords, muskets, nor knives, except such as are wanted in the caravan. At the entrance of the desert they buy rock-salt of the Arabs, who bring it to them in loads ready packed, which they carry as an article of trade. In their caravan there were about 500 camels, of which about 150 or 200 were laden with salt."

"The returns are made in gold-dust, slaves, ivory, and pepper; gold-dust is preferred and is brought to Timbuctoo from Housa in small leather bags. Cowries and gold-dust are the medium of traffic. The shereefs and other merchants generally sell their goods to some of the principal native merchants, and immediately send off the slaves, taking their gold-dust with them into

§ But go to the next heir.

‡ Kameeina is the Arabic word for the linen called *plattina*. They are worth 50 Mexico dollars each, at Timbuctoo.

§ Called, in Amsterdam, *Felt Spiegels*, and in Timbuctoo, *Merrak de jaan*.

other countries. The merchants residing at Timbuctoo have agents or correspondents in other countries; and are themselves agents in return. Timbuctoo is visited by merchants from all the neighbouring black countries. Some of its inhabitants are amazingly rich. The dress of common women has been often worth 1000 dollars. A principal source of their wealth is lending gold-dust and slaves at high interest to foreign merchants, which is repaid by goods from Morocco and other countries, to which the gold-dust and slaves are carried. They commonly trade in the public market, but often send to the merchant or go to his house. Cowries in the least damaged are bad coin, and go for less than those that are perfect. There are no particular market days; the public market for provisions is an open place fifty feet square, and is surrounded by shops. The Arabs sit down on their goods in the middle, till they have sold them.

"The black natives are smiths, carpenters, shoemakers, tailors, and masons, but not writers. The Arabs in the neighbourhood are weavers, and make carpets resembling those of Fas and of Mesurata, where they are called telisse; they are of wool, from their own sheep, and camels' hair. The bags for goods, and the tents, are of goats' and camels' hair; there are no palm-tree trees in that country."

The country is well cultivated except on the side of the desert; the produce consists of rice, beans, and a corn called *Allia* the *Drah* of Barbary; they have no wheat or barley. Dews are very heavy, and irrigation by canals cut from the Nile, and by wells, as in Egypt, is employed. They have violent thunder storms in summer, but no rains. The winter lasts two months, though the weather is cool from September to April. Rice is the principal food. They roast, boil, bake, and stew; and take three meals, breakfast, dinner, and supper, at 8 o'clock, 3, and soon after sunset. They drink only water or milk, and have no palm wine, or fermented liquor. When they want to be exhilarated after dinner, they provide a plant of an intoxicating quality called of *hushika* ♀, of which they take a handful before a draught of water.

Of their animals "goats are very large, as big as the calves in England, and very plentiful; sheep are also very large. Cattle are small; many are oxen. Milk of camels and goats is preferred to that of cows. Horses are small, and are principally fed upon camels' milk; they are of the greyhound shape, and will travel three days without rest. They have dromedaries which travel from Timbuctoo to Tafeliet (1200

♂ *El Hushika*. This is the African bump plant: it is esteemed for the extraordinary and pleasing voluptuous rancidity of mind which it produces on those who smoke it: unlike the intoxication from wine, a fascinating stupor pervades the mind, and the dreams are agreeable. The leaf is the flower and seeds of the plant: it is a strong narcotic, so that those who use it cannot do without it. For a further description of this plant, see Jackson's Morocco, 2d or 3d edit. p. 131 & 132.

British miles) in the short period of five or six days.

"They have common fowls, ostriches, and a bird larger than our blackbird; also storks, which latter are birds of passage, and arrive in the spring and disappear at the approach of winter; swallows, &c.

Offish, they have many extremely good in the Nile; one of the shape and size of our salmon; the largest of these are about four feet long. They use lines and hooks brought from Barbary, and nets, like our casting nets, made by themselves. They strike large fish with spears and fish-gigs.

Of their dress, we learn that the "Sultan wears a white turban of very fine muslin, the ends of which are embroidered with gold, and brought to the front; this turban comes from Bengal. He wears a loose white cotton shirt, with sleeves long and wide, open at the breast; unlike that of the Arabs, it reaches to the small of the leg; over this a *caftan* of red woolen cloth, of the same length; red is generally esteemed. The shirt (*kumja*) is made at Timbuctoo, but the caftan comes from Fas, ready made; over the caftan is worn a short cotton waistcoat, striped white, red, and blue; this comes from Bengal, and is called *juliba*. When he is seated, all the sleeves are turned up over the shoulder, so that his arms are large, and the air is admitted to his body.

"Upon his turban, on the forehead, is a ball of silk, like a pear; one of the distinctions of royalty. He wears also a close red skull cap, like the Moors of Tetuan, and two sashes, one over each shoulder, such as the Moors wear round the waist; they are rather cords than sashes, and are very large; half a pound of silk is used in one of them. The subjects wear but one; they are either red, yellow, or blue, made at Fas. He wears, like his subjects, his sash round the waist, also made at Fas; of these there are two kinds,—one of leather, with a gold buckle in front, like those of the soldiers in Barbary; the other of silk, like those of the Moorish merchants. He wears, (as do the subjects) breeches made in the Moorish fashion, of cotton in summer, made at Timbuctoo, and of woollen in winter, brought ready made from Fas. His shoes are distinguished by a piece of red leather, in front of the leg, about three inches wide, and eight long, embroidered with silk and gold. When he sits in his apartment, he wears a dagger, with a gold hilt, which hangs on his right side: when he goes out, his attendants carry his musket, bow, arrows, and lance.

"His subjects dress in the same manner, excepting the distinctions of royalty; viz. the pear, the sashes on the shoulders, and the embroidered leather on the shoes. The sultan wears a caftan, open in front from top to bottom, under this a slip of cotton like the kings, an Indian shawl over the shoulders, which ties behind, and a silk handkerchief about her head. Other women dress in the same manner. They wear no drawers. The poorest women are always clothed. They never show their bosom. The men and women wear ear-rings. The general experience of a woman's dress is from two dinats

to thirty. Their shoes are red, and are brought from Morocco. Their arms and ancles are adorned with bracelets. The poor have them of brass; the rich, of gold. The rich ornament their heads with cowries. The poor have but one bracelet on the leg, and one on the arm; the rich, two. They also wear gold rings upon their fingers. They have no pearls or precious stones.\* The women do not wear veils."

The king keeps 500 or 600 horses, and hunts the antelope, wild ass, ostrich, and aoudou, or wild cow of Africa, described by Jackson in his Morocco (chapter on Zoology). They have the finest greyhounds in the world, with which they pursue the antelope only, the ostrich being too fleet for any dog. All these animals of chase are gregarious. They are shot both by the musket and bow. There are no lions, tigers, or wild boars near Timbuctoo.

The games for play are chess and draughts, at which the natives are very expert; they have no cards; but tumblers, jugglers, ventriloquists, whose voices seem to come from under their arm-pits; music which is pleasing and of more than twenty sorts; dances, some of which are very indecent.

"They measure time by days, weeks, lunar months and lunar years; yet few can ascertain their age. They have no temples, churches, or mosques, no regular worship nor sabbath. But once in three months they have a great festival, which lasts two or three days, sometimes a week, and is spent in eating and drinking. He does not know the cause; but thinks it, perhaps, a commemoration of the king's birth day; no work is done. They believe in a Supreme Being and another state of existence, and have saints and men whom they revere as holy. Some of them are sorcerers, and some ideots, as in Barbary and Turkey; and though physicians are numerous, they expect more effectual aid in sickness from the prayers of the saints, especially in the rheumatism. Music is employed to excite ecstasy in the saint, who, when in a state of inspiration, tells (on the authority of some departed saint, generally of Seely Muhammed Seef,) what animal must be sacrificed for the recovery of the patient: a white cock, a red cock, a hen, an ostrich, an antelope, or a goat. The animal is then killed in the presence of the sick, and dressed; the blood, feathers, and bones are preserved in a shell and carried to some retired spot, where they are covered and marked as a sacrifice. No salt or seasoning is used in the meat, but incense is used previous to its preparation. The sick man eats as much as he can of the meat, and all present partake; the rice, or what else is dressed with it, must be the produce of charitable contributions from others, not of the house or family; and every contributor prays for the patient.

"The nails and palms of the hands are stained red with henna, cultivated there: the Arabs tattoo their hands and arms, but not the people of Timbuctoo. These people are real negroes; they have a slight mark on the face, slapping from the eye; the Foul-

\* This seems to differ from the statement that brides receive jewels on their marriage.—Ed.

lans have a horizontal mark; the Bambarrahs a wide gash from the forehead to the chin. Tombs are raised over the dead; they are buried in a winding-sheet and a coffin; the relations mourn over their graves, and pronounce a panegyric on the dead. The men and women mix in society, and visit together with the same freedom as in Europe. They sleep on mattresses, with cotton sheets, and a counterpane; the married, in separate beds in the same room. They frequently bathe the whole body, their smell would otherwise be offensive; they use towels brought from India. At dinner they spread their mats and sit as in Barbary. They smoke a great deal, but tobacco is dear; it is the best article of trade. Poisoning is common; they get the poison from the fangs of snakes; but, he says, most commonly from a part of the body near the tail, by a kind of distillation."

"There are no Arabs between Timbuctoo and the Nile; they live on the other side, and would not with impunity invade the lands of these people, who are very populous, and could easily destroy any army that should attempt to molest them. The lands are chiefly private property. The Foulans are very beautiful. The Bambarrahs have thick lips and wide nostrils. The king of Foulan is much respected at Timbuctoo; his subjects are Muhamedans, but not circumcised. They cannot be made slaves at Timbuctoo; but the Arabs steal their girls and sell them; not for slavery, but for marriage."

"Girls are marriageable very young; sometimes they have children at ten years old."

"Thus far we have gleaned the information relating to the far-famed and little known Timbuctoo. We now take up the equally remarkable circumstances of the "Journey from that city to Housa."

"Shabeeny, after staying three years at Timbuctoo, departed for Housa; and crossing the small river close to the walls, reached the Nile in three days, travelling through a fine, populous, cultivated country, abounding in trees, some of which are a kind of oak, bearing a large acorn, much finer than those of Barbary, which are sent as presents to Spain. Travelling is perfectly safe. They embarked on the Nile in a large boat with one mast, a sail, and oars; the current was not rapid: having a favourable wind, on his return, he came back in as short a time as he went. The water was very red and sweet. The place where they embarked is called Mushgreelia; here is a ferry, and opposite is a village. As the current is slow, and they moved every night, they were eight or ten days sailing down the stream to Housa. They had ten or twelve men on board, and when it was calm, or the wind contrary, they rowed; they steered with an oar, the boat having no rudder. He saw a great many

boats passing up and down the river; *there are more boats on this river between Mushgreelia and Housa than between Rosetta and Cairo on the Nile of Egypt.* A great many villages are on the banks. There are boats of the same form as those of Tetuan and Tangiers, but much larger, built of planks, and have ribs like those of Barbary; instead of pitch or tar, they are caulked with a sort of red clay, or lole. The sail is of canvas of flax (not cotton) brought from Barbary, originally from Holland; it is square. They row like the Moors, going down the stream."

"There is a road by land from Timbuctoo to Housa, but on account of the expence it is not used by merchants: Shabeeny believes it is about 5 days' journey. If you go this way, you must cross the river before you reach Housa. They landed at the port of Housa, distant a day and a half from the town; their merchandise was carried from this port on horses, asses, and horned cattle; the blacks dislike camels; they say, "*These are the beasts that carry us into slavery.*" The country was rich and well cultivated; they have a plant bearing a pod called mellochias, from which they make a thick vegetable jelly. There is no artificial road from Timbuctoo to the Nile; near the river the soil is miry. Shabeeny travelled from Timbuctoo to Housa in the hot weather when the Nile was nearly full; it seldom falls much below the level of its banks; he travelled on horse-back from Timbuctoo to the river, and slept two nights upon the road in the huts of the natives. One of the principal men in the village leaves his hut to the travellers and gives them a supper; in the mean time he goes to the hut of some friend, and in the morning receives a small present for his hospitality."

"*The River Neel or Nile.*—The Neel El Kebeer, (that is the Great Nile,) like the Neel Musser or Nile of Egypt, is fullest in the month of August, when it overflows in some places where the banks are low; the water which overflows is seldom above midleg; the banks are covered with reeds, with which they make mats. Camels, sheep, goats, and horses, feed upon the banks, but during the inundation are removed to the uplands. The walls of the huts both within and without are cased with wood to the height of about three feet, to preserve them from the water; the wells have the best water after the swelling of the river. The flood continues about ten days; the abundance of rice depends on the quantity of land flooded. He always understood that the Nile empties itself in the sea, the salt sea, or the great ocean. There is a village at the port of Housa where he landed; the river here is much wider than where he embarked, and still wider at Jinnie. He saw no river enter the Nile in the course of his voyage. It much resembles the Nile of Egypt; gardens and lands are irrigated from it. Its breadth is various; in some places he thinks it narrower than the Thames at London, in others much wider; at the landing place they slept in the hut of a native, and next morning at sunrise set off for Housa, where they arrived in twelve hours through a fine

plain without hills; the country is much more populous than between Timbuctoo and the Nile. Ferry boats are to be had at several villages."

"*Housa.*—They did not see the town till they came within an hour from it, or an hour and a half; it stands in a plain. Housa is south-east of Timbuctoo, a much larger city and nearly as large as London. He lived there two years, but never saw the whole of it. It has no walls; the houses are like those of Timbuctoo, and form irregular lanes or streets like those of Fas or Morocco, wide enough for camels to pass with their loads. The palace is much larger than that of Timbuctoo; it is seven or eight miles in circumference, and surrounded by a wall; he remembers but four gates, but there may be more; he thinks the number of guards at each gate is about 50: it is in that part of the town most distant from the Nile. The houses are dark coloured and flat roofed. He thinks Cairo is about one third larger than Housa; the streets are much wider than those of Timbuctoo; the houses are covered with a kind of clay of different colours, but never white. They have no chalk or lime in the country."

At Housa the religion, government, administration of justice, trade, disposition of property, &c. are not much different from Timbuctoo. They write from right to left, possibly the ancient Carthaginian character: it is very large, probably half an inch long. The king can raise an army of 70 or 80,000 horse and 100,000 infantry. They fight with matchlocks, manufacture gunpowder, and are wonderfully dexterous with the lance and bow."

"The hour is an indefinite term, and assimilates to our expression of a good while; it is from half an hour by the dial to six hours, and the difference is expressed by the word *wahad saa kaberr*, a long hour; and *wahad saa sercer*, a little hour; also by the elongation of the last syllable of the last word."

"He saw no camels at Housa, but heard they use them to fetch gold, and cover their legs with leather, to guard them from snakes. They have dogs and cats, but no scorpions or snakes in their houses. Lice, bugs, and fleas abound. He saw no wild animals or fowl in the neighbourhood of Housa."

"In person the natives are of various sizes, but the tallest man he ever saw was at Housa. The city being very large, he seldom had an opportunity of seeing the king, as at Timbuctoo. He saw him but twice, in two years, and only in the courts of justice; he was remarkable for the width of his nostrils, the redness of his eyes, the smoothness of his skin, and the fine tint of his perfectly black complexion."

"The ground where gold is found is about sixteen miles from Housa. They go in the night with camels whose legs and feet are covered to protect them against snakes, they take a bag of sand, and mark with it the places that glitter with gold; in the morning they collect where marked, and carry it to refiners, who, for a small sum, separate the gold. There are no mountains or rivers

• All true Muhamedans are circumcised, so that they must partake of Paganism if uncircumcised.

near the spot; it is a plain without sand, of a dark brown earth. Any person may go to seek gold; they sell it to the merchants, who pay a small duty to the king. The produce is uncertain; he has heard that a bushel of earth has produced the value of twelve denars, three pounds sterling, of pure gold. They set out from Housa about two o'clock in the afternoon, arrive about sun-set, and return the next day seeking for gold during the whole night."

"The limits of the empire beyond Timbuctoo, on the north side of the Nile, are very extensive. Afuoo is subject to the king of Housa; no slaves can be made from thence. Darfueel is near Afuoo; the latter is on the north side of the river, nearer to its source, and a great way from Timbuctoo. No Arabs are found on the banks of the Nile. He supposes the circumference of the empire to be about twenty-five days' journey; he has heard that many other large towns are dependent upon it, but does not remember their names.

"The neighbouring countries are Bambarra, Timbooo, Mooshee, and Jinnic; all negroes. He has heard of Bernoo as a great empire."

"The iron mines are in the desert; the iron is brought in small pieces by the Arabs, who melt and purify it. They cannot cast iron. They use charcoal fire, and form guns and swords with the hammer and anvil. The points of their arrows are barbed with iron; the cross bows have a groove for the arrow. No man can draw the bow by his arm alone, they have a kind of lever; the bow part is of steel brought from Barbary, and is manufactured at Timbuctoo. They do not make steel themselves.

"They inoculate for the small-pox; the pus is put into a dried raisin and eaten. *Roska Dinlooka* is a kind of oath, and means, by God. They believe only one God. After dinner they use the Arabic expression, *El Hamed Ullah*; praise to be to God.

"They believe the immortality of the soul, and that both men and women go to paradise; that there is no future punishment; the wicked are punished in this world. Happiness, after death, consists in being in the presence of God."

The remainder of the volume whence we have made these selections, so curious and important in African geography, is replete with matter, which, much as we desire to lay before our readers, we must reserve for hereafter. We can only say, that Mr. Jackson has laid us under a deep obligation by his notes and intelligence concerning this third portion of the Old World, independent of the accounts of that particular region, in the attempt to reach which, Parke and others of our bravest countrymen have perished.

*The Diary of an Invalid; being the Journal of a Tour in pursuit of Health in*

*Portugal, Italy, Switzerland, and France, in the years 1817, 1818, and 1819.* By Henry Mathews, A. M. London, 1820. 8vo. pp. 518.

This performance is very accurately described, in its concluding paragraph, to be "a volume, which, from the desultory and careless character of its contents, can have no higher pretensions than to furnish the pocket of a travelling chaise, or occupy the settee of a parlour window." It might perhaps be wished that some curtailments had rendered it more portable for the former use, and less bulky for the latter; for, really, five hundred and odd pages constitute rather a heavy plaything, and fifteen shillings is a sum super-trifling. Mr. Mathews, however, has chosen a good title *ad captandum*, and generally trundles us along with him in a neat pleasing way. Had not Mr. Rose preceded him in manner, and a good deal in subject; and Forsyth, Williams, and other recent travellers, anticipated him so entirely as to divest three fourths of his work of the charm of novelty, it would have been infinitely more entertaining; but this defect lies in the thing itself, and not in the execution. The author may indeed be most truly said to be one of the tribe of gentlemen who write with ease; but it is not equally true of his penmanship, that your easy writing's d—d hard reading. That we consider his book to be too long by at least one third, is the fact; and that he is occasionally flippant, and oftener peremptory and dogmatical in his opinions concerning foreign manners and customs, there is no denying; but withal there is an excellent common-sense foundation in all his remarks; and on classical subjects, or those connected with the fine arts, we think he displays much taste and judgement. But the few observations with which we shall have occasion to interlard our extracts will more appropriately define our judgment and we advance to that mode without further introduction.

During a short residence at Lisbon the author could, it may be supposed, pick up nothing new. Amongst the minor plagues of the place, with which, and the Portuguese character altogether, he seems to have been mightily disgusted, he mentions the flies. "The rooms," he says, "are full of them; they attack you in countless myriads, and their annoyance is intolerable. With what different feelings would one read the story of Domitian, in England and at Lisbon!—There I sympathised with the flies—here with Domitian; whose hostility seems very justifiable, and whose expertness is the

daily subject of my emulation." Again, "As I was returning from my stroll, I sat down on the steps of a statue; but I was hurried away by observing a man ridding himself of a numerous retinue of vermin on the other side of the pedestal, and cracking them by dozens on the steps. And so much for the Lusitanian, or as it might with more propriety be called, the Lusitanian metropolis. I shall quit it without one feeling of regret. In fact, to remain in it is impossible—I am fairly stunk out."

The first of these extracts is playful: the last too much *la Rose*. It is strange, that among one class of educated persons, and of those moving in the upper circles, there should be a sort of slang, regardless of propriety and delicacy, apparently put forward as evidence of smartness and humour, but in sober sadness, offensive to politeness and taste, and not half so amusing as the vulgarities of the absolutely vulgar. We have rarely seen university wit clear of this blemish. The stupid jokes of the college had are retained with fond pertinacity by the learned man; and even Mr. Mathews' puns upon *Jupiter* and *Jew Peter*, as if the jest were worth the reprinting in the diary of even an invalid. On the same principle of dislike to this species of literary or fashionable indecorum, which caused us to censure his prototype in sickness, in resorting to Albemarle Street for the cure of his mania in the topical use of the press, and in throwing out the disorder in the shape of *Travels*... we mean Mr. Rose; we cannot but repeat our disapprobation of such phrases as those about Jews crossing the breech, cardinals' train-bearers or tail-twisters, &c. &c. and especially of those details (page 191), which he justly states are unfit for a modest page, and yet inserts (partially but too largely), in the face of his own declaration.

From Lisbon, the author sailed to Leghorn, and thence visited most of the principal cities of Italy. At Florence the Venus struck him as it does every man of genuine feeling and taste, and he thus very sportively, yet in part beautifully, relates the impression made upon his mind. "The statue that enchants the world—the unimitated, the humitable Venus. She has now resumed her old station, after her second visit to Paris; for I am surprised that the French did not argue, that her adventure with the shepherd on Mount Ida was clearly typical of her late trip to their metropolis. One is generally disappointed after great expectations have been raised; but in this instance I was delighted at first sight, and each succeeding view has charmed me more. It is indeed a wonderful work in conception and execution, —but I doubt whether *Venus* be not a mis-

namer. Who can recognise in this divine statue, any traits of the Queen of Love and Pity-ure? It seems rather intended as a personification of all that is elegant, graceful, and beautiful; not only abstracted from all human infirmities, but elevated above all human feelings and affections; for, though the form is female, the beauty is like the beauty of angels, who are of no sex. I was at first reminded of Milton's Eve; but in Eve, even in her days of innocence, before 'she damned us all,' there was some tincture of humanity, of which there is none in the Venus; in whose eye there is no heaven, and in whose gesture there is no love."

We do not quite agree with this view; but it is spiritually taken. Mr. M. rates the Apollo far below our estimate of that divinely impressive statue. At Florence, the news of the death of the Princess Charlotte was received, and all the British went into mourning. At that period our author went to an evening party given by the Countess of Albany. "She still maintains the form and ceremony of Queen Dowager, wearing the arms of England on her carriage, and receiving a circle every Saturday evening, with a strictness of etiquette exceeding that of the Grand Duke's Court. She was almost the only person out of mourning. This was, to say the least of it, had taste. If there is no alliance of blood, there is a pecuniary relationship between her and the English government, from which she receives an annual pension of 1500*l.* that might well have afforded a black gown. It would be difficult to trace in her present appearance, any remains of those charms, that could attract the fiery and fastidious Alferi."

At Florence, there is a sculptor of the name of Bertolini, who takes excellent likenesses, and is in great request among our countrymen. They not only sit to him in great numbers, but procure casts of celebrated individuals from London, which he copies in marble, and delivers in this metropolis, free of all other charges, and greatly to the injury of our native artists; at the small cost of 22*l.* each. On the passion for their representation in stone, the author observes, "If this fashion hold, it will give posterity some trouble. Family pictures are easily put out of the way; but family statues would be sadly durable lumber,—unless, indeed, they found their way to the lime-kiln."

From Florence we proceed to Rome, passing safely the Riccrai, a mountain stream, near Sienna, which the guide-book quaintly enough tells the traveller he must cross four times, if he is not drowned in any of the [three first] first throes. Mr. M. recommends Vasi as the best book to consult for directing the stranger to the curiosities of Rome; his own experience, however, produces very little information not previously common. His descriptions are, nevertheless, very judicious and clever; it was impossible that they could be new. We select, therefore, only two or three anecdotes.

"Plus the Vith's passion for recording his own glory, in the constant inscription, *Manifestum Pii Scati*, was wittily satirized during a period of scarcity, when the *pagnotta*, or little roll of two *baiochi*, answering to our penny roll, which never varies in price, however its size may be affected by the price of corn, had shrunk to a most lamentable littleness. One morning, one of these Lilliputian leaves was found in the hands of Pasquin's statue, with an appended scroll in large characters,—*Manifestum Pii Scati*."

"One day, (says the author,) in my way home, I met a funeral ceremony. A crucifix with black, followed by a train of priests, with lighted tapers in their hands, headed the procession. Then, came a troop of figures, dressed in white robes, with their faces covered with masks of the same materials. The hier followed—on which lay the corpse of a young woman, arrayed in all the ornaments of dress, with her face exposed, where the bloom of life yet lingered. The members of different fraternities followed the hier—dressed in the robes of their orders—and all masked. They carried lighted tapers in their hands, and chanted out prayers, in a sort of mumbling recitative. I followed the train to the church, for I had doubts whether the beautiful figure I had seen on the hier, was not a figure of wax—but I was soon convinced it was indeed the corpse of a fellow-creature—cut off in the pride and bloom of youthful maiden beauty. Such is the Italian mode of conducting the last scene of the tragedy of life. As soon as a person dies, the relations leave the house, and fly to bury themselves and their griefs in some other retirement. The care of the funeral devolves on one of the fraternities, who are associated for this purpose in every parish. These are dressed in a sort of domino, and hood; which, having holes for the eyes, answers the purpose of a mask, and completely conceals the face. The funeral of the very poorest is thus conducted, with quite as much ceremony as need be. This is perhaps a better system than our own, where the relatives are exhibited, as a spectacle to impertinent curiosity, whilst from feelings of duty they follow to the grave, the remains of those they loved. But, ours is surely an unphilosophical view of the subject. It looks as if we were materialists, and considered the cold clod, as the sole remains of the object of our affection. The Italians reason better; and perhaps feel as much as ourselves, when they regard the body,—deprived of the soul that animated and the mind that informed it, as no more a part of the departed spirit, than the clothes, which it has also left behind.—The ultimate disposal of the body is perhaps conducted here with too much of that spirit which would disregard all claims that 'this mortal coil' can have to our attention. As soon as the funeral service is concluded, the corpse is stripped, and consigned to those, who have the care of the interment. There are large vaults, underneath the churches, for the reception of the dead. Those, who can afford it, are put into a wooden shell, before they are cast into one of these Golgothas—but the great mass are tossed in without a rag to

cover them. When one of these caverns is full, it is bricked up; and, after fifty years, it is opened again, and the bones are removed to other places, prepared for their reception. So much for the last scene of the drama of life—with respect to the first act, our conduct of it is certainly more natural. Here they swathe and swaddle their children, till the poor urchins look like Egyptian mummies. To this frightful custom, one may attribute the want of strength, and symmetry of the men, which is sufficiently remarkable."

We may here notice, that Canova is not so great a favourite with Mr. M. as Thorwaldsen. He thinks the former has a reputation beyond his merits, and that, though there is much grace in his works, the effect is too often spoiled by an affected prettiness, or a theatrical display. That there is a fine fashionable air about his female figures; and his men all attitudinarians. And that he has studied the ancients, and M. Angelo, too much as an imitator, while the designs of the Danish artist possess freshness and originality, guided by the purest taste.

The following is a characteristic anecdote of Consalvi, the Pope's prime minister, who is designated as "a shrewd, intelligent, and well-looking man." As he passed out of chapel, a well-dressed person in the court-yard threw himself upon his knees before him, and Consalvi, as if he thought the man had some petition to present, advanced towards him; but, when he found that his only object was to kiss his hand, he put him aside; being, as it is said, very impatient of all such public demonstrations of homage."

In the library of the Vatican, it is stated, "you see many curious relics of Roman furniture, with a sample of their household gods, which are the queerest little things in the world; and, if *Æneās*'s, were not on a larger scale, he might have carried away a hundred of them in his pocket." In the Campo Vaccino the author saw another extraordinary sight. There was a large herd of about a hundred pigs, and he "arrived just as three men were commencing the work of death. They had each a stiletto in their hand, and they dispatched the whole herd in a few minutes. The stab was made near the left leg, and seemed to go directly to the heart, for the animal fell without a groan or struggle. This appears to be a less cruel, and is certainly a more quiet mode, than our own, where the pence of a whole parish is disturbed by the terrible uproar which is occasioned by the murder of a single pig. It is to be hoped that the stiletto may soon be confined to this use."

*A propos des boites*, or, rather, according to English version, *talking of wine*, reminds us of an anecdote with which we shall conclude our Roman extracts. The Princess Prosselli is said to be an amiable and interesting woman, the eldest daughter of Lucien Buonaparte by a former wife, and the lady who refused to marry Ferdinand of Spain. This match was proposed to her when on a visit to her uncle the Emperor, and she had the courage to contemn his threats. Being asked if she did not feel afraid of the conse-

\*Mr. M. is too good a scholar not to know, what, indeed, every two know, that there were *Venuses*, with other, and very different attributed, in the ancient Mythology.—Ed.

beel under that deceased English Virago, and by her flesh in our blood and ruin : to do this I had many agents, first, divers couriers who were hungry and gaped wide for Spanish gold, secondly, some that bare him at the heart for inveterate quarrels; thirdly, some foreigners, who have in vain sought the elixir hitherto, hope to find it in his head; fourthly, all men of the Romish faith, who are of the Spanish faction, and would have been my blood-hounds to hunt him or any such to death willingly, as persons hating the prosperity of their country, and the valor, worth, and wit of their own nation; in respect of us and our catholic cause; lastly, I left behind me such an instrument composed artificially, of a secular understanding, and a religious profession, as he is every way adapted to serve himself into the closet of the heart, and to work upon feminine levity, who in that country have masculine spirits, to command and pursue their plots unto death. This therefore I account as done, and rejoice in it, knowing it will be very profitable to us, grateful to our faction there, and what though it be c.oss to the people, or the clergy, we that only negotiate for our gain, and treat about this marriage for their own ends, can conclude or break off when we see our time, without respect of such, as can neither profit us, nor hurt us; for I have certain knowledge, that the commons generally are so effeminate and cowardly, that they at their masters, which are seldom and slight, only for the benefit of their master masters of a 1000 soldiers, scarce a hundred darts discharge a musket, and of that hundred, scarce one can use it like a soldier; and for their arms they are so ill provided, that one corslet serveth many men, when such as shew their armour one day in one place, lend them to their friends in other places to shew, when they have use; and this if it be spied, is only punished by a mulct in the purse, which is the officers aim, who for his advantage, winks at the rest, and is glad to find and cherish by connivance profitable faults, that increase his revenues; thus stands the state of that poor miserable country, and which had never more people and fewer men; so that if my master should resolve upon an invasion, the time never fits as at this present, security of this marriage, and the disuse of arms having cast them into a dead sleep, a strong and waking faction being ever amongst them ready to assist us, and they being unprovided of ships, or arms, or hearts to fight, an universal discontentment following all men: this I have from their master masters, and captains, who are many of them of our religion, or of none, and so ours ready to be bought and sold, and desirous to be my masters servants in fee.

Thus we see, that to draw the picture of England as a ruined country, is not a modern invention: we leave it to the reformers of 1820 to compare the two eras.

From the "Life and Death of Queen Henrietta," we select a few pas-

sages which seem most likely to pass muster for novelty. Her Majesty's landing, 22d February, 1642; from the continent, with troops to aid her royal spouse against the parliamentary forces, is thus painted in her own words: ..

The next night after we came to Burlington, four of the parliaments ships arrived, without being perceived by us, and about five of the clock in the morning, began to ply us so fast with their ordinance, that they made us all rise out of our beds, and leave the village; one of the ships did me the favour to flank upon the house where I lay, and before I was out of my bed, the cannon-bullets whistled so loud about me, that all the company pressed me earnestly to go out of the house, their cannon having totally beaten down all the neighbour houses, and two cannon-bullets falling from the top to the bottom of the house where I was; so that (cloathed as well as in haste I could be) I went on foot some little distance out of the town, (under the shelter of a ditch, like that of Newmarket) whither before I could get, the cannon bullets fell thick about us, and a serpent was killed within seventy paces of me, we in the end gained the ditch, and stayed there two hours, whilst their cannon play'd all the while upon us; the bullets flew for the most part over our heads, some few only grazing on the ditch, covered us with earth, &c. till the ebbing of the tide, and the threats of the Holland Admiral put an end to that danger.

The coronation of her son, Charles II. is very concisely and peculiarly described.

Now come we to his Majesties coronation, where we may see those regal ornaments that for several years had lain obscure: This, was the crown profained by the lewd hands of those prostitute members at Westminster, when they seized on the Regalia, which by H. Martin, his advice was thought fit to be shared amongst the usurers; this was the crown, afterwards violated, deprived and widowed of that sacred and royal head of King Charles the martyr: this was the crown that alone of all the insignia of majesty, abhorred the idolatry of Cromwells usurpation, and escaped the ravishing and polluted hands of that tyrant; this was that crown which the malignity of a dire pestilence had envied the sight and blessing thereof to the city of London; his majesties imperial chamber, at his royal father's inauguration, and this was that crown, under whose just and ancient descent, we have flourished ever since we were a nation, till our late monarchy.

His Majesty on the 22d of April, early in the morning, passed from Whitehall to the Tower by water; from thence to go through the city to Westminster Abby, there to be crowned.

Two days were allotted to the consummation of this great and most celebrated action, the wonder and delight of all persons, both foreign and domestic, and pity it was that the solid and lasting happi-

ness it portended should not have taken up a month, and given it the name *Coronatio*. I should give a relation of the magnificent ceremonies performed therein, but it being too large for an intended small tract, I choose rather to refer the reader to what on that subject hath already been made publick.

Infinite and innumerable were the acclamations and shouts from all the parts, as his Majesty passed along, to the no less joy than amazement of the spectators, who beheld those glorious personages that rid before and behind his majesty. Indeed if we were in vain to attempt to express this solemnity, it was so far from being unutterable, that it is almost unconceivable, and much wonder it caused in outlandish persons, who were acquainted with our late troubles and confusions, which way it was possible for the English to appear in so rich and stately a manner.

These examples are sufficient to illustrate our subject; and we have only to add, that this author asserts that the Queen married the Earl of St. Albans, after the execution of the Martyr King.

#### ARCTIC ZOOLOGY.

(Extracted from Seabury's valuable publication.)

Captain S. thinks the whale reaches the magnitude called *siz*, that is, with a six feet length of whalebone, in twelve years, and attains its full growth at the age of twenty or twenty-five. Whales, doubtless, live to a great age. The marks of age are an increase in the quantity of grey colour in the skin, and a change to a yellowish tinge of the white parts about the head; a decrease in the quantity of oil yielded by a certain weight of blubber; an increase of hardness in the blubber, and in the thickness and strength of the ligamentous fibres of which it is partly composed.

The maternal affection of the whale, which, in other respects, is apparently a stupid animal, is striking and interesting. The cub, being inescapable to danger, is easily harpooned; when the tender attachment of the mother is so manifested as not unfrequently to bring it within the reach of the whalers. Hence, though a cub is of little value, seldom producing above a ton of oil, and often less, yet it is sometimes struck as a snare for its mother. In this case, she joins it at the surface of the water, whenever it has occasion to rise for respiration: encourages it to swim off; assists its flight, by taking it under her fin; and seldom deserts it while life remains. She is then dangerous to approach; but affords frequent opportunities for attack: She loses all regard for her own safety, in anxiety for the preservation of her young;—dashes through the midst of her enemies;—despises the danger that threatens her;—and even voluntarily remains with her offspring, after various attacks on herself from the harpoons of the fishers. In June 1811, one of my harpooners struck a sucker, with the hope of its leading to the capture of the mother. Presently she arose close by the "fast boat;" and seizing the young one, dragged

about a hundred fathoms of line out of the boat with remarkable force and velocity. Again she arose to the surface; darted furiously to and fro; frequently stopped short, or suddenly changed her direction, and gave every possible intimation of extreme agony. For a length of time, she continued thus to act, though closely pursued by the boats; and, inspired with courage and resolution by her concern for her offspring, seemed regardless of the danger which surrounded her. At length, one of the boats approached so near, that a harpoon was hove at her. It hit, but did not attach itself. A second harpoon was struck; this also failed to penetrate: but a third was more effectual, and held. Still she did not attempt to escape, but allowed other boats to approach; so that, in a few minutes, three more harpoons were fastened; and, in the course of an hour afterwards, she was killed.

There is something extremely painful in the destruction of a whale, when thus evincing a degree of affectionate regard for its offspring, that would do honour to the superior intelligence of human beings; yet the object of the adventure, the value of the prize, the joy of the capture, cannot be sacrificed to feelings of compassion.

Whales, though often found in great numbers together, can scarcely be said to be gregarious; for they are found most generally solitary, or in pairs, excepting when drawn to the same spot, by the attraction of an abundance of palatable food, or of a choice situation of the ice.

The superiority of the sexes, in point of numbers, seems to be in favour of the male. Of 124 whales which have been taken near Spitzbergen in eight years, in ships commanded by myself, 70 were males, and 54 were females, being in the proportion of five to four nearly.

The mysticetus occurs more abundantly in the frozen seas of Greenland and Davis' Strait,—in the bays of Baffin and Hudson,—in the sea to the northward of Behring's Strait, and along some parts of the northern shores of Asia, and probably America.

The Esquimaux eat the flesh and fat of the whale, and drink the oil with greediness. Indeed, some tribes who are not familiarised with spirituous liquors, carry along with them in their canoes, in their fishing excursions, bladders filled with oil, which they use in the same way, and with a similar result, that a British sailor does a dram. They also eat the skin of the whale raw, both adults and children; for it is not uncommon, when the females visit the whale ships, for them to help themselves to pieces of skin, preferring those with which a little blubber is connected, and to give it as food to their infants suspended on their backs, who suck it with apparent delight. Blubber, when pickled and boiled, is said to be very palatable; the tall, when par-boiled and then fried, is said to be not unsavoury, but even agreeable eating; and the flesh of young whales, I know from experiment, is by no means indifferent food.

I shall conclude this account of the mysticetus, with a sketch of some of the charac-

ters which belong generally to cetaceous animals.

Whales are viviparous; they have but one young at a time, and suckle it with teats. They are furnished with lungs, and are under the necessity of approaching the surface of the water at intervals to respire in the air. The heart has two ventricles and two auricles. The blood is warmer than in the human species; in a narwal that had been an hour and a half dead, the temperature of the blood was 97°; and in a mysticetus recently killed, 102°. All of them inhabit the sea. Some of them procure their food by means of a kind of sieve, composed of two fringes of whalebone; these have no teeth. Others have no whalebone, but are furnished with teeth. They all have two lateral or pectoral fins, with concealed bones like those of a land; and a large flexible horizontal tail, which is the principal member of motion. Some have a kind of dorsal fin, which is an adipose, or cartilaginous substance, without motion. This fin, varying in form, size and position, in different species, and being in a conspicuous situation, is well adapted for a specific distinction. The appearance and dimension of the whalebone and teeth, especially the former, are other specific characteristics. All whales have spiracles or blow holes, some with one, others with two openings, through which they breathe; some have a smooth skin all over the body; others have rugged or sulci about the region of the thorax and on the lower jaw. And all afford, beneath the integuments, a quantity of fat or blubber, from whence a useful and valuable oil, the train-oil of commerce, is extracted.

The B. Physalis is the longest of the whale tribe; and, probably, the most powerful and bulky of created beings.

It differs from the mysticetus in its form being less cylindrical, and its body being longer and more slender; in its whalebone being shorter; in its produce in blubber and oil being less; in its colour being of a bluer tinge; in its fins being more in number; in its breathing or blowing being more violent; in its speed being greater; in its actions being quicker and more restless, and in its conduct being bolder.

The length of the physalis is about 100 feet; its greatest circumference 30 or 35.

One was found dead in Davis' Straits 105 feet long, and 38 feet in circumference. The B. Musculus, or broad nosed whale, is not unlike the preceding, and frequents the coasts of Scotland, Ireland, Norway, &c. This is the creature usually killed on our shores. The other varieties are the B. Boops or Finner, and the B. Rostata, or Beaked Whale, which grows to the length of from 20 to 30 feet. The Narwal, or unicorn, is another of the inhabitants of the northern seas. The tusk is confined to the males, and generally from 3 to 6 feet in length: it projects from the left side of the head, that on the right side, (about 9 inches long,) remaining embedded in the skull. The Narwal is gregarious.

The Delphinus Deducator, called also the Caring, or Leading Whale, grows to the

length of 24 feet, and its herds are very numerous. This dolphin resembles the grampus, and it is often stranded. Hundreds have been destroyed at a time through accidents of this kind. The Beluga, or White Whale, is met with in families of from 5 to 10 together.

Of the quadrupeds inhabiting Spitzbergen and the icy seas adjacent, Capt. S. gives an interesting history; but we must abridge his observations without mercy. The Walrus, Morse, or Sea-horse, is a singular animal, and forms the connecting link between the mammalia of the land and the water, corresponding, in several of its characters, both with the bullock and the whale. It grows to the bulk of an ox. Its canine teeth, two in number, are of the length, externally, of 10 to 20 inches, (some naturalists say 3 feet,) and extend downward from the upper jaw, and include the point of the lower jaw between them. They are incurved inward. Their full length, when cut out of the skull, is commonly 15 to 20 inches, sometimes almost 30; and their weight 5 to 10 pounds each, or upward. The walrus, being a slow, clumsy animal on land, its tusks seem necessary for its defence against the bear, and also for enabling it to raise its unwieldy body upon the ice, when its access to the shore is prevented.

The walrus is found on the shores of Spitzbergen, 12 to 15 feet in length, and 8 to 10 feet in circumference.

When seen at a distance, the front part of the head of the young walrus, without tusks, is not unlike the human face. As this animal is in the habit of rearing its head above water, to look at ships, and other passing objects, it is not at all improbable but that it may have afforded foundation for some of the stories of mermaids. I have myself seen a sea-horse in such a position, and under such circumstances, that it required little stretch of imagination to mistake it for a human being; so like indeed was it, that the surgeon of the ship actually reported to me his having seen a man with his head just appearing above the surface of the water. Seals exhibit themselves in a similar way; the heads of some, at a distance, are not unlike the human head; the resemblance, however, is not so striking as that presented by the walrus.

The walrus is a fearless animal. It pays no regard to a boat, excepting as an object of curiosity. It is sometimes taken by a harpoon when in the water. If one attack fails, it often affords an opportunity for repeating it. The capture of a walrus in the water, cannot always be accomplished without danger; for, as they go in herds, an attack made upon one individual, draws all its companions to its defence. In such cases, they frequently rally round the boat from whence the blow was struck; pierce its planks with their tusks; and, though resisted in the most determined manner, sometimes raise themselves upon the gunwale, and threaten to overset it. The best defence against these enraged animals, is, in this crisis, sea sand; which, being thrown into their eyes, occasions a partial blindness, and

quences of irritating so irascible a being, she very nobly replied, "Oh no! we fear every devil from those whom we do not esteem." ("O que non! on craint peu, celui qu'on n'estime pas.")

From Rome our author went to Naples, where the same pre-occupation of the field by former writers begets the same sterility in his accounts of that city, and all its adjacent marvels. The squalid looks of the inhabitants of the Pontine Marshes, justified the answer given to a traveller, who inquired of a group of these animated spectres, "How do you manage to live here?"—"We die," and so they did in another way at Pompeii, which Mr. M. visited, and tells us, that, among other human remains dug up, "In the stocks of the guard-room, which were used as a military punishment, the skeletons of four soldiers were found sitting; but these poor fellows have now been released from their ignominious situation, and the stocks, with every thing else that was moveable, have been placed in the museum; the bones being consigned to their parent clay."

At Naples, we have an odd story of a bishop stealing 20 dollars; but a notice, more agreeable to our objects, is taken, of some admirable statues in the church of St. Severo. These are executed by a Venetian of the name of *Corradini*. "One represents a female, covered with a veil, which is most happily executed in marble, and has all the effect of a transparency. There is another of the same kind, a dead Christ, covered with the same thin gauze veil, which appears as if it were moist with the cold damp of the dead. There is also a statue of a figure in a net, the celebrated work of *Queirolo*, a Genoese, which is a model of pains and patience. It is cut out of a single block; yet the net has many folds, and scarcely touches the statue."

The Campo Santo, the great golphtha of Naples, is much more horrible than what we have transcribed respecting the funerals at Rome.

"It is situated on a rising ground behind the town; about a mile and a half from the gate. Within its walls, are 365 caverns; one is open every day for the reception of the dead, the great mass of whom, as soon as the rites of religion have been performed, are brought here for sepulture. There were fifteen cast in, while we were there; men, women, and children,—without a rag to cover them; literally fulfilling the words of Scripture,—"As he came forth out of his mother's womb, naked shall he return, to go as he came!" I looked down into this frightful charnel-house;—it was a shocking sight;—a mass of blood and garbage,—for many of the bodies had been opened at the hospitals. Cock-roaches, and other reptiles, were crawling about in all their glory.—"We fat all creatures else to fat us, and we fat ourselves for maggots; that's the end!"

"We made the sexton of this dreary abode, who, by the way, had been employed in this daily work for eleven years, open the stone of the next day's grave, which had been sealed up for a year. The flesh was entire-

ly gone; for, in such a fermenting mass, the work of corruption must go on swimmingly. Quick lime is added to hasten the process, and nothing seemed to remain, but a dry heap of bones and skulls. What must be the feelings of those, who can suffer the remains of a Friend, a Sister, a Mother, or a Wife, to be thus disposed of! Indifferent as I feel to the posthumous fate of my own remains, Heaven grant, that I may at least rest and not alone; and not be mixed up in so horrible a human hash as this!

"There were some women, saying *Arc Maria*, within the square, for the departed souls of their friends; but, our arrival took them from this pious work, and set them upon some calculations, connected with us, and our carriage, and the number of it; to direct them, in the selection of lucky numbers in the lottery, upon their return to Naples!"

Quitting this city, Mr. M. visited Capri, Velletri, on his way back to Rome, where he witnessed an execution founded on some remarkable circumstances. He says,

"The culprit was a 'Fellow with a horrid face,' who had murdered his father. The murder was detected in a singular manner, affording an extraordinary instance of the sagacity and faithful attachment of the dog to his master. The disappearance of the deceased had given rise to inquiry, and the officers of police went to his cottage, where, on examining his son, they learned that his father had gone out to work as usual, a few days before, and had not been seen since. As the officers were continuing their search in the neighbourhood, their attention was excited by observing a dog, lying in a lone place; who seemed to endeavour to attract their notice, by scratching on some newly turned earth. Their curiosity was excited by something peculiar in his action and manner, to examine the spot;—where they found the body. It would seem that the dog must have been an unobserved witness of his master's murder, and had not forsaken his grave. On returning to the cottage with the body, the son was so struck with the discovery made by the officers by means which he could not divine, that, concluding it must have been by supernatural intimation, he made a full confession of his guilt;—that he had beaten out his father's brains with a mallet, at the instigation of his mother, that he had dragged him to this bye-place, and there buried him. The mother was condemned to imprisonment for life;—the son to the guillotine. He kept us waiting ten o'clock till almost three; for the execution is delayed till the culprit is brought to a due state of penitence.

"At last the bell rung, the Host was brought from a neighbouring church, that he might receive the last sacrament; and soon afterwards, the criminal was led out. *Inglesse* was a passport on this as on other occasions. The guards that formed in a square round the guillotine, made way for me to pass; and I was introduced, almost against my will, close to the scaffold.

"A crucifix, and a black banner, with

death's heads upon it, were borne before the culprit, who advanced between two priests. He mounted the scaffold with a firm step, and did not once flinch till he stooped to put his head into the groove prepared to receive it.

"This is the trying minute, the rest is the affair of the tenth part of an instant. It appears to be the best of all modes of inflicting the punishment of death; combining the greatest impression on the spectator, with the least possible suffering to the victim.

"It is so rapid, that I should doubt whether there was any suffering; but from the expression of the countenance, when the executioner held up the head, I am inclined to believe, that sense and consciousness may remain for a few seconds, after the head is off. The eyes seemed to retain speculation for a moment or two, and there was a look in the ghastly stare with which they glared upon the crowd, which implied that the head was aware of its ignominious situation. And indeed there is nothing improbable in this supposition, for in all injuries of the spine, whereby a communication with the sensorium is cut off, it is the parts below the injury which are deprived of sensation, while those above retain their sensibility. And so, in the case of decapitation, the muscles and nerves of the face and eyes, may for a short time continue to convey impressions to the brain, in spite of the separation from the trunk."

The remainder of the volume is much more dry than that portion whence we have compounded our review. Florence, Bologna, Venice, Padua, Milan, the Simples, rambles about Switzerland, Lyons, Langue-doc, Toulouse, Bourdeaux, and Paris, appear too much in the uninteresting shape of an itinerary, with politics and criticism swelling out the table of contents, to afford entire content on the desk in the study. We shall not follow this course, but, in conclusion, pick out the plums for our readers, and leave the rest of the pudding, as Mr. M. would say, to be digested by more voracious appetites.

Venice is at present remarkable for containing eight horses; the four of St. Mark, and four kept by Lord Byron, who astonishes the natives by riding them on an island—choosing to be different from those about him; thus a swan among eagles or owls, as a British Senator, he must be a fowl of another feather among the swans, ducks, or geese of the Venetian canals. Venice is also reported as famous for the manufacture of very small gold trinkets. The author bought a gold chain for 20 francs, an inch and a half long, and worked with the aid of microscopic glasses; surely these are not the links which restrain the noble band from his country.

In the incubations on France, we are informed, among other inhuman horrors of the revolution, that—

"Near Montellinar was the *Chateau de Grignaa*, where Madame de Sévigné fell a victim to maternal anxiety, and was buried in the family vault. The Chateau was destroyed during the fury of the Revolution."

and the leaden coffins in the vaults, presented too valuable a booty to be spared, by the brutal ruffians of those days. The body of Madame de Sévigné had been embalmed, and was found in a state of perfect preservation, richly dressed;—but no respect was paid to virtue even in the grave; every thing, even to the dress she wore, was pillaged and taken away; and the naked corpse left to mingle, as it might, with its native dust.

"This unnatural war with the dead is one of the most revolting features of the French revolution. No respect was paid to rank, or sex, or virtue; and this was not a solitary act of rage, committed at a single place, but the general practice throughout France.—A fellow passenger tells me: that he saw the body of Laura, the mistress of Petrarch, exposed to the most brutal indignities, in the streets of Arignon. It had been embalmed, and was found in a mummy state, of a dark brown colour. It was the same everywhere; and the best, and the worst of the Bourbons, Henry IV. and Louis XI., were exposed to equal indignities, nor could the deeds of Turcotte himself protect his corpse from the profanation of these ferocious violators. All the crimes commit ed upon the living, during the reign of blood and terror, will not stamp the French name with so indelible a stain, as these unmanly outrages upon the dead."

"A very curious inquiry into the subject of the famous Iron Mask, leads the author to infer that *Fouquet* might be the sufferer; but we have no room to enumerate the coincidences on which this hypothesis is supported; and must conclude, which we shall, with the mention of a man whom the author encountered at Toulouse, and who is so much admired by all, that we are sure it will gratify our readers to hear a report of his being about to return to England, and undertake the management of Covent Garden Theatre. • Mr. M. pays a farewell visit to "Mr. Kemble, to whom I have been indebted, for many pleasant evenings of social intercourse. It is delightful to see the father of the English stage, enjoying the evening of life, in the tranquillity of literary leisure;—a man to whose public exertions, we have all been indebted for the highest intellectual gratification; who, by the charm of his art, has become so identified in our imagination with the ideal characters of Shakspeare, that those who have seen him can scarcely think of Macbeth,—King John,—Wolsey,—Hotspur,—Brutus,—or Coriolanus, without embodying them in the form and features of—John Philip Kemble."

*Smeaton's Historical and Biographical Tracts.*

No. 13. *A choice Narrative of Count Gondamor's Transactions during his Embassy in England.* By Sir Robert Cotton. 1659.

No. 14. *The Life and Death of Henrietta Maria de Bourbon, Queen to that blessed King and Martyr, Charles I.* &c. 1685.

\* We state this as a rumour that has reached us; not as appearing in the Diary.

At pages 597, 611, and 714, of our last year's volume, we noticed, as they issued from the press, the earlier specimens of these republished tracts, which are cheap, curious, and neatly got up. The two numbers at the head of this article, together with seven of a historical nature previously printed, make a very entertaining little 4to, belonging to the period of the Stuarts, and enabling us to read scarce works without the cost of bibliomania, the whole nine amounting in price to no more than 40s.

Gondamor's account of the transactions in England, is a political pamphlet fictitiously put into the mouth of that celebrated person, whose dexterity as an ambassador was not relished by a large party in this country\*. The wri-

\* Spanish ambassadors have frequently cut a conspicuous figure at our court: for example, take the following anecdote from a work entitled '*Mémoires d'un Voyageur qui se repose.*' When the attempt upon the King was made by Margaret Nicholson, as his majesty was going to St. James's to hold a levee, in consequence of that event a council was ordered to be held as soon as the levee was over. The Marquis del Campo, being apprised of that circumstance, and knowing that the council would detain the King in two or three hours beyond his usual time, took post horses and set off for Windsor the moment the levee was over, alighted at the palace, and called upon a lady there with whom he was acquainted. The Queen finding that the King did not return at the usual time, and understanding that the Marquis was in the palace, sent to ask him if he had been at the levee. He replied that he had, and that he had left his majesty in perfect health, going to council. When the King arrived he of course told her majesty the extraordinary occurrences of the morning. The Queen expressed great surprise that the Marquis del Campo, who had been near three hours in the palace, had not mentioned the subject to her: he was sent for, and he then told her majesty, that finding upon his arrival at the palace no rumour of the attempt upon the King had reached the Queen, he did not think it expedient to apprise her of it, till his majesty's arrival gave full assurance of his safety; but at the same time, as some incorrect and alarming reports might be brought down, he thought it right to remain in the palace, in order in that case to be able to remove all apprehensions from her majesty's mind, by acquainting her with the real facts.

This fine compliment was paralleled in a different way by another ambassador from Spain, who, when the Sardinian ambassador called all the foreign ministers resident in London together, and urged a complaint of their privileges being violated by the seizure of some smuggled articles in his residence, and it appeared that he had really lent his protection to cover the nefarious traffic, observed, that it was true the privileges of ambassadors ought to be held sacred; but if the King of Sardinia could not afford to send a gentleman, he ought not to keep a minister at the English or any court. This remark, we need hardly add, settled the business of the meeting. Ed.

ter makes him relate to the Duke of Lerma, and a council of Spanish ministers, how he had employed himself, and what he had achieved by his intrigues; and some of his statements are remarkable even to the present day. Among other things, he says,

All their voyages to the East Indies, I permit rather with a colourable resistance than a serious, because I see them not helpful but hurtful to the state in general, carrying out gold and treasure, bringing home spice, silks, feathers, and the like toys, and insensibly wasting the common stock of coin and bullion, while it fills the custom-house, and some private purses, who thereby enabled to keep this inconvenience on foot by bribes, especially so many great persons (even statesmen) being adventurers and sharers in the gain; besides this, wasteth their mariners, not one of ten returning, which I am glad to hear, for they are the men we stand in fear of.

Their West Indian voyages I withstand them in earnest, because they begin to inhabit there, and fortify themselves, and may in time perhaps raise another England, to withstand our new Spain in America; as this old England opposeth our present state, and clouds the glorious extents thereof of Europe; besides, there they trade for commodities without waste of their treasure, and often return gold for knives, glasses, and the like trifles, and that without such loss of their mariners, as in other places; therefore I crossed whatsoever intentions were projected for Virginia, or the Bermudes, because I see they may be hereafter really helpful to them, as now they serve for drains to unload their populous state, which else would overflow its own banks, by continuance of peace, and turn head upon itself, or make a body fit for any rebellion.

This is a singular view of our East and West India trade and colonies nearly two centuries ago. The ambassador continues.

But the last service I did for the state was not the least, when I underwrought that admirable engine, *Ratleigh*, and so was the cause his voyage threatening much danger and damage to us was overthrown, and himself returning in disgrace, I pursued almost to death; neither but (I hope) need I say almost, if all things hit right, and all strings hold; the determination of my commission would not permit me longer to stay to follow him to execution, which I desired the rather, that by concession I might have wrung from the inconsiderate English, an acknowledgement of my masters right in those places, punishing him for attempting there, though they might prescribe for the first foot; and this I did to stop their mouths hereafter, and because I would quench the heat and valour of that nation, that none should dare hereafter to undertake the like, or be so hardy as to look out at sea, or breath upon our coasts; and lastly, because I would bring to an ignominious death, that old pirate; who is one of the last now living,

obliges them to disperse. When on shore, they are best killed with long sharp pointed knives.

The tusks of the walrus, which are hard, white, and compact ivory, are employed by dentists in the fabrication of false teeth.

Seals (Phocæ), are too well known to need much observation. The voice of the young seal, when in pain or distress, is a whining cry, resembling that of a child. Seals appear to hear well when under water; music, or particularly a person whistling, draws them to the surface, and induces them to stretch their necks to the utmost extent, so as to prove a snare, by bringing them within reach of the shooter. The most effectual way of shooting them is by the use of small shot fired into their eyes; when killed with a bullet, they generally sink and are lost. Seals are often seen on their passage from one situation to another, in very large shoals. In such cases, for the sake of respiration, they all appear every now and then at the surface together, springing up so as to raise their heads and necks, and often their whole bodies out of the water. Their progress is pretty rapid; their actions appear frisky; and their general conduct is productive of amusement to the spectator. The sailors, when they observe such a shoal, call it a 'seal's wedding.'

*(To be concluded in our next.)*

## ARTS AND SCIENCES.

*(From the Edinburgh Philosophical Journal.)*

**LITHARS' ENGRAVINGS.**—In the operation of engraving, the desired effect is produced by making incisions upon the copper-plate with a steel instrument of an angular shape, which incisions are filled with printing-ink, and transferred to the paper by the pressure of a roller, which is passed over its surface. There is another mode of producing these lines or incisions by means of diluted nitrous acid, which is well known, and in which the impression is taken in the same way. The new mode of engraving is done upon a principle exactly the reverse, for instead of the subject being cut into the copper, it is the interstice between these lines which is removed by diluted acid, (commonly called *Aqua-fortis*) and the lines are left as the surface: from which the impression is taken, by means of a common type printing-press, instead of a copper-plate press.

This is effected by drawing with turpentine varnish, coloured with lamp black, whatever is required upon the plate, and when the varnish is thoroughly dry, the acid is poured upon it, and the interstice of course removed by its action upon the uncovered part of the copper. If the subject is very full of dark shading, this operation will be performed with little risk of accident, and with the removal of very little of the interstice between the lines; but if the distance between the lines is great, the risk and difficulty is very much increased, and it will be requisite to cut away the parts which surround the lines with a graver, in order to prevent the dabber with the printing ink from

reaching the bottom, and thus producing a blurred impression. It is obvious, therefore, that the more the plate is covered with work, the less risk will there be in the preparation of it with the acid, after the subject is drawn; and the less trouble will there be in removing the interstice (if any) from those places where there is little shading.

A great degree of facility will be obtained by etching out the first line with the common etching-needle, and afterwards putting on the cross line with the varnish; and by this means there will be much more variety, regularity, and beauty in the effect, than if the whole had been done with the varnish.

I have found from experience, that the best mode of proceeding is to lay an etching ground upon the copper, as in the ordinary operation of etching; to remove the first lines, or rather *interstices*, with the needle, and then to put on the cross-lines with the varnish. Should this cramp the freedom of the artist in some parts, he can easily scrape off the etching ground, and draw those with the varnish.

Although this discovery must still be considered in its infancy, and very incomplete, yet it is probable that much may be done with it, if proper materials can be found out to work with. It possesses every advantage which common engraving does, and at the same time all the advantages of engraving on wood; and, above all, it enables us to procure as many impressions as can be taken from types. The greatest difficulty to be surmounted, is to obtain a substitute for the varnish, which will flow from a pen or pencil like Indian ink; for as the varnish has a tendency to dry, and get tough in the pencil, the operation is by this circumstance very considerably impeded. Other substances than copper may be used; and experience may prove them to be better adapted to the purpose. I, says Mr. L., the inventor have tried wood covered with white lead and strong glue, with considerable success, but not with so much as copper; and it may be as well, for the sake of those who may think it worth their while to make other trials, to mention that I have used lead, pewter, type-metal, zinc, and brass, all with various success, but have still found copper superior to them all. Mr. Sivright of Meggetland, a gentleman well known in this city for his scientific acquirements, and to whom, during these experiments, I was much indebted, used with very great success the same kind of limestone which is employed in lithography.

I have also tried various kinds of varnishes, viz. mastic varnish, japan, liquid etching-ground, copal varnish, and spirit varnish, but have found the best to be common turpentine varnish, or resin dissolved in turpentine.

**ROYAL INSTITUTION.**—Mr. Campbell, on Wednesday, gave his second Lecture upon Poetry. He began with adverting to the most ancient poetry with which we are acquainted, viz. that of the Old Testament; and pointed out some passages of great beauty and sublimity. He said that the Hebrews did not cultivate poetry, and observed, that

whatever advantages they possessed over the Gentiles in the purity of religious worship, they certainly were behind them in literature and the elegant arts.

Mr. Campbell then turned to the poets of Greece, and began of course with Homer. It would be doing great injustice to Mr. C. and no credit to ourselves, if we were to attempt to give to our readers, from memory, even a sketch of this part of the lecture. His observations upon the great Grecian bard were so interwoven, and arose so naturally out of each other, his illustrations were so happy, and conveyed in language so correct and so brilliant, that we feel ourselves unequal to the task of even general description. Mr. C. differed entirely from Mr. Bryant and Professor Wolf; the former of whom disbelieved the existence of Troy, and of the war which forms the subject of the *Iliad*; and the latter of whom doubted the identity of Homer himself, for he considered him only as one of many rhapsodists who sang the war of Troy, although the whole poem has reached us under his name. Upon the first point he said, that although Homer had enriched his story with all the ornaments of poetry, yet, as to the main fact of the confederation of the states of Greece against Troy, he saw no rational ground for scepticism. It never was doubted by the Greeks themselves, who certainly had better means of forming a judgment upon the subject than any modern critic, however learned. With regard to the other point, viz. whether Homer was really the author of the whole poem, he considered the authority of the Greeks, again, as decisive, and they had never raised a question upon the subject. Besides, the *Iliad* itself contained intrinsic evidence that it was the production of one mind—the unity of the plan—the consistency of all its parts, and of the characters, shewed that it could not have been composed by a number of unconnected individuals, and collected in after ages into one poem.

We shall only add, that Mr. C. seemed to think that Homer was fully deserving of the exalted station in which he has been placed by the common consent of mankind.

*Henkelum, March 28.*

An inhabitant of this place, of the name of Wilgen, has found upon his land, which has been inundated to a great depth, a very large mass of solid clay, which is supposed to have been washed up from the depth of 68 feet below a bed of soft earth. Perceiving some bones project from it, he carefully took away the earth, and found the whole upper part of the head of an animal of immense size, 46 inches long, 30 broad, and weighing above 200 lbs.

A voyage of discovery is to be undertaken next summer, from the mouth of the Lena into the Frozen Ocean, to examine the north coast of Siberia, and the islands to the north of that country which were discovered several years ago. As the islands in question (which for any thing we know may form a considerable continent), have only been visited in winter; it will no doubt be very interesting

to examine whether the ice will allow ships to approach them in summer, and to ascertain their extent.

## FINE ARTS.

### SPRING GARDEN EXHIBITION.

The Society of Painters in Oil and Water Colours, opened their sixteenth exhibition on Monday. It is not so fine as some which have preceded it, but contains, notwithstanding, some very capital specimens of British Art. Among these, on a cursory glance, we noticed a highly finished picture, No. 17, "The Tight Shoe," in Richter's best manner, the story humorously told, and the painting superb; some exquisite drawings by G. F. Robson; a grand poetical composition of Jupiter nursed by the Nymphs in Crete, J. Cristall, the grouping and general character belonging to the foremost class of design; Eton and Windsor, two sweet little pieces by J. Varley; a clever landscape or two by J. Wilson; several glowing copies of nature by C. Fielding; the trial of Algernon Sydney by Stephano; the Veteran: a curiously painted subject, by W. H. Watts; Una in the forest by W. Bewick; uncommonly well executed views of French Towns, by Trout; admirable pictures of dogs, by E. Landecker, and something of the same kind by J. Christinas; together with other pleasing contributions by Barrett, A. Robertson, Linton, Lewis, Miss Gouldsmith, J. Graham, Boaden, Linnell, Nash, Vincent, Barker, Hayter, &c. &c. forming altogether a delightful lounge, and eminently deserving the countenance of the British Public.

### ROYAL ACADEMY.

A private view of the rooms yesterday, enables us to speak but shortly of the ensuing exhibition: the form of our publication, and the number printed, rendering it impossible to afford much space to any subject so late in the week. The collection is upon the whole, showy and attractive; and there are a few admirable pictures. Portraits, as usual, predominate, and we observe little difference in the styles of the best known artists. Sir T. Lawrence has some fine works in this class, the chief of which is the late Sir William Grant. Phillips has also some excellent heads; one or two of them of public men, who would be very glad to be either so young or handsome as the painter has made them. Beechey, Shee, Raeburn, Howard, Jackson, Owen, Stewardson, Joseph, Geddes, Masquerier, Lane, E. Hastings, and one or two others, appeared to us most prominent and numerous in similar productions. In the higher branches of art, we were struck with some exquisite pieces from the Decameron, and Gil Blas, by Storhard; the Opening of the Will, from Waverley, perhaps Wilkie's chef-d'œuvre; a Dead Calm, by Calcott, of infinite beauty; the Wolf and the Lamb, by Mulready, a most amusing and characteristic scene; the Widow of Siegfried the Swift, a large picture by Fuzeli, in a high tone of imagination; Lear, well treated by

Howard; Christ raising the Daughter of Jairus, Thomson; Venus intruding on the bath of Diana, Hilton, admirably painted; Rome, from the Vatican, an extraordinary performance, by Turner; an arch Cupid, by Owen; a charming Loudon's Gypsy, by Leslie; the Storm Retiring, a sea view, by Phillips; Venus showing her wound to Mars, a good subject, and very clever in expression, by Hayter; the last scene of Sir Giles Overreach, with good portraits of Drury-Lane performers, by Clint—one of the best dramatic things we have ever seen; a Market, full of incident, by Rollins Sharples; Melicor and Atalanta, a classical composition, by R. T. Bone; and smaller, but in various ways highly meritorious works, by J. Gandy, Etty, A. E. Chalon, Jones, Stephano, Cooper, Ingallton, Briggs, &c. &c. In the landscape department, we noticed interesting productions by Collins, Nasmyth, W. Wilson, J. Wilson, Samuel, Powell, and many others. Animals, by Ward, and young Landseer, deserve to be particularized. In the Architecture, Mr. Soane has a splendid picture. In Sculpture, an Eve, by Bailey, is one of the finest specimens of modern art; a Sleeping Child, with an exquisite head, by Chantrey; a Sketch, by I. Golt; an alto relievo, by Westmacott; a basso relievo, by Flaxman; busts, by Chantrey, Turnerelli, S. Joseph, Milligan, caught our attention. We of course had only a rapid glance, and have probably omitted many works which merited positive distinction.

### CONSUMPTION.

A FRAGMENT.

It is not so hard to die as I believed it to be. The preparation is the difficulty—I bless God I had time for that.—the rest is worse to beholders than to me. I am all blessed hope—hope itself. She looked what she said.—*Chorus Heroines.*

The cheek where health so lately shed  
Its constant bloom of softest red,  
Soon like her pollard open brow,  
Was linkless as the purest snow;  
Saw when delight or fever thro'  
A feeble blush of crimson hue  
O'er its pale surface, her dark eye  
Sparkled with clearer brilliancy.  
Her wasted snowy arm no more,  
Its former rounded beauty wore,  
But every azure vein within  
Shone thro' the soft transparent skin;  
The touching charm, the pensive grace,  
Diffused around her form and face,  
Her pure decaying loveliness,  
Might well some virgin saint express,  
Exchanging for the light of heaven  
The transient joys this earth had given.

She rose, and from her temples flung  
The rich dark curls which o'er her tunic hung;  
Half fainting then she forward leant,  
With drooping head, and figure bent.  
Her pale lips quiver'd; from her eye  
Large scaling tears fell heavily;  
While her small trembling hand in vain  
(Striving to dull their throbbing pain)  
Her fever'd temples press'd: there came  
A shivering o'er her feeble frame.—

Recovering slowly, by degrees  
She rais'd her head to catch the breeze  
Which freshly thro' the casement blew:  
Gasping, with lips apart, she drew  
The cool reviving air, again  
Her looks, her form, composed gain.—  
In tones, so weak they well betray'd  
Each vital source of strength decay'd,  
She spoke of the delights which gave  
A cheering aspect to the grave;  
While with increasing eloquence  
She seem'd around her to dispense  
The comfort she had vainly supplied—  
But

ARTHUR STANLEY.

### SONG.

Stranger, rest and sleep securely,  
Let no doubt thy breast annoy;  
Who sleeps here, believe, shall surely  
Wake to life, to hope, and joy.  
Soft music on the air is floating;  
All fragrant breathes the fresh fragrant gale;  
The bird's last hymn thou hear'st unnoting—  
Unmarked the balmy air inhale.  
Unconscious bliss art thou receiving,  
For thy rapt soul is borne away;  
Fancy, thy mental sight deceiving,  
Gives to thy view joy's future day.  
In mischief o'er the senses stealing,  
In perfumed dews at evening's close,  
Visions of future bliss revealing,  
Comes the Genius of repose.  
All inert, in slumber lying,  
Perception shall thy senses keep;  
Its consciousness alone denying,  
Gives thee all the bliss of sleep.

Glasgow, Mar. 16, 1820.

TOLKAM.

MR. BREAKWIND, flattered by the kind attention paid to him by the Editor of the Literary Gazette, by the speedy insertion of all his fragments, has been induced to parody a few popular airs, which he hopes will meet with his approbation, and that of a generous public, and "all that sort of thing," as his friend Mr. Randall says.

### AIR.—The Legacy.

When in jail I shall calm recline,  
Beneath my best coat to some pawnbroker near,  
Shew him how stylish the gilt buttons shine,  
And ask him a price that is not too dear;  
Bid him not search for bank notes in the pocket,  
For they were *hugg'd* out to discharge a bad debt;  
And all that he'll find will be an old locker  
Of Sol's, which she gave me the last time we met.

When the use of each *gin car* is o'er,  
Sack them, and take them over the way;  
For I know the *corv*, and he'll lend you more  
Than any *flut* can afford to pay;  
Bid him not turn 'em up for the ransing,  
That oftentimes lies at the bottom so dim;  
But tell him, my *old one*, without any mincing,  
You *mopp'd* them out \* ere you brought them to him.

Take then this glass, which the *fail-bird* is twin-  
ing  
With bright *flashy* flowers which spring for him  
yet,  
And think how oft in it we've seen the *gin* shin-  
ing,  
And bath'd our ripe lips in the *Dandy's* light *seet*.

\* Drink up the remainder.

And wonder not if in some inspired minute,  
 I lately you gaze on this cup o'er and o'er,  
 A *ye of blue* ruin should start up within it,  
 The inside of your white neck to break once more.  
 R. RECKWINDOW.

## BIOGRAPHY.

At Sylhet, July 14, died Mr. R. Smith, aged nearly 80, and for the last ten years, assistant to the superintendent of the Botanic Garden at Calcutta. His contributions to this establishment endeared him to the lovers of Indian Botany; and his loss is regretted by the public, not merely on account of the arduous and skill with which he cultivated the pleasing pursuit in which he was engaged; but of his liberality in communicating rare and beautiful specimens to others who were fond of his favourite science.

## THE DRAMA.

**DAWKY LANE: KING LEAR.**—On Monday this play was produced, with Kean in the principal character. Somehow or other,—by having got the question, whether he would perform it ill or well into pretty general discussion, by the puff preliminary, collateral, and direct, by strange advertisements, and by various means, more readily felt even in this great metropolis than described, and, perhaps, above all, by a prevailing sense of the difficulty of the enterprise, and of the rare talents of the actor—a very high degree of public curiosity was excited. The periodical press was *bespoke*, we do not mean improperly, but merely that very cogent reasons were urged for obtaining a verdict as favourable as circumstances would permit; and in so far as the dramatic world was concerned, the point of success or failure was declared of the very deepest importance. Even our philosophy was infected, and we went early to witness the solution of the momentous problem, involving the fame of Shakspeare and the glory of Kean—both matters of immortal interest, no doubt; but we scarcely think both equally at issue upon this occasion. Indeed, it ought to be premised, that the Tragedy as performed is not the Swan of Avon's Lear, but the 34 Number of Elliston's Shakspeare—see *Bills*—or, in other words, that miserable, mongrel transmutation of Tate's, which most un-schematically changes gold into base metal, and utterly ruins one of the finest conceptions that ever sprang from a human mind. We mean that trashy piece of foppery, which not only destroys the grand, leading, natural idea of the sublime poet, by altering the catastrophe, but which poisons and mangles every member of it,—excludes the privileged fool, that admirable foil to the King's weakness and wandering—introduces a paltry amour between Edgar and Cordelia, thus dispelling by moonshine meetings the whole charm of Poor Tom's assumed madness, and making as common as the scene shifter, the sweet heroine whom the intuitive genius of Shakspeare kept, like a divinity, out of sight, and only

brought back at last to swell the dreadful pathos of his denouement;—converts the creditable steward of Goneril, who ought from his station to be shrewd and steady, into a coxcomb, by way of compensation for the part omitted, consequently, spoiling the excellent scene preceding Kent's being put in the stocks;—and, in fine, contrives so to disguise the original, as to render it quite unnecessary to prohibit the admission of “*The free List*,” out of any notion of the hostility of that happily named body to Shakspeare, whether it be that their enmity arises from being on the free list, or that the grant of being on the free list is owing to their enmity. If the latter, we can only say that Shakspeare has had, and has, about the Theatres, greater foes than they are. But to the performances.—Whatever might be the feeling towards the mighty author, it was very evident that a large portion of the audience was exceedingly well disposed towards the play as about to be acted, and towards the actors. The applause began as soon as possible, that is to say, immediately after the lamps were lighted; and thenceforward every thing was cheered and shouted to—an encouragement, if genuine and within bounds, but an impropriety when carried to so palpable an excess. The first scene was one of indifferent promise. In dowering his daughters, Lear allowed no scope for the bye-speeches of his youngest, for he quitted his throne and came close up to her; and his own delivery of the text indicated but too surely, that all the poetry of Shakspeare would be lost—sacrificed, it may be, for a half dozen striking theatrical effects. So it turned out. None of those delightful passages of lament, of remorse, of self reproach, of melting tenderness, to which there is a key-note in Kean's voice that might respond so admirably, were rendered even moderately affecting; the whole were dismissed for a few bursts of rage or anguish, some of them very powerful, but others unmeaning and inconsistent. The play proceeded, and it soon became quite clear to our judgment that Lear, (at least if our idea of it be correct) was not a character suited to this able performer. He gave us the passion, but not the dignity; he gave us the declamation, but not the nature; he gave us the folly, but not the fine philosophizing vein of the broken-hearted king. The curse on Goneril was very forcible, yet our blood did not run chill, as it ever did when Kemble pronounced this awful imprecation. During all the tempest scenes, instead of the overflowings of a wounded spirit; the bitterness of a mind stung to the quick by unlooked for ingratitude, “much sharper than a serpent's tooth,” of the pathetic reflections on the instability and guilt of human affairs, Mr. Kean conceived it to be right to anticipate that madness which ought to be afterwards caught, as it were, by infection from Edgar, and to draw a picture of mental alienation, where only a high-wrought indignation and affliction of soul is painted by the author. It was not yet time for

—Matter and impetuosity mixed,  
 Reason in madness.

But Mr. Kean even mistook the obvious import of particular passages: after calling on *caitiffs* and close put-up guilt to tremble, at the elemental rage of heaven, Lear, drawing the consoling contrast with himself, exclaims,

—/ I am a man

More sinned against than sinning—

the performer laid the emphasis on “*am*,” a new but very erroneous reading; and indeed there were several like examples. These however, it would be tedious to enumerate, and we rather state our opinion of his general misconception of the character. He made Lear an idiot,—occasionally a mere dauling old man, twiddling his hands about, fumbling his clothes, patting his brow, and parting his hair with an expression of doubt whether he were really lunatic or not. Many of his sentences were uttered exactly as a drunken person, endeavouring to be plain with big sonorous words, would speak; and the well-known stage trick of horrid suspirations and hysterical growls, was repeated far too often. None of these marks, we presume to think, belong to the true Lear. He is infinitely greater in his madness than when sane. There are forgetfulness, bursts of grief, rage, rarely depression; but nothing like mean imbecility. Shakspeare, indeed, changes his language from poetry to prose; from the heroic measure to an unmeasured style; but assuredly the beautiful sentiments which he puts into his mouth, ought to save him from the misrepresentation of insane and silly helplessness. When he apostrophises the unsophisticated nature of poor Tom, who owes the worn silk, the beast no hide, &c.; when he bids anatomise the hard heart of Regan; nay, even when he takes his theme from the eyeless Gloucester, and lashes the vices of mankind, his aberrations are somewhat unconnected, yet still of the noblest character. Lear's mind is hurt, not destroyed; his understanding is disturbed, not overthrown; and there are not six sentences, in the whole character, which betray more than a wounded spirit, far less decided insanity. Mr. Kean would do well to re-study it with this consideration: but he took quite another view of the subject, in which, if our premises be accurate, he was decidedly in error. In what he did, the best scene by far was that in which he recovers from his opiate sleep, and recognises Cordelia. He was also much applauded for the way in which he said “Who put my man i' the stocks?”—The conclusion, as it now stands, no actor can prevent from being tame; but Mr. Kean made no observable effort to elevate it, and the play wound up like a nursery tale. We have exceeded our bounds, and have no room for the other parts. Rac was very respectable in Edgar, though he left out some fine lines, if they have been permitted to stand in Elliston's Shakspeare. Dowton appeared to us to act Kent in a quizzical way, as if laughing in his sleeve at Lear, and taking no pains to support him. Mrs. West, as Cordelia, in white muslin, deserved much praise; and Misses Glover and Egerton, were exceedingly good in all that Goneril and

Regan put in their power. The scenery was only tolerable, and some gaping and nodding trees made a ludicrous exhibition when agitated by the storm. The tragedy is likely to be continued for some time.

On Thursday, the farce of the *King and the Miller of Mansfield* was revived, with Mr. S. Kemble as the Miller. In consequence of some blackguard in the gallery choosing to interrupt the performance, by calling for the health of the queen being drunk, a row was got up, and the acting reduced to dumb show. Shakespeare denies the clown the privilege of saying more than is set down for them; and the stage would soon come to an intolerable pass, if such licence of interpolation were allowed to any one of a promiscuous audience. The thing "is a villainous ambition," (we care not what the matter attempted to be introduced may be,) and the public ought to aid the manager decidedly in resisting the practice.

COVENT GARDEN. *Henri Quatre*.—A dramatic romance so called, composed of sundry French pieces by Mr. Morton, with music got together by Mr. Bishop, has been successfully brought out at this house. It consists of some adventures of Henri in one of those ex-royal rambles of which he was so fond; and an episode of loves, duels, and generous actions, in which two of his officers are the principals; but the plot is too complex for detail, without a greater waste of paper than we are inclined to yield. Suffice it to say, that it is one of those pretty pleasing entertainments, which are seen and listened to with great satisfaction, as they require no effort to follow, and provoke no passion to analyze. The music is uncommonly sweet, and the scenery exquisitely beautiful. Macready in Henri, C. Kemble and Abbott in the Officers, Fawcett, Johnston (restored for one season more to his friends and the stage), Liston, Emery, Blanchard, Duruset, Hunt, and Egerton, all in parts well suited to their respective talents, give great strength and éclat to the acting; while Misses Stephens, and M. Tree, and a Master Longhurst, augment the melody by some very delicious singing; and Miss Brunton also adds her elegant comic powers to a cast unwontedly rich and comprehensive. The dialogue is terse and amusing; the lyrics very natty-pamby. Taken altogether, it is long since we saw a more agreeable drama; for though it possesses none of the higher qualities of composition, it is alternately gay and affecting, the incidents are well put together, the story generally interesting, and the performances, musical and histrionic, excellent. There ought to be a canon for theatrical pronunciation,—the law of the prompter, and hung up in the Green Room. The various ways in which Henri is pronounced, is quite amusing.—Hangroë, Hongrie, Henry, Hengry, Hanri, &c. &c. were met by Sully, Soollie, Salles, Sully, and an equivalent number of intonations, in the name of his prime minister.

THE NEW HAYMARKET THEATRE.—The site of this theatre is determined, and the building will be almost immediately commenced. We hear that forty subscriptions of 250*l.* each, are to constitute the chief fund.

The house will be about 16 feet more in width than the old theatre, and very little more in depth. By this plan, commodious passages may be obtained, and nearly the same admirable size preserved in the stage and audience parts. It will occupy the ground in the Haymarket, now filled by the three houses immediately below the theatre, and facing Charles Street, and thus there is an opportunity of having a handsome front towards St. James's Square. We trust the whole will be managed in a way lucrative to the parties, ornamental to the metropolis, and auspicious to the sterling drama.

THEATRE DES VARIETES.—First representation of *Destouches, ou le Philosophe marié*.—Destouches was an avowed enemy of the modern philosophy, which he ridiculed by thousands of epigrams. Perhaps one of the best he ever wrote is the title of the comedy, the *Philosopher marié*. Can any thing more completely satirize this singular kind of philosophy, than to represent, as one of its disciples, a man so weak and so far a slave to his dissolute companions, that he is ashamed to own his marriage?

This comedy is looked upon as a sketch of the author's family: he has painted his wife in *Arlette*; his sister-in-law in *Célestine*; her lover in *Damon*; his own father in *Lisimore*; and himself in *Arite*.

On this anecdotal sketch the new piece is founded. The uncle of Destouches, an old bachelor and a great enemy to matrimony, has sworn to disinherit his nephew if he should ever think of marrying; and he urges him to take orders, to ensure the impossibility of his ever submitting to the yoke of hymen. Destouches, who is already united to an elegant and accomplished woman, determines to keep his marriage a profound secret, through the fear of losing a fine fortune. The embarrassing situation in which he is placed between his uncle, his wife, and her sister, gives rise to several highly comic scenes, and he resolves to introduce them into a new comedy which he intends to bring out, under the title of *le Philosophe marié*. This the whole is discovered; but Madame Destouches has, in the mean while, succeeded in overcoming some of the uncle's prejudices, and he gives his consent to the union.

## VARIETIES.

Professor Kugelgen, a distinguished painter of Saxony, was murdered last month in the vicinity of Laschwitz.

The language of the interior of Sumatra, of the Javanese, of the inhabitants of Borneo and the Celebes, of the Philippine Islands, of Japan, of Cambodia, and Siam, are all, (with the exception of some imperfect ideas of the Japanese given in Kämpfer's excellent History of Japan, and Thunberg's Travels,) untouched by Protestant nations, or very little known.

*Holyhead Road*.—Whilst cutting through the corner of a field, called in Welsh Dol Trebeddw, in the line of road making be-

tween Lima and Carnegie, the workmen discovered upwards of forty graves, about two yards in length, most of them cased with rough stones, and all lying in the compass of 20 yards by 10. Bones were found in many of them, but not the least vestige of any coffins. On the under side of the stone which covered one of the most perfect of the graves was the following inscription, in rude Roman capitals, the letters in several instances joined together—

BRIO HO NASLI  
IAT HIC IACET  
ET VXOREM CAVNE.

This stone is preserved for the inspection of the curious, and may be seen, together with some of the bones, at Pentrefolias. The oldest inhabitants have not the least recollection of hearing anything concerning these graves; but it is very probable, that at a remote period this place was the scene of some of those contests which were continually taking place prior to the subjugation of Wales, and that the township of Trebeddw took its name from the circumstance, Dol Trebeddw signifying the Field of the Graves. *Salopian Journal*, April 12.

Near Gogain, the Mahratta capital, the bergot tree attains a very large size; there is one at Kurrode, a village twenty-five miles south of Neemuck, on the road to Gogain, which covers a space not less than five hundred and fifty yards in circumference; the different stems are innumerable, the parent stem full twelve feet in diameter, of irregular shape, and in its immediate vicinity are about thirty-five stems, from six to eight feet diameter. There is one limb of the parent stock which stretches out in a horizontal direction about one hundred feet, six feet from the ground, and at every ten feet a stem of eighteen inches in diameter falls perpendicularly, and has root in the earth. The last stem rises as a tree different from the others. Viewing this tree, at a little distance from the circle it describes, its appearance is strikingly fine, and through the openings of its branches and foliage other trees are seen in different directions with very pretty effect.

MASONIC ANECDOTE.—At an inn, in a town in the west of England, several people were sitting round the fire in a large kitchen, through which there was a passage to other apartments of the house, and among the company there was a travelling woman and a tailor. In this inn there was a Lodge of Free and Accepted Masons' old, and it being lodge-night, several of the members passed through the kitchen in their way to the Lodge apartments; this introduced observations on the principles of masonry, and the occult signs by which Masons could be known to each other. The woman said there was not so much mystery as people imagined, for that she could show any body the Mason's sign; "What," said the tailor, "that of the free and accepted?" "Yes," she replied, "and I will hold you a half-crown bowl of punch, to be confirmed by any of the members whom you please to nominate. "Why," said he, a woman was never admitted, and how is it possible you could procure it?" "No mat-

ter for that," added she, "I will readily forfeit the wager if I do not establish the fact."

The company urged the unfortunate tailor to accept the challenge, which he at last agreed to, and the bet was deposited. The woman got up, and took hold of the tailor by the collar, saying, "Come, follow me," which he did, trembling all, fearing he was to undergo some part of the discipline in the making of a Mason, of which he had heard a most dreadful report. She led him into the street, and pointing to the sign of the *Lion and Lamb*, asked him whose sign it was? He answered, "It is Mr. Loder's," (the name of the inn-keeper). "Is he a Free Mason?" "Yes," "Then," said the woman, "I have shewn you the sign of a Free and Accepted Mason."

The laugh was so much against poor Snip, for having been taken in, that it was with some difficulty he could be prevailed on to partake of the punch.

## METEOROLOGICAL JOURNAL.

APRIL, 1820.

Thursday, 20—Thermometer from 41 to 62.  
Barometer from 30, 30 to 30, 39.  
Wind W. and N. W. 3.—Cloudy about noon, the rest of the day generally clear.

## TO CORRESPONDENTS.

We are obliged to postpone many articles meant for insertion.

John Braddick is assured, that we called the *Society of Friends*, Quakers, with no intention of, but merely to alter the phraseology of our critique; and certainly not imagining that a name so judiciously applied could be held as ought but a distinction now, however sarcastically employed in the first instance. Other sects, the Methodists, for example, glory in that which was originally a nickname and reproach.

## Miscellaneous Advertisements.

(Connected with Literature and the Arts.)

THE SIXTEENTH Annual Exhibition of the Society of Painters in Oil and Water Colours, is now open, at the Great Room, Spring Gardens. Admission 1s.—Catalogue 6d.

COPLEY FIELDING, Sec.

MR. HAYDON'S PICTURE OF "Christ's Entry into Jerusalem," is now open for Exhibition, at Bullock's Great Room, upstairs to the right, from ten till six.—Admission 1s. Catalogue 6d.  
"Fear not Daughter of Zion; behold thy King cometh, sitting on an ass's colt."

## Paternoster Row.—To Booksellers, Merchants, Wholesale Druggists, and others.

TO LET, either together or separate, a large and commodious DWELLING HOUSE, consisting of upwards of twelve rooms, with a spacious double-fronted Shop, two convenient counting-houses attached to it, and a good back warehouse, capacious cellaring, &c. being No. 33, Paternoster Row. The whole calculated for carrying on an extensive concern. N. B. At least for a moderate term of years will be granted if required. For further particulars apply at No. 47, Paternoster Row.

BENEVOLENT FUND FOR RELIEVING THE WIDOWS AND ORPHANS OF ARTISTS. The Friends and Patrons of the Arts are respectfully informed, that the ELEVENTH ANNIVERSARY of the INSTITUTION will be celebrated at Freemasons' Hall, on Monday, 1st May, being the day the Royal Exhibition opens to the public. The Most Noble the Marquis of LANSDOWNE is in the Chair.

ROBERT BALMAYNO, Honorary Secretary. Tickets 17s. to be had of the Secretary at the Tavern or of the Secretary, 25, Muttoning Place, Regent's Park. Dinner on the Table at half-past five precisely. The Benevolence of this Institution may be claimed as matter of right by the Widows and Orphans of all Artists of merit, resident in the United Kingdom, who contribute an annual tribute (too small to be named) in aid of a Supplemental Fund for their own relief, should their necessities ever require it. There is no restriction of Sex, or of Country. All Artists of merit are hereby invited to join and partake in its benefits.

## BOOKS PUBLISHED THIS DAY.

The following Works will be published very shortly, by Rodwell and Martin, Bond Street.

In 2 large vols. 8vo. with plans, price 1l. 10s.

1. THE ANTIQUITIES OF THE JEWS, carefully compiled from authentic sources, and their Customs illustrated from Modern Travels. By William Brown, D. D. Minister of Exeter Cathedral.  
In 2 vols. fol. 8vo. second edition, considerably enlarged, with plans, price 12s. An Historical Sketch of the Campaign of 1810, illustrated by Plans of the Operations, and of the Battles of Quatre Bras, Ligny, and Waterloo. By Captain Barry, of the First or Grenadier Guards.

3 Paris. In Imperial 8vo. price 12s. Part III. of Views in Paris and its Vicinity, by Captain Barry, containing, 1. The Louvre from the Pont Neuf; 2. Triumphal Column on the Place du Chatelet; Notre Dame and the Isle de Palais; 4. St. Germain; 5. Rouen Cathedral. Proofs in 4to. price 18s. To be completed in twelve numbers.

4. In one volume, 8vo. 4to. Journal of a Tour through part of the Snowy Range of the Himala Mountains, and to the Sources of the Rivers Jumna and Ganges. With Notes on the Hills at the foot of the Himala Range between the River Sutlej and Akhanda; in the course and towards the close of the Gorkha War in 1816. By James Balfour Fraser, Esq.

5. In Elephant folio, uniform with Daniell's Oriental Scenery, and Belz's Views in Abyssinia. Twenty Views in the Himala Mountains, illustrative of the foregoing Travels, engraved from the Original Drawings made on the spot. By James Balfour Fraser, Esq. The price of this Work will be to Subscribers previous to publication, Twenty Guinea, after which it will be raised to Twenty-five Guinea.

6. Sir Warbeck of Wollstone: a Novel, by Miss Holford.

Just published, by Harvey and Darton, 46, Gracechurch Street.

POEMS. BY BERNARD BARTON. 8vo. boards. 10s. 6d.

## Mr. Wordsworth's New Poems.

8vo. price 12s. 6d.

THE RIVER DUDDON, a Series of Sonnets; VAUDRACOR and JULIA, with other Poems. By WILLIAM WORDSWORTH.

\* \* This Publication, together with Peter Bell, the Waggoner, and the Thanksgiving Ode, completes the third and last Volume of the author's Miscellaneous Poems.

Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author, THE EXCURSION, a Poem, in 4to. 2l. 2s.

THE WHITE DOE OF RYLSTONE, a Poem, in 4to. 1l. 1s.

In 2 vols. 8vo. with portraits and plates, price 30s. 6d.

MEMOIRS of the late R. L. EDGEWORTH, Esq. begun by himself, and finished by his Daughter, MARIA EDGEWORTH. Printed for B. Hanter, successor to M. Johnson, 72, St. Paul's Churchyard; and Baldwin, Cradock and Joy, in Paternoster Row.

## Huntingdon Peerage.

Handsome printed in 4to. with Portraits of the Earl and Countess of Huntingdon, price 52s.

THE HUNTINGDON PEERAGE; comprising a detailed Account of the Evidence and Proceedings connected with the Recent Restoration of the Earldom; together with the Report of the Attorney General on that occasion. To which is prefixed, A Genealogical and Biographical History of the Illustrious House of Hastings, including a Memoir of the present Earl and his Family. The whole interspersed with a variety of curious historical and legal matter, and several original Letters and incidental Anecdotes of distinguished individuals concerned. By HENRY NUGENT BELL, Esq. Student of the Inner Temple. London: Published by Baldwin, Cradock, and Joy, Paternoster Row; and to be had of the Author, No. 10, Adelphi Terrace.

\* \* A digested and authentic Account of this important Decision, which now stands on record as matter of legal reference and precedent, and which has excited so much curiosity, by reason of the singular circumstances connected with the title when in abeyance, while it promises much rare and curious information to the general reader, must prove particularly acceptable and valuable to the Senator and Lawyer, and to the superior ranks of the public at large.

Elegantly printed, in 2 large volumes, 8vo. 4to. and illustrated with a Portrait of the Author, and other engravings, price 7l. 7s. in extra boards.

THE WORKS OF THOMAS GRAY, with Memoirs of his Life and Writings, by WILLIAM MASON, to which are subjoined, Extracts Philological, Poetical, and Critical, from the author's original Manuscripts, selected and arranged by THOMAS JAMES MATHIAS. Printed for T. Cadell and W. Davies, in the Strand; and W. Blackwood, Edinburgh.

To the Public.—As no very elegant or magnificent edition of them has ever yet appeared, it was thought proper to present to the British Nation the present edition of the complete works of its greatest Lyric Poet, and of a Scholar second to none, Thomas Gray, with an elegance and with a splendour of Typography suitable to their dignity. It is hoped that the price, though necessarily high from unavoidable causes, will not be considered as too great, as the number of the copies is very limited, and as this edition may probably claim a place in the libraries of the learned and the opulent, and in the public repositories of literature in the United Kingdom of Great Britain and Ireland, and, perhaps, in those of the States on the Continent.

N. B. A few Copies of this Work are printed on Imperial Paper, price 12l. 12s. extra boards.

## Adams's Life of Camoens.

In 2 vols. crown 8vo. embellished with 5 Portraits, and numerous Woodcuts, 1l. 4s. 6d.

MEMOIRS of the LIFE and WRITINGS of LUIS DE CAMOENS. By JOHN ADAMSON, F. S. A. London, Edinburgh, and Newcastle-upon-Tyne. London Printed for Longman, Hurst, Rees, Orme, and Brown, 15, Abchurch Lane.

A few Copies have been taken off on large paper, with proof impressions of the plates. 1l. 15s. 6d.

**THE POETICAL WORKS OF THE REVEREND GEORGE CHABRE**, Consisting of, I. Poems—11. The Borough—III. Tales—and IV. Tales of the Hall. 5 vols. 8vo. 21. 18s. 6d. 5 vols. royal 8vo. 4s. 12s. 7 vols. small 8vo. 2s. 2s. Printed for John Murray, Albemarle Street.

With a Map, two vols. 8vo. 18s.  
**A CIRCUMSTANTIAL NARRATIVE OF THE CAMPAIGN IN SAXONY, in the Year 1813.** By BARON OELBEN, one of the General Officers of the Army. To which are subjoined the Notes of M. Aubert de Vetry. Printed for John Murray, Albemarle Street.

In 8vo. 12s. Second Edition.  
**THE SKETCH BOOK OF GEOFFREY CRAYON**, Gent. Printed for John Murray, Albemarle Street.

In 8vo. 10s. 6d.  
**THE LIFE OF FENELON**, with other Biographical and Historical Tracts. By CHARLES BUTLER, Esq. Printed for John Murray, Albemarle Street.

In 8vo. 18s.  
**PRINCIPLES OF POLITICAL ECONOMY** considered, with a View to their Practical Application. By the Rev. T. R. MALTHUS, A. M. R. M. S. Professor of History and Political Economy in the East India College, Hertfordshire. Printed for John Murray, Albemarle Street.

**TRIVIAL POEMS AND TRIOLETS.** By PATRICK CARY, 1621. Edited, with a Preface, by Sir WALTER SCOTT, Bart. 4to. 18s. A very few Copies are printed.

\*Some specimens from the Poems of Patrick Cary, were published by the present proprietor of the manuscript, in the Edinburgh Annual Register, for the year 1810. As they have attracted, from time to time, the notice of our poetical antiquaries, the Editor has been induced to place them beyond the chance of total oblivion, by the present very limited edition. The Reader is here introduced to a Host of the seventeenth century, as staunch a cavalier, and nearly as good a poet as the celebrated Colonel Lovell. Of the poems, only one manuscript copy is known to exist. It was presented to Sir Walter Scott, the present proprietor. The volume is a small duodecimo, written in a very neat hand, (the author's autograph), is perfect, and in tolerably good order, though scribbled on the blank leaves, and stripped of its sister clasps and ornaments. The proprietor of this unique manuscript is apt to over-rate its intrinsic merit; and yet the Editor cannot help being of opinion, that Cary's playfulness, gaiety, and ease of expression, both in satirical verses and political satire, entitle him to rank considerably above the "mob of gentlemen who write with ease."—*Albionist*, April.

Printed for John Murray, Albemarle Street.

A new Edition, 4 vols. cr. 8vo. 11. 16s.  
**ANTAR, a Bedouen Romance.** Translated from the Arabic. By TERRICH HAMILTON, Esq. Oriental Secretary to the British Embassy at Constantinople.

51 Vols. 2, 3, and 4, (never before published), are sold separately. 11. 7s.  
Printed for John Murray, Albemarle Street.

In 8vo. 25s.  
**TRAVELS ON THE CONTINENT**; for the Use of Travellers.

\*This work will be found a very useful Guide through France, Switzerland, Italy, Germany, Portugal, Spain, Holland, Denmark, Sweden, Norway, and Russia; and contains an Account of the Antiquities of Italy; particularly those of Rome, Herculaneum, Pompeii, and Pastum; together with minute lists of the most eminent statues and Paintings which embellish the Continental Galleries. It gives accurate details of the expences incurred by residing in various parts of France, Italy, &c.; so that persons who visit the Continent from economical motives, may select the most eligible places for permanent residence, and for the use of families, who may wish to avoid the expense attendant upon travelling with a courier; with Instructions for invalids. Printed for John Murray, Albemarle Street.

In 8vo. 12s.  
**THE COMEDIES OF ARISTOPHANES.** By T. MITCHELL, A. M. late Fellow of Sidney-Sussex College, Cambridge. Printed for John Murray, Albemarle-street.

In 8vo. 8s. 6d.  
**THE FALL OF JERUSALEM.** A Dramatic Poem. By the Rev. H. H. MILMAN, Vicar of St. Mary's Reading, and late Fellow of Brasenose College, Oxford. Printed for John Murray, Albemarle-Street.

In 8vo. 1s. 6d.  
**STANZAS TO THE MEMORY OF THE LATE KING.** By Mrs. J. HEMANS. Printed for John Murray, Albemarle Street.

*Crandall's Greenland.*  
Illustrated by Plates, 2 vols. 8vo. price 11s. boards. A new Edition, with considerable improvements and additions.  
**THE HISTORY OF GREENLAND**, including an Account of the Mission carried on by the United Brethren in that Country, with a Continuation to the present Time, Illustrative Notes, and an Appendix, containing a Sketch of the Mission of the Brethren in Labrador. From the German, by DAVID CRANDALL, Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Dr. Johnson declared that very few books had ever affected him so deeply, and that the man who did not relish the first part was no Philosopher, and he who could not enjoy the second no Christian.

In 2 vols. 8vo. price 14s.  
**ON PROTESTANT NONCONFORMITY.** By JOSHUA CUNDELL, Book I. On the Moral Design of Christian Institutions. Book II. Church Government. Book III. Rites and Services. Book IV. Ecclesiastical Establishments. Printed for B. J. Holdsworth, No. 16, St. Paul's Church Yard.

"\*Our Readers will, we trust, hail the appearance of a publication on the great question of Nonconformity, most richly meriting the highest commendation from all parties for the candid and amiable spirit which pervades and informs the whole. It ought, indeed, to be in the hands of every Dissenter. It embodies more information, and more sagacious argument upon Nonconformity, than is to be found any where within the same compass."—*London Christian Instructor*, September and December, 1818.

Price 21s. boards, in one large vol. 8vo.  
**THE ENTHUSIASM OF THE METHODISTS** AND PAPERS considered. By Bishop Lavington. With Notes, Introduction, and Appendix. By Rev. R. POLWHELE. This is a reprint from the scarce edition now selling for a very high price. The author's principal design is to draw a comparison, by way of caution to all Protestants, between the wild and pernicious enthusiasm of some of the most eminent Saints in the Popish Communion, and those of the Methodists in our Country; which latter he calls a set of pretended reformers, animated by an enthusiastic and fanatical spirit. Printed by A. J. Valpy, and sold by G. and W. B. Whittaker; Sherwood and Co.; Simpkin and Co.; R. Priestley, London; and all other booksellers.

*Horsley's Biblical Criticism.*  
In 4 vols. 8vo. 21. 2s. 10s.

**BIBLICAL CRITICISM ON THE BOOKS OF THE OLD TESTAMENT, AND TRANSLATIONS OF SACRED SONGS, with Notes, Critical and Explanatory.** By SAMUEL HORSLEY, LL. D. F. R. S. F. A. S. late Bishop of St. Asaph. London: Printed for Longman, Hurst, Rees, Orme, and Brown; and F. C. and J. Kington. Of whom may be had, by the same author, *Sermons*, 3 vols. 8vo. price 11. 7s. boards. *Nine Sermons*, on the Evidence of our Lord's Resurrection. In 8vo. price 10s. 6d. boards. A Translation of the Psalms of David, with Notes, in 2 vols. 8vo. price 18s. boards.

In May will be published, in 2 Vols. 4to.  
**LUCIAN OF SAMOSATA**, from the Greek. With the Comments and Illustrations of Wieland and others. By WILLIAM TUCKER, F. R. S. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

*The Coronation.*  
In 1 vol. 8vo. with Engravings, price 15s. (Dedicated, by permission, to His Grace the Duke of Norfolk.)  
**THE GLORY OF REGALTY; an HISTORICAL TREATISE OF THE ANUNTING AND CROWNING OF THE KINGS AND QUEENS OF ENGLAND**; containing remarks on the ancient modes of creating Kings, and on the constitution of the existing coronation; an account of the Court of Claims, of the functions of the great Officers of State, and of the Feudal Services and Proceutions, together with the whole of the Ritual used at the Inauguration of our Kings, and a Chronicle of English Coronations from the earliest known observance of the ceremony. By ARTHUR TAYLOR, F. R. A. A few copies are printed on large paper, price 11. 10s. 6d. by Payne and Sons, Pall-mall; and J. and A. Arch, Cornhill.

**SIR ARTHUR CLARKE'S ESSAY ON RAINING**, the 3rd edition, revised and enlarged, is this day published, price 5s. 6d. Printed for Henry Colburn and Co. Conduit Street.

In 8vo. price 14s. boards.  
**THE PHILOSOPHY OF LIFE.** By SIR WILLIAM MORGEN, M. D. and Fellow of the Royal College of Physicians of London.  
\*Sir C. Morgan has here presented us with a book containing a great deal of useful and entertaining information. He has undertaken to consider man as an organized being; to explain his structure, and how it is affected by various modes of treatment. To shew the influence of climate, diet, &c. upon the human frame, and to connect this influence with the moral and intellectual character of the mind. In conducting this investigation he has had an opportunity of calling to his aid, not only the knowledge of his own peculiar profession, but the discoveries of modern Chemistry, interesting facts in natural history and illustrations from general science, and the history of nations. The work contains many plain and sensible lessons on the best methods of keeping both mind and body in a healthy state."—*Printed for Henry Colburn and Co. Conduit Street.*

In 4 handsome vols. 8vo. with portraits, price 21. 8s. 10s.  
**THE LIFE CORRESPONDENCE OF HENRY WATSON, EARL OF ORFORD**, now first collected: comprising his Letters to the Hon. Mr. Conway; Richard West, Esq.; Mr. Gray; Lady Hervey; George Montagu, Esq.; Rev. Mr. Birch; Richard Bentley, Esq.; the Countess of Albesbury; Hon. G. Hardinge; Rev. Wm. Cole; the Earl of Stafford; John Chute, Esq.; Mrs. Hannah More; David Hume; John Craven; Mr. Nichols; W. Hucor, Esq. Rev. Mason, &c. &c. Printed for Rodwell and Martin, Bond Street; and Henry Colburn and Co. Conduit Street.

In 4to. with plates, 31. 3s. boards.  
**TRAVELS** in Various Countries of the EAST; being a Continuation of Memoirs relating to European and Asiatic Turkey, &c. Edited by ROBERT WALPOLE, M. A. Containing the late Travels of the late Mr. Browne; a Biographical Memoir of him; a Journey from Suet to Sinai; an account of the remarkable Monuments of Antiquity, discovered at Susa, in Persia; Travels in Syria, Asia Minor, Greece, and the Archipelago; with Remarks on the Antiquities, Natural History, Manners, Customs, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, also edited by Mr. Walpole, Memoirs relating to European and Asiatic Turkey, &c. 2d edit. 4to. with plates, 31. 3s. 10s.

*Southey's Life of Wesley.*  
In 2 vols. 8vo. with portraits, 11. 8s. boards.  
**THE LIFE OF WESLEY, and the RISE and PROGRESS OF METHODISM.** By ROBERT SOUTHLEY, Esq. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author, *Practical Works*, 4 vols. 8vo. 4s. 10s. 6d. *History of Brazil*, 3 vols. 4to. 71. 14s. boards, with a Map.

London: Printed for the Proprietors, by W. POPE, 47, Chancery Lane; and Published every Saturday, by W. A. KEMPES, at the Literary Gazette Office, 362, (Kewer Change) Strand, where Communications, (post paid) are requested to be addressed to the Editors.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 172.

SATURDAY, MAY 6, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

LOUIS BUONAPARTE'S WORK.

*Historical Documents and Reflections on the Government of Holland.* By Louis Buonaparte, Ex-king of Holland. London, 1820. 8vo. 3 vols.

It is quite a novelty to criticise an ex-king; and however Majesty comes in for its share of political remark in our days, it is seldom that it affords grounds for literary comment. The ex-sovereign of Holland, the best member of a very extraordinary family, has chosen an honest epigraph for his book,

Do what you ought, happen what may; which, we believe, much to his honour, was his rule of conduct during his reign. To a publication of this size, the first copy of which that issued from the press, was delivered into our hands on Tuesday, it is evidently impossible for us to do analytical justice on so short an acquaintance; but it is the character of the Literary Gazette, to bring immediately under the public eye, some account of such works as appear peculiarly worthy of attention; and we shall therefore hazard a very concise outline, and a few of the most anecdotal extracts, on the spur of the moment.

The affairs of Holland from 1806 to 1810 are fully treated of, and a very intelligent history, is enhanced in value by the picture of the king, from his accession to his depression, and enlivened by characteristic traits of Louis's more ambitious brother, his ministers, and partizans.

The author defends the Buonaparte family from the calumnies uttered against them, and asserts that they were both French and noble. On the latter point he says—

"As to the nobility of the Buonaparte family, whatever libellers may pretend, it is very ancient, and well identified in the annals of Italy. It is said, that when the marriage of Napoleon with the archduchess Maria Louisa was about to take place, the French emperor, in answer to some remonstrances on the subject, observed, 'I should not enter into this alliance, if I did not know, that her origin is as noble as my own.' A collection of documents, extracted from the archives of different towns of Italy, was then presented to the emperor Napoleon, from which it appeared, that the Buonapartes, at a very remote period, were lords of Treviso. Napoleon threw it into the fire, energetically observing, 'I wish my nobility to con-

tinence only with myself, and to hold all my titles from the French people."

Louis represents himself as grave and romantic, ardent and phlegmatic, at the same time: also as brave and courageous, of which he instances several proofs while serving in the early campaigns of Napoleon. The following are further details.

"Louis possessed a strong constitution, but he had not taken sufficient care of himself in his campaigns. He was left to himself at too early an age, without sufficient preparation. He had received several very severe falls from his horse, the worst of which nearly cost him his left eye, on which a deep scar afterwards remained. He met with this accident at Nice, after the siege of Toulon. While returning from a mission at full gallop, on a young and fiery horse of the full Spanish breed, he was met by the aide-de-camp Junot on foot, who frightened the horse to try the skill of the rider, which the horse mastered: Louis fell, and the wound he received was so ill attended to, that he has always preserved the scar. After the peace of Campo Formio, when the Egyptian expedition was in contemplation, Louis wished to serve in it, but at the same time to set out later than the rest, in order to try the waters of Barrege, which had been recommended to him. When he last returned with the news of peace, his horses became restive in descending the high mountain of St. André, in Saroy, when he dislocated his knee. His brother himself decided, that he should take his departure, to join the army of Egypt, with the first vessel which sailed after the close of the bathing season.

"Louis, for a secret reason, was desirous of remaining at Paris. His sister Caroline was at the celebrated boarding-school of Madame Campan, at St. Germain. Thither he frequently repaired, where he used to meet a female friend of his sister, whose father had emigrated in the commencement of the revolution. He felt a warm interest in her behalf, esteemed the qualities both of her heart and mind, and thought her altogether the most beautiful person he had ever seen.

"Walking one evening in the garden of the Tuilleries with Casabianca, a reduced naval officer of rank, and the friend of his brother, an honourable, amiable, and intelligent man, but timid and apprehensive at the same time, and who in the first storms of the revolution had saved himself by his excessive prudence, he could not contain his sentiments, and he confided them to this gentleman. Casabianca was alarmed. 'Do you know,' said he, 'that this marriage would be attended with the most injurious consequences to your brother, and would render him suspected to the government? and that too at a moment,

when he is setting out on a hazardous expedition, and when it is of the utmost consequence to him, to make as many friends as possible, or at least not to make any enemies, or to become suspected."

"Next day Napoleon sent for his brother, and ordered him to set out instantly with three of his other aides-de-camp for Toulon, where they were to wait his arrival, and from whence they were to accompany him to Egypt. Louis discovered, a long time after, that Casabianca instantly informed Napoleon of the sentiments and intentions of his brother, and, instead of losing time in attempts to persuade an amorous young man, Napoleon procured from the minister of war an order for his immediate departure."

After taking something of a French view of the glorious battle of the Nile, the following affecting story is related.

Such was the famous battle of Aboukir, which immortalized Nelson, but ought to convince the English, that the French will have a navy, whenever they set seriously about it, or rather whenever they shall make the attempt. During the fatal explosion of the Orient, the conduct and death of the young Casabianca were deserving of remark. This boy, whose age did not exceed 13, displayed the utmost activity. Stationed among the guns, he encouraged the gunners and sailors, and when the firing happened to be impeded in the heat of the action, through excess of zeal and agitation, he restored order and tranquillity by a coolness, which was quite astonishing for his age; he made the gunners and sailors sensible of their inadvertencies, and took care that each gun was served with cartridges suited to its calibre.

He did not know, that his father had been mortally wounded; and when the fire broke out on board the Orient, and the guns were abandoned, this courageous child remained by himself, and called loudly on his father, to tell him, if he could quit his post like the rest without dishonour. The fire was making dreadful ravages, yet he still waited for his father's answer; but in vain! At length an old sailor informed him of the misfortune of Casabianca, and told him, that he was ordered to save his son's life by surrendering. He refused, and ran to the gun-room. When he perceived his father, he threw himself upon him, held him in his close embrace, and declared, that he would never quit him. In vain his father entreated and threatened him; in vain the old sailor, who felt an attachment to his captain, wished to render him this last service. "I must die, I will die with my father!" answered the generous child. "There is but a moment remaining," observed the sailor; "I shall have great difficulty in saving myself; adieu!"

The flame reaching the powder, the vessel blew up, with the young Casablanca, who in vain covered with his body the mutilated remains of his father. Such is what the old sailor related to general Kieber and Louis, on landing at Alexandria.

Louis's marriage is a curious subject. In October 1801, on returning to Paris, he says—

His sister-in-law again spoke to him of his marriage. She gave him daily invitations; but Louis laughed at this project, of which the execution seemed to him impossible. However, one evening when there was a ball at Malmaison, his sister-in-law took him apart, his brother joined them, and, after a long conference, they obtained from him his consent. The day for the ceremony was fixed, and on the 4th of January, 1802, the contract, the civil marriage, and the religious ceremony took place. Louis became a husband. Never was there a more gloomy ceremony.—Never had husband and wife a stronger presentiment of all the horrors of a forced and ill-suited marriage.

This was the commencement of his misfortunes; of his physical and moral sufferings; he was then 22 years of age. His constitution had been early formed, but his mind and his character were not yet entirely so. He possessed that *naïveté*, that excessive sincerity, which belongs essentially to infancy, the result of a private education, and of the grave and reflecting disposition of a man, forced to accustom himself to live within himself.

This troublesome situation changed his character; it also affected his health, progressively, but without his perceiving it, as it were: from thenceforward he was a stranger to repose.

No calamities can be more real or more insupportable than domestic troubles, because, from whatever part they proceed, they directly reach the heart.

Those of Louis stamped on his mind and his whole existence a sort of profound melancholy, a dejection, an aridity, so to speak, which nothing ever could, or ever will, remedy.

We shall now add a word or two with respect to his marriage, that we may avoid returning again to a subject, which has supplied libellers with so many calumnies and absurd stories.

Before the ceremony, during the benediction, and ever afterwards, they both equally and constantly felt, that they were not suited for each other, and yet they allowed themselves to be drawn into a marriage, which their relations, and the mother of Hortensia more especially, conceived to be essentially politic and necessary. From the 4th of January, 1802, down to the month of September, 1807, when they finally parted from each other, they remained together in all not more than four months, and that at three separate periods, with long intervals between; but they had three children, whom they loved with equal affection. The eldest, named Napoleon Charles, died in Holland,

on the 5th of May, 1807; Napoleon Louis, the second, was baptised at St. Cloud, by his holiness, Pope Pius VIII., during the residence of the sovereign pontiff in France. This is the son whom Louis endeavoured to put in his place when he abdicated in 1810. The third received the name of Charles Louis Napoleon.

This constraint must appear singular, and would, in fact, be incredible in ordinary times; but in those in which they lived, in their position, and with their characters, as this work will exhibit them, the circumstance will appear less strange.

During the years 1802, 1803, and 1804, he was almost always either with his regiment, or at the mineral baths.

In 1804 he was named general of brigade, and retained the command of his regiment.

At this period the conspiracy of Georges, the death of Pichegru, and that of the duke d'Enghien took place. Louis could do nothing to prevent this catastrophe. He was then at Compeigne, where, besides his regiment, he commanded a brigade of dragoons, under the orders of general Buregny d'Hilliers. He immediately repaired to Paris with Hortensia, when they learned this misfortune at Compeigne; but he was too late; besides, he could not have prevented it, as the first consul was then deceived by too many intrigues. He could only add his tears to those of his mother-in-law, of Hortensia, and of his sister Caroline, all equally affected on account of such a misfortune. Napoleon was himself for several days melancholy, absent, and extremely slowly. There cannot be a doubt, that he was peridically and rapidly drawn into this calamity.

These extracts, which are derived from the first part of the first volume, must suffice till our next.

*Memoirs of the Life and Writings of Louis de Camoens.* By John Adamson, F. S. A. 2 vols. large 12mo. Newcastle and London, 1820.

This valuable addition to Portuguese literature has just been published. It supplies in a very perfect form that copious "information respecting the life and writings of Camoens," which has long been a desideratum; and is altogether one of the most copious and well arranged works of the kind which we have recently seen. The author of the noblest (it would hardly be too much to say the only) poem in the Portuguese language has indeed been brought before the British public in many and various shapes; his history, and his productions have not failed to attract the attention of biographer and bard; but still a compendium placing the whole in one point of view was wanted, and Mr. Adamson has ably performed this task, especially (though not at the length we could have desired), in regard to the Rimas which, in the universal admiration of the greater Lusiad, had till very lately failed to be known in any degree equal to their merits.

But however gratifying this production must be to the admirers of the Portuguese

musé, it affords very small scope to us for critical observation. Mickle's work, of which many editions have been printed, affords to general readers competent information relative to India, where Camoens spent so much of his life, and the conquest of which he made the theme for his immortal poem; and also to the circumstances of that conquered and unhappy life, spent in trouble, painful vicissitude, poverty, and sorrow, and terminated in an hospital. His translation of the Lusiad is acknowledged by every one to be a spirited and splendid performance, often compressing into vigour what is weak and diffuse in the original, and admirable in its version of all the descriptive parts. The only objection which we ever heard urged, was by Portuguese scholars, who, naturally more than fondly alive to the beauties of their distinguished countryman, fancy that every alteration is a fault, and every departure from his text a blemish. They have therefore, said that Mickle's poem was a recomposition rather than a translation; but still they, in common with less fastidious judges, have acknowledged his powers and confessed his genius.

We need hardly refer to Sir R. Fanshawe's translation, which preceded Mickle's by a hundred years—that century and its own imperfections had rendered it obsolete before the latter appeared. Lord Strangford's Poems from Camoens, which were published ten or twelve years ago, contributed something to a more diffused acquaintance in this country with the minor pieces of the author of the Lusiad. His Lordship gave spirited and elegant transcripts of forty or fifty of the romances, and of a part of the sixth book of the principal poem, in ottava rima; and Southey, Hayley, and others, have in various detached shapes translated a number of the sonnets, trifles, and elegies.

To these English transfusions, Mr. Adamson has now added a comprehensive view of the subject, and several further specimens of translation. His two volumes are very neatly and suitably printed, and adorned with well-executed engravings. From the biography of Camoens, which is ably illustrated from his writings, we should have a difficulty in extracting any new facts; the author however mentions that "A project for erecting a monument to his memory was lately formed at Lisbon, where subscriptions, which have since been aided by contributions in London and Paris, were entered into for carrying it into effect. The amount of the donations for this purpose, is represented to exceed 800*l*.; and, although some temporary suspension may at the present moment exist, so desirable and praise-worthy a scheme is entitled to our best wishes for its fulfilment. The place which has been fixed upon for the erection of the monument, is the convent situated at Belem, within three miles of Lisbon, and which was built by the King Dom Manoel, to record to posterity the discovery, by the Portuguese, of the route to India."

Thus will a tardy tribute be raised to the memory of the man whom tempestuous times and an ungrateful country left to beggary and starvation, and who, in the midst of wretch-

edness and affliction, erected his own imperishable monument. Such has too frequently been the lot of great talent; and it is curious to remark, how under every species of patronage, it has so happened that the ornaments of the world have languished in obscurity and perished in misery. From the age when Homer, blind and in want, sought charity and hymned his glorious lays, to this hour, when the successful few flourish, while the many pine and endeavour with vain struggles to achieve a name; there has been but one aspect of the planets which influence the fate of genius. If, of the Troubadours, some sang to kings and heroes, the multitude were but wandering vagrants, picking up a bitter morsel from the scanty allowance of the lowly ranks. When civilization improved the condition of mankind, it did little towards diminishing the "Calamities of Authors;" and if we look at our own history, there are but one or two brief exceptions to the common rule of neglect and contumely. These were—

"Like angel visits, few and far between;"

a royal gleam of warmth and splendour burst from a Stuart; and, as we gather from the anecdotes of the age, the reign of Anne was adorned by a galaxy of noble and ministerial men, themselves ornaments to literature, who esteemed it to be the duty of wealth and power to reward the labours and nourish the efforts of less fortunate genius. Since that period little or nothing has been done for literature. Like every thing else in this commercial country, it has become a thing of traffic, and hapless is the merchant who has not a large capital to trade upon. There is hardly an instance of success from small beginnings, encouraged by the sunshine of early praise, and sustained by the props of timely support.

A new reign, commenced with fair auspices, revives the almost dead hope, that we may yet witness a better disposition of patronage and regard towards rising merit. How noble would it be to go down to posterity as the Augustus of the nineteenth century!—how splendid a destiny to be the Mæcenas of that Augustus! But this can never result from a slight, partial, and fitful system of countenance: the rays of light and heat must fall upon the cottage as well as upon the castle; upon the sweet valley as well as on the towering mountain. George the IV. is, we firmly believe, anxious to foster the arts and learning; and his own taste and intelligence peculiarly qualify him for the exalted station of being their most accomplished and beneficent friend. We trust that he will set before his eyes the never-ending glory of such a character; and, taking his royal share of the patronage of literature out of the hands of book-sellers, and surrounding his throne with princes, peers, and enlightened rank, favourable to the object in view, revive or recreate a golden age of British Genius.

We ask our readers pardon for this digression, which we rely on the more sincerely on account of the rareness of such an offence on our parts; but the matter is of deep im-

portance, and the present is the crisis on which its determination depends. In returning to Camoens and Mr. Adamson, we have only to subjoin two very pretty examples of the manner in which the latter has rendered such of the rimas as he has selected for the exercise of his pen. The first is the sonnet "A formosura desta fresca serra."

The mountain cool, the chesnut's verdant shade,  
The lot'ring walk along the river side,  
Where never wore her sad abode lath made,  
Nor sorrow lingered on the sil'ry tide—  
The sea's hoarse sound—the earth with verdure gay—

The gilded pool of Phœbus' parting rays—  
The flocks that tread at eve their homeward way—

The soft mist yielding to the sunny blaze.—  
Not all the varied charms and beauties rare  
That nature boasts—when thou, my sole delight!

Art absent from me, to my aching sight  
Can comfort give, but as a prospect drear  
And cold before me stand—I onward go,  
And as the joys increase, increase my woe.

The other is a sweet sonnet, commencing,

"Ditoso seja aquella que sómente  
Sequeixa de amorosas esquivanças."

Happy the man who but of Love complains,  
His dear delusions and his coy disdains—  
Some days of comfort may be yet in store,  
His hopes are safe, and when his trial's o'er—  
His lengthened care may end, and peace succeed to pains.

Happy the man, who, absent from the source  
Whence flowed his grief, his sorrows had their course,

Feels but the memory of departed joy:  
Anticipates ill his thoughts employ;  
Thus when the evil comes, 'tis with diminished force.

Happy his state, who from contentment seern  
Suffers alone: But woe to him the smart  
Of faults to pardon which must wound the heart,

And place within the soul, of sin the thorn.

This last is not so well translated as the preceding, but is more faithful than poetical. Upon the whole, the publication, though more minute than is agreeable to mere readers for amusement, must we think be accepted as a valuable addition to their stores, by the lovers of the language and literature of Portugal.

*Winter Nights, or Fire-side Lucubrations.*

By Nathan Drake, M. D. &c. London. 1820. 2 vols. crown 8vo.

With how pleasing a pen Dr. Drake writes, is well known to the literary world. The present light and recreative performance will not diminish his reputation, nor fail to afford similar amusement to the lovers of the *belles lettres*, with the former works of the same tasteful and cultivated mind. It embraces subjects of criticism (a usurpation of our province!) prose fiction, and poetry; and we have perused none of these without feeling that either a winter night or a summer morning may

be very agreeably spent in company with the author. Kirton Priory, a tale, occupies about a volume—too much ground for us to cover; and we must (especially as the book has come into our hands late in the week) select a sample for our readers, rather recommended by its convenient bulk than by its superior interest.

The very striking and romantic incident on which I have founded the following little tale, was first given to the public by the Rev. Philip Parsons, in his work entitled "Monuments and Painted Glass," 4to. 1794; and as it is a necessary, and, at the same time, an interesting introduction to the poem, I shall present it to my readers in the words of that ingenious antiquary:—

"I cannot conclude this account of Haddleigh," he says, "without giving an anecdote in some degree connected with the place, and in itself exceedingly remarkable.

"I was informed that in the parish church of Llandulph, in Cornwall, there was a memorial of a lineal descendant of the Imperial line, who married a wife from Haddleigh.

"The account was so highly curious and yet so improbable, that I wished to be certain of the truth. To this purpose I wrote to the officiating minister at Saltash, which I judged to be the nearest post town to Llandulph, and in consequence soon received an obliging answer, of which the following is an extract:—

"In the chancel of Llandulph church is a mural monument, containing the following inscription on a brass tablet, in length twenty-one inches, in breadth seventeen, and fixed about five feet from the ground. Every letter is in Roman capitals, and the original spelling is preserved.

"*The Inscription.*

"Here lyeth the body of Theodoro Paleologus, of Pesanio, in Italye, descended from the Imperiall lyne of the last Christian Emperours of Greece, being the sonne of Camilio, the sonne of Prosper, the sonne of Theodoro, the sonne of John, the sonne of Thomas, the second brother to Constantine Paleologus, the eighth of that name, and last of the lyne that reigned in Constantinople, until subdued by the Turke, who married with Mary, the daughter of William Bolls of Hadlye, in Suffolke, gent., and had issue five children:—Theodoro, John, Ferdinando, Maria, and Dorothy, and deppied this life at Clyfton the 21st of January, 1636.

"Above the whole, in an escutcheon of brass, are engraved two turrets, with the figure of an eagle with two heads, resting a claw on each turret.

"Wm. TREVANION BARLOW."

"On receiving this account, so convincing in regard to the existence of such a monument, I made further enquiries in respect to the person, but with much less success.

"Thomas, brother of Constantine Paleologus, of whom Mahomet II., emperor of the Turks, gave this character—that in the

• Llandulph is a few miles from Callington.

great country of Peloponnesus, he had found many slaves, but never a man but him,\* after defending the castle of Salmonica a whole year against the Turks, made his escape from that fortress, when all hopes of relief had been abandoned, and fled into Italy, where Pope Pius II. allowed him a pension till his death. It is probable that Theodore, the descendant of Prince Thomas, who lies buried at Llandulph, sought an asylum in England, in consequence of the hostility shown towards the Greeks by Pope Paul V. and his successor Gregory XV. I have not been able to learn what became of the sons of this descendant of the Imperial line: his daughter Dorothy was married at Llandulph, to William Arundel, in 1656, and died 1681; and his daughter Mary, who died unmarried, was buried there in 1674, as appears by the parish register.

"A kind friend has searched, at my desire, the old register of Hadleigh, in which he finds the family of the Balls very numerous."

"In the register of marriages," says he, "there is one dated May 27, 1617, with the names erased, and four :: dots left in the place; now why may not I, in the spirit of an antiquary, suppose that this might be the very marriage, as it is about nineteen years before Theodoros died?"

"If this conjecture be well founded, the erasure (and the erasure of a register is something extraordinary) might arise from resentment, or a desire of concealment. And the idea is something corroborated by a similar erasure, equally remarkable in the baptisms of the family of the Balls; it is this:—

Mary . . . . . Dr. to . . . . . 1591.

It should seem that this was the Mary Balls, who was married in 1617, and who then would be twenty-six years of age." †

#### MARY OF HADLEIGH.

Through the dim arch, with mantling ivy crown'd,  
The moon's wan orb had shed a sickly light;  
Along each echoing aisle, with sullen sound,  
The midnight storm was rushing on its flight:  
When o'er the heath, as pour'd the piercing air,  
The cry of "murder" rose upon the blast;  
The traveller starting, breath'd a hurried prayer,  
Rein'd his dark steed, and turn'd his ear agast.  
Groans, as from parting life's convulsing frame,  
At times were heard upon the gale to swell;  
And, led by these, with fearful step he came,  
Where, bath'd in blood, the hapless victim fell.  
Stretch'd on the green-sward as in act to die,  
Though breathing still, a gallant youth he found,  
The moon-beam glancing as the rock swept by,  
Show'd his rich vesture pierc'd with many a wound.

With anguish seiz'd and horror at the deed,  
Awe-struck while he gaz'd, then, leaping down,  
Bound the worn sufferer fainting on his steed,  
And led him heedful to the neighbouring town.  
Here, where the Breta winds her rippling wave,  
And views her tall spire lift its tip ring head,  
Where Hadleigh still can point to Guthrun's grave,  
And still the tear o'er martyr'd Taylor shed,

\* Vide Knolles's History of the Turks.  
† Parson's Monuments and Stained Glass, &c., 1794. pp. 544, 545.

Speechless and cold, and pierc'd with thrilling pain,  
The drooping stranger to his roof he brought,  
Instant for aid dispatch'd his mental train,  
And each kind means to save existence sought,  
Nor sought in vain; for soon, tho' pale and weak,  
Though tremulous still, and labouring to respire,  
Health dawning smil'd upon his faded cheek,  
From his eye-balls shot returning fire.  
Yet, danger shifting, varied treachery tries,  
And, mask'd in charms, from beauty's bosom flows;  
From looks of pity, love-inspiring sighs,  
From lips that breathe, and cheeks that shame the rose.

Ah! what defence could Theodoros boast,  
When o'er his couch as evening breezes die,  
He saw the blushing daughter of his host  
In languid sorrow bend the fearful eye.

First of the forms that ever poet drew,  
Was Mary graceful as the bounding roe;  
On her ripe lip sat love embath'd in dew,  
Or ambush'd close where heaves the living snow.  
Free from her forehead, curl'd and clust'ring bright,

Profuse and rich her raven tresses fell!  
Whilst 'dark and full, and thrond' in humid light,  
How many a tale those eyes of sweetness tell!  
Nor was her mind less lovely than her frame.—  
For all that suffer'd she had learnt to grieve;  
A lily shrinking from the noon-tide flame,  
But pouring perfume on the gale of eve.

Oh! woman's pity each dread ill can cure,  
It whispers peace, and seems to open heav'n;  
It gives the breast to glow with passion pure,  
Breathes its warm vows, and hope to be forgiv'n.

Thus felt the youth, and soon sweet Mary knows  
What soft infection on his accents flows.  
As she sits listening to the varied woe  
That one by one his manly heart had wrung.

Of many a deed in glory's fields he told,  
Of many a danger pass'd on shore and flood;  
E'en to the night when, fr'd by thirst of gold,  
His faithless servants dip't their hands in blood.

There is a sympathy in noble minds,  
A bond of love which vice and folly fly,  
A confidence which only virtue finds,  
As, touch'd by truth, she bids the heart reply.

And these did Mary and her lover feel,  
Though round the youth a veil of mystery hung;  
Though parents murmur, and though friends appeal,

And many a censure flows from many a tongue.  
Ah, where! if not in that eye's open cell,  
As pledges sure of manly honour giv'n,  
If not on that clear brow, they love to dwell,  
Oh, where shall faith and fondness find their heav'n!

In triumph trusting, and with joy imprest,  
No fear had Mary or of guile or art;  
But, in the temple where her fathers rest,  
Gave to the man she lov'd a willing heart.

Swift from the altar to an unknown roof,  
Th' enamour'd stranger bore his blooming bride;

And years roll'd on, whilst from the world aloof,  
No search could trace them, and no rumour guide.

When, one dark night, as, round Mount Edgcombe high

The whirling tempests their hoarse descent sung,  
And, in wild concord with the sea-mew's cry,  
O'er Cornwall's cliffs the foam of ocean flung,

From a lone vessel wreck'd on Tamer's flood,  
And nigh the wreck by Llandulph's fame enshrin'd,

Thrown on the coast an aged pilgrim stood,  
His grey locks streaming on the winter's wind.  
Round in dismay, of friendly aid in search,  
Through the deep void he turn'd an anxious eye,  
When from the chancel of high Llandulph church,

With sudden flash a beam of light shot by.  
Rapt in amazement, yet led on by fate,  
O'er the dim pile one fearful look he cast;  
Then trac'd its walls, and through its western gate,

Half open found, with trembling footstep past.  
On the ground kneeling, near a scutcheon'd tomb,

A female form he saw, and rob'd in white;  
Whilst, hung on high, through shades of murk-  
klest gloom,

A lamp pale gleaming shed a sickly light.

Slow, and with noiseless stealth, he onward stept,  
His heart-pulse flutt'ring with suspended breath;  
Till, close behind the mourner as she wept,  
Silent he stood, a statue still as death.

Oh! who the sorrows of lost love can speak,  
As to her bosom press'd her infant clung!  
Fast fell the tears that bath'd its dimpled cheek,  
Whilst her clasp'd hands in agony she wrung.

On a brass tablet rear'd above her head,  
O'er which the lamp a waning splendour threw,  
Her eyes were fix'd, and thither instant led,  
Fix'd the deep anguish of the pilgrim too.

For there with pangs no utterance could make known,

With wonder mingling, and with shudd'ring awe,

Theodoros, heir of the Imperial throne.  
Commix'd with Mary's humble name he saw!

Groans, as if life its utmost seat forsook,  
At length escap'd the pilgrim's tortur'd breast;  
And Mary, rising, turn'd with ghastly look,  
"My father!" shriek'd, and instant sank to rest!

*The History of Spain, from the earliest Ages, &c. to 1814. With Chronological and Genealogical Tables, &c. By Frances Thurlte. London, 1820. 12mo. pp. 498.*

A popular abridgment of the History of Spain was very much wanted, and we are glad that the task of making it has fallen into such good hands as those of Miss Thurlte; or we should rather say, of Mrs. Jamieson, for it happens to be our pleasing duty to add, by this review, a literary sweet to the sweets of her honeymoon. The recent exploits of British heroism in that country, and its present political aspects, increase the interest of the publication; and we think the fair authoress not only fortunate in her design and execution, but particularly so in the time at which her work appears. It is scarcely necessary to multiply quotations from a performance of this class, which steers very cleverly between the rocks of dry detail and superfluous ornament; and resembles in some parts (for example, in the reign of Philip II.) the manner of Goldsmith,—that model for all historians, as far as style and clearness of expression are concerned. The annals of the Moors in Spain, notwithstanding their conciseness, preserve the romantic character of the people and of those chivalrous times; the chronological tables are excellent;

the first volume, descriptive of the city, adjoining country, and various traits of manners and customs, for the purpose of at once introducing the reader to the interior of the harem and palace, of which it forms a part.

"On approaching the castle of the bashaw, you pass the first intrenchments, escorted by the haupers (the bashaw's body-guards). The castle is surrounded by a wall upwards of forty feet high, with battlements, embrasures, and towers, in the old manner of fortification, and is of ancient architecture, much disfigured on the inside by irregular additions made by the present bashaw to contain the numerous branches of his family. Having passed through the gate, you enter the first court-yard of the castle crowded with guards, waiting before the skiff or hall, where the Chiah sits all day. This is the highest office belonging to the Bashaw, and the most in his confidence. He is invested with supreme power whenever the bashaw is absent. No subject can approach the bashaw on any affairs but through him. A number of guards with black slaves and Mamelukes attend him. Through this hall is a paved square with a piazza supported by marble pillars, in which is built the messesley or council chamber, where the bashaw receives his court on gala days. It is finished on the outside with Chinese tiles, a number of which form an entire painting. A flight of variegated marble steps leads up to the door of it."

The fair author had not been many days in Tripoli, when she had the good fortune to be presented at court, at least to the female portion of it. Lilla Kebbiara, or Hallana, to use a more poetic appellation, wife to the bashaw, is represented as being extremely affable, and possessing the most insinuating manners. Though at that time forty years of age, she was still very handsome, having light blue eyes and flaxen hair. She was adored by her subjects. The appearance of Lilla Hallana and the apartment in which the author first saw her, are described as follows.

"The Moorish habit for mourning consists only in the clothes being entirely deprived of their new appearance, and the deeper the mourning is meant to be the more indifferent and even shabby the clothes; therefore when she orders a new cap, which is so richly embroidered that it is like a solid plate of gold, she never puts it on till it has passed through water before her, and all the beauty of it destroyed. She weeps over the operation, and her tirewomen make extempore verses on the cause of her distress. The rest of her clothes were grand, and she wore costly jewels; a transparent veil of many yards, flowing carelessly about her in graceful drapery, displayed through it the whole of her rich dress; and her figure was altogether majestic, with the sweetest countenance. The apartment she was in was hung with dark green velvet tapestry, ornamented with coloured silk damask flowers; and sentences out of the Koran were cut in silk letters and neatly sewed on, forming a deep border at the top and bottom; below this, the apartment was finished with tiles forming landscapes. The sides of the

doorway, and the entrance into the room, were marble; and according to the custom of furnishing here, choice china and crystal encircled the room on a moulding near the ceiling. Close beneath these ornaments were placed large looking-glasses with frames of gold and silver; the floor was covered with curious matting and rich carpeting over it; loose mattresses and cushions placed on the ground, made up in the form of sofas, covered with velvet, and embroidered with gold and silver, served for seats, with Turkey carpets laid before them. The coffee was served in very small cups of china, placed in gold filigree cups without saucers, on a solid gold salver, of an uncommon size, richly embossed: this massive waiter was brought in by two slaves, who bore it between them round to each of the company; and these two eunuchs were the most richly habited slaves we had yet seen in the castle: they were entirely covered with gold and silver. Refreshments were afterwards served upon low and beautifully inlaid tables, not higher than a foot from the ground; and amongst the sherbets was fresh pomegranate juice, passed through the rind of the fruit, which gave it an excellent flavour. After the repast, slaves attended with silver filigree censers, offering, at the same time, towels with gold ends wove in them near half a yard deep."

Though want of room prevents our extracting some of these anecdotes which succeeded the above passage, we cannot omit one illustrating the wretched state of the females in Barbary, where their very lives are in the hands, and at the disposal of men alternately the slaves of caprice and jealousy. The Tripolitan ambassador to Morocco had a Circassian slave who lived near the family residence, and whom he suspected of infidelity; but after having often threatened and as often pardoned her, she at length fell a victim to the rage of a Mameluke in the service of her lord.

"This wretch was an enemy to his master, and an unsuccessful admirer of the fair Circassian. Hearing that his master was engaged at an entertainment given by the Christians, he came to him late in the evening, and worked on his imagination till the fatal tasker was obtained. The Mameluke immediately rode off full speed to the garden where she resided, and had departed on the wretched errand but a few moments, when the visible alteration and the agony in the countenance of the ambassador, led his friends soon to the supposition of the cruel orders he had issued, and he was easily persuaded to countermand them. He sent horsemen with every inducement given them to overtake the sanguinary Mameluke, and arrest his hand from the murder he was so eager to perpetrate. They reached the garden a few seconds after him; but he knowing of a breach in the garden wall, had, assassin-like, entered that way to prevent alarm, and found the fair Circassian walking solitarily in the garden at that late hour. At the sight of him she fled, having long considered him as her destined murderer. She, in her terror, climbed up the garden

walls, and ran round the top of them. Those who were sent to save her saw her run in vain. They forced the gates and entered them; in the mean while, twice they heard a pistol fired, and soon after the dying groans of the unfortunate female, whom the Mameluke, to prevent explanations, had stabbed to death, after having discharged two pistols at her."

Instances of a similar nature were quite common at Tripoli in those days. In page 156 of *passim*, of the first volume, there is a very interesting account of the treatment to which Christian slaves were formerly exposed at Tripoli, in the person of a Spanish lady and her two children. Those who read it, will be thereby still better enabled to appreciate the services rendered to Europe and humanity by Great Britain, in having abolished that horrible practice altogether.

In 1785 and the following year, Tripoli was exposed to the double calamity of a plague and famine, which carried off a third of its inhabitants. Even to this day, it would seem that the melancholy experience of the past, has been of little service to the Mahometans, who from their implicit faith in predestination, consider it as altogether superfluous to take any precautions against the introduction of these destructive scourges. Alluding to the effects of the epidemic on this occasion, the author observes:—

"The city of Tripoli, after the plague, exhibited an appearance awfully striking. In some of the houses were found the last victims that had perished in them, who having died alone, unvisited and unassisted, lay in a state too bad to be removed from the spot, and were obliged to be buried where they were; while in others, children were wandering about deserted, without a friend belonging to them. The town was almost entirely depopulated, and rarely two people walked together. One solitary being paced slowly through the streets, his mind unoccupied by business, and lost in painful reflections: if he lifted his eyes, it was with mournful surprise to gaze on the empty habitations around him: whole streets he passed without a living creature in them; for beside the desolation of the plague before it broke out in this city, many of the inhabitants, with the greatest inconvenience, left their houses and fled to Tunis (where the plague then raged), to avoid starving in the dreadful famine that preceded it here."

Turning from this wretched picture, we shall present a more cheerful sketch to the reader. A lady of distinction being desirous of celebrating the return of Hadgi Ablerrahman, who has been already alluded to, a number of female friends were accordingly invited, and amongst the rest our author, who gives the following account of an evening party at Tripoli.

"The festive song for this rejoicing we heard long before we reached the house, and it was not without difficulty and delay that we could be conducted through this crowded assembly to the ambassador's wife and family, who were seated with the most distinguished part of the company. At sunset, about an hour after we arrived, Lilla Au-

man rose and led the company to the galleries of the house, fitted up in the same manner as the area, covered with awnings and furnished with a profusion of mats, carpets, and cushions. In these galleries were placed low Moorish tables, furnished with viands of every delicacy the place could afford. The chief beverage was a sherbet I have before described to you, made of boiled raisins mixed with sugar and the juice of lemon. Between two and three hundred weight of this fruit is made use of at one of these feasts. Lilla Annani and the ambassador's eldest daughter walked round the tables while the guests were seated, to talk with them, and see they were properly served.

"During the entertainment of the music, Lilla Zenobia, the wife of Sidi el Buny and favourite of the bey, with a lady related to Haanet Hogia's family, and some other beauties of a gay description, unavoidably found entrance for a short time. Not long after they came in, a report spread through the apartments which caused a serious alarm: it was that Sidi Useph was present, having introduced himself disguised as a female, among the attendants. As such a discovery might have proved fatal to him, the thought of its happening at the ambassador's house was truly terrifying to Lilla Annani. At the instant this report was spread, and every one in commotion, a number of women who had crowded into the avenues about the house, rushed into the street and disappeared; and it was positively affirmed that Sidi Useph was amongst them. Lilla Zenobia, with her friend; departed the same instant."

Thus it is that throughout the work, its charm is greatly heightened by a minuteness of detail which brings the reader in immediate contact with the objects and scenes described. Having shown the Moorish ladies "at home," the sketch would be incomplete were we to overlook the opportunity afforded, of exhibiting them during a visit to the house of Mr. Tully, where his lady and the fair author had the honour of entertaining the wife of Halgi Abderrahman, an event of very rare occurrence amongst Mahometans.

"The ambassador came himself first at nine o'clock in the evening: in about ten minutes after, his lady and his eldest daughter by his first wife, and two Moorish ladies, relations of the family, with their black and white women attendants, arrived. The gentlemen retired, and none of the male servants were suffered to appear. As soon as the ladies came, the ambassador left us, as agreeably to the custom of the country, he could not have appeared at the repast with his family. The Moorish ladies, when they entered the house, were so entirely concealed, that it was impossible to discover them, and they could only be known by the crowd of attendants that surrounded them, and by the whiteness and delicate texture of their drapery. When their slaves removed the upper covering, the next transparent web or barcan discovered the most costly dresses, with great quantities of jewels. Abderrahman's Greek was not painted, but

the rest of the ladies were. Lilla Annani gave us a reason for not adding this ornament to the rest of her dress, that being the mother of a family, she was just arrived at that age when the Moorish prayers could not be dispensed with; and as paint cannot be worn by any one during their orisons, she must, if she painted, be obliged, each time she attended her devotions, to wash it off and paint afresh."

The author adds: "It was very entertaining to us to see the curiosity and surprise every thing through the house excited in our visitors: they beheld in every second article something quite novel. They admired very much the books that were lying about, as they are only accustomed to see, or rather hear of manuscripts, and they seemed hardly to credit that ladies sat down to read through the books they saw. On the apartments being shown to them which were allotted for officers and gentlemen to sleep in occasionally, some of them manifested no less surprise at male visitors being permitted to sleep in the same part of the house where the ladies of the family were. When they were shewn the beds, they considered the building (as they termed it) of the bedsteads, inclosed with curtains, as distinct apartments: their own beds or couches are laid on the floor of their sedda or bedchamber, filling up an alcove, enclosed with rich curtains, as I have before described. At supper none of the ladies made use of a knife and fork, except Abderrahman's wife and daughter, who seemed to use them with some grace. They touched no wine, but drank sherbet and lemonade; and were in high spirits, and as much delighted as we were. Supper was not ended when the ambassador returned: a small part of our company attended him in the drawing-room, it being totally against the Moorish custom to have introduced him into the room where his wife and family were."

That in point of labour, at least, the female dandyism of Tripoli is not inferior to that experienced at an European toilet, may be conceived from the number of persons employed, and the great pains taken to adorn a Moorish lady. In addition to five or six dressers who are busily employed in laying on cosmetics, painting the eye-lashes, putting on the jewels, placing the head dress, and adjusting the other parts of the figure, we beg to call the attention of those who lead the fashions in more civilized countries, to the coiffure of Lilla Uducia, the ambassador's daughter. "A profusion of the richest Arabian perfumes and scented waters were used, and cloths reduced to the finest powder, simply by themselves, were prepared in a larger quantity than appeared possible to be used at once; but they proved only sufficient for the present occasion. The whole of this powder, near a quarter of a pound, was put into two large tresses of hair, descending from each side of the head behind, which were plaited to a size far beyond what the greatest quantity of hair growing on the head could accomplish, by mixing a quantity of black silk in them, prepared with strong perfumes by the slaves

present: here they have no idea of false hair. The operation of painting the eyelashes with a black tincture, laid on by a gold bodkin, is very tedious, and the method of shaping the eyebrows, by pulling out every single superfluous hair, was evidently most painful."

The affecting story of two slaves, a man and his wife, who had been exposed for sale in the market of Tripoli, will not fail to excite its due share of sympathy in a country, which boasts the exclusive honour of being the first to abolish the traffic in human flesh: but we must for the present terminate our remarks with the portrait of an African chief, Shaik Alieff, who paid Mr. Tully a visit during his temporary stay at the Tripolitan capital.

"This Gætulian, or Numidian, perfectly resembled in his habits and manners the description given of the first inhabitants of those countries. His dress was that of the Jibeelen, or mountain Arab, whose habit is precisely the same as it is described in the time of our Saviour. The fineness of the Arab's dress is proportioned to his fortune, Shaik Alieff's upper covering, or barcan, made of Barbary wool famous for its beauty and whiteness, appeared at first sight to be of the finest muslin, many yards in length, which he had rolled in simple folds around his head and body. He wore a curious wrought belt (of a manufacture peculiar to this country and to the hand of an Arab), ingeniously woven in a variety of figures resembling Arabic characters: it was wound several times tight and even round his body, and one end being doubled back and sewed up, served him for his purse. In this belt he wore his arms, and he prided himself much on them, not on account of their richness, but from the proof he had had of their execution. After the manner of the Arabs, he wore sandals, which he took off on entering the apartment, and thus paid a compliment to those who received him; for among the Arabs no one can approach his superior with his slippers on. His air was noble, his gait haughty, and his figure about the middle size. The Arabs are in general tall. Shaik Alieff's features were perfectly regular, and strongly marked; his complexion nearly black; his countenance very cheerful, though he was not a young man; and a settled vivacity seemed to be his characteristic; yet he retains all the ferocity of the ancient Arabs, and considers himself one of the masters of the desert of Tripoli; for the Vargummas and the Noilles, the two most powerful tribes known in these parts, hold the sovereignty of the deserts."

Our extracts from the second volume, which are unavoidably postponed, will relate to matters of a more serious nature than the foregoing, and tend to depict the untamable ferocity of the Moorish character better than any work we have hitherto met with on the same interesting subject.

#### LORD BYRON.

A Parisian critic, in reviewing the French translation of Lord Byron's works, recently published, gives the following observations

## ARTS AND SCIENCES.

## ROYAL INSTITUTION.

On Wednesday, Mr. Campbell gave his third Lecture on Poetry. Having concluded his observations on the Iliad, in the former one, he now proceeded to notice the *Odyssey*, which, he said, was distinguished by two remarkable characteristics, viz.—the richness of fancy which it displayed, and the extraordinary information which it gave, as respecting familiar life, in the heroic ages. In commenting upon the character of Ulysses, he said that, to modern readers, it might at first view, appear to contain too much cunning; but, a due consideration of the manners of the age, and the general state of society at that period, would shew that the poet had not assigned to his hero any quality inconsistent with the dignity of his character. Mr. Campbell spoke in terms of great admiration of Homer's Calypso, and contrasted her with the Calypso of Fenelon: the French writer, he said, had given to his Calypso the air of a coquette, instead of the dignified and interesting tenderness of her prototype. Mr. C. observed that, in the *Odyssey* was to be found the origin of enchantment: various modifications of it had been given by subsequent poets, but its invention could only be attributed to the creative genius of Homer. He then proceeded to defend the poet against the charge which had been made against him by La Harpe, of turpitude in the action of the *Odyssey*. That critic had complained that no less than twelve books of the poem were occupied by the adventures of Ulysses, after his arrival in Ithaca. In answer to this charge, he had to state, that, if the detail was minute, it was always interesting. The art of the poet made the reader sympathize with the hero, even in his caution. The discovery of Ulysses to his friends and to his wife might have been made earlier, and the catastrophe accelerated; but if it had, the poem, in his opinion, would have lost much of its nature, and consequently, of its beauty. Mr. C. recited some passages, describing the discovery of Ulysses, by his nurse, Euryclia; his interview afterwards with Penelope, and his father, Laertes. He read those passages apparently without effort, but with very great effect. In that most beautiful description of the interview between Laertes and Ulysses, in which the latter, in order to remove his father's doubts as to his identity, reminds him of the trees which Laertes gave him while yet a child, in that very garden where they were talking, Mr. C. was very visibly affected. Leaving Homer with apparent reluctance, the lecturer took a cursory view of the poets that flourished between his time and that of the Greek Dramatic Writers. He then described the nature of Greek Tragedy, and contrasted it with that of modern times; and having explained the nature and office of the chorus, observed, that though many attempts had been made to introduce it on the modern stage, they had all failed. No one who thoroughly understood and enjoyed the beauties of the tragic writers of Greece, could view

the remains of its sculpture which had reached us, without being conscious of a kind of union and connexion between them, which must be strongly felt though not easily described. In speaking of the effect of fine sculpture upon the mind, he illustrated his meaning by stating the sensations he experienced on the first view of the Apollo Belvedere, in language so beautiful, so sublimely eloquent, that it is impossible to describe the effect it produced upon his audience. Mr. C. will resume his observations on the Greek stage in his next lecture. Dr. Crotch gave his first lecture on Music on Friday last.

## LEARNED SOCIETIES.

## OXFORD, APRIL 28.

On Thursday last the following degrees were conferred:—

**MASTERS OF ARTS.**—David Howell, Esq. Christ Church, grand compounder, G. Hall, Scholar of Pembroke College, Rev. S. Curlew Lord, W. Morgan Williams, and Rev. C. Griffith, Wadham College; J. F. Benwell, and Cornelius Copner, Magdalen Hall; Rev. J. Morrill, and Gilbert Henderson, Fellows of Brasenose College; Charles Ranken, W. J. Monson, and Rev. Ralph H. Leeke, Christ Church; W. Gresswell, Fellow of Balliol College; J. Jones, and Rev. Peter Price, Fellows of Jesus College. **BACHELORS OF ARTS.**—Rev. H. Bellairs, St. Mary Hall, grand compounder. H. R. Fowler, and J. Frampton, Exeter College; J. Crayton, Pembroke College; J. Pruett, St. John's College; W. Charlton, Magdalen Hall; W. Duthy, Scholar on the New Foundation, Queen's College; Brook H. Bridges, Oriel College; W. J. Brodric, Esq. Balliol College. The same day in convocation, C. Bellamy, Student in Civil Law, and Fellow of St. John's College, was unanimously elected Vinerian Scholar. Yesterday the Rev. R. J. Carr, M. A. of Worcester College, was admitted Bachelor and Doctor in Divinity. The Rev. J. Bullock, Scholar of Worcester College, was admitted Master of Arts; and J. Colville, of Magdalen Hall, was admitted Bachelor of Arts.

Lord Grey, eldest son of the Earl of Stamford, is admitted Nobleman of Trinity College. J. Cottingham, Esq. M. A. of Trinity Hall, Barrister at Law, was on Tuesday last admitted into the Fellowship vacant by the resignation of Lewis Duval, Esq.

## CAMBRIDGE, APRIL 21.

The following gentlemen were on Friday last admitted to the under-mentioned degrees:—

**MASTERS OF ARTS.**—James Foulkes Roberts, and Edward Curtis Kemp, St. John's College. **BACHELORS OF ARTS.**—Richard Walker Fowler, and Lawrence Peel, St. John's College; James Crawford Gordon, John Turner, John Hollams, and Bartholomew Nichols, St. Peter's College; James B. Cartwright, Alexander Graves, and Edward White, Queen's College; William John Hall, and Arthur Hussey, Corpus Christi College. The Rev. W. Parish, M. A. of

Magdalen College, Jacksonian Professor of Chemistry, was on Sunday last admitted Bachelor in Divinity. The following gentlemen were on Tuesday last admitted to the under-mentioned degrees:—

**MASTER OF ARTS.**—Nicholas Fiott, St. John's College. **BACHELOR IN CIVIL LAW.**—Henry B. Martin, of Trinity Hall. **BACHELOR OF ARTS.**—William Henry Foster, of St. John's College.

The Norrisian prize for the year 1819 is adjudged to Mr. R. Brough, of Benet College.

## FINE ARTS.

## ROYAL ACADEMY.

We shall, in this Number, briefly remark upon a few of the pictures belonging to the School of Design; and to the higher productions in landscape. In our last, we did injustice to Mr. Sharpe, by omitting to mention his Sunday Morning (61) a clever and humorous picture of a boy being washed at a pump, which we had marked "1" in our catalogue, but lost sight of in the hurry of translating our pencillings into language.

No. 152. *Christ raising from Death the Daughter of Jairus.*—H. Thomson, R.A.

The subject of this picture, (from St. Matthew, chap. ix., v. 18 to 25), as well as the style of execution, is of the highest class. The interest it excites is of the deepest kind, and all must sympathize where all can understand. The purity of virgin white clothes the reanimating figure, and also surrounds her form. The garland of flowers beautifully contrasts the pallid hue of her countenance; which now appears to take the quiescence of sleep rather than that of death. The attitude and expression of the mother may vie with the finest of Guido's heads, nor is the trembling and eager agitation of the father less happily delineated. The figure of Christ in some degree shares the fate of many other representations; though we think, in the present instance, the deficiency arises rather from the elevated character of the three figures, which we have particularized, and which form the subject of the Saviour's regard. The colouring and manner have all the gravity of history, some monotony, and the figures rather short, and remind us of the works of Poussin. With perhaps a little of his marble or statue-like studies, this noble picture possesses all his grandeur and is altogether a splendid contribution to our native arts.

No. 206. *Rome from the Vatican.*—J. M. W. Turner, R. A.

It is with some diffidence as well as deference, that we give our opinion of this extraordinary picture. To the choice of the view we can have nothing to object; it is grand, new, and magnificent; but how far the prevalence of colours the most gaudy and obtrusive, and the absence of all repose, can be justified by any of the rules of art, is a matter of extreme doubt. There is always great interest given to a view, as seen through an arch or opening, which generally serves by its depth or local colours, as a frame-

work to confuse and give value to the distance, and also by its proximity to the sight, to form a substance of clear and decided contrast. We have no wish to see every thing neutralized, or any systematic sacrifice made of one part to another; but merely the display of colours for the sake of colours, is, we think, an absurdity unworthy the grand genius of the professor of perspective. But Mr. Turner must "think his own thoughts," and so will the public: for ourselves, we must confess that this appears to be a brilliant but outré and unsuccessful experiment.

Nos. 26, 66, 71, 92, 98, 146, 160, 214.—*T. Stothard, R. A.*

Mr. Stothard has given in substance six of the subjects which he exhibited last year upon a small scale, from the Decameron of Boccaccio; to which he has added his *Amphitrite*, and a picture of *Sancho Panza* conversing with the Duchess and her maids. This last is equally characterized by the elegance and taste, as by the humour, of his pencil; while the *Meadow*, the *Mill*, and the *Supper by the Fountain*, have a freshness and fancy exclusively his own. There is quite a reviving delight in the contemplation of these works,—they transport us entirely to the scenes which they represent, and give a local habitation to things which hitherto floated in indistinct visions upon our fancy. Assuredly, this painter is the painter to the imagination, and one of the greatest artists of his country and age.

No. 152. *The Reading of a Will.*—*D. Wilkie, R. A.*

It would hardly have been imagined in the commencement of British Art, that a union of the Flemish school with the characteristic humour of Hogarth, should have been found in the pencil of any single artist. Yet so it is, and the picture of Mr. Wilkie will bear us out in this remark, by the varied and confirmed talent which it exhibits. It is difficult to imagine a subject in which character and expression, costume, scenery, and accessories, could have found a field of more ample scope for a play of the picturesque. The interesting and interested widow listens without seeming to attend. She has an ear for the right and another for the left of what is going on; it is evident that the testament and the soldier divide her attention, while the quiet indeflexibility of the lawyer is finely contrasted with the impassioned features of those about him. His repose is the tumult of others, and reverses the idea of Pope, "Sleepless himself to give his readers sleep." Near the widow is placed an unoccupied arm chair, probably that of the dear departed; and full in view the strong box, with its valued boards of plate, &c. An old lady, followed by her footman and lap dog, is quitting the scene with feelings which cannot be mistaken. In short, every part of this inimitable performance is replete with interest, and needs no details either to make it understood or admired. The still life partakes of the same character, and is equally appropriate, and happily executed. An oval picture is as true to reality as can be achieved. Though we regret that this pic-

ture leaves the country, being painted for the King of Bavaria, it is a satisfaction to observe that it must greatly extend the fame of British Art upon the continent.

No. 13. *The Coral Fisher; Venus and her youthful Satellites arriving at the Isle of Paphos.*—*W. Etty.*

Equally poetical in its forms and colouring, it possesses also some of the most brilliant qualities almost exclusively attributed to the works of the Venetian school and the old masters, together with some of those inaccuracies in drawing, which the same exclusive attention to colouring produced in them. The principal figure, however, in Mr. Etty's picture, is graceful, and the whole is full of taste.

No. 17. *Landscape.* 148. *Harwich.*—*J. Constable, A.*

The interest of this, as well as of all the works of this artist, arises from its truth and locality. But it is truth and locality as given by a *Ruysdael* or a *Hobbins*, not the every day representation of pictorial scenery.

No. 81. *A dead Calm on the Medway, with small Craft dropping down.* &c. *A. W. Calcott, R. A.*

All that can be expressed by the quiet stillness of such a scene, is truly and happily effected. The nearer vessels are made to contrast with, and relieve from the more remote, with the utmost skill, and the aerial perspective is kept without the least appearance of system, or violence of opposition, either in tone or colour. To say that the composition is in every respect suitable, and the execution beautiful, is but to repeat that, which we have always observed in the works of Mr. Calcott.

No. 248. *The Storm retiring.*—*T. Phillips, R. A.*

This is a variety in the pencil of the artist, and exhibits him to great advantage. There is a simplicity in this awful effect of the storm, which adds amazingly to its excellence. The prostrate body and the single ear tell the tale with a pathos more touching than could be done by many details or exaggerated colours.

No. 356. *An ancient City, by Moonlight.*—*T. C. Hoofland.*

This is an effect of moonlight, brought to bear upon a scene of suitable grandeur to the majestic orb of light. It exhibits the various powers of its splendour, upon the land, and upon the water; it illumines the clouds, sheds its rays upon the mountains, and touches the towers and the temple; without departing in a single instance from that truth and character with which the study and observation of the skilful artist have clothed the scene.

#### ARTISTS' BENEVOLENT FUND.

On Monday, the friends of this commendable association held their anniversary dinner at the Freemason's Tavern, where good cheer so frequently stimulates the pulse of philanthropy: the Marquis of Lansdowne presided; and several members of the Royal Academy, foreign artists, and English gentry, sat around him. With the toasts sev-

have little to do after drinking them; and with the songs and music, scarcely more,—except to say, as they belong to the Fine Arts, that Tinney's rich bass, and Broadhurst's admirable lullaby-style, contributing much to the enjoyments of the meeting.

The chairman, on giving "The Royal Academy," spoke of its new President in the highest terms; and Mr. Shee acknowledged the compliment in the name of the body of which he also is so distinguished a member. We were rather surprised that he should make occasion to justify the Academy from suspicions or imputations of selfish feelings and lukewarmness in the cause of the Arts; nothing having been said in the room to call for a defence of this nature. We certainly do not understand whence arises the tenderness of reputation always evinced on the part of the Royal Academy; and indeed the public know very little about the affairs of that public institution. That it is abundantly rich, and that it does much good, we have every reason to believe; that it is a desirable thing for an artist to belong to it, in every point of view, is obvious. Perhaps we, and the country, would like to be a little better informed as to its "whereabouts," and wish that, like most other establishments to the aid of which there is a contribution from the nation, its exertions for the benefit of the arts should be more apparent. But we have at the same time, a firm reliance on the integrity, humanity, and patriotism of its administration; and from a personal acquaintance with many of its members, are convinced, that though they may act mistakenly they never would act wrongfully.

There is one point which it would be gratifying that any one of them took an opportunity to explain: we allude to the sending abroad, and supporting in their studies, such young men as afford evidence of abilities likely to be cultivated to the honour of their profession and native land. We have not recently heard of any such appointments; and yet they form a very prominent feature in the purposes for which the Royal Academy was founded.

The other proceedings of this anniversary furnish little for observation or record, suitable to our columns. The British Institution—Canova and the Arts of Italy—the Memory of the Artists of Greece—Mr. Shee and the union of Poetry and Painting—and other appropriate sentiments, were honoured with vinous libations. Mr. Balmanno, the Honorary Secretary, prefaced the reading of the subscription list, amounting to above 400*l.*, with some remarks which seemed to us to go farther into detail than was absolutely needful; but this gentleman has been from first to last so zealous a friend to the Fund, and has done so much to promote its interests, that even in questioning his judgment on this point, we must applaud his intention.

Somewhat of restlessness in their seats marked the conduct of a few of the party at the lower ends of the tables; and though curiosity is a potent stimulus, gentlemen ought to remember, that wherever one rises and walks to the top of a room for the purpose of hearing what is spoken more distinctly, others

and, taken altogether, we would recommend this volume as extremely amusing and instructive for youthful readers, and as a well-changed help to the memory of the elder and better informed in historical science.

The first book contains a sketch of ancient and modern Spain, its produce, government, religion, &c. We select a passage.—

"The Spanish horses, which are supposed to have been brought originally from Arabia, are proverbial for their beauty and fleetness. The sheep also of Spain have acquired much celebrity from the superior quality of their wool. They possess no beauty, for they are rather ill-looking than otherwise. And here we must not omit to mention, that these *very sheep*, which are called *Merinos*, and which the English graziers are now so anxious to cultivate, were, it is said, originally sent to Spain from a farm at Ryland in Gloucestershire by Edward III.; and it is not quite unworthy of remark, that after the lapse of 400 years and upwards, a present of the same kind, should be received by George III. from that country, which was originally indebted to one of his ancestors, for the sheep which have so long formed one of the principal sources of its revenue. It has been computed that Spain receives annually, no less a profit upon wool, than 80,000,000 rials, a sum equivalent to 1,666,666*l.* 13*s.* 4*d.* of our English money.

"The Spaniards, however, have been very jealous at the importation of Spanish sheep into France and England; but they need be under no apprehension as to the effect produced on their revenue from this circumstance, as far as relates to the latter country; for it is proved in England that the wool of the *Morinos* does become coarser in the space of a few years. The trial in France has been more fortunate, for M. Bourgoing asserts, that although the wool does not possess that *pliability* and *softness*, which distinguishes the real Spanish wool, it is *equally fine*, and is in great request in the French manufactures for broad cloths. Climate has certainly an influence on the wool, for the descendants of English sheep sent to New South Wales, are found to become nearly equal to the Spanish *Merinos*."

Spain, finally conquered by Pompey, flourished as a Roman province during the period of the Emperors. After the lapse of five centuries the country became subject to the Goths, and was ruled by Gothic princes for a century and a half. The Moslems, who had for a considerable period infested the coasts of Spain, now invaded that fertile land in force, and about the beginning of the eighth century subdued it, by "defeating Roderick the last of the Goths."

"After the death of Roderick, Count Julian, untouched by the woes of his native land, continued his disgraceful intrigues with Musa, whom he strongly advised to prosecute his conquests, and proceed immediately to Toledo. The march of the Moorish ge-

neral Tarik, was directed through the Sierra Morena, and his success and progress were astonishingly rapid. The city of Toledo, however, after a brave resistance, obtained an honourable capitulation, and the Jews, who had assisted the Moslems, were rewarded with peculiar benefits and privileges. Indeed, the friendship between these two people continued indissoluble, until the final expulsion of the Moors from Spain. Their former animosity was forgotten, and mutual support and protection formed the tie which now bound them in the closest bonds of amity. Murcia, Leon, and several other cities, submitted to the conquerors; the surrender of Medina Celi, was, however, the most splendid and lucrative of all the conquests of Tarik. Among the spoils of value; was the celebrated table of emerald, having three hundred and sixty feet of massy gold, enriched with emeralds and pearls, brought originally from the east by the Romans; acquired by the Goths at the pillage of Rome; seized by Tarik at the siege of Medina Celi, and presented by him to the throne of Damascus.

"Musa, who had remained quietly in Africa till this period, began, at length, to feel jealous of the renown and fame acquired by Tarik, whose victorious arms were attended by the most brilliant conquests. He had returned in triumph to Toledo, when Musa cited the 'victorious chief to appear before him; investigated his every action with the most scrupulous jealousy; demanded a strict account of all the spoils he had taken, and finally threw him into prison. He then proceeded to visit every part of Spain, and even crossed the Pyrenees, while his unfortunate rival and forerunner languished in a dungeon, from whence he was released by the express command of the caliph.

"Musa himself was now accused of dangerous and ambitious intentions, and summoned to Damascus, in order to answer the several charges preferred against him. He refused to obey; but a messenger in the name of the Commander of the Faithful arrested him in the camp, and conveyed him to the presence of the caliph, but his march resembled that of a triumphant rather than a captive general. Four hundred Gothic nobles, eighteen thousand female slaves, an immense quantity of gold and silver, and other precious articles preceded him, and attracted the admiring gaze of the inhabitants of those countries through which he passed, from Ceuta to Damascus. Upon a strict investigation of his conduct, he was found guilty of peculation, and under the decent pretence of a holy pilgrimage, was banished to Mecca, where he died of a broken heart. Previous to the execution of this sentence, he had the misfortune of hearing that his son, Abdalaziz, a man of mild and peaceable disposition, was arrested on the plea of having been induced by his wife Eg-lona, (the widow of Roderick) to form the ambitious design of erecting a kingdom independent of the Caliph. If such were his designs, they were most unpropitious, for he was put to death by his followers. His head was sent to Damascus, and inhumanly

exhibited to his father, who, upon being asked if he knew those features? "Yes," replied the unfortunate old man, "I know them, and I imprecate the same, a juster fate, on the authors of my son's death. Tarik" is supposed to have died in obscurity. Count Julian's fate is not ascertained, and his nephews are said to have experienced the ingratitude of the Moors; but the apostate Orpas, who forsook his country and his God, and exchanged the mitre for the turban, met with his well merited fate from the hands of Pelagius, the noble restorer of his country's fame.

This Pelagius headed the Spaniards who fled to the northern provinces, and founded the kingdom of Asturias, while the Moors took possession of the rest.

"The royal legion of Damascus was planted at Cordova; that of Enessa, at Seville; that of Kinnairn, or Chalcis, at Jaen; that of Palestine, at Algeziras, (which formerly belonged to Count Julian) and Medina Sidonia. Toledo became the residence of the natives of Persia and Yemen; while ten thousand horsemen of Syria and Irak, the most noble of the Arabian tribes, pitched their tents in the luxuriant environs of Granada."

In the heart of all this barbaric power stood the throne of Pelagius, the extent of whose kingdom was only twenty-five miles in length and twelve in breadth; but it was defended by barren rocks and noble spirits; and therefore remained firm and unbroken amid "the wreck of nations."

The kingdom of Navarre was also founded at the same era.

"When the Moors invaded Spain, some of the natives withdrew as we have seen to Asturias, while others found a refuge from slavery in the Pyrenees, where they lived independently, scattered about in various parts of the mountains. A certain hermit dying whose holy life and exemplary manners had greatly contributed to the harmony and prosperity of this unconnected community, his funeral was attended by 600 persons, including several nobles, and this meeting gave rise to the kingdom of Navarre. The inconveniences that had frequently arisen from occasional disputes, and which the deceased hermit had always settled, were now likely to become a serious evil, since there was no person to whom they could appeal for decision. At this critical juncture some one proposed electing a king, in whom the power of administering justice should be invested; the proposal met with a general assent, and the united suffrages of this little society conferred the honour on Garcias Ximenes, who died A. D. 758. His arms were a red shield

• In an old Arabian manuscript the following circumstance is related as having happened to Tarik upon his first landing. A poor woman approached him, fell at his feet and embraced them, telling him, at the same time, "that Spain was destined to be conquered by a stranger, having a mole on his right shoulder, and having one arm shorter than the other." In the prosecution of his conquests Tarik is said frequently to have reminded his soldiers of this circumstance.

without any hearing. At the battle of Tolosa, A. D. 1212, Sancho added chains and an emerald in the middle to commemorate his having broken the Moorish chain. The hermit's cell was the spot on which a royal palace was erected. A short time after this event, Charlemaigne A. D. 772, got possession of Navarre, which, with part of Biscay and Catalonia, constituted a French province. On the dissolution of his vast empire, the governors seized the province, assuming first the title of counts, and eventually of kings.

From A. D. 716 to 1492, when the Moorish monarchy of Grenada was destroyed, the history of the wars between the Christians and Moslems in Spain, is one chain of glorious adventure, heroic display, revolution, and bloodshed. The accounts are interesting, and full of matter for speculation to the philosopher; and many of the events, hitherto unimpaired, suggest fine subjects for the pen of the poet, and the pencil of the painter. We quote what relates to the foundation of the Inquisition about the year 1220.

"In the mean while James I. king of Arragon, succeeded Peter his father, who was slain in an engagement before the castle of Murrelle, in Gascony. He had taken arms in defence of the Albigenses\*, inhabitants of Alby, in the Pays de Vaud, whom the Church of Rome persecuted because of their dissenting from her superstitions. Simon de Montfort, earl of Leicester, was employed as the leader of this impious enterprise, and the celebrated St. Dominick signified himself particularly in the establishing at Toulouse [sic] a holy commission to try and punish these heretics. By the command of St. Do-

minick, and under his immediate eye, the fertile provinces of Languedoc and Gascony, were over-run by the soldiers of this Catholic crusade, who spread death and destruction in every direction. And the benefits of the holy commission were judged to be so great, that it henceforth became a permanent establishment, known by the name of the Inquisition.

We may mention, that "The ancient dukes of Spain were generals, and they had the privilege of coining money. Hence the coin *ducalo*, or *ducato*. Its value varies: at Madrid, Seville, and Cadiz, it is worth 4s. 11d. at Barcelona, Saragossa, Valencia, &c. it is sometimes worth 6s. 2d. sometimes 5s. 10d. and a fraction."

Having now quoted enough to show the manner in which the authoress has executed her task, we shall not advert at all to the more modern history of Spain, from the accession of Ferdinand and Isabella to the union of the Crowns of Leon and Castile. We shall merely add, that some antiquarian notes are to be found in the work, and that it has many anecdotes of different nations agreeably interspersed. The dates are generally accurate; but we observed two or three (probably typographical errors) which require revision, and also a few grammatical inaccuracies, which should be removed in ensuing editions. Line 4 from the bottom, p. 178, and l. 6 from the top 288, are instances of this: in the former "was" should be "had," and in the latter, "perfectly" should be "quite." We will not, however, part in censure: the publication is calculated to be very useful, and is a valuable addition to the class to which it pertains.

*Letters (Tully's) written during a Ten Years' Residence at the Court of Tripoli, &c. with coloured Plates. 2 vols. 8vo. pp. 707. London, 1820.*

Having amongst other unavoidable omissions so long neglected this amusing and deservedly popular work, we feel much pleasure in being at length enabled to make the *anecdote honorable*; and when we add, that it falls to our lot to do so with a *third edition*, and in an octavo form, the fair author will, it is hoped, do us the justice to believe that we have not intentionally overlooked a production which has met so flattering a reception with the public.

Although the gallant and successful attack of the fleet under Lord Exmouth, has, in addition to liberating the unfortunate christian slaves, repressed, if not entirely removed the system of piracy, which the Barbary powers had, to the disgrace of civilization established so long; it has neither tended to produce greater confidence, nor increase to any considerable extent their commercial intercourse with the nations of Europe. Consequently nothing that is calculated to make us better acquainted with the manners and customs of the people or their governments, has by any means diminished, while the same impenetrable mystery in which religious dogmas and jealous habits have hitherto concealed them, only stimulates curiosity, par-

ticularly towards those works that bear internal evidence of having been prepared on the very spot where the facts they relate occurred, or in which the manners and customs described, still continue to prevail in all their original force. Such is the case with regard to the volumes before us, which were written by the sister-in-law of the late Mr. Tully, British Consul General at the court of Tripoli; between whose family and that of the bashaw, the closest intimacy subsisted for many years.

Previous to our giving any of the singular anecdotes with which these letters abound, our readers will perhaps be pleased to know something of the place in which the author collected her materials. It is thus described—

"Previous to entering the Bay of Tripoli, a few miles from the land, the country is rendered picturesque by various tints of beautiful verdure: no object whatever seems to interrupt the evenness of the soil, which is of a light colour, almost white, and interspersed with long avenues of trees; for such is the appearance of the numerous palms planted in regular rows, and kept in the finest order. Their immense branches, coarse when near, are neat and distinct at a distance. The land lying low and very level, the naked stems of these trees are scarcely seen, and the plantations of dates seem to extend for many miles in luxuriant woods and groves. On a nearer view, they present a more straggling appearance, and afford neither shelter nor shade from the burning atmosphere which every where surrounds them. The whole of the town appears in a semicircle, some time before reaching the harbour's mouth. The extreme whiteness of square flat buildings covered with lime, which in this climate encounters the sun's fiercest rays, is very striking. The baths form clusters of cupolas very large, to the number of eight or ten crowded together in different parts of the town. The mosques have in general a small plantation of Indian figs and date-trees growing close to them, which, at a distance, appearing to be so many rich gardens in different parts of the town, give the whole city, in the eyes of an European, an aspect truly novel and pleasing. On entering the harbour, the town begins to discover dilapidations from the destructive hand of time, large hills of rubbish appearing in various parts offit. The castle, or royal palace, where the bashaw resides, is at the east end of the town, within the walls, with a dock-yard adjoining, where the bey, (the bashaw's eldest son, and heir to the throne) builds his cruisers. This castle is very ancient, and is enclosed by a strong high wall which appears impregnable; but it has lost all symmetry on the inside, from the innumerable additions made to contain the different branches of the royal family; for there is scarcely an instance of any of the blood royal, as far as the bashaw's great grandchildren, living without the castle walls. These buildings have increased it by degrees to a little irregular town."

As our extracts will frequently relate to events which took place in the bashaw's castle, we shall pass over the early part of

+ This is confusedly written: the historian, we presume, means by "this event," the election of Ximenes; but the intervening date, relating to a subsequent act perplexes the sense.

Ed.

\* This sect originally sprang up in Armenia, under the name of *Paulicians*, and from thence spread over Europe under various names. In England, the Lollards; in Holland, the Waldenses; in Bohemia, the Hussites; in France, the Albigenses, all originated from the same source. As the human mind became enlightened, their doctrine, which was at first closely interwoven with mystic error, became gradually more perfect; till at length, purified by persecution, and the lapse of ages, it formed the basis of that religion, which has emancipated the greater part of Europe from the slavery of superstition.

A. D. 660. In the time of Constantine Syllanus, the founder of the sect, who lived during the reign of Constant II. emperor of the east, the Bible was solely confined to the clergy. A copy of this valuable book having fallen into his hands, he perused it with the most eager attention, communicated the contents to several of his friends, and made the New Testament the foundation of his actions as well as his faith.

Their tenets consisted in a rejection of the Old Testament; of the real presence in the Eucharist; the adoration of the virgin; the intercession of saints, and the worship of relics. They addressed the Deity himself in prayer, justly concluding, that there would be no presumption in approaching the Supreme Being, since our Saviour had taught and commanded us to address him by the affectionate title of "Our Father."

on the noble author, on the authority of a traveller who lately visited Venice.

"Imagine a young man, alternately gay, haughty, and timid; with an expression of countenance such as the pencil of Raphael would have traced to represent a great poet; carrying away, as if in the whirlwind of a lofty mind, all that approaches him; boasting of his noble birth like a fool, and as proud of his genius as a plebeian; more gratified by the publicity which a celebrated English heiress gave to his love letters, in a fit of revenge, than by the eulogiums which all the literary reviews in Europe have pronounced on his works; loving liberty, as the source of all that is generous and true, and woman as the most perfect image of the beau ideal of the fine arts; cherishing solitude, that first of all inspirations which may be compared to the nymph Egeria, whom the Roman legislator courted for genius and wisdom; sometimes silent, sometimes inspired by his interlocutors; speaking the elliptical language of genius, for the more one thinks, the less one explains; preferring in conversation moral speculations to literary dissertations, for it is better to discuss ideas than words; seizing with the vivacity of an imagination which magnifies all that it hears and sees, the ideas which in conversation escape the most illiterate men, and describing in fine poetry the emotions he has received, so that his poems are an extensive, animated, and pure mirror of external impressions, reflected by his imagination;—such are the principal traits of the character and habits of Lord Byron; and such, in my opinion, are the manifestations of a great poet.

"The present decline of literature, particularly in France, has inspired Lord Byron with a kind of literary misanthropy. 'Come, d'Argens,' Frederick II. used to say, when he was low-spirited, 'Describe to me the levy of Louis XV.,' and the great King would laugh until the tears started into his eyes. The same effect is produced on Lord Byron, by reading the vague sonorous poetry which we term imitative and descriptive, and which resounds in the ears without ever penetrating the soul or the understanding. He cannot endure the society of literary men, because he considers the greater number to be mean and envious—'*Idi i bei spiriti*,' he exclaims, *e m'accorsi che non erano ne belli ne spiritosi*.

"Lord Byron speaks fluently both the ancient and modern Greek, and also French, Italian, and Arabic. In the morning, when he is usually in a melancholy mood, he composes two hundred lines of poetry, sometimes in his closet, but more frequently while he is riding on horseback. He spends a long time at dinner, when he happens to meet with a friend or guest to please him; for though extremely temperate, he loves to prolong the conversation over the desert. After dinner he hears music, and then, animated by the emotions it excites, he shuts himself up in his closet to reduce to fifty the two hundred lines which the inspiration of the morning had reserved for evening meditation. Thus three hundred guineas are lost to Lord Byron; for Mr. Murray, the bookseller, pays

at the rate of two guineas per line for his manuscript poems. His abode at Venice is an old Abbey, surrounded by trees as sublime and gloomy as his genius. It has been remarked, that a residence in Venice cannot be very consonant to Lord Byron's habits; for being, like Alfieri, passionately fond of the exercise of riding on horseback, he must naturally feel some degree of constraint by being surrounded by canals and gondolas. But there is a sandy tract of ground in the vicinity of Venice, where he rides for three or four hours daily. Since he has lived in Italy, several of his works have been translated into the language of Dante. The influence of the climate and manners of the south, have however contributed to soften down the severity of the author of *Conrad and Lara*; for within the last two years he has produced *Don Juan* and *Beppo*, which, far from being developed in the obscure clouds of northern melancholy, perhaps display their Italian nudity under too transparent a veil.

"There is an anecdote related of Lord Byron, which reflects equal honour on his character and genius, and which is sufficient to refute the scandalous imputations cast upon him in the libels dictated by conjugal jealousy, or literary envy. An insurrection broke out in Scotland, on the very spot where Lord Byron's most extensive property is situated. The insurgents, on approaching the estates of the great poet, agreed among themselves to pass through his immeasurable fields one after another, so as to trace along them only a narrow path, whilst they had completely destroyed the corn of other noblemen in the neighbourhood. Pindar's house received, amidst the flames of Thebes, the interesting homage of a King, too devoted to glory not to respect the genius which confers it; but a hundred times happier is the poet who could quell the fury of rebellion, and whose two-fold distinction, of wealth and noble birth, were pardoned for the sake of his genius."

"The perusal of Lord Byron's works sufficiently demonstrates the influence of his life over his talent, and of his passions over his glory. At every page we recognise the poet in his hero:—Lara, Childe Harold, Manfred, all are Byron; all is misfortune and genius throughout his works, which are inspired by the despair which they in their turn inspire. The satirical misanthropy and bitter melancholy which have poisoned his soul, are evinced in that gloomy style of composition, which unfolds all the misery and anguish of present life, and pictures only despair for the future. Is it to ennoble great crimes, or to calumniate great virtues, that they are confounded in the same heart? Has not contempt of prejudice carried Lord Byron too far, by forcing him to despise even the definitions of the words *vice* and *virtue*, such as mankind has established them; and has he not adopted too indiscriminately the doubt which M. de Chateaubriand expressed in a moment of despair:—'*Savons-nous ce qui*

*est bien, savons-nous ce qui est mal?*' Lord Byron seems to conclude that we do not know it, or that we know it very imperfectly. When we examine the heart of a man discontented with his fate, and yet satisfied with his own conscience, can we wonder that such a man, being unable to blame himself for his misfortunes, should accuse external objects and circumstances—all that does not belong to himself—finally social order; and as he has not enjoyed through life the virtue natural to his own heart, may he not conclude that the evil is unconnected with himself, and that it exists in society? Hence comes the trampling down of received convictions, the transposition of contempt and glory, the misplacing of esteem and blame, of vice and virtue, of good and evil. Such is, in a few words, the secret of the melancholy of superior minds, which has created a new style in literature, animated by contempt of mankind and love of humanity. The misery of a virtuous man is a reproach on social institutions; and when this virtuous man is at the same time a man of genius, his genius avenges his misfortunes on society. Such was Rousseau and such is Byron."

#### ARCTIC ZOOLOGY.—(Concluded.)

(Extracted from Scoresby's valuable publication.)

"The Arctic Fox is rarely seen by the whale fishers, as these animals appear most in the winter months. The Polar, or Greenland Bear, the sovereign of arctic animals, is powerful and courageous; savage and sagacious; apparently clumsy, yet not inactive. His senses are extremely acute, especially his sight and smell. As he traverses extensive fields of ice, he mounts the hummocks and looks around for prey; on rearing his head and snuffing the breeze, he perceives the scent of the carrion of the whale at an immense distance. A piece of kreg thrown into a fire, draws him to a ship from the distance of miles. The kreg of the whale, however offensive to a human nose, is to him a banquet. Seals seem to be his most usual food; yet, from the extreme watchfulness of these creatures, he is often it is believed, kept fasting for weeks together. He seems to be equally at home on the ice as on land. He is found on field ice, above 200 miles from the shore. He can swim with the velocity of three miles an hour, and can accomplish some leagues without much inconvenience. He dives to a considerable distance, though not very frequently.

"He may be captured in the water without much danger; but on the ice, he has such power of resistance at command, that the experiment is hazardous. When pursued and attacked, he always turns upon his enemies. If struck with a lance, he is apt to seize it in his mouth, and either bite it in two, or wrest it out of the hand. If shot with a ball, unless he is struck in the head, in the heart, or in the shoulder, he is enraged rather than depressed, and falls with increased power upon his pursuers. When shot at a distance and able to escape, he has been observed to retire to the shelter of a

\* This story, to use the old newspaper language, "stands in need of confirmation." Ed.

hummock, until, as if conscious of the typical effect of cold, apply snow with his paws to the wound.

"Though possessed of courage and great means of defence; he always, unless urged by hunger, retreats before men. His general walk is slow and deliberate; but when impelled by danger or hunger, he proceeds by a galloping step; and, upon ice, can easily outrun any man.

"The flesh, when cleared of the fat, is well flavoured and savoury, especially the muscular part of the hump. I once treated my surgeon with a dinner of bear's hump, who knew not, for above a month afterwards, but that it was a beef-steak. The liver, I may observe as a curious fact, is hurtful and even deleterious; while the flesh and liver of the seal, on which it chiefly feeds, are nourishing and palatable. Sailors, who have inadvertently eaten the liver of bears, have almost always been sick after it: some have actually died; and the effect on others, has been to cause the skin to peel off their bodies. This is, perhaps, almost the only instance known of any part of the flesh of a quadruped proving unwholesome.

"Bears, though they have been known to eat one another, are remarkably affectionate to their young. The female, which has generally two at a birth, defends them with such zeal, and watches over them with such anxiety, that she sometimes falls a sacrifice to her maternal attachment. A pleasing and very extraordinary instance of sagacity in a mother bear was related to me by a credible and well informed person, who accompanied me in several voyages to the whaling, in the capacity of surgeon. This bear, with two cubs under its protection, was pursued across a field of ice, by a party of armed sailors. At first she seemed to urge the young ones to an increase of speed, by running before them, turning round, and manifesting, by a peculiar action and voice, her anxiety for their progress; but finding her pursuers gaining upon them, she carried, or pushed, or pitched them alternately forward, until she effected their escape. In throwing them before her, the little creatures are said to have placed themselves across her path, to receive the impulse; and, when projected some yards in advance, they ran onwards until she overtook them; when they alternately adjusted themselves for a second throw.

"Several instances of peculiar sagacity in these animals have been observed.

"A seal, lying on the middle of a large piece of ice, with a hole just before it, was marked out by a bear for its prey, and secured by the artifice of diving under the ice, and making its way to the hole by which the seal was prepared to retreat. The seal, however, observed its approach, and plunged into the water; but the bear instantly sprung upon it, and appeared, in about a minute afterwards, with the seal in its mouth.

"The captain of one of the whalers being anxious to procure a bear, without wounding the skin, made trial of the stratagem of

laying the noose of a rope in the snow, and placing a piece of kregg within it. A bear, ranging the neighbouring ice, was soon enticed to the spot by the smell of burning meat. He perceived the bait, approached, and seized it in his mouth; but his foot, at the same moment, by a jerk of the rope, being entangled in the noose, he pushed it off with the adjoining paw, and deliberately retired. After having eaten the piece he carried away with him, he returned. The noose, with another piece of kregg, being then replaced, he pushed the rope aside, and again walked triumphantly off with the kregg. A third time the noose was laid, but, excited to caution by the evident observation of the bear, the sailors buried the rope beneath the snow, and laid the bait in a deep hole dug in the centre. The bear once more approached, and the sailors were assured of their success. But bruhi, more sagacious than they expected, after snuffing about the place for a few moments, scraped the snow away with his paw, threw the rope aside, and again escaped unhurt with his prize.

"In the month of June 1812, a female bear, with two cubs, approached the ship I commanded, and was shot. The cubs, not attempting to escape, were taken alive. These animals, though at first evidently very unhappy, became at length, in some measure, reconciled to their situation; and, being tolerably tame, were allowed occasionally to go at large about the deck. While the ship was moored to a floe, a few days after they were taken, one of them, having a rope fastened round his neck, was thrown overboard. It immediately swam to the ice, got upon it, and attempted to escape. Finding itself, however, detained by the rope, it endeavoured to disengage itself in the following ingenious way. Near the edge of the floe was a crack in the ice, of a considerable length, but only 18 inches or 2 feet wide, and 3 or 4 feet deep. To this spot the bear returned; and when, on crossing the chasm, the bight of the rope fell into it, he placed himself across the opening; then suspending himself by his hind feet, with a leg on each side, he dropped his head and most part of his body into the chasm; and, with a foot applied to each side of the neck, attempted, for some minutes, to push the rope over his head. Finding this scheme ineffectual, he retired to the main ice, and, running with great impetuosity from the ship, gave a remarkable pull on the rope; then going backward a few steps, he repeated the jerk. At length, after repeated attempts to escape this way, every failure of which he announced by a significant growl, he yielded himself to his hard necessity, and lay down on the ice in angry and sullen silence.

"Accidents with bears occasionally occur, though not so many, by any means, as the ferocity of these animals, and the temerity of the sailors, who embrace every opportunity of attacking them, might lead one to expect."

"A bear which was attacked by a boat's crew, in the Spitzbergen Sea, made such a

formidable resistance that it was enabled to climb the side of the boat and take possession of it, while the intimidated crew fled for safety to the water, supporting themselves by the gunwale and rings of the boat, until, by the assistance of another party from their ship, it was shot as it sat indolently in the stern. And, with regard to narrow escapes, I shall only add, that a sailor, who was pursued on a field of ice by a bear, when at a considerable distance from assistance, preserved his life, by throwing down an article of clothing, whenever the bear gained upon him, on which it always suspended the pursuit, until it had examined it, and thus gave him time to obtain some advance. In this way, by means of a hat, a jacket, and a neck handkerchief, successively cast down, the progress of the bear was retarded, and the sailor escaped from the danger that threatened him, in the refuge afforded him by his vessel."

It would far exceed our limits even to catalogue the remainder of Captain Scoresby's zoological inquiries, including the rein-deer, sharks, birds, amphibians, &c. &c. We shall merely quote a passage concerning the *Squalus borealis*, or Greenland Shark, which, as far as we know, has not heretofore been described. "The sailors imagine this shark to be blind, because it pays not the least attention to the presence of a man; and is, indeed, so apparently stupid, that it never darts back when a blow is aimed at it with a knife or lance.

"The *squalus borealis* is 12 or 14 feet in length, sometimes more, and 6 or 8 feet in circumference. Its liver, which is remarkably oily, will fill a barrel. In its general form, it very much resembles the dog-fish. The opening of the mouth, which extends nearly across the lower part of the head, is 21 to 24 inches in width. The teeth are serrated in one jaw, and lancet-shaped and denticulated in the other. On each side, there are at least four or five rows; on one side sometimes seven or eight.

"This shark is one of the foes of the whale. It bites it and annoys it while living, and feeds on it when dead. It scoops hemispherical pieces out of its body, nearly as big as a person's head; and continues scooping and gorging lump after lump, until the whole cavity of its belly is filled. It is so insensible of pain, that though it has been run through the body with a knife and escaped; yet, after a while, I have seen it return again on the whale, at the very spot where it received its wounds. The heart is very small. It performs 6 or 8 pulsations in a minute; and continues its beating for some hours after taken out of the body. The body, also, though separated into any number of parts, gives evidence of life for a similar length of time. It is, therefore, extremely difficult to kill. It is actually unsafe to trust the hand in its mouth, though the head be separated from the body."

Again repeating our approbation of Mr. Scoresby's work, we refer our readers to it, for much further and curious matter, which we have not space to notice.

will do the same, and confusion be the consequence. Our Artists, however, may plead high pretence; for the House of Commons exhibited in the same way on the opening of the session by the King; and when summoned to the Peers, made such a rush at the train of Mr. Speaker, that the unlucky Chancellor of the Exchequer, Sir William Curtis, and others, not formed for struggling in a crowd, were, as we have been told, completely thrown out of the disorderly procession.

**EMATA.** In our notice of the *Royal Academy*, in our last Number, endeavouring to compress it as much as possible, a few words, but of very important meaning, were accidentally omitted. In mentioning Sir T. Lawrence's admirable portrait of Sir W. Grant, instead of "the late Sir W. Grant," it ought to have been, "the late Master of the Rolls, Sir W. Grant;"—that eminent lawyer and distinguished man being still alive, and an ornament to his country, though retired from his professional duties. Wilkie's *Reading of a Will* is not from *Waverley*, but as we imagine, the hint taken and the idea enlarged upon from another novel by the same author, quoted rather oddly in the catalogue.

#### MR. GLOVER'S EXHIBITION. [Bond Street.]

The difficulty of sustaining the character of variety, and keeping up attention by the works of any artist singly, is sufficiently known: in the present instance, however, there is in Mr. Glover's Exhibition, a display of talent fully equal to the task. He speaks a language which all understand; and the truth and locality of his representations carry conviction to every observing mind. There is also a greater variety of subject than we had anticipated. His cattle, many of which are the size of life, occupy a large portion, and are in themselves equally entitled to the admiration of the public at large, and to that of the amateur. Among his landscapes, Nos. 78, and 61, struck us as possessing peculiar interest; the former by the grandeur of its composition, the almost boundless extent of its distance, and the clearness and brilliancy of its execution;—the latter by the novelty of its character, as giving the most perfect idea of height and magnitude, with an effect of light catching the tops of the tallest trees, and chequering the level scene below. Upon the whole, we consider this collection to be entitled to very high eulogy, and eminently honourable to the artist and his country.

**LITERARY FUND.**—The anniversary of the Literary Fund was observed on Thursday; we purpose giving an account of it, with remarks on the subject, in our next.

#### ORIGINAL POETRY.

##### A MAD SONG.

Come ye to seek me? then bear me home;  
To the home which I covet—the silent tomb!  
For the lover is vanish'd, the bridegroom is come!

Here ye the chime of the marriage bell?  
You shall soon hear it sounding my funeral knell.  
Wartle your blithest strains to-day;  
Soon shall you chant a deeper lay.

Blind my head with a myrtle wreath;  
Twine it at eve with the garland of death!  
Scatter sweet flowers in my thorny way,—  
I shall wither as fast as they:  
The flowers that sparkle with morning dew,  
At evening my quiet grave shall strew.  
Clothe my form in a robe of white,  
So shall it serve for my shroud to-night.  
Pluck a lock from my raven hair,  
Which next to my heart this morn I'll wear:  
Pluck it at eve from my clay-cold breast,  
And give it to him that loves me best:  
And say to the youth, as ye bear me home,  
The lover is dead, though the bridegroom is come!  
April 24, 1820.

*The Hindoo Girl's Song, and her Lover's Reply.*

BY RICHARD RYAN.

Oh take this rose, and let it lie,  
Close to thy fond devoted heart;  
There let it live its hour and die,  
And never from the dear rose part.  
For yester-morn at noontide's hour,  
As wand'ring by the Ganges' stream,  
Oppress'd and faint, I sought a bower,  
And fairies sent me this sweet dream:  
I thought a sylph, with wings of light,  
Bade me select the brightest tree,  
And gather for my soul's delight  
A sun-bright rose, and give it thee.  
Then take this rose, and near thy heart,  
Oh! ever wear of love this token,  
And never from the dear rose part,  
For if 'tis lost my heart is broken!

##### THE REPLY.

You gave a rose, and bid me keep,  
From all my nuptials the fragrant gem;  
But, sad mischance, while deep in sleep,  
The lovely rose was stol'n by them.  
They kiss'd its leaves, and stole its dew,  
To scent their own delicious breath;  
And each to each the bright rose threw,  
Until it sunk from bliss to death.  
Then every leaf that late had giv'n,  
To nymphs as bright its odours sweet,  
Whose breath was as the breath of heav'n,  
Was trod beneath the fair one's feet.  
So like to thee, ill-fated flower,  
Is he, who trusts in beauty's eyes;  
For tho' in bliss glides many an hour,  
Yet grief o'erakes him ere he dies.

##### LINES.

Sweet river, by thy lacent flowing stream,  
I oftimes wander to recall the past,  
The fairy moments of Love's golden dream,  
Too gaily bright,—and oh! too pure to last.  
But most I haunt thy emerald tinted shore,  
When day's bright orb has sunk into the west,  
When all its sparkling beams are seen no more,  
Leaving the sky in roseate splendour hest;  
And in that hour my fancy flies to thee,  
Lost Julia! if thy blest spirit's free  
To look on earth from the divinity,  
Turn thy seraphic gaze in smiles on me,  
For I am still unchanged, tho' thou art gone—  
My wishes are for thee, and death alone.

#### BIOGRAPHY.

M. Balzac, a French architect, well known for his beautiful designs from Egyptian monuments, which appeared in a work published by order of the French government,

died in Paris, on the 31st of March, of an apoplectic fit. He was an excellent man and a skilful artist, animated by sincere enthusiasm for the advancement of art. He preserved the energy of youth to a very old age. M. Balzac also cultivated poetry with success. Besides a multitude of designs and architectural plans, he has left behind him a collection of poems published last year, also a comedy in verse, and other manuscript works.

**Deaths of Celebrated Men.**—Several men of great celebrity have died within a short period. On the 12th of April, Arthur Young, so universally known for his works on agriculture, died at the age of 79. Major Topham, a person distinguished not less for figuring in the periodical press, than in the circles of fashion; the author of two or three fables; the life of the miser Elves; and himself a very eccentric character, died last week, at Doncaster, in his 69th year. The Earl of Selkirk, and Colonel Mudge, are also among the recent deaths: the former distinguished as a practical political writer, the latter as a geographer and man of science. In France, the famous (Count) Volney, the author of the *Ruins of Empires*, and of many literary and political productions, died at the age of 65, in Paris. He was a native of Craon in Bretagne, a member of the French Academy, and a Peer, created by Buonaparte. Volney was a correspondent of the Literary Society of Calcutta, and has bequeathed 1200 francs of *rente* for ever, to found a premium for the best Essay on the Oriental Languages, and particularly on the simplification of their characters. His funeral obsequies were performed in the Church of St. Sulpice on the 28th, and his remains carried thence to the cemetery of P. Lachaise. Mr. Lévêque de Pouilly, the author of several esteemed works on antiquities, is also dead, at Rheims, having attained the great age of 86.

#### THE DRAMA.

**KING'S THEATRE.**—On Thursday, that deserving individual and highly accomplished singer, Madame Bellocchi, had her benefit, (which was brilliantly attended), and produced for the occasion Rossi's Opera of *Il Tancredi*, with Rossini's score. Madame Bellocchi sustained the part of Tancredi; the other characters were filled by Angriani, Torri, Deville, and Signoras Corri and Mori. The piece was delightfully performed, and the heroine hero often, in the course of her exertions, received the loudest tributes of admiration. She was peculiarly fine and expressive in *Tu che accendi questo core*; and grand in a duet, where

"Ecco le trombe  
Al campo, al campo!"

occurs. But we want space for particulars; and shall only add, that the gratification experienced by the audience was throughout of the highest order.

**DRURY LANE.**—An afterpiece of a musical cast, and called "*The Lady and the Devil*," was produced at this theatre on

Wednesday. It consists of the manoeuvres of a young lady (Miss Kelly), to induce her lover (Elliston) to take the last step, matrimony; and terminates by her efforts being crowned with success, when she confesses to those stratagems, which the gentleman on whom they were practised had erroneously imputed to the agency of the Devil. Mrs. Bland has some pretty airs, and Harley, as a valet of the Leporello genus, a good deal of work in the line which he fills so ably. The early scenes drag heavily, but there is a good deal of bustle towards the close;—the former will no doubt be compressed, and the latter heightened by practice in the performers; after which the piece will deserve to live its day, as an amusing entertainment. The four actors whom we have named, did much for it by their exertions and talents.

**COVENT GARDEN.**—In rivalry to the theatres of the out-skirts, a pseudo-dramatic thing, called *Montoni* or the *Phantom*, was brought out at Covent Garden on Wednesday. The public seems to have come over pretty generally to our opinion, and to be tired of these senseless exhibitions, which assuredly fulfil no one of the purposes of the stage, for they neither reflect the manners of the age, nor improve the morals of the people. As this drama experienced the reception it deserved, we shall not waste our readers' patience, by recording the virtues and vices of the defunct. Suffice it, that not even the powerful art of Macready, aided by the gentlemanly vigour and discrimination of Abbott, the sidelong glances of Miss Foote, and the clever though unfinished acting of Yates, could avert the doom of *Montoni*.

A new tragedy, on a subject of Roman history, has been accepted, and is forthcoming at Covent Garden. We hear a very favourable account of it as a spirited production, and one possessed of high dramatic qualities, from a literary friend of very competent judgment.

The Drury Lane bills also announce a new tragedy, entitled "*Virginius*," not unlikely to be founded on the same story with that at Covent Garden.

## VARIETIES.

**Bolany.**—A letter from New York mentions, that in the month of February, a large collection of seeds, &c. of the trees and plants of South America, were embarked for Havre, to be sent to the Central Museum of Natural History at Paris.

An astronomical observatory similar to that at Greenwich, is about to be erected at the Cape of Good Hope. Mr. F. Tallows, of Cambridge University, is appointed astronomer: the situation is finely adapted for the advancement of science.

**French Newspapers.**—The Parisian opinion newspapers present a curious appearance at present; in every column almost, you see a hiatus of ten lines or more, wherever the censors have objected to the article.

Thus the journals are like fragments of political essays, and the reader is left to fill up twenty blank spaces in every sheet, according to his imagination.

During the storm scene in *Lezar*, on Wednesday, one of the trees was so exceedingly agitated (by the performance), that it fell down flat on the stage. A hypercrite objected to it, that though, in an upright position, it looked something like a tree, when it lay flat it was *nothing but a tree!*

*Replay.*—A French officer quarrelling with a Swiss, reproached him with his country's vice, of fighting on either side for money, while "we Frenchmen, (said he), fight for honour." "Yes, sir, (replied the Swiss), every one fights for that which he must want!"

*Anecdote.*—A woman anxious to get into Notre Dame, whence a sacred procession had just issued with the *Verger*, who denied her entrance. "I want the blessing of the *Good God!*" said she: "The Good God is just gone for a walk," was the answer; "there is no use in being so troublesome—he is not at home!"

*Memorandum from an Artist's Sketch Book.*—I divide my sky and clouds into kings, lords, and commons. To the sun I give the powerful and regulating influence of the laws. The azure vault of heaven reigns as king. The light and fleecy clouds are the lords; while the commons are distinguished by those of a darker and graver tone, sometimes approaching to a threatening tone, and bearing in them the destructive qualities of a tempest. The due equilibrium of these, is health and fertility to the globe we inhabit. For it may be observed, that when the sky as king, continues, or asserts his prerogative to continue, too long, without the intervention of his subjects, the clouds; or, if he regards the fleecy or showery forms of the higher powers, in preference to the lower but more useful,—sterility and barrenness are the consequence; and when necessity compels him to call for their aid, they seldom fail to show their strength, and come clattering in, obscuring the bright vision of the monarch, defying even the power and influence of the sun. Should the bright clouds, or lords, obtain a partial attention, or be suffered to hold too long a sway, they will diminish or obscure the brilliancy of the sovereign, holding out only promises of supply; whereas a due mixture of the sober commons gives the fruitful showers and the abundant harvest.

It is no uncommon thing for artists to contrive some short sentence, or even a word, to assist their memory in the observations they leave occasion to make; as, R. Y. B. Ryb, Red, Yellow, Blue; or in a couplet—

"When the shadows are bright,  
What becomes of the light?"

An earthquake, in the direction of from east to west, and accompanied by a detonating sound, was experienced at Brest, on the 21st ult. For the few days preceding the sky was uncommonly serene, and the sun brilliant; and even at the time of the explo-

sion the moon shone delightfully, and the atmosphere was untroubled. Phenomena of this kind are much more rare on the coast of the ocean than on the Mediterranean shores.

## METEOROLOGICAL JOURNAL.

APRIL, 1820.

**Thursday, 20**—Thermometer from 39 to 45.  
Barometer from 29, 83 to 30, 96.  
Wind N. and N. E. 3 and 4.—Cloudy.  
Rain fallen, 1 of an inch.  
**Friday, 21**—Thermometer from 35 to 53.  
Barometer from 30, 16 to 30, 20.  
Wind N. & E. 1, and S. W. 4.—Morning cloudy, the rest of the day generally clear.  
**Saturday, 22**—Thermometer from 32 to 59.  
Barometer, from 30, 27 to 30, 29.  
Wind S. W. 4.—Generally clear till noon, when it became cloudy, and continued cloudy the rest of the day.  
**Sunday, 23**—Thermometer from 37 to 59.  
Barometer from 30, 39 to 30, 44.  
Wind W. N. W. 4 and N. E. 4.—Generally cloudy till the evening, when it became clear.

MAY, 1820.

**Monday, 1**—Thermometer from 29 to 52.  
Barometer from 30, 47 to 30, 49.  
Wind N. 4 and S. 4.—Clouds generally passing; clear at times. A white frost in the morning. The wind very variable to-day.  
**Tuesday, 2**—Thermometer from 35 to 59.  
Barometer from 30, 42 to 30, 31.  
Wind S. W. 1, N. W. 1, N. E. 4 and E. 4.—Generally cloudy; sunshine at times. The upper part of a halo formed between 6 and 7. A. M. strongly coloured.  
**Wednesday, 3**—Thermometer from 32 to 52.  
Barometer from 30, 32 to 30, 26.  
Wind E. 4 and S. E. 4.—Generally cloudy.  
Edmonton, Middlesex. JOHN ADAMS.  
Lat. 51. 37. 32. N.  
Lon. 0. 3. 51. W.

## TO CORRESPONDENTS.

The Editor would be glad to be enabled to send a letter to *Pala Nations*.

We are obliged to C. A. R. With regard to his first point, it does not appear to us to merit the description given: there never was and never shall be seen in the *Literary Gazette*, a word or idea calculated to offend the chaste female eye, or only the purest female heart: with regard to the second, it occurred in the business part, which occupies very little of the Editor's attention, and thus it might be rejected by him.

Our very ill-used Subscribers at Glasnevin, are informed that we decline all favours which cannot submit to the judgment necessary for sharing a miscellany for the public. Both time and manner of insertion must be left to our sense of fitness; and though, as grateful for kindnesses real or intended, and willing to oblige, we cannot fill our journal with particular intimations.

W. N. S., and other Correspondents, will please to receive the same intimation.

• It is our intention, in our next Number, to give an account of the *Anniversary of the Suppression of the Navy*, established by the *SURGEONS OF THE NAVY*—an Institution which appears to us to merit the particular observation of the public, not only as commencing from a class of men distinguished for attainments and science, but as a worthy example of prudent philanthropy, to be followed by other numerous bodies in the country.

**THE POETICAL WORKS of the Reverend GEORGE CRABBE.** Consisting of, I. Poems—II. The Borough—III. Tales—and IV. Tales of the Hall. 8 vols. 8vo. 2l. 18s. 6d. 5 vols. royal 8vo. 4l. 12s. 7 vols. small 8vo. 2l. 2s. Printed for John Murray, Albemarle Street.

With a Map, two vols. 8vo. 18s.  
**A CIRCUMSTANT NARRATIVE of the CAMPAIGN in SAXONY, in the Year 1813.** By BARON ODELBEN, one of the General Officers of the Army. To which are subjoined the Notes of M. Aubert de Veroy. Printed for John Murray, Albemarle Street.

In 8vo. 12s. Second Edition.  
**THE SKETCH BOOK of GUY RAY.** ON, Gent. Printed for John Murray, Albemarle Street.

In 8vo. 10s. 6d.  
**THE LIFE of FENELON,** with other Biographical and Historical Tracts. By CHARLES BUTLER, Esq. Printed for John Murray, Albemarle Street.

In 8vo. 18s.  
**PRINCIPLES of POLITICAL ECONOMY** considered, with a View to their Practical Application. By the Rev. T. B. MAUTHU, A. M. R. S. Professor of History and Political Economy in the East India College, Hertfordshire. Printed for John Murray, Albemarle Street.

**TRIVIAL POEMS and TRIOLETS.** By PATRICK CARRY, 1681. Edited, with a Preface, by Mr. WALTER SCOTT, Bart. 8vo. 18s. A very few Copies are printed.

\* Some specimens from the Poems of Patrick Carry, were published by the present possessor of the manuscript, in the Edinburgh Annual Register, for the year 1810. As they have attracted, from time to time, the notice of our poetical antiquaries, the Editor has been induced to place them beyond the chance of total obliteration, by the present very limited edition. The Reader is here introduced to a Bard of the seventeenth century, as staunch a cavalier, and nearly as good a poet as the celebrated Colonel Lovelace. Of the poems, only one manuscript copy is known to exist. It was presented to Mr. Walter Scott, the present possessor. The volume is a small duodecimo, written in a very neat hand, (the author's autograph), is perfect, and in tolerably good order, though scribbled on the blank leaves, and striped of its silver clasps and ornaments. The proportion of a unique manuscript is apt to over-rate its intrinsic merit; and yet the Editor cannot help being of opinion, that Carry's playfulness, gaiety, and ease of expression, both in satirical verses and political satire, entitle him to rank considerably above the "mob of gentlemen who write with ease."—*Abbotsford, April.*  
Printed for John Murray, Albemarle Street.

A new Edition, 4 vols. 8vo. 1l. 16s.  
**ANTAR, a Bedouen Romance.** Translated from the Arabic. By TERRICK HAMILTON, Esq. Oriental Secretary to the British Embassy at Constantinople.

4½ Vols. 2, 3, and 4, (never before published) are sold separately. 1l. 7s.  
Printed for John Murray, Albemarle Street.

In 8vo. 25s.  
**TRAVELS on the CONTINENT;** for the Use of Travellers.

\* This work will be found a very useful Guide to France, Switzerland, Italy, Germany, Portugal, Spain, Holland, Denmark, Sweden, Norway, and Russia; and contains an Account of the Antiquities of Italy; particularly those of Rome, Herculaneum, Pompeii, and Pausanias; together with minute lists of the most eminent Statues and Paintings which embellish the Continental Galleries. It gives accurate details of the expenses incurred by residing in various parts of France, Italy, &c.; so that persons who visit the Continent from economical motives, may select the most eligible places for permanent residence, and for the use of families, who may wish to avoid the expense attendant upon travelling with a courier; with instructions for invalids. Printed for John Murray, Albemarle Street.

In 8vo. 16s.  
**THE COMEDIES of ARISTOPHANES.** By T. MITCHELL, A. M. late Fellow of Sidney-Sussex College, Cambridge. Printed for John Murray, Albemarle Street.

In 8vo. 8s. 6d.  
**THE FALL of JERUSALEM. A Dramatic Poem.** By the Rev. H. H. MILMAN, Vicar of St. Mary's Reading, and late Fellow of Brasenose College, Oxford. Printed for John Murray, Albemarle Street.

In 8vo. 1s. 6d.  
**STANZAS to the MEMORY of the late KING.** By Mrs. HEMANS. Printed for John Murray, Albemarle Street.

*Crantz's Greenland.*  
Illustrated by Plates, 3 vols. 8vo. price 1l. 1s. boards, a New Edition, with considerable improvements and additions.

**THE HISTORY of GREENLAND,** including an Account of the Mission carried on by the United Brethren in that Country, with a Continuation to the present Time, illustrative Notes, and an Appendix, containing a Sketch of the Mission of the Brethren in Labrador. From the German, by DAVID CRANTZ. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Dr. Johnson declared that very few books had ever affected him so deeply, and that the man who did not relish the first part was no Philosopher, and he who could not enjoy the second no Christian.

*Horsley's Biblical Criticisms.*  
In 4 vols. 8vo. 2l. 2s. 6d.

**BIBLICAL CRITICISM on the BOOKS of the OLD TESTAMENT, and TRANSLATIONS of SACRED SONGS,** with Notes, Critical and Explanatory. By SAMUEL HORSLEY, LL. D. F. R. S. A. late Bishop of St. Asaph. London: Printed for Longman, Hurst, Rees, Orme, and Brown; and F. C. and J. Rivington. Of whom may be had, by the same Author, *Sermons*, 3 vols. 8vo. price 1l. 7s. boards. *Nine Sermons, on the Evidence of our Lord's Resurrection.* In 8vo. price 10s. 6d. boards. A Translation of the Psalms of David, with Notes, in 2 vols. 8vo. price 10s. boards.

*Adamson's Life of Camoens.*  
In 2 vols. crown 8vo. embellished with 5 Portraits, and numerous Woodcuts, 1l. 4s. 6d.

**MEMOIRS of the LIFE and WRITINGS of LUIS de CAMOENS.** By JOHN ADAMSON, F. R. S. A. London, Edinburgh, and Newcastle-upon-Tyne. London Printed for Longman, Hurst, Rees, Orme, and Brown.

A few Copies have been taken off on large paper, with proof impressions of the plates. 1l. 16s. 6d.

*Mr. Wordsworth's New Poems.*  
8vo. price 12s. 6d.

**THE RIVER DUDDON,** a Series of Sonnets; and LUDANOR and JULIA, with other Poems. By WILLIAM WORDSWORTH.

\* This Publication, together with Peter Bell, the Waggoner, and the Thanksgiving Ode, completes the third and last Volume of the author's Miscellaneous Poems.

Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author, *THE EXCURSION*, a Poem, in 4to. 2l. 2s.

*THE WHITE DOG of RYLLSTONE*, a Poem, in 4to. 1l. 1s.

**BIBLIOTHECA RARA et CURIOSA;** or a

Catalogue of a highly curious and interesting Collection of Books lately formed on the Continent, containing many singular and rare Works, on nearly every subject which has occupied the attention of the learned and curious; and including a considerable number of books not known in this country. Sold by Dooley and Sons, Broad Street, Royal Exchange. Price 1s. 6d. Where may be had, Catalogues of French, Italian, German, Spanish Books, &c. for 1820. These Catalogues may be had of Cambridge, Dublin; Wilson and Co. Edinburgh; Parker, Oxford; and Delight and Son, Cambridge.

**SIR ARTHUR CLARKE'S ESSAY on HATHING,** the 6th edition, revised and enlarged, is this day published, price 8s. 6d. Printed for Henry Colburn and Co. Conduit Street.

In 8vo. price 14s. boards.  
**THE PHILOSOPHY of LIFE.** By SIR CHARLES MORGAN, M. D. and Fellow of the Royal College of Physicians of London.

\* Sir C. Morgan has here presented us with a book containing a great deal of useful and entertaining information. We have determined to consider man as an organized being; to explain his structure, and how it is affected by various modes of treatment. To show the influence of climate, diet, &c. upon the human frame, and to connect this influence with the moral and intellectual character of the mind. In conducting this investigation he has had an opportunity of calling to his aid, not only the knowledge of his own peculiar profession, but the discoveries of modern Chemistry, interesting facts in natural history and Illustrations from general science, and the history of nations. The work contains many plain and sensible lessons on the best methods of keeping both mind and body in a healthy state.  
Printed for Henry Colburn and Co. Conduit Street.

In 4 handsome vols. 8vo. with portrait, price 2l. 2s. 6d.  
**THE WHOLE CORRESPONDENCE of ROBERT WALPOLE, EARL of ORFORD,** now first collected: comprising his Letters to the Hon. Mr. Comyn; Richard West, Esq.; Mr. Gray; Lady Hervey; George Montagu, Esq.; Rev. Mr. Breth; Richard Bentley, Esq.; the Countess of Albany; Hon. G. Hardinge; Rev. Wm. Cole; the Earl of Strafford; John Clive, Esq.; Mrs. Hannah More; David Hume; Lady Craven; Mr. Nicholls; W. Keocoe, Esq. Rev. Maon, &c. &c. Printed for Rodwell and Martin, Bond Street; and Henry Colburn and Co. Conduit Street.

In 4to. with plates, 3l. 3s. boards.  
**TRAVELS in various COUNTRIES of the EAST;** being a Continuation of Memoirs relating to European and Asiatic Turkey, &c. Edited by ROBERT WALPOLE, M. A. Containing the last Travels of the late Mr. Bruce; a Biographical Memoir of James a Journey from Busra to Simeon, an account of the remarkable Monuments of Antiquity, discovered at Sam, in Persia; Travels in Syria, Asia Minor, Greece, and the Archipelago; with Remarks on the Antiquities, Natural History, Manners, Customs, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, also edited by Mr. Walpole, Memoirs relating to European and Asiatic Turkey, &c. 3d edit. 4to. with plates, 3l. 3s. 6d.

*Southey's Life of Wesley.*  
In 2 vols. 8vo. with portraits, 1l. 10s. boards.  
**THE LIFE of WESLEY,** and the RISE and PROGRESS of METHODISM. By ROBERT SOUTHEY, Esq. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author, *Poetical Works*, 14 vols. foolscap 8vo. 3l. 10s. 6d. *History of Brazil*, 3 vols. 8vo. 7l. 10s. boards, with a Map.

*German Periodical Publications.*

The following German Publications may be read at Bossey and Sons, A. Broad Street, Royal Exchange.

**HEIDELBERGER JAHRBUCH.** Jens & Halle Literar. Zeitung & Wiener Jahrbuch der Literatur, at a Guinea per year.

*Longman and Co.'s Catalogue of Old Books for 1820, price 2s.*

**THE THIRD PART of a GENERAL CATALOGUE of OLD BOOKS for the Year 1820.** Containing the classes of Ancient Classics, Gr. et Lat.; Dictionaries, Grammar, and Bibliography, all Languages; Coins, Medals, Gems, Emblems, &c. all Languages. To be sold at the prefixed prices, by Longman, Hurst, Rees, Orme, and Brown, Peterborough Street.

† The Fourth, or concluding Part, of this extensive Catalogue, will appear on the 8th of June.

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane: Published every Saturday, by W. A. SIMPSON, at the Literary Gazette Office, 36, (Fleet-Street) Strand, where Communications (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 178.

SATURDAY, MAY 13, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Travels in Brazil, in the years 1815-6-7.* By Prince Maximilian, of Wied-Neuwied. London. 1820, 4to, pp. 335.

Our last Number commenced with the review of a *ci-devant* King historian: this begins with the notice of a Prince traveller and man of science. Certainly, the fraternity of authors must feel elevated by the junction of such distinguished auxiliaries. With the pursuits and talents of Prince Maximilian our readers are partially acquainted, as we have had several opportunities of laying before them accounts of his Highness's proceedings in Brazil. We shall therefore abstain from preface, and, taking it for granted that the writer and his course are sufficiently known, fall at once into the middle of his scientific labours, especially as a naturalist; and curious observations on the natives, whose haunts he has explored, under the protection of the government, and whose habits he has described more minutely than any preceding traveller.

The first excursion from Rio Janeiro, is to Cape Frio. The author set out on the 4th of August, and almost immediately got into the heart of scenery of the grandest kind, and teeming with botanical and animal wonders. A brief extract here will afford an idea of the country, and of the author's inquiries and mode of stating their result.

The forest itself was a dark wilderness of ancient trees of colossal magnitude, composed of the *minasa*, *tiguan vite*, *bomba*, *bigonasia*, and others, which as usual, were attended by a number of parasite plants, such as *brometia*, *epidendrum*, *passiflora*, *haskinia*, *banisteria*, &c. the climbing stems of which are rooted in the ground, while their leaves and flowers occupy only the highest summits of their supporters; they cannot therefore be examined without cutting down one of those gigantic monarchs of the forest, the extreme hardness of whose wood often defies the sharpest axe. Among these creeping plants, a *banhinia* is very remarkable: its strong woody branches always grow in alternate arcs of circles: the concavity of each arc is as artificially hollowed, as if the gnawing chisel of a statuary had been employed for the purpose, and on the opposite

side convex side is a short blunt thorn. This singular plant, which might easily be mistaken for a production of art, climbs into the tops of the highest trees. Its leaf is small and bilobed. But I never saw the flower, though the plant itself is very common. The odour exhaled by many of these creeping plants is strong, but extremely various: the *cipo craro* smells very agreeably, something like cloves; another, on the contrary, which is mentioned by La Condamine as growing on the banks of the Amazon, has the smell of garlic. Many of them shoot downwards long branches, which take root; thus impeding the progress of the traveller, who must cut them down before he can proceed. Such pendent branches, when agitated by the wind, frequently inflict severe blows on the traveller in these forests. In general, vegetation is so luxuriant in these climates, that every old tree we saw presented a botanical garden of plants, often difficult to come at, and certainly for the most part unknown.

We shot many fine birds here: amongst others, the *trogon viridis* of Linnaeus was very common; his voice and oft-repeated whistle, sinking from high to low, is every where heard. We soon learned to imitate it, and could thus easily entice the bird, which settled on low branches near us, where we could shoot it with ease. Woodpeckers, of different beautiful species, were equally numerous. We often killed great numbers of the little parrots with a wedge-shaped tail, here called *tiribas*. Towards evening I had the good fortune to obtain the *pacó*, or red-necked magpie of Azara. This is a beautiful black bird, of the size of a crow, the fore-part of the neck of a brilliant red colour. Mr. Sellow did not find many new plants; but he frequently met with the *alatroemeria ligata*, bearing a red and white striped flower. He also caught a snake, which, though very common here, is the most beautiful of its species. This animal is known in the country by the names of *cobra coral*, or *cocaça*; but it must not be confounded with the *cocaça* described by Lacépède and others. The name of coral-snake is most justly assigned to it; the most brilliant scarlet alternates on its smooth body with black and greenish white rings, so that this innocent reptile may be compared with a string of variegated beads. I have frequently preserved it in spirits of wine; but could never succeed in retaining its fine red colour. In the Linnaean system this species of snake has doubtless been described by the name of *coluber fulvius*, from specimens which had lost their splendid hues in spirits.

From Cape Frio the Prince journeyed across the country to St. Salvador, on

the river Paraíba. We copy the most novel particulars.—

The route over a sandy soil was fatiguing, but the magnificent scenery of the forest richly indemnified us for every exertion. Upon the trunk of a tree which grew obliquely, I found a lead-coloured snake six or seven feet long, which I shall denominate *coluber plumbeus*. It suffered us all to ride past without moving. I had desired one of my hunters to shoot it, but a negro, who carried the plants we collected, was with great difficulty prevailed upon to carry this large, wholly innoxious animal, which we tied up in a cloth at the end of a long stick, across his shoulders. After he had gone a considerable distance, he perceived a slight motion in his burden, and was so terrified, that he threw it down and ran away.

Near the river Ostras, before you reach the sea-beach again by this road, you pass over some hills, which are for the most part covered with a species of reed from thirty to forty feet in height, called *taguarrum*, or the great cane. Its colossal stems, which are as much as six inches in diameter, shoot upwards, and have a gentle bend at the top: the leaves are feathery, and upon the branches are short strong thorns which render such a barrier impenetrable. This kind of bamboo forms extremely intricate thickets, which from their numerous dry leaves and their withered sheaths produce, with the slightest wind, a peculiar rustling noise. They are extremely welcome to the hunter; for on cutting off such a reed below the joint, the stem of the younger shoots is found to be full of a cool pleasant liquid, though of a rather flat, sweetish taste, which immediately quenches the most burning thirst. This remarkable plant loves mountainous, dry situations; it therefore abounds particularly in the capitania of Minas Gerais, where drinking-vessels are made out of its stems.

At St. Fidelis a visit is paid to a tribe of the Puris, whose good-will had been previously secured by presents. The author thus relates the circumstances—

We had scarcely left the house the next morning, when we perceived the Indians coming out of the woods. We hastened to meet them, treated them immediately with brandy, and accompanied them to the forest. When we rode round the sugar-works of the

• The length of this animal was six feet, one inch, four lines; it had two hundred and twenty-four divisions on the belly, and seventy-nine pair of tail-scales. The upper parts are of a dark lead colour; the lower of a fine yellowish white, shining like porcelain.

*fazenda*, we found the whole horde of the Puris lying on the grass. The groups of naked brown figures presented a most singular and highly interesting spectacle. Men, women, and children, were huddled together, and contemplated us with curious but timid looks. They had all adorned themselves as much as possible: only a few of the women wore a cloth round the waist or over the breast; but most of them were without any covering. Some of the men had by way of ornament a piece of the skin of a monkey, of the kind called *mono (teles)* fastened round their brows; and we observed also a few who had cut off their hair quite close. The women carried their little children partly in loudages made of bass, which were fastened over the right shoulder; others carried them on their backs, supported by broad bandages passing over the forehead. This is the manner in which they usually carry their baskets of provisions when they travel. Some of the men and girls were much painted; they had a red spot on the forehead and cheeks, and some of them red stripes on the face; others had black stripes lengthwise, and transverse strokes with dots over the body; and many of the little children were marked all over, like a leopard, with little black dots. This painting seems to be arbitrary, and to be regulated by their individual taste. Some of the girls wore a certain kind of ribbons round their heads; and the females in general fasten a bandage of bass or cord tightly round the wrists and ankles, in order, as they say, to make those parts small and elegant.

The figure of the men is in general robust, squat, and often very muscular; the head large and round; the face broad, with mostly high cheek-bones; the eyes black, small, and sometimes oblique; the nose short and broad, and their teeth very white: but some were distinguished by sharp features, small aquiline noses, and very lively eyes, which in very few of them have a pleasing look, but in most a grave, gloomy, and cunning expression, shaded by their projecting foreheads.

One of the men was distinguished from all the rest by his Calmuck physiognomy; he had a large round head, the hair of which was all cut to an inch in length; a very muscular robust body; a short thick neck; a broad flat face; his eyes, which were placed obliquely, were rather larger than those of the Calmucks usually are, very black, staring, and wild; the eye-brows were black, bushy, and much arched; the nose small, but with wide nostrils; the lips rather thick. This fellow, who, as our attendants said, had never been seen here before, appeared to us all so formidable, that we unanimously declared we should not like to meet him alone unarmed in a solitary place. The Puris are in general very short, and all the Brazilian tribes are inferior in this respect to the Europeans, and even to the Negroes. All the men here carried their weapons, consisting of long bows and arrows, in their hands.

Fire, which the Puris call *poté*, is a prime necessary of life with all the Brazilian tribes: they never suffer it to go out, and keep it up the whole night, because they would other-

wise, owing to the want of clothing, suffer severely from the cold; and because it is also attended with the important advantage of scaring all wild beasts from their huts. Such a habit is abandoned by the savages without regret, when the adjacent country no longer supplies them with a sufficiency of food; they then remove to other parts where they find greater abundance of monkeys, swine, deer, *paca*, *aguti*, and other game. In this neighbourhood the Puris are reported to have shot a great number of the bearded ape, and they in fact offered to sell us several half-roasted pieces of that animal; one of these was a head, the other a breast with the arms, but without the head; a truly disgusting sight! especially because they roast all their game with the skin on, which is thus scorched black. These tough half-ran dainties they tear in pieces with their strong white teeth. They are said to devour in the same manner human flesh out of revenge; but as for their eating their own deceased relations, as a last token of affection, according to the report of some early writers, no trace of such a custom is to be found, at least in our times, among the *Tapuyas* on the east coast. The Portuguese on the Paraíba universally assert that the Puris feast on the flesh of the enemies they have killed, and there really seems to be some truth in this assertion, as will appear in the sequel; but they would never confess it to us. When we questioned them on the subject, they answered that the Botocudos only had this custom. Maye relates that the Indians at Santa Gallo ate birds without plucking them. I never saw a savage do this; they even carefully take out the entrails, and probably had a mind to amuse the English traveller by shewing him some extraordinary trick.

In the huts there were great numbers of women and children; and in some of them several sleeping-nets, though in general there was only one in each hut. A Puris, on my offering him a knife, took down his sleeping-net and delivered it to me: others bartered away the bands of apes'-skin round their forehead, their necklaces, and the like. Mr. Freyreiss entered into a negotiation with one of the Puris for the purchase of his son, and offered him various articles in exchange. The women consulted aloud, in the singing tone peculiar to them, and some of them with gestures indicative of disapprobation; most of their words ended in *o*, and were drawn out, which produced a very loud and singular concert. It was evident that they were unwilling to part with the boy; but the head of the family, an elderly gray-looking man with good features, spoke a few words with great emphasis, and then stood for some time lost in thought with his eyes fixed on the ground: a shirt, two knives, a handkerchief, some strings of coloured glass beads, and some small mirrors, were successively given to him: he could not withstand this temptation: he went into the wood, and soon returned leading by the hand a boy, who was however ugly, and in some measure deformed, and was therefore rejected; hereupon he brought a second, who was accepted. It is incredible with what indifference

this boy heard his fate. He did not change countenance, or even take leave of his friends, but mounted cheerfully behind Mr. Freyreiss. This callous indifference on all occasions, whether agreeable or melancholy, is met with among all the American tribes. Joy and grief make no lively impression on them; they are seldom seen to laugh, and not often heard to speak very loud. Their most urgent craving is food; their stomach requires to be constantly filled; they accordingly eat uncommonly quick, with greedy looks, their whole attention being directed to their repast. But they are said to be equally capable of enduring hunger for a long time.

As we could not obtain flour at the *fazenda* to feed all these people, we considered of other means to satisfy the loud calls of their stomachs. The master of the house gave us a small hog, which we presented to them, telling them to shoot it themselves; so that we had an opportunity of seeing with what savage cruelty they prepare animals for their food. The hog was eating near the house; a Puris advanced softly, and shot it too high, under the back-bone; it ran away screaming, and dragging the arrow along with it. The savage then took a second arrow, shot the animal, while running, in the shoulder, and then caught it. Meantime the women had kindled a fire. When we all came up, they shot the animal again in the neck, to dispatch it, and then in the breast. It was not, however, yet dead; it lay screaming and bleeding profusely: but without regard to its cries, they threw it alive into the fire to singe off the hair, and laughed heartily at the groans which its sufferings extorted. It was not till our loudly expressed displeasure at this barbarity became more and more impatient, that one of them advanced, and plunged a knife into the breast of the much tortured animal; on which they scraped off the hair, and immediately cut it up and divided it. From the small size of the animal, many of them did not obtain a share, and went back grumbling to their woods.

Our ensuing extracts are taken from a portion of the work which relates to the route from St. Salvador to the river Espirito Santo, and thence to the Rio-douro.

The heat being very intense, we suffered much from thirst, which our young Puri taught us an infallible method of allaying. This was to break off the middle stiff leaves of the bromelias, in the corners of which very good water from the rain and dew collects; and this nectar is caught by applying the plant quickly to the mouth.

On the projecting points of the coast, we this day found stony hills, upon which grew a great number of slender wild cocoa-palms, the fine leaves of which proudly waved in the

Neither here, nor in the sequel, did I find among the savages any confirmation of what Mr. Freyreiss says in Eschwege's Journal of Brazil, namely, that the savages never eat the flesh of animals which they have killed themselves.

fresh sea-breeze. The oyster-cater was every where common, as well as plovers and sand-pipers. In a beautiful ancient forest we were highly amused with the loud notes of various birds, among which, as the evening approached, an owl (*scops*) was also heard; parrots screamed aloud, and the sweet call of the *jao* (*tinamus*) resounded far off in this multitudinous concert, through the solitary wilderness. We took up our night's lodging at the *Fazenda de Agô*, where maniocca, cotton, and coffee, are cultivated. Extensive woods, filled with all kinds of wild beasts, nearly adjoin the plantations on the land side. In the preceding night, a large ouce (*guaraceta, felis onca, lina*) had killed a mare belonging to the proprietor, whose hunters, with their dogs, had in vain searched the neighbouring forests. Not far from the *fazenda*, a lofty rounded insulated mountain, called Morro de Agô, rises from among the contiguous woods. It consists of rocks and steep naked precipices, and is surrounded by high hills; its summit is said to command a magnificent prospect. Near the dwellings I found a little marsh, where I was astonished, at night-fall, by the remarkable voice of a frog hitherto unknown to me: it sounded exactly like a tinman or brazer working with his hammer; only the sound was on the whole deeper or fuller. It was not till long afterwards that I became better acquainted with this animal, which, on account of its voice, is called by the Portuguese the smith. Another curiosity, was a thick bush, of a kind of *heliconia*, which we had not yet seen; and which constantly leads down the stalks of its flowers arching, at a certain height, and then turns up the end again; many flowers, with scarlet calices, cover the crooked part of the stalk, which is of an equally fine colour. This magnificent shrub formed a perfect bower.

Two of our hunters found in the wood a large venomous serpent. It lay quietly in a hollow, where it was not easy to get at it; one of them therefore mounted on a low tree, from which he shot the animal. This beautiful serpent is called in this country *curucuch*, attains the length of eight or nine feet and a considerable thickness, is of a pale reddish yellow colour, with a row of lozenge-shaped spots on the back. The form of the shields, scales and tail, shows that it is the great viper of the woods of Cayenne and Surinam, described, though rather incorrectly, by Daubenton, under the name of *lachesis*. Its bite is much dreaded, and persons who are wounded by it are said to die in less than six hours.

At Pedra de Agôa the author says—

As evening came on, the cattle that had been out grazing began to assemble; we observed among them a singular sheep, which we learnt on enquiry to be a cross of a ram and a she-goat. The animal greatly resembled its dam; it was thick, corpulent, and round, had soft goat's hair, and the horns turned rather more outwards.

In these forests, now that the summer was just setting in, numerous butterflies of vari-

ous kinds, especially *nymphalæ*, were fluttering about. We found here the remarkable bag-shaped nest of a little bird of the tody genus, which always builds near the nests of a certain species of wasps, (*marimbondo*.) for the purpose, as it is affirmed, of securing itself from the attacks of its enemies. I attempted to approach the nest of the bird, but was prevented by the wasps, which actually made their appearance immediately.

(To be concluded in our next.)

*The Poetical Decameron, or Ten Conversations on English Prose and Poetry, particularly of the Reigns of Elizabeth and James I.* By J. Payne Collier, of the Middle Temple. Edinburgh and London, 1820. Cr. 8vo. 2 vols.

Mr. Collier, whose debut upon the lettered stage is, we believe, made on the present occasion, has pitched upon a period for research and elucidation, which has unrivalled charms for the lovers of English literature. In this he has evinced not only a sound judgement but a highly laudable ambition; and it gives us pleasure to add, that considerable stores of bibliographical information are the result of his inquiries. Having read much on the subject to which he has devoted his pen, Mr. C. has thrown the results into the form of dialogue, in which the interlocutors, three friends of the names of Blount, Elliot, and Morton, maintain the conversation in a pleasant manner. Of course the Decameron is divided into ten sittings. In these, the author's object, while canvassing the productions of our early writers, seems to have been to shun as much as possible the common places of poetry, and to adduce at least as much novelty as his purpose could bear. Nor is it to be supposed that preceding labourers in the same rich field have left him gleanings only: so far from it, we look to see rich harvests gathered in for many seasons yet to come, even after that of Mr. Collier's reaping. It is true, however, that the course which he has adopted, has led him more into the examination of rarities, than into the development of unknown beauties. He is more of the antiquarian than of the poetical critic. And as a literary antiquarian, he has been rewarded by the discovery, among other scarce tracts, of the original novel on which Shakespeare founded his Twelfth Night;—a poem dedicated to Isaac Walton, the celebrated angler, with which his biographers were not acquainted;...an original poem by Thomas Churchyard, never before quoted;... Lord Morley's translation of Petrarch's

Triumphs;...Markham's heroic poem on Sir Richard Grenville;...and several other curious tracts, little, if at all known, even to the most diligent bibliophiles. These matters alone are sufficient to recommend the Poetical Decameron to a large class of readers; and Mr. C. has endeavoured to make it more generally acceptable by the way in which he has relieved its dryness.

We confess, that to our tastes it would have been more agreeable without a portion of this seasoning; but we have no doubt that it will render it more palatable and popular with the majority of our readers.

We extract a passage from the preface, to explain the author's own opinion on this point.

"With regard to the manner, the form of dialogue has been selected, as allowing more ease and familiarity of observation, and at the same time a greater facility of excursion from one book or from one subject to another. It is a saying of refined antiquity, that a meeting of friends should never consist of more than the Muses, or of fewer than the Graces: the latter has been chosen in this instance for greater convenience and simplicity, and as much diversity of character has been displayed as the nature of the conversations would easily allow. Congeniality of feeling was of course necessary, and different modifications of it was nearly all that could be attempted.

"There is but one of the succeeding conversations, the seventh, which can be properly called miscellaneous, for all the rest have one leading object, more or less strictly pursued. Thus in the first, a very rare poem of much talent by Fitzgeffrey, may be said to be the ground-work; all the digressions in their degrees contributing to illustrate it. The second treats particularly of the rise and progress of undramatic blank verse in English, used at least a century before the publication of *Paradise Lost*. The four next conversations are devoted to the origin and improvement of satirical poetry, of which Bishop Hall, with a little of what Lord Bacon calls "the varnish of boasting," falsely claims and has been generally admitted to be the earliest inventor or practitioner, when, in truth, he was preceded by several celebrated writers. The seventh contains a collection of curious poems, independently of such as the author had introduced in his progress in furtherance of the main designs. The eighth criticises an original novel, on which Shakespeare founded his "Twelfth Night," very recently discovered, and unknown to all his numerous editors: it also adverts to other productions to which our great dramatic bard was indebted. The ninth and tenth conversations embrace a review of many of the most rare productions for and against theatrical performances from the earliest times to the Restoration: it of course includes not a few interesting particulars illustrative of the history of the stage, and

some tracts that have hitherto escaped notice."

There is an induction, which contains some pertinent remarks on Shakspeare and his Commentators; after disposing of whom the author proceeds to his "First Conversation." With this, relating to Charles Fitzgeffrey's poem on the death of Sir Francis Drake, we shall not now meddle more than to quote two verses from that performance.

"Their enemies fled with such great hast,  
They left their roosts on the spit;  
Hens and chickens well crou'd and baste,  
Tables covered ready to sitte:

Wine and sugar they found good store  
Their guests were come unlook'd for."

"Ulysses with his Naue great  
In ten yeres space great valloft wome;  
Yet all this time did no such feate,  
As Drake within one yere hath doone.  
Both Turk and Pope and all our foes,  
Doe dread this Drake where ere he goe."

Neither shall we go through the intervening conversations, which dwell largely on the early English satirists, but content ourselves with quoting from the 7th and 8th, such extracts as will afford fair grounds for judging Mr. Collier as an author.

The seventh conversation turns on books of miscellaneous character, which may be styled literary curiosities. It sets out with Churchyard, who "began writing in the reign of Edward VI., but 1559 is the earliest date of any extant and known performance by him, and he did not cease to publish until after the death of Elizabeth. [A very rare work of Churchyard's is then mentioned, which seems to have been unknown to Chalmers, Warton, and Risson: *Bourne* says it is called] 'The Miserie of Flaynders, Calamitie of Fraunce, Misfortune of Portugall, Vniuersitue of Irelannde, Troubles of Scotlannde: And the blessed State of Englannde. Written by Tho. Churchyard, Gent. 1579.' Imprinted at London for Andrewe Munnscill. The size, you see, is the old small quarto, and is consists of only 20 leaves."

Parts of this poem might well apply to circumstances within our own recollection; for example, on the "*Calamitie of Fraunce*,"

"For lost in feld two hundred thousande men,  
Yet still their mindes on murder ran so faste  
They went about nothing but bloodshed then  
To fight it out, as long as life might last;  
Reverend did worke & weane an endlesse webbe  
Desire of will, a wofull thredde did spinne,  
The flood of hate, that neuer thinking of ebbe,  
A swelling sea of strife brought gushing in.  
The rooted wrathe had spread such branches out,

That leaues of loue were base on the bowe,  
Yet spitefull twigs began to be faste to sprout  
That from the harte the tree was rotten throue.  
No kindly sappe did comfort any sprale,  
No hark & stocke and bodye did decalle:  
So that it seemde the soile infected was  
With malice moods that smells of mischief greate.

Their golden lande, was turn'd to rustic Brus,  
And eke the thing wrought, as God had curst the soote;

The ground thought scorne to bryng forth frute  
in time,

The Vines did rotte, the blade would beare no  
corne,  
Like winter foule became the Sommers Prime,  
The pleasant plotts brought forth wilde brier &  
thorn

With Raine & storme the lande was vexed still:  
The ire of God the people could not slunne,  
Great grewe the grief that came by headstrong  
will,

And all these plagues by proude conceit begonne,  
That thought to rule perhappa past reasons lore;  
Threat that who please, my muse not tramde  
therefore."

And again—

"O Fraunce, who looke vpon thy bloodie waite,  
And notes but halfe the pagant thou hast plac'd,  
Will be therefore the wiser all their daies,  
Or at the least, will howrely bee afraide  
To plaie such pranks as thou poore Fraunce  
hast doon:

Thou hast a tyme and wretched care to run  
For others weale, that can good warning take;  
Thy neighbours haue had laisure to regard  
The harms of thee, and so a mirrour make  
Of thy greate doole and fulfilld destine harde.  
Can greater plagues bee seen in any soile  
Then reuill rage and hauocke euery waile!  
A ciuile warre, with wicked waile & spoile;  
A deadlie botche that strikes stoute harte by daie  
And kills by night the harmles in his bedde:  
O ciuile warre, thou hast a Hidra hedde;  
A Vipers kinde, a Serpentes nature throwr,  
A Spiders shape, a forme of vllie Toide,  
A Deuillish face, a shamelesse belidde browe,  
A bloodie hande at home & eke abroad."

Churchyard's picture of Scotland is also curious.

"Shall man that hath the reason to forbeare  
Be worse then beast? O God that fault forbid!  
Shall malice find a phase and sower there,  
Where such greate gifts ought lie like treasure  
hid?

Shall harts of men (the temple of the Lorde)  
Lodge murdier vile, & nourish foule discorde?  
Shall those that knowes what lawe & peace is  
worth  
Breake Lawe and Peace, and breede dissention  
atill?

The tree is bad that bryngs suche branches  
forth,  
The heddes are vaine, that shewes no deeper  
skill;  
The ground is nought that breeds such scratching  
brers,  
And soile not good where murder still spers."

The contrast with England shall finish our illustration.

"Here haue we scope to skippe or walke,  
To romme & plaie at base;  
Still roide of feare and free of minde,  
in euery pointe and cace,  
Heere frends maie meete and talke at will,  
the Prince and Lawe obaid;  
And another strange nor home borne childe,  
of Fortune stands afraide,  
Here hands doe reape the seeds thei sowe,  
and heads haue quiet sleepe;  
And wisdome gouerns so the worlde,  
that reason order keeps.

Here merce rules, and mildnesse reigns  
and peace greate plentie bryngs;  
And solace in his sweetest voice  
the Christmas carrowle syngs.  
Here frends maie feast, and triumph too,  
in surcite roide of ill;

And one the other welcome make  
with mirth and warme good will.  
The grounde it bryngs such blessing forth,  
that glad are forraigne all,  
Amid their want and hard extreams  
in fauour here to faull:  
Here wounded staets doe heale their harms  
and strangers still repaire;  
When mischief makes them marche abroad,  
and driue them in dispaire.  
Here thousands haunt and find relief,  
that are in beouie cace.  
And friendly folke with open armes  
doeth sillie soules embrace.  
Here things are cheape, and easily had,  
no soile the like can shoue;  
No state nor Kyngdome at this daie  
doeth in such plentie floure.  
The trau'lar that hath paste the worlde,  
and gone through many a lande:  
When he comes home, and notes these thyngs,  
to heauen holds vp hande;  
And mushe how this little plotte  
can yeild suche pleasures greate;  
It argues wheree suche graces growe,  
that God hath best the seate."

We wish we could say as much now!

This chapter also contains notices of Lewicke, who versified the well known story of Titus and Gisippus; of Markham, who wrote the tragedy of "Sir Richard Grenville, Knt.," of Constable, from whom four unprinted Sonnets are inserted; and of others, their contemporaries.

The last of Constable's sonnets, which are addressed "to Sir Philip Sydney's Soule," is a good specimen of the poetry of the age.

Great Alexander then did well declare  
How great was his united Kingdomes might,  
When eu'ry Captaine of his Army might  
After his death with mighty Kings compare:  
So now we see after thy death, how far  
Thou dost win in worth surpass each other  
Knight,

When we admire him as no mortal wight,  
In whom the least of all thy vertues are:  
One did of Macedon the King become.  
Another sat on the Egyptian throne,  
But only Alexander selfe had all:  
So courteous some, and some be liberrall,  
Some witty, wise, valliant, and learned some  
But King of all the vertues thou alone.

But we must apply the small remaining space which we can allot to the Eighth Conversation, which treats of the novel hitherto undiscovered, whence Shakspeare took the plot of *Twelfth Night*. The title of the book in which it is found is "Rich his Farewell to Militarie Profession; Containing very pleasant discourses fit for a peaceable time. Gathered together for the onely delight of the courteous Gentlemen both of *Englannde* and *Ireland*, for whose onely pleasure they were collected together, and vnto whom they are directed and dedicated. Newly augmented. By *Barnabe Riche*, Gentleman.—*Malui me diuitem esse quam vocari*."—Imprinted at London by G. E. for Thomas Adams, 1606."

And Mr. Collier thus proceeds:

"Morton. Was not Twelfth Night written before 1606, the date of Rich's book, where you say the original novel is inserted?

"*Bourne*. No; but if it were, I could still satisfy you that the novel in this volume was employed by Shakespeare. However, it seems agreed by the commentators, who have taken some pains upon the subject, that Twelfth Night was not written until after 1612. Mr. Chalmers says in 1613, and Mr. Tywhit, and after him Malone, in 1614. So that 6, 7, or 8 years most likely elapsed between the publication of Rich's work, in 1606, and the writing of Twelfth Night. • • I have never seen any other edition of Rich's *Farewell* but this of 1606, but independently of those words 'newly augmented,' I can decisively establish from the prefatory matter, that it must have been originally written and printed between 1578 and 1581: if, therefore, Twelfth Night had been our great dramatic poet's first, instead of being his last play, he might still have been indebted to this source.

"*Elliot*. What does the prefatory matter consist of?

"*Bourne*. The point I refer to is established by the epistle 'To the noble souldiours both of England and Ireland' for the author says in it, 'I remember that in my last work, intituled the *Alarum to England*, I promised to take in hand some other thing.' Therefore the '*Alarum to England*' immediately preceded what is before us, and that *Alarum* bears date in 1578.—In 1581 Rich published the first volume of his '*Strange and wonderful adventures of Do Simonides*,' so that the '*Farewell*' must have appeared between 1578 and 1581, or Rich could not have mentioned his '*Alarum to England*' as his last work.

"*Morton*. Is there any thing else in the volume to confirm the opinion that 'Rich his Farewell' was first printed much earlier than 1606?

"*Bourne*. There is; and the proof is remarkable on another account, from its reference to Sir Christopher Hatton, who is spoken of as alive, and who died in 1591. He appears to have been the 'Maister & vnderholder' of Barnabe Rich, and was himself a poet. In all probability he penned the fourth act of '*Tancred and Gismunda*,' in Dodsley's Collection, and if we may rely upon the authority of the writer of *Polimanteia* (who not publishing until four years after Sir C. Hatton's death) seems to have had no motive to flatter, he must have been a considerable poet. 'Then (says he) name but Hatton, the Muses favorite, the Church's music, Learnings Patron, my once poore lands ornament; the Courtiers grace, the Schollars countenance and the Guardes Capitaine.'

"*Elliot*. A fine specimen of the art of sinking in prose, for the ridicule of a new Mortuus.

"*Bourne*. I quote it for the inference, not for the style: 'Sir Christopher Hatton, L. Chancellor of England,' is inserted in the margin, and from hence it would seem that he had written much more than has come down to our time.

"*Morton*. Ritson only mentions an acrostic by him, and there is some doubt about that: 'the Church's music,' in what you read

from *Polimanteia*, would imply that he had translated Psalms, or at least, written some sacred poems. Horace Walpole, if I recollect rightly, attributes to a kinsman of Sir Christopher's a translation of the Psalms, not printed till 1644, and Wood assigns them to Jeremy Taylor. It is not impossible that they were in fact the work of Lord Chancellor Hatton."

The author indulges in several episodes, and then returns to Rich, as follows.

"*Bourne*. The word *Disconce* had a very undefined meaning at that time: Rich uses it to express what we now call novels or tales, and of these there are eight in this small 4to. volume, so that they are not of very considerable length. In an address 'to the Readers in general,' Rich observes: 'The Histories (altogether) are eight in number, whereof, the first, the second, the fifth, the seventh, and eight are tales that are but forged onely for delight; neither credible to be believed, nor hurtfull to be perused. The third, the fourth, and the sixth are Italian Histories written likewise for pleasure by maister L. B.'

"*Elliot*. And which of these is the foundation of Shakespeare's play?

"*Bourne*. The second. The commentators anticipated what has now fortunately occurred, that the original novel of Twelfth Night might, at some future time, be discovered. The likeness in parts is extremely strong, and indeed there will be no room for any doubt, whether Shakespeare did or did not employ it.—The history is entitled 'Of Apoloniuss and Silla,' and you will find that throughout Shakespeare has changed all the names, as indeed in such cases he frequently did.—The argument of the story is thus given after the title.

"*The Argument of the second Historie.*

"Apoloniuss, Duke, hauing spent a yeares seruice in the warres against the Turke, returning homeward with his companie by sea was driven by force of weather to the Ile of Cyprus, where he was well receiued by Pontus gouernour of the same Ile, with whom Silla, daughter to Pontus, fell so strangely in loue that after Apoloniuss was departed to Constantiнопole, Silla with one man followed, and coming to Constantiнопole, she serued Apoloniuss in the habite of a man, and after many pretie accidents falling out, she was knowne to Apoloniuss, who in requittall of her loue married her."

"*Morton*. Excepting the circumstance of Silla serving the duke in man's attire, and their subsequent marriage, the argument does not indicate any other resemblance to Shakespeare's play: Rich lays his scene in Constantiнопole, but Shakespeare in Illyria.

"*Elliot*. Sebastian and Olivia, or any persons answering to them, seem entirely omitted by Rich.

"*Bourne*. In the argument, not in the story: you would not wish to have the argument as long and as particular as the narrative: it cannot include every thing; notwithstanding, it was merely casting my eye over the argument that first led me to suspect a resemblance, which I afterwards

found most satisfactorily confirmed. The body of the history opens with various reflections on the influence of 'Daunc Error' in human affairs, and especially in those of love, after which it relates that Apoloniuss, 'a worthy Duke,' a very young man, who had leved an army and served against the Turk, while Constantiнопole was yet in the hands of the Christians, returning home after one year's victories, was compelled, by stress of weather, to seek shelter in Cyprus (or *Cyprus* as Rich calls it): he was here entertained very courteously by Pontus, the gouernor, who had a son named Sillio and a daughter named Silla: the latter soon fell desperately in love with Duke Apoloniuss, and 'used so great familiarity with him, as her honour might well permitte, and fed him with such amorous baits as the modesty of a maide could reasonably afford.'

"*Elliot*. Then does Sillio, brother to Silla, correspond with Shakespeare's Sebastian, brother to Viola?

"*Bourne*. Throughout.—Apoloniuss makes no return, and indeed scarcely seems to notice the attentions of the young lady, but with the first fair wind sails home to Constantiнопole. Thither Silla resolves to follow him, and is aided in her design by Pedro, a faithful servant, in whose company, and as whose sister, she embarks in a galley that happened to be preparing to quit the port."

Mr. Collier goes on to point out other coincidences. Silla is wrecked, but preserved in a chest, which she breaks open, and clothing herself in the male attire which it contains, travels to Constantiнопole, and presents herself to the Duke, who 'Perceiving him to be a proper smogne young man, gaue him contentuamente.' Silla at this time took upon herself her brother's name. We now come to Olivia, or the lady who in Rich's novel answers to her: she is called Iulina, and is represented as a young beautiful widow, whose husband had died lately, and left her extremely rich. Shakespeare thought it would have a better effect to describe her as a virgin whose brother was recently deceased. 'To this Lady Iulina, Apoloniuss became an earnest suter, and according to the manner of woces, besides faie wordes, sorrowfull sighes and piteous countenances, there must be sending of louing letters, Chaines, Braceletes, Bronches, Ringes, Tabletes, Gemmes, Iuels and presents, I know not what. So my Duke who in the time that he remained in the Ile of Cyprus, had no skill at all in the arte of Lowe, although it were more then half proffered vnto him, was now become a scholler in Loues Schoole, and had alreadie learned his first lesson; that is, to speake pitifully, to looke ruthfully, to promise largely, to serue diligently and to speake carefully: Now he was learning his second lesson, that is, to reward liberally, to giue bountiflully, to present willingly and to write louingly. Thus Apoloniuss was so busied in his new study that, I warrant you, there was no man that could challenge him for playing the truant, he followed his profession with so good will: And who must be the messenger to carrie

the tokens and love letters to the Lady Iulina but Silio his man: in him the Duke reposed his only confidence to goe between him and his Lady."

"*Elliot*. Now the resemblance begins to open upon us.

"*Bourne*. And it will grow more and more striking every minute. After some reflections on the cruel situation in which Silla, *alias* Silio, was placed, Rich goes on thus: 'Iulina now having many times taken the case of this young youth Silio, perceiving him to be of such excellent perfect grace, was so intangled with the often sight of this sweet temptation that she fell into as great a liking with the man, as the maister was with her self: And on a time Silio beyng sent from his maister with a message to the Lady Iulina, as he became very earnestly to sollicite in his maisters behale, Iulina interrupting him in his tale said: Silio, it is enough that you have said for your maister; from henceforth either speake for your self or say nothing at all. Silla, ashamed to heare these words, bega in her mind to accuse the blindness of Ione, that Iulina, neglecting the good of so noble a Duke, would preferre her love unto such a one as nature it selfe had denied to respence her liking.'

"*Elliot*. Ay, now we enter into the very heart of Shakespeare's play: *Le vrai peut quelquefois n'être pas vraisemblable*, and this was an instance, for your assertion did not at first seem borne out.

"*Bourne*. I thought you were at first a little incredulous; you seemed afraid of coming under the ironical censure of our old friend *Rabelais*, 'un homme de bon sens croit toujours qu'on lui dit & qu'il trouve par écrit.' We now come to Silla's brother Silio, the Sebastian of Shakespeare: Silio at the time of these transactions was in the interior of Africa, and was not like Sebastian wrecked in the same ship with Viola. Returning to Cyprus, he vows to discover Silla, and after various travels, he arrives at Constantinople, 'where as he was walking in an evening for his owne recreation on a pleasant greene yard without the walles of the Citie, he fortuned to meet with the Lady Iulina, who likewise had been abroad to take the aire; and as she sodainly cast her eyes upon Silio, thinking him to be her olde acquaintance, by reason they were so like one another, as you have heard before, said unto him, sir, Silio, if your hast be not the greater, I pray you let me have a little talke with you, seeing I have so luckily met you in this place.'

The rest of the resemblance is traced very satisfactorily; but we can only add, that the whole is worthy of the attention of the admirers (and who are not the admirers?) of Shakespeare.

In more minute particulars, we could instance to Mr. Collier, several curious facts, to show how very inadequately the foundations on which Shakespeare built, have been examined by his commentators. It is perhaps little known, for example, that the famous speech

"He that steals my purse, steals trash" is almost literally translated from an Italian poet of no mean rank; and that the whimsical definitions of Touchstone are to be found in the same language.

Mutius, an Italian, published in 1566, a treatise on duelling; the following are the heads of some of the chapters.

Of all kinds of lies that may be given.

Of the lie direct.

Of the lie hypochondriacal.

Of the lie general.

Of the lie special.

Of the immaterial lie.

#### LOUIS BUONAPARTE'S HOLLAND. [Second Notice.]

After disposing of his early life, his Ex-Majesty proceeds to the more important part of his history, as connected with the Buonapartean dynasty in Holland. We pass the preliminary forms acted by deputies, &c. under the authority of Napoleon: it is sufficient to say, that the denouement was the accession of King Louis, *nolens volens*, without being consulted about the business, in June, 1806. Upon this the monarch in spite of his teeth remarks, (using the third person, as he does throughout these volume.)—

"The existence of Louis in France became every day more insupportable. Without domestic comfort; without tranquillity; mute in the council; having no military occupation; seeing his functions in this respect confined to the introduction of officers for the purpose of administering the oath to them, and visiting the military school from time to time; bearing evident marks of disfavour; and few persons daring to visit him, he felt himself in a state of constraint and moral *appon*, which he could not have any longer supported, if events had not torn him from his position. "In Holland," he said to himself, "interests of various kinds, matters of necessity, and public affairs, will wholly occupy me. I shall bestow on my country all the affection, which I cannot display in my own family. I shall thus perhaps gradually recover from my physical and moral depression."

His address on receiving the crown, is worthy of being reprinted, as a specimen of the style of these days, though, unhappily for Louis, he had more sincerity in his declarations than was usual on such occasions.

On the 23d of June, Louis made his solemn entry into the Hague, and soon found that the indications of oppression from France, and the total negation of his purpose of free agency for the good of Holland, were but too deeply rooted in the system which was to be pursued towards him. Subsequent events are prefaced by a general view of the country, at the period of the accession; and his Majesty shows at least a strong desire to legislate justly and wisely on all points. A proof of the extent of this

family failing may be instanced in what he writes concerning the physicking of his new people.

"With regard to health, each province possessed a medical committee, subject to a general superintendent, who was connected with the ministry of the interior. But though this superintendent was one of the first physicians of the country, his instructions were obeyed with great difficulty. The committee of each province communicated with the government, agreeably to old habits, in the manner in which one college communicates with another. They seemed to think that the central point of the ministry was merely destined to collect the expression of the wishes of the provinces: they consumed too much time in deliberating.

"The King projected meliorations with regard to the health and salubrity of the country. Subject himself to a slow and extraordinary disease from the age of 22, he had been induced to reflect on this important object, and to convince himself of certain truths in this respect. Medicine is more than a mere name. A great number of plants possess real virtues, and there are remedies for many chronic diseases, whilst those of this description which cannot be cured are either supportable, such as the gout, the rheumatism, &c. or are few in number, and connected with organic defects; but then observation is difficult. When a physician has attained sufficient knowledge to enable him to become useful, he dies. Diseases and the effects of remedies differ in the case of each individual. What care and trouble are necessary to guard against mistaking one symptom for another, and to distinguish the different diseases! Reasoning is frequently belied by experience; because, in our wonderful organization, there are secrets and subtleties which escape, and will always escape all reasoning and research. Notwithstanding these circumstances, physicians act as if their science was certain. Rousseau was in the right when he said, '*Let us have medicine without Physicians*;' an expression full of good sense, which perfectly explains the difficulty of this science. The best mode of practice, except in the case of several acute diseases, which are subject to certain rules, and may be said to be completely under command, is not to set out from fixed principles, as in the exact sciences, but to study the effect of the remedies, and their difference in the same case in different constitutions.

"He would have wished to establish a college, for the purpose of collecting from all parts of the known world all possible remedies, and to diffuse and publish the knowledge of them throughout the kingdom. It was his opinion, that the measure, which is resorted to in times of contagion, ought to be adopted for diseases in ordinary times; that houses of convalescence should be established, where all deviation from the regimen and diet necessary for the recovery of the patient would be impossible. He wished also to establish a severe critical tribunal for physicians, to examine and decide on their conduct, and to publish the result of that examina-

tion in a particular journal every time a man died; and, on the other hand, to recompense all those who should cure remarkable diseases; to diminish the number of physicians; prohibit the sale of all medicines, which should not be of the first quality; to distribute them gratis to the poor, and in the villages. He had begun, at Amsterdam, the establishment of a royal laboratory, &c.

"There are certain contradictions or inconsistencies in society, which it is hardly possible to remark. For instance: What can be more essential to society than good physicians? and yet those who follow the medical profession are so numerous! How advantageous, therefore, would it be to diminish considerably the number! They ought to be distributed into several classes, for the purpose of pointing out to the public who are really the best, and preventing patients from misplacing their confidence, as they so frequently do. For two other projects he felt a warm interest, and meant to have bestowed on them the utmost attention. The first of these was, the ridding the country as much as possible, and by degrees, of mutilated, deformed, and rickety persons, and of all the children of a defective conformation, by facilitating their establishment in the colonies, by preventing marriages between people of this description, and by preventing the settlement, or even the long residence of deformed foreigners in the kingdom. The second project was, to enter into an arrangement with other countries, for the purpose of extirpating from Europe venereal diseases, the yellow fever, small pox, &c.; to establish, for that purpose, lazarettos; and to adopt measures analogous to those resorted to as a security against the plague. Is not society established for the alleviation of the lot of unfortunate mortals; a race visibly degenerated, and placed here below as in a place of trial and purification?"

There is really something ludicrous in these schemes: they seem more calculated for burlesque royalty on the stage, than for *bona fide* kingship in real life! Yet the intentions of Louis were pure, though his head's weakness is not a little demonstrated by such absurdities.

The manner in which Napoleon persecuted Holland, and endeavoured to make his brother the agent of his tyranny, is absolutely incredible. One extract will display it in full force; and English readers will find, in Italian, a singular reason assigned for the hatred which the *et-dearest* Emperor entertained towards the Dutch.

"The King was frequently unable to repress a painful foreboding with respect to the intentions and sentiments of his brother towards him; but he in vain attempted to discover the object of them. The thought, that he, perhaps, wished to unite Holland to his dominions through him, and by making a sacrifice of him, frequently came across his mind; but he could not bring himself seriously to entertain this idea. How could he believe, that he wished to make his name,

his brother, his own work, an instrument of perfidy, and of death for a whole people!! He endeavoured to discover other reasons, and persuaded himself, that there were some secret causes for such conduct. In the first place, the resemblance of the Dutch to the English might render the Emperor their enemy.—In the next place, said he to himself, he wishes, perhaps, the introduction of the conscription, that the Dutch, the neighbours of the French, may not enjoy an advantage over them. And, lastly, he wishes a bankruptcy, because he believes that Holland will then be able to supply France abundantly with troops, vessels, and money."

A remarkable communication previous to the Prussian war, affords a high idea of the military talents of Napoleon. He thus writes to his brother—

"You will make a useful diversion at Wesel (he said), where I request you to assemble your army, augmented by French troops. This army will take the name of army of the North. You will manage matters so as to induce a belief, that it is much stronger than it really is. If the Prussians show themselves in Holland, and allow themselves to be deceived, they are ruined. If they do not adopt this course, they are still ruined. Whilst they suppose that I am establishing my line of operations parallel to them and the Rhine, I have already calculated that in a few hours after the declaration, they cannot prevent me from outflanking their left, and attacking a greater force against it than they can oppose to me, and than is necessary for its destruction. When their line is once broken, all their efforts to afford assistance to their left will operate against themselves. Separated and cut off in their march, they will fall successively into my lines. The results are incalculable. Perhaps I shall be at Berlin in less than six weeks. My army is stronger than that of the Prussians, and though they should even beat me at first, they would immediately find me in their centre with a hundred thousand fresh troops, pursuing my plan," &c. &c.

The battle of Jena fully confirmed the ability of these dispositions, and the sound foundation for these anticipations.

The second volume is more important than entertaining, being chiefly filled with political documents belonging to 1807—8. We however select a few characteristic traits.

"One of the greatest works in Holland is the New-Diep, formed by a wooden pier, which its skillful engineer has contrived to answer the purpose of deepening the harbour, by keeping back the ebb tide.

On this inspection the king conceived the design of removing the naval dockyard, now at Amsterdam, to this spot, and of making the Hehler a place of strength; a business of no difficulty, but expensive.

While he was in the road of the Texel, observing the manoeuvres of the squadron, he saw several vessels enter, some Americans, others Swedes. One of the great officers of his household, astonished to see the flag of the latter nation, with which the French were at war, asked him with a respectful but malignant look, if he had observed these

vessels, belonging to a nation with which France was at war, and with which all communication was prohibited. "I see nothing but trading vessels;" answered the King, turning his back upon him. But it appears, that this officer, to whom the King was greatly attached, and on whom he had conferred the most striking marks of his favour, did not stop here, but sent to Paris an account against him, whom he called his friend, his master, his benefactor: since a few days after he was compelled, on the pressing instances of France, to declare war against Sweden; an ill-timed act, and without a motive, since this state of war had long existed. The king was desired also, to place all Swedish property in a state of sequestration: but to this he would not consent."

"After the conclusion of the treaty of Tilsit, the emperor had returned to Paris. The king received information of it in the Pyrenees, as well as of the fresh complaints and fresh threats against Holland. Messages had been sent to the Hague, addressed to the regency, which led to a momentary belief that the king was dead; but happily one of the couriers, whom he was in the practice of despatching daily, arrived, and contradicted this news. He was made acquainted with the state of affairs, and hastened to quit the baths, and return to Holland.

"On his passing through Paris, as the king paid a visit to his brother, the latter told him, laughing, that he should not be surprised to hear of his having been informed, that the French custom-house officers and gendarmes had entered the Dutch territories to punish the smugglers;" however," he added, "this will take place immediately." The king listened to nothing more, withdrew, and set off in all haste. He reached Antwerp without stopping. Scarcely had he arrived in this city, when he learned, that gendarmes in disguise had introduced themselves into the fortified towns of Bergen-op-zoom, Breda, and Bois-le-duc, had arrested an individual in each, under pretence of smuggling; and had carried them off to France, to the disgrace of the local magistrates and garrisons. The king's indignation was extreme. He removed general Paravicini de Capelen, governor of Bergen-op-zoom, who had been the dupe of the gendarmes, and ordered him to be brought to trial before the proper judges. He dismissed the president of Breda also: but in spite of all he could say or do, he could not obtain in France the liberty of the Dutchmen, who had been carried off; and who, having been conveyed to Paris, remained there several years. Among them was an infirm and very respectable old man, who could not obtain his liberty till after this period, and by means of a ransom. To the statement of these facts the king could add nothing, and ought not."

Napoleon's proposal, to transfer Louis from Holland to Spain, is a curious document.

As early as the 27th of March, 1806, the emperor had sent a courier to the king of Holland, with the following letter.

"My brother; the king of Spain has just abdicated. The Prince of the Peace has been put into prison. The commencement of an insurrection has broken out at Madrid. On this occasion my troops were forty leagues from Madrid: the Grand Duke of Berg must have entered the place on the 23rd, with forty thousand men. To this moment the people are calling for me aloud. Assured that I shall have no firm peace with England, but by impressing a grand motion on the continent, I have resolved to place a French prince on the throne of Spain. The climate of Holland does not agree with you. Besides, Holland cannot extricate itself from its difficulties. In the whirlwind of the world, whether peace take place or not, it cannot sustain itself. In this state of affairs I have thought of you for the throne of Spain. You will be the sovereign of a generous nation of eleven millions of men, and of important colonies. With economy and activity Spain may have sixty thousand men in arms, and fifty ships in her harbours. Answer me categorically, what is your opinion of this project? You will be aware, that it is yet but a project; and that, though I have a hundred thousand men in Spain, it is possible, from the circumstances that may supervene, that I shall march directly, and settle every thing in a fortnight, or that I shall proceed more slowly, and that it may be the secret of several months' operations. Answer me categorically: if I name you king of Spain, will you agree to it? may I depend upon you? As it is possible, that your courier may no longer find me in Paris, and must then traverse Spain amid chances that cannot be foreseen, answer me simply these two words: I received your letter of such a date, my answer is *yes*; and then I shall reckon on your acting as I wish: or *no*, which will imply, that you do not agree to my proposal. You may afterwards write a letter giving your opinion at large on the part you take, and address it under cover to your wife at Paris. If I be there, she will give it me; if not, she will return it to you.

"Let nobody into your confidence, and do not mention the subject of this letter, I entreat you, to any person whatever; for a thing should be done, before we avow having thought of it, &c."

The surprise of the king equalled his indignation at receiving a proposal, which he considered as impolitic, unjust, and shameful. It has been seen, that he was on terms of friendship with Charles IV. He refused therefore sharply. "I am not the governor of a province," he said on this subject. "For a king there is no promotion but to heaven: all are equal. With what face can I go to demand an oath of fidelity from another people, if I do not remain faithful to that, which I took to Holland, when I ascended the throne?" In consequence his answer was a direct refusal.

Another article hurt him severely. He was convinced anew of what he endeavoured in vain to conceal from himself. These words: "The climate of Holland does not agree with you: besides, it is ruined beyond recovery." incontestably proved, that he

had been forced upon the throne, to ruin it and the country also.

On the 7th of June king Joseph received the congratulations of the different bodies of the Spanish government. He made known his accession by a proclamation of the 11th of June. He confirmed Prince Murat in his office as lieutenant-general of the realm.

Thus we see, that as of lords, it is of kings—

'A breath can make them, as a breath has made.'

We shall reserve the third volume for another notice.

#### SUPERSTITION.

We translate the annexed from a French publication, as an example of the superstitious opinions which even in our times prevail, to a considerable degree, in an otherwise enlightened country. The subject, it will be seen, is a record of the supernatural forewarnings of the murder of the Duc de Berri.

In ancient as well as modern times, on the approach of one of those events which change the destiny of nations, people have imagined the accustomed harmony of the universe to be broken, and that forebodings of a gloomy or a cheering nature, announced what they had either to hope or to fear.

These forebodings, real or imaginary, serve at least to shew the importance which people attach to certain events: thus for instance, the various miracles which took place at Rome previous to the assassination of Cæsar, enable us to judge of the horror which the death of that great man excited among the Romans; and the phantom which appeared to Brutus, on the eve of the battle in which he lost his life, proves how the attention of Rome was fixed on that event, which hurried the republic in the toils of Brutus. Finally, when we call to mind the forebodings which tormented Henry IV., on the very morning of his assassination, it is natural to conclude that France, when she beheld the death of the conqueror of the League, could not but fear that the League would again take up arms.

The Duc de Berri, the august victim of the ferocity of Louvel, has drawn down as many tears as the victim of Ravallac; and the signs which announced the death of the late Prince, are now the theme of conversation in France.

The forebodings, dreams, and visions, which preceded the death of the Duc de Berri, have lately been collected and published in a little pamphlet, from which we extract the following.

On the 13th of February, Madame M.... was walking in the Faubourg St. Honoré at the time when the Duc de Berri's carriage passed on its way to the Opera. Some unaccountable fancy or horrible presentiment led her to observe to the Chevalier Dal...., who accompanied her, "I did not know that funerals were suffered to take place at this late hour." "Funerals?" exclaimed M. Dal.... "Yes," added the lady, "a

hearse has just now passed us," M. Dal.... looked round, and then turning to his companion, said, "You are mistaken; it was the Duc de Berri's carriage."—"Indeed!" said Madame M.... with strong emotion, "how singular, that I should have taken it for a hearse!"

We are informed by one of his late Royal Highness's grooms, that the Prince's favorite horse, did nothing but neigh and start during the night of the 13th of February.

It is remarkable, that several Ducs de Berri have suffered a melancholy death. Louis XVI. was a Duc de Berri.

At the Pension Royale of St. Denis, a young woman dreamt, on the 13th of February, that she received a crown of white roses from his Majesty, and that after plucking off the flowers and the leaves, she placed the thorns on the head of the august widow of the most unfortunate of Princes.

The audience, on quitting the Bourdeaux Theatre on the 13th of February, beheld a luminous globe in the air, which did not vanish until day-break.

On the same night, a peasant of La Vendée three times heard the cry: *to arms!* and three times he jumped up to seize his sword.

M. G...., who died a few days after the Prince, had a most singular dream. The noble Peer, whom His Royal Highness honored with his friendship, dreamt, on the 11th of January, that as he was standing with His Royal Highness at one of the windows of the Castle of the Tuileries, they observed a magnificent procession advancing towards the Louvre. A hearse richly decorated, and drawn by eight horses having appeared in sight, the Prince asked,—"Whose funeral is that?" on which M. G.... replied, "It is yours, Prince:" in a few moments, another hearse, less rich than the first appeared, and M. G.... having in his turn asked who was to be buried? the Prince replied, "It is you, Count." When M. G.... related this dream to His Royal Highness, the latter laughed.

An officer of the Royal Guard dreamt, on the 13th of February, that a red cap was fixed on the top of the Opera House; he was roused by the rolling of the thunder which he fancied he heard, and which, in his dream, appeared to destroy the Opera-House, and the cap of the year 93.

The following is an anonymous letter which the Duc de Berri received an hour before he went to the Opera, and to which he unfortunately paid no attention.

Monseigneur,—Do not venture out without an escort. A poniard is raised against you. Your confidence will prove fatal to you. Preserve your life for the sake of France, of which you are the idol and the hope. Distrust particularly fair men!

A respectful admirer of your Royal Highness's virtues.

A Frenchman.

#### ARTS AND SCIENCES.

##### ROYAL INSTITUTION.

On Wednesday, Mr. Campbell resumed

his Lectures. After giving a description of the form and constitution of the Greek stage, he proceeded to comment upon the works of the tragic writers, Eschylus, Sophocles, and Euripides; and illustrated his observations with apposite quotations.

#### NAVAL SURGEONS' SUPPLEMENTAL FUND.

Pursuant to the promise in our last Number, we proceed to notice this excellent Institution, the anniversary of which, excepting a very brief paragraph in the Morning Post, has been passed *sub silentio* by the periodical press. Of course *we* shall confine ourselves to those features which are most allied to literature and science; and indeed, it is only in the view of the intimate connection with, and large part in the literary and scientific sphere of Britain, which the gentlemen forming this association fill, that we take up the subject.

Their yearly meeting is observed on the 28th of April the birth-day of the late Viscount Melville, whom they, in common with the rest of the naval service, justly consider to have been their great friend and benefactor. This topic is so ably illustrated by an address which was delivered at a former meeting, that we obtained a report of it, intending at that period to insert an article similar to the present, which circumstances having then prevented, we now resort to our copy for this explanatory document. We need only say further, that the speaker was Dr. Veitch, whose professional talents are so well known by his various publications, and whose exertions in promoting the formation and interests of this Society are, we learn from his brethren, most highly appreciated. Dr. Veitch said,

"After what has just now passed I cannot avoid offering myself to your indulgence and attention on this most interesting occasion: our worthy secretary has this instant acquainted us, that the heart of Lord Melville is with this meeting—an intimation which was peculiarly grateful to all who heard him; and I can in return assure him, that the heart of all present is with the name of Melville. The virtues of the late illustrious individual of this name have long held a conspicuous and distinguished place in the eye of his country, and of the navy at large; and to his liberality and his discernment, the medical department of that service are eminently indebted. The duty therefore which I now assign to myself, is at once grateful and easy, as I am supported by the consciousness of being engaged in no doubtful cause; where eloquence, to which I have no pretensions, is required to influence the mind. I am satisfied that the circle I now address, is strongly impressed with the sentiments of independence, as well as the feelings of gratitude: and I am therefore convinced that there will be no hesitation in venerating the memory of the man who has aided to our professional respectability; who has enabled us to cultivate that independence so generally and justly felt by all, with fairer prospects of success, and also to avert many of those evils that are peculiarly incidental

to naval life. I will here presume to state to you, that at the termination of the war originating in the French revolution, and after ten years' services in the capacities of assistant and surgeon, and also as surgeon and acting physician to the fleet under the late lamented Admiral Tott, and after having traversed the western ocean thrice, so that the greater part of those services were performed in a climate (the West Indies) the most inhospitable to health, I was paid off without being entitled to one sixpence of remuneration, in the form of half pay.

"Such a state of things has now ceased; a great monument has been erected to the cause of humanity, by the encouragement given to medical men, and in the advantages of which arrangements all participate, from the humblest to the highest rank. This favourable change we owe to the late Lord Melville; and I am anxious that we should this day prove, that no time is likely to efface our admiration and gratitude for a deed springing from true benevolence, combined with a disposition to exalt our professional character in the eye of the service and of our country. It is not to be denied, that his ever to be lamented death, left much of this, his favoured plan, unfinished, and to the completion of which, sensibility, energies, and a masterly judgment, will be required; but I will not allow myself to despair of seeing this measure, so grateful to his memory, carried into effect, under the name and auspices of another Melville; and in a manner worthy of him with whom this great design originated. The admiral and captain, whose duty it is to promote the health of their men; the parents, whose great pleasures flow from the safety of their offspring; the country, that delights in the safety of the wounded warrior; are all interested in the progress and perfection of this measure. Liberalism, wisely directed, is the road to true greatness. This principle, whether contemplated through the medium of history, or immediate action, is sure to command for its possessor the most delightful deference. Without it, I had almost said there can be no virtue; however I will affirm, that without it all other virtues are greatly obscured. Under the influence of this ennobling and exalted principle, the illustrious Clatham fearlessly drew forth merit; and in doing so, he consolidated that union which has kept this great nation entire, amidst the degradations and misfortunes of surrounding empires. Thus has the Highland arm, terrible in the field, but to the vanquished so mild and unassuming as the retiring maid, been enabled to surround his name and grave with trophies which no length of time can conquer. Our illustrious patron saw the importance of the navy to his country; and he cultivated its energies with all the powers he possessed; hence a band of heroes arose, who drove from the face of our dominions, the Ocean, every thing like the vestige of a foe; and but for those exertions the battle of Waterloo, for which this day stands so gloriously and proudly distinguished, would never have been fought. I mean not to

detract from the merits of the army, of which no man can think more highly than I do. In our time we have seen the world as it were driven from its centre; but the councils, the unparalleled courage of the army and navy of our country, have proved the levers by means of which it has been as it were restored to its natural position. It must I think be obvious to all, that we never could have met under the delightful circumstances we have this day done, but for the aid of the illustrious individual noticed; and I have therefore to suggest that his birth day shall constitute an anniversary among the medical corps of the navy, and that it shall be divested of all political object, so that the heart and mind may indulge in the pleasing and more exalted feelings of respect and gratitude."

Under the auspices of Lord Melville, the medical service of the navy rose to its due rank; and it only became necessary to adopt some plan by which the widows and orphans of men whose station had been marked in society, should be prevented from falling into unmerited poverty and distress. The pension which the national gratitude and justice could allow, was quite inadequate to support the respectability of the one, or supply means for the fitting education of the other. In this state of things the Supplemental Fund was projected; and to the honour of the present First Lord of the Admiralty (of whom in reference to his father it may be said, *Nati natorum et qui nascuntur ab illis*), and of Mr. Croker, it met with that continuance and encouragement which it deserved. Its growth has been accelerated by their fostering care; and though the meeting which has drawn these observations from us was only the second anniversary, the statement made by the Secretary, (Mr. Finlayson) displayed the Fund in eminently useful operation and prosperity.

Every surgeon of the navy contributes 2l. 12s. per ann. out of his pay; and thus the institution is enabled to add 40l. a year to the Widow's Pension of 40l. from government. Such a sum in aid of the public allowances makes all the difference between pining necessity and moderate comfort—between that inferiority of station which is painful to humanity, and that decent provision which is due to the relics of those whose lives have been worn out in the performance of the most arduous duties.

It is a melancholy coincidence to state, that at the very hour when the last Meeting was drinking better health to Mr. McLachlan, a surgeon, who had distinguished himself by his indefatigable zeal for establishing the Fund, that worthy man breathed his last. Were not his closing moments brightened by the good which he had done? The subject is one of exquisite pathos—a lesson of mortality, but a lesson of virtue—which the mind cannot dwell upon without being affected in the deepest manner.

On this occasion were present Mr. Searle in the chair, of whose services the navy is gratefully sensible, and who only added one

\* The motion was unanimously adopted.

to many obligations, by this attention to the medical branch of it; Sir W. Johnston Hope, under whose auspices a similar institution is being formed for the benefit of the Widows and Children of the Lieutenants of the Navy; Mr. Ommamey, Drs. Tait, Rhodan, Wilson, Veitch, and many eminent naval and medical characters. It is not our province to deal in boasts and compliments: we have given this account for only one reason—to enforce the expediency and humanity, the usefulness and the wisdom, of other classes of men, be they literary, scientific, or professional, following the admirable example of this Supplemental Fund; and forming associations which shall, when they are no more, preserve those most dear to them on earth from the unhappiness of poverty, and the degradation of falling into the dregs of social life.

**HIVING BEES.**—When a hive is too weak to stand over winter, or when it is wished to deprive the bees of their honey, without suffocating them, it is now the general practice to unite the hives, in either of these situations. The method of uniting bee-hives, as practised by M. Huish, except in the hands of a very experienced apiarian, is attended with very considerable risk to the lives of the bees; whilst Bonnar's method is not unfrequently attended by the destruction of a considerable proportion of the community. A safe and effectual mode of uniting hives, particularly when the honey season is advanced, has been successfully practised for 30 years, by the Rev. Richard Paxton, Minister of Tundergarth.

Mr. Paxton's method of uniting hives is this:—An empty hive being procured, is inverted on the hive from which it is wished to dislodge the bees, either to take their honey, or to unite them with another hive. Betwixt the two hives thus connected, a small piece of wood is so placed, as to keep these two hives about an inch apart on one side. The reason of placing this stick across the mouths, and between the two hives, is to prevent the bees, after being driven up the one side of the hive, descending (which they would do) by the other to the hive from whence they were dislodged. The hives being in the situation now described, the operator strikes on the under hive, (taking care not to strike so strong as to hurt the combs), till the bees, being terrified by the noise, take refuge in the upper hive. A quantity of small beer must be made milk warm, and as much soft sugar melted in it as will make a thin gruel. A bunch of feathers, or brush, must also be ready. The operator now gently lifts the hive containing the dislodged bees: his assistant also is ready to lift up the hive with which these are to be united. The hive which is to receive the new colony is turned with its mouth upwards, when a person standing ready sprinkles as quick as possible the bees as they show themselves with the liquor already described. When he thinks all are pretty well drenched, he stops. The same operation having been performed on the other hive, that is, the hive which was dislodged from their own work, these bees

are enjilted into the hive destined to receive the colony as quick as possible, and swept with a bunch of feathers into the interstices between the combs. The hive is instantly reverted, and placed on the stand.

The operation is best performed in the evening. In a few hours after the union, all will be quiet. Next day, you may perhaps see a few skirmishes, owing to the sprinkling liquor having missed some of them: but very few will suffer death. This year I do not think I lost three score of bees by the operation. Four quarts of small beer, with 14lb. of common soft sugar, should do for the uniting of two common sized hives.

In this method of uniting hives, there is no danger of drowning the insects, as there is in uniting them by Mr. Huish's manner, or creating a bloody and exterminating civil war, the general consequence of Mr. Bonnar's plan.

The explanation of the principle may be left to naturalists. It would appear, that bees judge very much by the smell, and that all those scented by the small beer and sugar are thus induced to regard each other as friends and associates.—(*Ed. Phil. Journ.*)

## LEARNED SOCIETIES.

### CAMBRIDGE, May 5th.

Robert Woodhouse, Esq. M. A. F. R. S. Fellow of Gonville and Caius College, was on Monday last unanimously elected Lucasian Professor of Mathematics, in the room of the late Dr. Milner, President of Queen's College.

The following gentlemen were on Tuesday last admitted to the undermentioned degrees: **DOCTORS IN DIVINITY.**—The Rev. Dr. Ellington, Provost of Trinity College, Dublin, admitted *ad eundem*. The Rev. R. Roberts, of St. John's College.

**HONORARY MASTERS OF ARTS.**—H. A. Wallop Fellows, Trinity Hall. Edmund G. Hornby, and George McNeill, Trinity College.

**MASTERS OF ARTS.**—W. Taylor Rayne, and J. T. Austen, St. John's College.

**BACHELORS OF ARTS.**—G. Powlett-Thomson, St. John's College. Edward Curtis, Sidney College. J. Brooks Crowe, Pembroke Hall.

**Sir W. Browne's Prizes.**—The two medals not disposed of in former years were on Tuesday last adjudged as follows:—For the Latin Ode, to Mr. Henry Thompson, Scholar of St. John's College. For the Greek and Latin Epigrams, to Mr. Richard Oakes, Scholar of King's College.

The Senate have not agreed to the report of the Fitzwilliam Syndicate, relative to the site of the intended Museum.

**May 6th.**—Thursday the following Degrees were conferred:—

**BACHELOR IN MEDICINE.**—F. Hopkins Ramage, St. Alban Hall, incorporated from the University of Dublin.

**BACHELOR IN DIVINITY.**—Rev. John Williams, Fellow of Exeter College.

**MASTERS OF ARTS.**—George Fitz Ernest, Esq. St. Alban Hall. Rev. T. Gunston

Calhoun, Demy, and Ichabod Charles Wright, Fellow of Magdalen College. Rev. George Rolleston, Merton College. Rev. Daniel Francis Warner, Magdalen Hall. Rev. John Jones, and Rev. George Woodhouse, Trinity College.

**BACHELORS OF ARTS.**—John Hunt, St. Alban Hall. W. Ives, Magdalen Hall. W. Leonard Shuldham, Christ Church. G. Burnister, and F. W. Gray, Trinity College. Adam Foskett, Worcester College.

The Rev. John Jones, M. A. of Jesus College, and Archdeacon of Merioneth, has been elected Canon Bampton's Lecturer for the next year.

On Saturday last the Rev. Thomas Kettle, M. A. was admitted Fellow of Corpus Christi College.

## FINE ARTS.

### ROYAL ACADEMY.

No. 99. *Captain at work drawing up fishing boats.*—W. Collins, R. A. Elect.

Attractive among the attracting, the unobtrusive excellence of this artist's works are sure to win the regard of the judicious, and the admiration of the uninitiated. A glance is sufficient to discern light, and this quality pervades in a particular manner the pictures of Mr. Collins. His coast scenes, and they are generally his choice, have been studied with reference to the peculiar effects of light both as it operates on sky and distance; and though his foreground details have little on which to animalvert, they are always appropriate and picturesque. Such are the performances of this artist; and if we may judge by the continued character of his pencil, they will continue to command the attention of every lover of art.

No. 311. *The last Scene in Massinger's Play of a New Way to pay Old Debts, with portraits.*—G. Clint.

We have said, "This is one of the best dramatic things we have ever seen." In making this remark we do not mean to exalt it above many preceding works of this kind. More especially, such as those of Zofany, Harlowe, or of Mr. Clint's own performance in the last Exhibition. The impression it makes is very striking, and the skill displayed is very great; one objection however is, to its being too theatrical. The arrangement is that of the theatre; the dresses those of the theatre; and the characters of course the same. As likenesses they are excellent; but that quality invariably interferes, more or less, with qualities of art. We need only instance that of the principal figure—Kean, in Sir Giles Overreach. Neither his figure nor his youth give the idea of the sordid and tempestuous character drawn by the poet, for the individual likeness breaks the charm of the imagination. The theatre is not a school for painting; a hint may be taken, an expression may be caught, but they must be moulded into form by the skill of the artist. Still this picture, for what it aims at, is fully entitled to public admiration: the artist, in productions of the class to which it belongs, has many and great difficulties to

contend against, which Mr. Clint was very ably surmounted.

No. 106. *The Wolf and the Lamb*.—*W. Mulready, R. A.*

It is among the best characteristics of modern art, that the interest given to pictorial works arises principally from the truth of character which they display, rather than from that technical skill, which has so long held the admirers of *veritas* in the shackles of connoisseurship. Like a skilful pugilist, Mr. Mulready never aims a blow without making it tell; and it is impossible not to feel the full force of his powers. In the subject under consideration, he has illustrated the fable of *Æsop*, by the most apt delineation of different boyish dispositions, contrasting his characters by the most familiar and natural positions in which they can be placed, and throwing in his accessories with the most judicious arrangement that can be imagined. A timid boy entering a door is in danger of a blow from one of pugnacious propensities; a child is running from the mingled rage and terror; a woman is watching—the whole exquisitely true to nature.

No. 61. *Sunday Morning*.—*M. W. Sharpe.*

This laconic title is given to a picture as full of incident and interest as almost any thing we have witnessed. We are broke in upon by surprise in the management of the subject, which represents a boy being submitted to a thorough washing with soap-suds, in furtherance to the cleanliness necessary for his sabbath appearance. This "Preparation for the Sabbath" is new to the public, and it is impossible to contemplate it without laughter at the ludicrous treatment of the story, while at the same time our admiration is excited by the skill of the painter. The scenery is beautifully picturesque; the colouring excellent; and it is saying perhaps all that can be said in praise of the whole, that, in our opinion, it surpasses even the best of Mr. Sharpe's former productions.

No. 170. *Venus in search of Cupid, surprises Diana at her Bath*. (From *Spenser*, b. iii. c. 6.)—*W. Hilton, R. A.*

This is a very splendid display both of form and colouring; but perhaps too much scattered for concentrated effect. The principal group is full of taste, and beautifully contrasted by the positions of the surrounding nymphs. In fact we never observed in any picture more expression in attitude than in this. The doubtful air of Venus, the various passions excited by her intrusion on the dignified Diana and her attendants, are admirably depicted. Nothing can be more rich than the landscape, though it is not "the wilderness for her unmet" of the quotation, but rather the "sweet bowers with pleasure fraught," which it tells us she has left in search of her son.

No. 141, 165. *Scenes from Henry IV. and Twelfth Night*.—*H. P. Briggs.*

These dramatic representations do great credit to the pencil of Mr. Briggs: his comic powers are more especially distinguished in the picture of Sir Andrew Aguecheek, &c. The whole scene displays the joke and ri-

baltry of the characters. It is executed in a style clear and brilliant; but the figures are rather too short. Falstaff, in the other, is a portrait, which may account for its not being so successful; and the figure of the Prince is beneath the dignity of his station, and inconsistent with Shakespeare's description of him.

*British Gallery, Pall Mall*.—This gallery will be opened with an exhibition of portraits, representing some of the most distinguished persons in the history and literature of the united kingdoms, on Monday, the 22d. instant.

## ORIGINAL POETRY.

THE ENTRY INTO JERUSALEM.  
(Mr. Haydon's Great Picture.)

The air is filled with shouts, and trumpets' sounding—

A host is at thy gates, Jerusalem.

Now is their ran the Mount of Olives rounding;

Above them Judah's lion banners gleam,

Join'd with the palm and olive's leafy stem:

Now swell the nearer sounds of voice and string,

As down the hill-side pours the living stream;

And to the cloudless heaven Hosannas ring;

"He comes, the son of David comes—the mighty King!"

The cymbals' Roman heard; and grasp'd his shield,

And rush'd in fiery haste to gate and tower;

The post! from the battlement beheld

The host, and knew the falling of his power—

That shout gave sign of Zion's final hour.

Still down the marble road the myriads come,

Spreading the way with garment, branch, and flower,

And deeper sounds are mingling, "Woe to Rome!"

"The day of Freedom dawns—rise Israel from thy tomb!"

Temple of beauty,—long that day is done,

Thy ark is dust, thy golden clerubim

In the fierce triumph of the heathen gone.

The shades of ages on thy altars swim,

Yet still a light is there, tho' wavering dim;

And has its holy lamp been watched in vain?

Or lives it not until the finished time,

When he who fixed, shall break his people's chains;

And thou be the lov'd, the crown'd of God again!

But then thou wast of earth the splendid wonder,

And matchless beauty sat upon thy walls;

At once, as with a peal of midnight thunder,

Startled the crowd within thy ivory halls;

The priests with turban'd brows, and purple

falls.

The son of Mammon, the pale usurer,

Like men that see the lightning ere it falls,

From their polluted seats sprang smote with fear—

That shout, like Judgment's Trumpet, burst

upon their ear.

He comes, yet with the burning host nam'd;

Pale, pure, prophetic, God of Majesty!

Tho' thousands, tens of thousands round him

arm'd,

None durst abide that depth divine of eye;

None durst his waving garments' hem draw nigh.

But at his feet was laid the Roman's sword:

There Lazarus bowed to see his King pass by;

There Jairus, with his age's child, adored.

"He comes, the King of Kings, Hosannah to the Lord!"

THIS IS.

[The following Monody on the death of Captain Norris, who was washed overboard, from *H. M. Packet, Bradford*, on Wednesday, March 17th, 1815, has been printed for private distribution among those who lamented the fate of that gallant and interesting officer. It is the production of Mr. F. Howard, and we copy it as a tribute that will be agreeable to the many friends of its subject, both at home and in Germany.]

High foams the surge! and wave impelling wave  
Come towing on—the tempest has gone forth.

And rides the billows that in madness rave!

Whilst the fierce slave of the infuriate North

Whitens and drives along!—there is no space

Between the heav'n and sea—the skies descend

In waters on the ocean—whose wild fate

Frowns on the heav'n's, and terrific blend

All elements of horror!—ah! but mark!

Seen dimly through the haze that struggling

speck,

—'Tis gone—again 'tis seen—it is some bark,

And gallant hearts are there; see, on the deck

With calm firm dignity there stands a form,

That like a genius guides the little wreck

Through the vast abyss of the welcoming storm!

Divide! ye Clouds, and pour your thunders

round!

Ye Waters, swell! Ye mountain billows roll!

Yawn thou dread Ocean, to thy depth profound!

Ye cannot move that great, intrepid soul!

Though Death in ghastly shapes is hovering

near,

Not from one visage does the colour fly,

Or has one seaman given a shriek of fear!

Whilst Norris lives, they feel hope cannot die:

But see that giant wave in dreadful state

Crown'd like a king of waters, with a wreath

Of foam, move on terrifically great,

And from our ear subject billows far beneath!

Brave Norris views it, anxious—without fear,

Marks it approach—nor shrinks to meet the

doom.

And bids his crew against the shock prepare

And looks with calmness on his coming tomb!

It comes!—his lips are severed with the word

Of caution and command—beware! beware!

That wave has come! and now, no more is heard

But one wild burst of horror and despair!

And nought is seen but one dark host of wave!

That toss in triumph their huge heads in air—

Again the Bark slow rises from its grave—

"The Captain is not there—far down the tide

Some saw, or thought they saw his streaming

hair,

And one, his lifted hands to Heav'n, descried:

—And he is gone for ever—on his brow

His widow's tears shall fall not—the green

nod

Shall lie not on his breast—yet is he now

Though buried in the wave, as near unto his

God!

And he is gone for ever—in his youth

Wash'd like some flower from off the river's

side;

The hand of Friendship and the heart of Truth,

Lie cold beneath the Baltic's stormy tide.

Yet still his memory some relief must yield,

To ease the anguish that would else o'er-

whelm;

Dies not the soldier best upon the field?

And did not Norris bravely at the helm?

Died he not bravely? ah! but he is dead!

And in that thought all consolation dies!

Can we recall the spirit that has fled?

Can we allure him from his kindred skies?

How many now that look'd to him alone,

For hope, and comfort, and support, are left

Of all in him? how many more will own  
None can supply the place that he has left  
In the warm breast. The manly virtues grew  
And flourish'd with him—yet of tender heart,  
In honor spotless, and in friendship true,  
He bore at once the brave, and gentle part.  
And me, ye seamen! gallant, hardy race!  
Nor blush to find a tear in trickling down  
The furrow'd traces of each sea-beat face,  
That heart wrung true virtue is proud to own!

Oh, come and mourn your Brother and your  
Friend!

He knew and loved ye, and was loved again—  
And think on Norris sometimes when ye bend  
In pensive sadness o'er his grave—the Main!

### SKETCHES OF SOCIETY.

The following account of a prevented sacrifice, in India, contains particulars of Hindu superstitions, with which we were previously unacquainted. The transaction took place at Puchmurry, in the Goand Hills.

At a short distance from Puchmurry, there is a celebrated natural cave, in the bottom of a solid rock, and this being sacred to Mahadeo, and otherwise very famous, great numbers of pilgrims annually resort to it for the purpose of prayer and ablution, in a small quantity of water, with which the bottom of the cave is always covered, owing to a continual dripping from the roof. The female part of the pilgrimage, however, have more sensible motives for their visit to this wild, unattractive place of worship; and it is their zeal for increasing the native population that gives rise to one of the most cruel and murderous sacrifices that takes place in India.

When a woman has been so long barren as to make even hope itself turn to despair, she proceeds thither, and after going through the usual ceremonies, entreats Mahadeo to remove her unfruitfulness, and concludes the whole with vowing to sacrifice her first-born infant at his shrine, by dashing it headlong from a high and craggy rock, close to the one in which his cave is! This most dreadful act is executed, I was told, yearly, by at least one mother; but it bore a different aspect while I was there, and it is this of which I am about to inform you. The case was that of a full grown woman, who came to destroy herself in conformity with a former vow of her mother's, and my curiosity being greatly excited, I went in company with another gentleman, to witness the whole proceeding—in the event of our not being able to put a stop to it altogether. We found the woman sitting near the base of the rock, from which she was to cast herself headlong; having in one hand a knife and a cocoa-nut, and in the other a small looking glass. She appeared to be about thirty, and as ugly as any woman could well be; several Brahmins were near her, but she seemed to regard no one,—merely exclaiming, at the intervals, "Deo bhur Jee," in a loud and disagreeable tone of voice.

On enquiring into the cause of the approaching suicide, I was informed that the woman's mother had vowed, in former days, to offer up her first-born, to Mahadeo; and that her sterility having thereby been

removed, she had borne this child and several others. Either through forgetfulness, however, or the strength of maternal affection, she neglected to destroy this eldest proof of the god's omnipotence, and the girl grew up, and got married in due course of time. Her husband soon after died, and a second, whom she wedded, followed the example of his predecessor; as did her father and mother not long after. These accumulated misfortunes drove the woman nearly mad, and for two months previous to the time of which I am speaking, she had done nothing but wander about the village, eating every thing that was offered her—no matter by whom. In consequence of this she had soon lost her caste, and the seclusion from her own friends, which this circumstance rendered indispensable, completed her misery: and having taken it into her head, that all these mishaps were the consequences of her mother's vow remaining unfulfilled, she determined to proceed and execute it in her own person.

Colonel Adams had, with that humanity which forms so conspicuous a part of his character, directed his own principal hircarrah, and a Brahmin to accompany us, and to explain to the woman that no such sacrifices were ordered, or in any way authorized, by any of their own laws, and to use their utmost endeavours (excepting force) to prevent the self-destruction. The Brahmins who accompanied the woman, joined us most heartily in our efforts to change her resolution. She was perfectly sensible, and understood every thing we said to her; but a decided negative was the only answer we could get to our entreaties that she would refrain from sacrificing herself. Her Brahmins told us that if she would only return, her friends would willingly and kindly receive her, and that no disgrace whatever would attach itself to her name if she declined fulfilling the vow of her mother. We likewise made known to her that Colonel Adams would have her conducted safely back, and the Subadar of Hurlah, the place of her residence, would (as the Brahmins said) he had offered to do before she set out) give her a pair of bullocks and a small piece of ground for her support. In fine, every thing that could possibly be urged, and every advantageous offer that could be made, proved quite ineffectual in shaking, even in the least degree, her resolution of dying.

The warmth and good will with which the Colonel's hircarrah (himself a high-caste Hindoo) endeavoured to save the unhappy woman, were not less creditable than surprising; and every Brahmin present seconded his efforts with the most sincere good will imaginable. She was so determined, however, upon taking the leap, that instead of listening to us with satisfaction, she repeatedly ordered the music to play, so that our voices might be drowned; but a slight and silent hint from us, was quite enough to insure disobedience to her orders on the part of the musicians; and indeed every one present seemed heartily to wish us success. One old Brahmin was so very importunate with her, that she threw the before-mention-

ed cocoa-nut at his head, with such force and violence as would, had it struck him, have very speedily stopped his rhetoric; but luckily it came against a stone and was dashed to pieces.

After remaining there several hours, during which time great quantities of sweetmeats were offered to her, of which she ate very greedily, and seeing that her determination had not been in the least degree subdued, I thought it useless to stay any longer; but left the hircarrah there with directions to continue his efforts, and to give me a regular account of the sacrifice, in case he found it impossible to put a stop to it. About two hours after my return to camp, I had the pleasure of seeing the woman enter it also, accompanied by an immense crowd; and on enquiry I learned that after my departure she had continued inexorable till she got near the top of the precipice, when she fainted away, and remained senseless for a long time; that upon coming to herself again, Ram Sing (the hircarrah) seeing a little irresolution in her countenance, took advantage of the circumstance, and, falling at her feet, conjured her to abandon her horrible intention. The Brahmins joined with him until she was prevailed upon to return to camp, whence Colonel Adams, having furnished her with money to defray her expenses, got her conducted home.

From the above account, for the authenticity of every part of which I can vouch, it may be inferred that these sacrifices are not owing to the Brahmins, and that no intoxicating drugs or liquors are made use of to stimulate the victim's resolution, or to lull her feelings; but that the Brahmins themselves are ready and willing to see all their endeavours to prevent so horrible a custom. The infanticide, which is practised at Puchmurry, is a most horrible and barbarous custom, but that is the act of the parents, not of any one else; and it would, I doubt not, be prohibited altogether if practised in our territories; but those hills belong to the Bhoonalah; and we have of course nothing to say to them.

### SECT OF INDIAN DEISTS.

The following account of the *Sauds*, a religious sect in the Upper Provinces, is from the Second Report of the Calcutta Committee of the Church Missionary Society.

1. In March 1816, I went with two other gentlemen from Futteh-gurh, on the invitation of the principal persons of the *Saud* sect, to witness an assemblage of them, for the purpose of religious worship, in the city of Furruckabad, the general meeting of the sect being that year in that city.

2. The assembly took place within the Court-yard (*Daulan*) of a large house. The number of men, women, and children, was considerable: we were received with great attention, and chairs were placed for us in front of the *Deurkee*, or hall. After some time, when the place was quite full of people, the worship commenced. It consisted solely in the chanting of a hymn, this being the only mode of public worship used by the *Sauds*.

3. At subsequent periods, I made par-

cular enquiries relative to the religious opinions and practices of this sect, and was frequently visited by Bhuwanee Dos, the principal member of the sect, in the city of Furruckhabad.

4. The following is the substance of the account given by Bhuwanee Dos, of the origin of his sect:

5. About the Sunabit year 1600, or 177 years ago, a person named Beer, bhan, inhabitant of Beer, bhanur near Narnoul, in the province of Delhi, received a miraculous communication from Ooda Dos, teaching him the particulars of the religion now professed by the Sauds—Ooda Dos, at the same time gave to Beer, bhan marks by which he might know him on his re-appearance: 1st. That whatever be foretold should happen. 2d. That no shadow should be cast from his figure. 3d. That he would tell him his thoughts. 4th. That he would be suspended between heaven and earth. 5th. That he would bring the dead to life.

6. Bhuwanee Dos presented me with a copy of the *Pot, her*, or religious book of the Sauds, written in a kind of verse, in the *Tenth* Hindue dialect, and he fully explained to me the leading points of their religion.

7. The Sauds utterly reject and abhor all kinds of idolatry, and the Ganges is considered by them with no greater veneration than by Christians, although the converts are made chiefly, if not entirely from among the Hindoos, whom they resemble in outward appearance. Their name for God is *Sutgur*; and *Saud*, the appellation of the sect, means, servant of God. They are pure deists, and their form of worship is most simple, as I have already stated.

8. The Sauds resemble the Quakers, in their customs, in a remarkable degree.

9. Ornaments and gay apparel of every kind are strictly prohibited; their dress is always white.

10. They never make any obeisance or *suhm*.

11. They will not take an oath, and they are exempted in the Court of Justice; their *asseveration*, as that of the Quakers, being considered equivalent.

12. The Sauds profess to abstain from all luxuries, such as tobacco, paun, opium, and wine.—They never have nauches or dancing.

13. All attack on man or beasts is forbidden but in self defence, resistance is allowable.

14. Industry is enjoined. The Sauds, like the Quakers, take great care of their poor and infirm people. To receive assistance out of the *punt* or tribe, would be reckoned disgraceful, and render the offender liable to excommunication.

15. All parade of worship is forbidden.—Secret prayer is commended; alms should be unostentatious; they are not to be done that they should be seen of men.

16. The due regulation of the tongue is a principal duty.

17. The chief seats of the Saud sect, are Delhi, Agra, Jypoore, and Furruckhabad, but there are several of the sect scattered

over the country. An annual meeting takes place at one or other of the cities above mentioned, at which the concerns of the sect are settled.

18. The magistrate of Furruckhabad informed me, that he had found the Sauds, an orderly and well conducted people; they are chiefly engaged in trade.

## THE DRAMA.

COVENT GARDEN.—*Midas*.—This very popular burlesque was performed, for the first time this season, on Wednesday; Apollo by Duruset, and Myra by Miss Tree. Both are favourites with us; the former from his melodious voice and unaffected style, the latter from her sweet notes and pleasing manner. Duruset touches the heart as much as any vocalist we ever heard, and never fails to make us love music by the simple yet graceful way in which he sings; displaying at once a rich organ, and cultivated talent. Mr. and Mrs. Liston, and Emery, played their old parts, with their old effect.

## FOREIGN DRAMA.

### SECOND THEATRE FRANÇAIS.

First representation of *Les Comédiens*, a comedy in 5 acts, by M. Casimir Delavigne (author of the *Sicilian Vespers*).

Molière once intended to write a comedy on the *players*: but he confined himself merely to two excellent scenes in his *Impromptu de Versailles*, and he thus apologizes for not having fulfilled his original design:—"I have my reasons for renouncing it; and to say the truth, I never thought the thing worth the pains. It is a trifle, a joke which would never excite laughter."

What appeared so hazardous to Molière, has not, however, frightened a very young author.

M. Delavigne has chosen actors for his leading characters, and he seems to have introduced himself among them; for the dramatic author who is the victim of the vanity and rivalry of the performers, resembles M. Delavigne, since he is a young poet full of ardour, imagination, and talent.

He sends a new comedy to the manager of the Bourdeaux Theatre, and after a thousand refusals and complaints, the performers are prevailed on to accept their parts and the evening is fixed for the first representation.

The author is more than usually interested in its success, as on that success depends his marriage with a young and beautiful actress of the Bourdeaux Theatre. On the other hand, a cousin of the young actress, arrives *incognito* from India, to marry her, or at least to make her a sharer in an immense fortune bequeathed to him by an uncle.

The young gentleman accidentally meets the principal comic performer of the Bourdeaux company, from whom he learns that his fair cousin has embraced the theatrical profession.

He wishes to see her without being known, and for this purpose he assumes the character of a theatrical inspector from Paris. The comic actor, before mentioned, transforms himself into an author, and gives him a roll of blank paper, which is humbly presented to the president of the

committee, who promises to extend his protection to the new work.

There is another character, a young English nobleman, who has become acquainted with a Baroness, a charming widow, whom he resolves to marry. The Baroness, however, is no other than a comic actress of the theatre, whom the noble lord, to his no small mortification, recognizes on the stage in the part of a chambermaid.

These characters have a peculiarly original and comic colouring. When the evening appointed for the representation of the author's play, is near at hand, some disputes arise between the performers, as to the merits of their respective characters. These difficulties are however surmounted, and the piece is performed with the highest success. He now arrives at the *dénouement*. Of course all mistakes are cleared up. The British peer is in a furious rage, at being duped by an actress; the Indian cousin renounces the hand of Lucille, who receives a fortune of two hundred thousand francs, and the two lovers are united. Lucille is represented as a model of decorum and virtue.

The first and second acts were loudly applauded; some degree of coolness was manifested during the third; a few symptoms of disapprobation occurred during the fourth; and the fifth was crowned with enthusiastic success. Such is the history of this representation, which attracted a numerous and brilliant audience.

At Versailles, Paesicello's opera of *King Theodore at Venice* has been revived. This opera, when first brought out at Paris, about thirty years ago, was performed for seventy successive nights.

### THEATRE DES VARIETES.

First representation of *Ennui*, or *Le Comte Derfort*.—Arthur Count Derfort, being sated with pleasure of every kind, falls a victim to *ennui*; his days are spent in indolence, and his life becomes such a burden to him, that he resolves to rid himself of it, and to transfer his fortune to his friend Arundel. The latter, however, instead of accepting the offer, undertakes to cure the Count. He persuades him that the title and estates of the house of Derfort, which he possesses, are the property of the gardener Robin, who has been unjustly deprived of his right. Thus, supposing he is reduced solely to his own resources, Arthur feels all his faculties developed with fresh ardour and activity; his heart opens to sensations which he had lost, and he endeavours to render himself servicable to his old servants whom he had neglected. He exerts himself to obtain the liberation of Arundel, who is confined for debt, and he engages to take the management of a manufactory. Finally, he is happy, and his happiness would be augmented should the young and beautiful Marie consent to become his wife; but being now destitute of fortune, he cannot presume to offer her his hand. Marie, however, guesses his secret; she loves him, and delights in being able to console him for the losses he has sustained.

Concluding that his remedy has completely succeeded, and that the Count has no

longer any reason to apprehend an attack of the spleen, Arundel explains the stratagem he had employed. On hearing this Marie wishes to return the ring which Derfort presented to her as a pledge of his attachment; but the Count resolves to marry her.

### VARIETIES.

*Augsburg, 19th April.*—Last night at 7 hours 32 minutes, there was seen here a meteor, which appeared nearly three times as large and three times as bright as the beautiful planet Venus. This meteor came from the East South East, passed by the moon 3° to the north, and by Venus 10° to the south, and descended within 8° to the western horizon, where it disappeared behind a cloud. It passed in 4 seconds from the neighbourhood of the moon to the place where it vanished in the western horizon; it emitted a beautiful bright red and bluish lustre.

The Philadelphia theatre was destroyed by fire, said to be the work of incendiaries, on the 4th of April.

*Munich, 22d April.*—The celebrated traveller, Mr. F. W. Sieber, has sold to the Royal Academy, his collection of Antiquities collected in Candia, Egypt and Palestine; but interesting as these objects are, much greater attention is excited by a pamphlet which Mr. Sieber has just published, under the title of "the Cure of declared Hydrophobia." The author speaks with such decided conviction of the discovery, that neither the physician nor the psychologist can avoid feeling hope and confidence.

A dramatic writer, whose piece was hissed, was consolingly told by a "d—d good-natured friend," that he should submit without irritation to the voice of the public:—"Poh!" he exclaimed, "don't talk to me about it, unless you can tell me how many fools make the public!"

They seem determined in France to follow up the new order of Parnassus, which has, so creditably to his Majesty, been commenced in the person of Sir Walter Scott, as we find prefixed to a translation of "LALLA ROOKEH," just published in Paris, a biographical sketch of the author, entitled "Notice sur Sir Thomas Moore."

*Extra-judicial, Medical Criticism on the Drama!* Dr. Pearson has invaded our province, and we cannot allow his broad to pass without resistance. In the Drury Lane Play-bill of Monday, (a very unfair vehicle for such an attack as he has made on the dramatic talents of the proprietor and manager of that theatre) the learned Doctor says,

"I think it my duty to state, for the satisfaction of the Public, that although Mr. ELLISTON is considerably relieved from his late severe disorder, he is still so ill as to be incapable of any performance in his profession without considerable hazard.

"GEORGE PEARSON, M. D.

"Sunday, May 1, 1820, George Street, Hanover Square."

Now why the Esculapian critic should imagine it would give satisfaction to the public

to know that Mr. Elliston was prevented by illness from appearing before it, is to us incomprehensible; especially as the repetition of a successful new piece, no less than the Lady and the Devil, depends on his recovery. We advise the Doctor to stick to the Hanover Square Rooms: and leave the Drama to us, who know how to treat its symptoms.

These Play-bills, *en passant*, are becoming more amusing than in their ancient dry and barren state. That to which we have alluded also desires "The Tradesmen of the theatre to make up their accounts to the 1st of May, that they may be examined and discharged." We look with impatience to see the new act brought into Parliament for amending the Drury Lane building act, printed at the bottom with the accounts of the "broad farcical, pantomimical drama of Harlequin's invasion;" we mean no allusion to Mr. Calcraft, who brought in the (Parliamentary) Bill, nor any pun on the (Theatrical) Bill, in which we advise its insertion.

*Transposition.*—An anagrammatist, looking at the posting bills, in which the success of *King Lear* is so largely inscribed, observed, that it was nothing but *Ish Glare*.

Lear, after to-day, is announced to be performed *thrice* a week, instead of *every night*; and the bills say that the new tragedy of *Virginus* is deferred in consequence of this "increasing attraction." Another paragraph, among these samples of unintelligible absurdity, runs in these words:—

"Mr. KEAN, is sustaining his newly acquired honours with the most astonishing effects, and the whole Corps Dramatique are anxious to uphold the reputation, which their united endeavours have given, to this unequalled production of our immortal Bard."  
—I. e. Mr. Kean's newly acquired honours!!!

### LITERARY NOTICES.

Mr. Croly, the author of the noble poem of Paris, and other excellent productions, is about to publish a poem, in the Spenser stanza, entitled, "The Angel of the World," founded on the celebrated story of Haruth and Maruth, told by Mahomet, as a warning against the dangers of wine. The angel delegated to rule the earth, is tempted by a spirit sent to try his virtue, and is undone. The poem abounds in descriptions of the more splendid phenomena of earth and air in the East. The scene of the temptation is placed in view of Damascus, the rose and winder of Asia.

*Warren's Literary Register.*—A weekly sheet under this title has been commenced by a young bookseller in Bond Street, and seems to us to be well entitled to countenance. It is a sort of catalogue raisonné of new works published or imported, and, being circulated in a convenient shape, unmingled with other matter, is calculated to extend the knowledge of what is doing in the literary world, and consequently to promote the general interests of literature. There are several (we are at least acquainted with two) records of this kind in Paris, and it is curious that in London, where so

much more book-selling business is done, there has hitherto been no production of this useful nature, if we except Messrs. Longman and Company's monthly lists, which are however more effective in the country than in the metropolis.

A quarterly literary work has been established at Botany Bay.

*Contents of the Journal des Savans for April.*  
Rouffort, Supplement Glossaire de la Langue Romaine.—Reviewed by M. Raynouard.

Martin, Memoires sur l'Arctique.—M. Silvestre de Sacy.

Walckenaer, Le Monde Maritime.—M. Abel Remusat.

Dochvel, Tour in Greece.—M. Letronne.  
Strabo, French Translation of.—M. Raoul Rochette.

Raoul Rochette, Dictionnaire Universel de la Langue Française.—M. Daunou.

*Tuesday, 9*—Thermometer from 48 to 64.  
Barometer from 29, 92 to 29, 89.

Wind S. b. W. 2.—Morning cloudy, with sunshine; the rest of the day clear. Lightning in the S. E. about 10  $\frac{1}{2}$  M.

Rain fallen, .175 of an inch.

*Wednesday, 10*—Thermometer from 42 to 62.  
Barometer from 29, 79 to 30, 02.

Wind S.W. 3. Alternate showers and sunshine.  
Edmonton, Middlesex. JOHN ADAMS.

### TO CORRESPONDENTS.

\*. We are compelled to postpone our intended notice of the *Literary Fund* for another week; and indeed, the present pressure of new and interesting publications, obliges us to curtail our miscellaneous more than at any other period of the season.

Mr. August Bell's extraordinary work, on the Recovery of the Huntingdon Perceage, respecting which we purposed to add another notice to that contained in our No. 165, has been published: but we have not been able to perform our design. The name may be said of Wordsworth's new Poems, of which we have not had it in our power to resume the consideration, since they issued from the press. We hold all these matters, however, to be debts due to our readers, to be discharged as speedily as possible.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

**MR. HAYDON'S PICTURE** of 'Christ's Entry into Jerusalem,' is now open for Exhibition, at Bell's Great Room, upstairs to the right, from 10 till six.—Admission 1s. Catalogue 6d.

By JOHN FAITHORN, M.D. London: Printed for Longman and Co.; sold also by WILLIAM Chesterman; Perry, I. esington; and Blackburn, Harrogate.

**THE EDINBURGH MAGAZINE and LITERARY MISCELLANY**, being a New Series of the Scots Magazine, for April, 1820. Contents.—Remarks on "The Monastery." On the Restoration of the Parthenon. Illustrations of the Topography of Troy, with a Review of the Opinions of preceding Writers (concluded). Remarks on the Miscellaneous Poetry of Goethe. Journal of a Visit to Holland, including an Account of the Great Works at Cawick; Letter X. Notes from an Old Diary, relating to the Rebellion of 1745. Canons of Taste. Historical Notices of the popular Superstitions, Traditions, and Customs of Trilist. date. Account of an Apparition in Agramos. German Reviews. The Bytander; No. 11. Inquiry respecting an Historical work of Sir George Mackenzie. A Character of Sir Robert Walpole, from an early Edition of Hume's Essays. Translation from Petrarch. Literary Society. Miscellaneous. Monthly Register, &c. Edinburgh: Printed for Archibald Constable and Co.

In two large vols. 8vo. handsomely printed, with 25 illustrative engravings, price 11. 6s. boards.

**A JOURNEY in CARNIOLA, ITALY, and FRANCE, in the Years 1817-1818**; containing Remarks relating to Language, Geography, History, Antiquities, Natural History, Sciences, Paintings, Sculpture, Architecture, Agriculture, the Mechanical Arts, and Manufactures. By W. A. CADELL, Esq. F. R. S. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

In the description of the Middle and North of Italy, which occupies the greater part of this work, the author has been at pains to compare the accounts of the country, published by ancient and modern Italian Writers, with what he saw himself. The Geology of Italy, and the ancient Marbles of Rome, are treated of in the Appendix. The Map is carefully drawn, and contains notes relating to Geology, and the height of Mountains. The Engravings are in considerable number, and amongst them is a set of Elevations, drawn on one scale, so as to give a comparative view of the magnitude of some of the principal Buildings of Italy and other countries.

In three large volumes, 8vo. handsomely printed, with thirty-five illustrative Maps and Engravings, price 21. 12s. 6d. boards.

**HISTORY of the INDIAN ARCHPELAGO**, containing an account of the Manners, Arts, Languages, Religions, Institutions, and Commerce, of its Inhabitants. By JOHN CRAWFORD, F. R. S. late British Resident at the Court of the Sultan of Java. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

This work will be found to contain a more full and accurate account of the Indian Archipelago, than any other which has hitherto appeared. The author's residence in the countries which he describes, and his official opportunities of acquiring information regarding the history, manners, and customs of their inhabitants, render his details on these subjects peculiarly valuable. The Books on Agriculture and that on Commerce, (now that the India trade is partially opened) will be read with particular Interest by those who are directing their capital to this hitherto unexplored field of commerce; and a great body of useful information will be found under the last of these heads, regarding the articles of exportation best suited to the Indian market, and of the native products which may be most beneficially imported into Europe.

In crown folio, price four guineas, (a few copies remain for sale on large paper, price eight guineas.)

**ITALIANSHIRE—THE HISTORY and TOPOGRAPHY of the PARISH of SHEFFIELD**, in the County of YORK, with Historical and Descriptive Notices of the Parishes of Ecclesfield, Hanworth, Treeton, and Whiston, and of the Chapelry of Bradford. By JOSEPH HUNTER, an Honorary Member of the Society of Antiquaries of Newcastle upon Tyne.

This Work contains an account of a district of considerable extent hitherto undescribed, and is embellished with several highly finished engravings, from drawings by Mr. Edgar Yarwood. London: Published by Lackington, Hughes, Harding, Mavor, and Co. Finsbury Square.

In 8vo. 8s. 6d.

**THE FALL OF JERUSALEM.** A Dramatic Poem. By the Rev. H. H. MILMAN, Vicar of St. Mary's Reading, and late Fellow of Brasenose College, Oxford. Printed for John Murray, Albemarle Street.

**THE POETICAL WORKS OF the Reverend GEORGE CHABOT.** Consisting of 1. Poems—11. The Borough—111. Tales—and 1V. Tales of the Hall. 8 vols. 8vo. 21. 18s. 6d. 5 vols. royal 8vo. 41. 12s. 7 vols. small 8vo. 24. 2s. Printed for John Murray, Albemarle Street.

With a Map, two vols. 8vo. 12s.

**A CIRCUMSTANTIAL NARRATIVE OF the CAMPAIGN IN SAXONY, in the Year 1818.** By BARON ODLEREN, one of the General Officers of the Army. To which are subjoined the Notes of M. Aubert de Vertry. Printed for John Murray, Albemarle Street.

4to. 25s.

**A VIEW OF the AGRICULTURE, MANUFACTURES, STATISTICS, and STATE OF SOCIETY OF Germany, and parts of Holland and France, taken during a Journey through those Countries, in 1819.** By WILLIAM JACOB, Esq. F. R. S. Printed for John Murray, Albemarle Street.

8vo. price 6s. 6d. boards

**A VISIT TO the PROVINCE OF UPPER CANADA.** By J. STRACHAN, in 1819. The book contains every kind of information which an Emigrant can desire to obtain, derived from authentic sources, inaccessible to former travellers. The civil and religious state of the province, climate, soil, agriculture, &c. &c. with remarks on Mr. Birbeck's settlement in the Illinois, and his statements impartially considered. To which is added, a brief Account of Mr. Gourlay's Proceedings as a Reformer, in Upper Canada. The whole being carefully drawn up from materials furnished by that author's brother, who has been twenty years resident in the country, and a member of the Government. Printed for J. Strachan, Aberdeen; Longman, Hurst, Esdaile, and Brown, London; Oliver and Boyd, Edinburgh; W. Turnbull, Glasgow; and Leslie, Dundee.

*Under the authority of the Portuguese Government*  
**POPE'S ESSAY ON MAN AND A MESSIAH:** the 13th and 14th Chapters of Isaiah; and various other pieces, translated into the Portuguese Language; including selections from the Literature of eight nations, with extensive and elaborate annotations. By the VISE-CONTÉ DE SAO LOURENÇO, principal Treasurer of Brazil; embellished with an original and hitherto engraved portrait of Pope, by Jervas, and four illustrations of the Essay on Man, engraved by C. Heath, Scott, Rhodes, and Warren, from designs by U. Smith.

The few remaining copies of this superb private publication, which are allowed to be sold in this country, may be had of R. Jennings, No. 2, Foultry, price 6 guineas, 3 vols. 4to. extra boards.

*Huntington Pezrage.*

Handsome printed in 4to. with Portraits of the Earl and Countess of Huntington, price 21. 2s.

**THE HUNTINGTON PEZARGE;** comprising a detailed Account of the Evidence and Proceedings connected with the Recent Restoration of the Earl; together with the Report of the Attorney General on that occasion. To which is prefixed, A Genealogical and Biographical History of the Illustrious House of Hastings, including a Memoir of the present Earl and his Family. The whole interspersed with a variety of curious historical and legal matter, and several original Letters and incidental Anecdotes of distinguished individuals concerned. By HENRY NUGENT BELF, Esq. Student of the Inner Temple. London: Published by Baldwin, Cradock, and Joy, Paternoster Row; and to be had of the Author, No. 10, Adelphi Terrace.

† A digested and authentic Account of this important Decision, which now stands on record as matter of legal reference and precedent, and which has excited so much curiosity, by reason of the singular circumstances connected with the title when it awoke, while it promises much rare and curious information to the general reader, must prove peculiarly acceptable and valuable to the Senator and Lawyer, and to the superior ranks of the public at large.

*Dr. Mant's Family Common Prayer Book complete.* Dedicated, by permission, to the Most Rev. the Lord Archbishop of Canterbury, price 11. 12s. in boards, on medium, and 12. 12s. on royal paper.

**THE BOOK OF COMMON PRAYER,** with Notes explanatory, Practical, and Historical, from approved Writers of the Church of England, selected and arranged by the Rev. RICHARD MANT, D. D. Rector of St. Botolph's, Bishopsgate, and of East Hurley, Surrey; and Domestic Chaplain to his Grace the Archbishop of Canterbury. Oxford: Printed for J. Parker; and F. C. and J. Rivington, St. Paul's Church Yard, and Waterloo Place, London. Sold also by Messrs. Deighton and Robinson, Cambridge; and by all booksellers in towns and country.

† A Republication of this work, in Parts, will commence on the first of June, and will be continued Monthly, at 4s. on Medium, and 5s. on royal paper.

*The Chronicle of the Times.*

In a thick and closely printed Volume royal 16mo. with a Chart, price 18s. in boards.

**THE CHRONOLOGY of the last FIFTY YEARS,** from 1770 to 1820; prefaced by one of the most ample general Chronologies extant, from the earliest Records down to 1770. This will prove to be one of the most convenient and useful Books of Reference ever published; and sooner or later it must find its way into every public Library, and into the Book-case of every private family. The period of Fifty Years has been chosen, as being the Term of an active Generation, within which Events continue to operate on the Affairs of the World, and on the Interests of Individuals, and during which they are therefore in the highest degree interesting to the Reasonings and Recollections of the Contemporaries. Printed for Sir Richard Phillips and Co. Bridge Street; and to be had of W. Sams, St. James's Street; and of all Booksellers. Of whom may be had, Dr. ROBINSON'S MODERN HISTORY, from Charlemagne to the Accession of George IV. with 25 engravings. 4s. bound.

Price 21s. boards, in one large fol. 8vo.

**THE ENTHUSIASM OF the METHODISTS and PAPISTS** considered. By Bishop Livingston. With Notes, Introduction, and Appendix. By Rev. R. POLWHELM. This is a reprint from the scarce edition now selling for a very high price. The author's principal design is to draw a comparison, by way of caution to all Protestants, between the wild and pernicious enthusiasms of some of the most eminent Saints in the Popish Communion, and those of the Methodists in our Country; which latter he calls a set of pretended reforms, animated by an enthusiastic and fanatical spirit. Printed by A. J. Vally; and sold by G. and W. B. Whittaker; Sherwood and Co.; Simpkin and Co.; R. Priestley, London; and all other booksellers.

*The English Manuscripts.*

Handsome printed in two vols. royal 4to. embellished with portraits and other engravings, by the first Artists, price 51. 18s. 6d. boards, the second edition of  
**MEMOIRS OF JOHN EVELYN,** Esq. the celebrated author of *Sylva*, &c. written by himself; printed from the original MS. in the Library at Wotton. Edited by WILLIAM BRAY, Esq. Fellow and Treasurer of the Society of Antiquaries, &c. Printed for Henry Colburn and Co. Conduit Street.

Printed uniformly with *Park's Travels*, in 8vo. illustrated with a Map and numerous Plates, price 21. 2s. boards.

**TRAVELS IN the INTERIOR OF AFRICA,** TO the SOURCES OF the SENEGAL and GAMBIA, undertaken by order of the French Government, and performed in 1818, by M. G. MOLLIER. Edited by T. E. BOWDICH, Esq. conductor of the Mission to Ashantee. Printed for Henry Colburn and Co. Conduit Street; of whom may also be had, *Travels in Southern Africa*, by Professor Lichtenstein, 2 vols. 4to. with plates, price 18. 12s. boards.

In 8vo. price 6s. boards.

**MEMOIRS OF the COMTE DE WESTPHALIA,** and of JEROME BONAPARTE, with anecdotes of his Favorites, Ministers, &c. For some account of this curious work, see the Quarterly Review, just published. Printed for Henry Colburn and Co. Conduit Street.

The 2nd Edition, in 2 vols. 8vo. 21s.

**TRAVELS IN EGYPT, SYRIA, CYPRUS, the MOREA, GREECE, ITALY, &c.** in a Series of Letters, interspersed with numerous Anecdotes of distinguished Persons, by JOHN RAMSEY, Esq.

These sketches have all the freedom of truth about them, and will be found to contain much interesting and useful information. Performed in company with the eldest son of Sir John Maxwell, the author possessed the advantage of the best introductions, and fully availing himself of them, he has described the fashionable circles of Vienna, Rome, Naples, and other cities, with great vivacity and effect. His account of the Minotaur, their modes of living, &c. &c. of each interest, which have not come within the observation of any other Traveller.

Printed for Henry Colburn and Co. Conduit Street.

In 1 vol. 8vo. embellished with a portrait of the author, and 17 engravings of remarkable scenery, 21. 2s.

**NARRATIVE OF a RESIDENCE in IRELAND.** By ANNE PLATTKEIL, author of "Narrative of a Three Years' Residence in France," &c. God has done every thing for this Country, Man nothing. Lord Chancery.

Printed for Henry Colburn and Co. Conduit Street.

In 2 vols. 8vo. embellished with several fine portraits, 21s.

the second edition of  
**LIFE OF the Rt. Hon. R. SHERIDAN.** By JOHN WATKINS, LL. D. With a particular account of his Family and Connections, drawn from authentic documents, and illustrated with Original Correspondence, and a variety of interesting anecdotes of distinguished persons, among whom will be found Lord Fox, Lord John Russell, Sir Parr, Greville, &c. &c. Printed for Henry Colburn and Co. Conduit Street, of whom may be had, part 2 of the quarto edition, to complete sets.

*Translation of Mad. De Genlis' New Work.*

In 2 vols. 8vo. price 10s. 6d. boards.

**PETARCHI and LAURA:** an historical Romance, translated from the French of MADAME DE GENLIS. Printed for Henry Colburn and Co. Conduit Street, of whom may be had, by the same distinguished writer,

1. JULIEN DELMOR, or the New Africa a Novel, actually founded on the events that have occurred in France, during the last thirty years, 4 vols. 2s.

2. ZEM and AZEM, 2 vols. 12s.

3. ZUMA, and other Tales. 6s.

4. HENRI QUATRE, 3 vols. 12s.

In 12mo. price 4s. 6d.

**THE MOTHER'S MEDICAL ASSISTANT,** containing Instructions for the Management of the Treatment of the Diseases of Infants and Children. By Sir ARTHUR CLARKE, M. D. &c. &c. author of an Essay on Bathing. Printed for Henry Colburn and Co. Conduit Street; of whom may be had, a 5th edition of Sir A. Clarke's Essay on Bathing, &c. &c.

On Monday will be published, handsomely printed in 4to. and illustrated with a map and other engravings, price 21. 2s. boards.

**TRAVELS IN BRAZIL,** during the years 1815, 1816, & 1817. By Prince MAXIMILIAN, of Savoy. This work will be found to be one of the most important that has yet appeared respecting this interesting, but hitherto imperfectly known Country. The Prince has examined the totally unknown regions along the East Coast of Brazil, between the 13th and 25th degrees of South Latitude, which had not yet been penetrated into by any Traveller, with a scientific view; and with his numerous and important zoological observations, he has connected the most interesting particulars respecting the nature of the country, and the manners of the inhabitants. Printed for Henry Colburn, and Co. Conduit Street.

London: Printed for the Proprietors, by W. POPE, &c. Chancery Lane; Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 38, (Exeter Change) Strand, where Communications (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 174.

SATURDAY, MAY 20, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Antar; a Bedouin Romance. Translated from the Arabic, by Terriek Hamilton, Esq. London, 1820. 12mo. Vols 2, 3, and 4.*

When the first volume of this remarkable book was published last year, we expressed a very favourable opinion of it, and quoted copiously from its contents, to justify that opinion. The three volumes now before us, complete (we believe) the first part of the Arabian work, which is of great length; and continue to exhibit a curious picture of the customs and manners of the Arab tribes antecedent to the era of Mahomet. With what change the introduction of his religion has made, these habits seem to have descended to the nineteenth century; and the narrative of the adventures of Antar, though sufficiently marvellous, may be consulted as no bad account of Arabia at the present moment. Four volumes may probably be thought somewhat too much of the matter; but, if we give up, as we in truth must do, the point of entertainment to that extent, we still adhere to our predilection for the publication, as a literary curiosity.

The author continues to relate the loves of Antar and his cousin Ilia; the opposition to their marriage by the family of the latter; the wars and encounters, the treachery, murders, and exploits, arising out of the circumstances, which retard or promote their union. The whole concludes with a magnificent marriage, at which all the tribes of Arabia, 360 in number, are feasted.

There is too much sameness in the combats, and the reader becomes fatigued with the repetition of sword-strokes, which divide men and horses into four equal parts, and other prodigies of valour and strength of the like description. In fact, it requires almost the courage and perseverance of Antar to get through four volumes of fights, all so similar in incidents and results: the novelty ceases, and attention flags, under the ponderous load of exaggeration and wonderful events. We shall, however, endeavour to spare our readers the weariness which we have experienced; and, while we enable them to form a judgment upon Antar, amuse them by selecting the most interesting and diversified passages.

An immense Persian army, under Prince VOL IV.

Chodawend, the son of Chosroe, invades Arabia, and, after a skirmish, the following characteristic circumstances are told.

"And the Persians alighted in their tents, and the land and the desert were filled, and whilst they were reposing, Khodawend ordered a letter to be written to the tribe of Abs commanding them to submit; and let it be mentioned that in that case I will stand as mediator between them and my father, but if they resist I will not spare one of them either high or low. Accordingly the vizier wrote a letter to King Zoheir to the above effect, stating,—Khodawend is advised to destroy you, but he has had compassion on you; he has resolved on acknowledging you the supports of his government, and the abettors of its greatness. Feel therefore the value of this intention, and presume not to thwart the imperial government.

"Having folded the letter, he gave it to a satrap, and ordered him to depart. He also honoured him with ensigns and standards, and gave him an escort of twenty Persian horsemen, with an interpreter called Ocab, son of Terfjem. The tribe of Abs had alighted, and not one remained on horseback but Antar and Maadi Kereb, who on observing the satrap, Antar said to Maadi Kereb, O chief, verily there is a satrap advancing towards us, he probably wants us to surrender ourselves to him that he may take us and hang us on the balcony; I rather wish to begin with them before they commence with us. They were in conversation, when lo! the satrap came up to them; he did not salute them, but asked for King Zoheir. He inquires for King Zoheir, said the interpreter, for he has a letter from Khodawend for him. We, O Arab, said Antar, have read your letter before its arrival; in it your prince orders us to surrender ourselves without fighting or contending. Pull that satrap off the back of his horse, said he to Shiboob; ay, and the rest too. Seize all their property; and if any one dares struggle with you, treat him thus—and at the word he expanded his arm, and pierced the satrap through the chest, forcing the spear out quivering through his back, and he hurled him down dead. When his comrades saw what Antar had done, they cried out for quarter, and surrendered themselves to Shiboob, who bound them fast by the shoulders. As to the interpreter, he shuddered. May God requite you well, said he, for you have answered us before even reading the letter. If this indeed is the honorary robe for a satrap, let it not be so for an interpreter; for I have children and a family, and I am but a poor fellow. I only followed these Persians, but with the prospect of gaining some miserable trifle. I never calculated on being hung; and my children when I am gone will remain orphans.

So he wept, and groaned, and complained, thus expressing himself:

"O knight of the horses of warriors that overthrew; their lion, resembling the roaring ocean. By your awful appearance you have disgraced heroes, and reduced them to despair. As soon as the Persian sees you he is dishonoured; if they approach you, and extend their spears against your glory, they must retreat, or there is no security. Have compassion then on your victim, a person of little worth, whose family will be in misery when he is gone. Not the thrust of the spear or battle are among my qualifications. I profess no fighting; I have no cleaving scimitar. My name is Ocab; but indeed I am no fighting man, and the sword in the palm of my hand only chases pelicans."

"Antar laughed at Ocab's verses. O Aboolfawaris, said Maadi Kereb, it would be foul indeed to hang this fellow. He has confessed his crime. Antar let him go. Return to your family, said he, and go no more to the Persian, or you will be in danger; for when they see you safe they will accuse you, and perhaps will put you to death. You are very right, my lord, said he: by the faith of an Arab, had I known these Persians would have been thus worsted I would not have quitted you, and probably I might have managed to secure some of their goods, and have returned with it to my family. Sheikh, said Maadi Kereb, this business has failed; but, come, take the spoils of this satrap, and return to your family, and pass not your evening a dead man. Ay, my lord, said Ocab, he is a wise fellow who returns safe to his friends. So he ran up to the satrap and despoiled him. Round his waist was a girdle and a sword, and when Ocab saw all that wealth he was bewildered; and having completely rifled him, O my lord, said he to Antar, I will never separate from you again. I wish you would present me to your king, that I may kiss his hand, and offer him my services: then indeed I will for ever cleave to your party, and whenever you slay a satrap I will plunder him. Antar laughed heartily: But, said Maadi Kereb, O Aboolfawaris, you have slain the satrap, and now King Zoheir cannot consult with him. O Maadi, said Antar, whenever any one comes to order us to surrender ourselves to him we will hang him, and not parley with him. Antar joined King Zoheir, and gave him the letter; he read it, and was much agitated. My lord, said Antar, what is the answer? Flanging and beheading must be the answer, said King Zoheir, so that Khodawend may send us no more of his satraps. I have done so, said Antar; and going out he saw that Shiboob had hung most of them; only three remained. He ordered him to shave their beards, and cut off their ears, and sling the

heads of those he had hung round their necks, and send them back to their prince. Shihob did as his brother ordered: one of them died on the road; two arrived, and their clothes were of the cornelian dyes; and when they stood in the presence of Zernekal they grunted and blasphemed, saying, the fault is Khodawend's, who condescends to negotiate with these Arabs. Zernekal introduced them to the prince, and informed him what had passed. Khodawend, on hearing this, swore by the fire that they must bring before him every Arab fettered, with their hands bound round their necks, or he would put to death every Persian he had with him. He passed that night in great anxiety for the appearance of day; and soon the men assembled about the troops; the horsemen mounted; the two armies prepared; the dust arose and obscured the land; the trumpets resounded, and shouts were raised; the imperial standards advanced; the Arab horse pranced, and the tribe of Abs also were eager for the contest in defence of their women and families, but they did not move far from the entrance of the mountains. Antar attacked the Persian, and scattered away their skulls. He wished on that day to keep off the Persians from the assault, but the armies could not be controlled; they shouted in their jargons, and raised their voices; but Khodawend prevented his Arabs from attacking with the Persians. Prince Aswad came forth, and also Belia and Hadisah, and they stood just without the scene of battle, enjoying the spectacle of the contest between the Abisians and Persians. The universe was in convulsions. The sun, with the violence of the dust, was veiled; the earth shook; lives were plundered; men were bewildered; swords clashed; the senses fled; blood flowed; the land was in tumults; the dust rose in clouds; the dead were trampled on with fury; the brave advanced, the cowards shrunk away. Antar and Maadi exhibited all their powers on that day. Khodawend was amazed. And they continued in that perilous confusion till the day fled, and the night came on in obscurity. The whole country was crammed with the dead. The armies of Khodawend alighted at their tents, whilst Antar and Maadi Kerab returned in front of their troops, rescuing the flowers of the Judas tree, so secured were they with the blood of the horsemen. They remained on guard till daylight, when the armies drew up for the battle and the contest. The Abisians stood forth, and in front were Antar and Maadi Kerab like the lions of the waste. Khodawend commanded the Persians to make the attack against the Abisians. Instantly the complexion of the beautiful changed; the cries were incessant; the gates of success were closed upon the Persians; the battle raged; shouts were vehement. The coward thought of his life, and screamed. Skulls were chopped off by the sword; the king of death was eager in the pursuit of souls; energy was excited; all sport was at an end. The horses were drenched in perspiration; great was the agitation; heads were smote and were cleft in twain. The stumbling and slipping were universal;

swords and shields were shattered; hands and necks were clipped off; spears dashed through the eyes; and the heart of Amarah burst."

Amarah is Antar's rival. The subjoined is a description of a volcano near which certain tribes subject to a chief called Nacmah dwelt. Nacmah going on a foray, "sent to the tribes of Iiyah, and Subab, Washab, and Athool, and Barik, and Shamrak, and ordered them to march with all expedition; for these tribes were subject to him, and feared his cruelty. Their residences were round the mountain of volcano, and all had adopted the worship of the moon. This mountain was one of the phenomena of the All-merciful Lord, for there incessantly issued from it something like a black cloud, and whenever the new moon rose, from this mountain burst forth groans, and sparks of fire flew forth. It was a black mountain, and no one was able to ascend it, and iron could not have any effect on its stony sides. An historian has noticed it, saying, The Lord God has been angry with this mountain, ever since he created the world at first, and at the consummation it will be the stone work of hell. In one of my excursions I ascended it, and I saw within it terrific wonders; its summit is divided in two, and in the centre is a sea of fire, that never subsides, but day and night it rolls in waves of flame, and on it are angels of wrath, and stern enormous monsters, that are never weary, but are continually stationed for its punishment by the will of the omnipotent God."

Though the Arabic poetry must lose much of its beauty in prose translation, there is a great deal to admire in many of these compositions. Antar's lamentation for the death of his King Zohair, affords an example:—

"Set is the full moon, though once it was in its zenith; hidden is its light, and all is dark. Eclipsed is the sun, and the moon no more returns in smiles. Fallen are the constellations; they have disappeared; the atmosphere is obscured; the dust of darkness is over it; all the seas are hollow, and are sunk deep; we have lost its dews and its clouds. At the moment that Zohair fell dead infancy shrouded us, and sat upon us. Fortune has made him drink of the cup of death, but likewise fortune will be quick in its vengeance. He was my stay, my armour in adversity; he was my breastplate, my spear, my scimitar. O my eyes, when ye shed not tears, may sleep be denied ye! I swear by Him who slays and brings to life, by Him who rules the light and the darkness, never will I raise my sword in battle till I behold all my enemies in dismay and in shame. O tribe of Amair, O clan of Kelab, dread the light and slande of my sword; soon shall thy wives scream in terrors of captivity; soon shall they weep for their orphaned little ones. I am Antar, son of Shedad, and my star is high raised above the sublimity of the seven heavens!"

"When Antar had finished his verses, his tears gushed out in incessant streams, and he wept bitterly, till he could no more, and

he fainted; but when he recovered from his swoon, he cast his eyes towards King Zohair's seat, and thus expressed himself:

"Weep abundantly, my eyes, in torrents of tears; and me, relieve my woes with weeping! For oh! I have lost a prince that was my support—that was my full moon; but it is now set below the earth! I have lost the sea and the rain by my enemies, and him whose benevolence resembled the deluging clouds. I have lost a lion, but in no lion was there his power. I have lost the knight of war, the invincible hero: my heart is on fire. I have lost all resignation for a prince who taught the Arabs on the day of combat with his spear. O Oais, depend on me; for in my heart is a flame of fire that consumes it, and my forbearance I can no longer persist in. Rise with me; let us seek vengeance speedily, for death is sweeter to my heart than honey. Reproach me not for my wars, —I love them: I will bear neither word nor rebuke. Night is my complexion, and the lions of war know me. The coat of mail be my strong tower, and my heart is hewn out of a rock. Warriors are reduced to contempt by me in the day of combat, as the Arabs can witness for me. Woe, woe to my heart, for what it has lost. Death, now Zohair is no more, is my noblest aim."

(To be concluded in our next.)

*Memoirs of Richard Lovell Edgeworth, Esq. Begun by Himself, and concluded by his Daughter Maria Edgeworth. London, 1820. 2 vols. 8vo.*

When we took up this work we felt apprehensive that two solid volumes would be found too much for the subject; and as we perused the early pages, that apprehension became stronger. We were however agreeably disappointed after we got through the nursery stories of the author's childhood, and, accompanying him into the world, began to fall upon matter of a more entertaining cast.

There is something very beautiful and affecting in the idea of a child completing the biography of a parent; and it loses nothing by the way in which it is put in Mr. Edgeworth's introduction. He says,

"My beloved daughter, Maria, at my earnest request, has promised to revise, complete, and publish her father's life."

"Were she to perceive any extenuation on the one hand, or exaggeration on the other, it would wound her feelings; she would be obliged to alter, or omit, what she did not approve, and her affection for her friend and parent would be diminished:—can the public have a better surety than this, for the accuracy of these memoirs?"

He adds—

"I now take leave of the world, which has been most indulgent to me, as a man, and as an author, and I take leave of the world with this declaration,—that, to speak the truth without harshness, is, in my opinion,

the most certain way to succeed in every honorable pursuit."

The author sets out with the antiquity of his family, into the records of which he enters, favouring us with, here and there, a bull or idle tale. For instance at page 8 it is stated of one of his female ancestors, that "after the rebels had forced this lady out of the castle, and had set fire to it, they plundered it completely;" in other countries they would have plundered it before they set fire to it! At page 14, we have a relation of the well known gallantry which rescued a candle from a barrel of gunpowder, ascribed to a Lady Edgeworth; at page 18, the story of a coin put under the seal of a deed which exposes the roguery of the parties, and invalidates the forged document, (told nearly word for word in "Patronage;") and indeed, the whole of the early parts, are disfigured by the repetition and appropriation of jests famous in joocular literature, and by anecdotes of marvellous precocity belonging to the infancy of the writer. Looking to Mr. E. as an advocate for a better system of education than, unfortunately, is usually pursued in respect to children, we have a graver objection to an account of a transaction which followed his having thrown a hot iron at his brother. He tells us—

"When my mother heard what I had done, I saw she was struck with horror, but she said not one word in anger to me. She ordered every body out of the room except myself, and then drawing me near her, she spoke to me in a mild voice, but in a most serious manner. First, she explained to me the nature of the crime, which I had run the hazard of committing; she told me, she was sure that I had no intention seriously to hurt my brother, and did not know, that if the iron had hit my brother, it *must* have killed him. While I felt this first shock, and whilst the horror of murder was upon me, my mother seized the moment, to conjure me to try in future to command my passions. I remember her telling me, that I had an uncle by the mother's side who had such a violent temper, that in a fit of passion one of his eyes actually started out of its socket. 'You,' said my mother to me, 'have naturally a violent temper: if you grow up to be a man without learning to govern it, it will be impossible for you then to command yourself; and there is no knowing what crime you may in a fit of passion commit, and how miserable you may in consequence of it become. You are but a very young child, yet I think you can understand me. Instead of speaking to you as I do at this moment, I might punish you severely; but I think it better to treat you like a reasonable creature. My wish is to teach you to command your temper; nobody can do that for you, so well as you can do it for yourself."

Here the precept is good; but how many times more dangerously powerful is the example of a parent telling lies to her child, in order to persuade him to act rightly? It was not true that the iron *must* have been fatal; and it was a falsehood that any one's eye

started from the socket in a fit of passion. These are the fatalities in forming the youthful mind; and though the author praises his mother's knowledge of human nature, he has herein set up a beacon to be avoided, not an example to be imitated. But we pass to pleasanter subjects, only premising, that in 1761, the author entered Corpus Christi College, having studied previously at Dublin: his bent however appears to have been almost exclusively towards mechanics, which became his ruling passion."

The following story is told of Sir Francis Delaval's electioneering at Andover.

"His attorney's bill was yet to be discharged. It had been running on for many years, and though large sums had been paid on account, a prodigious balance still remained to be adjusted. The affair came before the King's Bench. Among a variety of exorbitant and monstrous charges there appeared the following article.

"To being thrown out of the window at the George Inn, Andover—to my leg being thereby broken—to surgeon's bill, and loss of time and business—all in the service of Sir F. B. Delaval.—Five hundred pounds."

"When this curious item came to be explained, it appeared, that the attorney had, by way of promoting Sir Francis's interest in the borough, sent cards of invitation to the officers of a regiment in the town, in the name of the mayor and corporation, inviting them to dine and drink His Majesty's health on his birthday. He, at the same time, wrote a similar invitation to the mayor and corporation, in the name of the officers of the regiment. The two companies met, complimented each other, eat a good dinner, drank a hearty bottle of wine to His Majesty's health, and prepared to break up. The commanding officer of the regiment, being the politest man in company, made a handsome speech to Mr. Mayor, thanking him for his hospitable invitation and entertainment. 'No, colonel,' replied the mayor, 'it is to you that thanks are due by me and by my brother aldermen for your generous treat to us.' The colonel replied with as much warmth as good breeding would allow: the mayor retorted with downright anger, swearing that he would not be choused by the bravest colonel in His Majesty's service.—'Mr. Mayor,' said the colonel, 'there is no necessity for displaying any vulgar passion on this occasion. Permit me to shew you, that I have here your obliging card of invitation.'—'Nay, Mr. Colonel, here is no opportunity for bantering, there is your card.'

"Upon examining the cards, it was observed, that, notwithstanding an attempt to disguise it, both cards were written in the same hand by some person, who had designed to make fools of them all. Every eye of the corporation turned spontaneously upon the attorney, who, of course, attended all public meetings. His impudence suddenly gave way, he faltered and betrayed

• As an example of this, it has been stated to us, that when a beloved daughter died, Mr. Edgeworth relieved the distraction of his soul by inventing a patent coffin for her corpse. *Ed.*

himself so fully by his confusion, that the colonel, in a fit of summary justice, threw him out of the window. For this Sir Francis Delaval was charged five hundred pounds."

Mr. E. married in 1763, and lived principally in Berkshire, where he became very intimate with Mr. Day, cultivating at the same time an intercourse with most of the literati of the time.

The eccentricities of Mr. E. and of some of his friends, are unfolded in some whimsical anecdotes. We copy the following in a miscellaneous way.

"In one of my journeys from Hare Hatch to Birmingham, I accidentally met with a person, whom I as a mechanic, had a curiosity to see. This was a sailor, who had amused London with a singular exhibition of dexterity. He was called *Jack the Darter*. He threw his darts, which consisted of thin rods of deal, of about half an inch in diameter, and of a yard long, to an amazing height and distance; for instance, he threw them over what was then called the New Church in the Strand. Of this feat I had heard, but I entertained some doubts upon the subject; I had enquired from my friends where this man could be found, but had not been able to discover him. As I was driving towards Birmingham in an open carriage of a singular construction, I overtook a man, who walked remarkably fast, but who stopped as I passed him, and eyed my equipage with uncommon curiosity. There was something in his manner, that made me speak to him; and, from the sort of questions he asked about my carriage, I found that he was a clever fellow. I soon learned, that he had walked over the greatest part of England, and that he was perfectly acquainted with London. It came into my head to inquire, whether he had ever seen the exhibition, about which I was so desirous to be informed. 'Lord! Sir,' said he, 'I am, myself, *Jack the Darter*.' He had a roll of brown paper in his hand, which he unfolded, and soon produced a bundle of the light deal sticks, which he had the power of darting to such a distance. He readily consented to gratify my curiosity, and after he had thrown some of them to a prodigious height, I asked him to throw some of them horizontally. At the first trial he threw one of them eighty yards with great ease. I observed, that he coiled a small string round the stick, by which he gave it a rotary motion, that preserved it from altering its course; and at the same time it allowed the arm, which threw it, time to exercise its whole force.

"If any thing be simply thrown from the hand, it is clear, that it can acquire no greater velocity than that of the hand which throws it; but if the body, that is thrown, passes through a greater space than the hand, whilst the hand continues to communicate motion to the body to be impelled, the body will acquire a velocity nearly double to that of the hand which throws it. The ancients were aware of this, and they wrapped a thong of leather round their javelins, by which they could throw them with additional violence. This invention did not, I believe, belong to the Greeks; nor do I remember

is being mentioned by Homer or Xenophon. It was in use among the Romans; but at what time it was introduced or laid aside I know not. Whoever is acquainted with the science of projectiles will perceive, that this invention is well worthy of their attention."

The author spent several years in France :

The society at Lyons was at this time emulating the polish of Parisian manners, and approaching fast to the dissipation and relaxation of morals, which prevailed in Paris. Among the trifling anecdotes, that have remained in my memory, I may mention a repartee of a belle at Lyons, a Madame Bobu. This lady had given some offence to M. de Vespillier, the mayor of Lyons. At a masquerade, the major discovered this lady in her disguise, and accosted her in a sarcastic tone, with a quotation from the syllables of the Primer:—"Comment vous portez vous, Madame Ba-Be-Bi-Bo-Bu?"—She answered, "Très bien! Monsieur Ca-Ca-Co-Co!"—A sarcasm, which was not applied at hazard.

A few more slight anecdotes will mark the manners of that day at Lyons, and the good and bad qualities apparent in the different ranks of society. An English gentleman, who seemed to be very popular among his companions, had brought himself into sudden distress by an unlucky run at play. He was arrested, while he was entertaining several of his countrymen at dinner. Not one of them interfered in his favour; but when he retired from the room, a valet de place, who had lived with him for two years, offered him a purse containing more than the debt for which he was arrested, telling him, that he had earned that money by the English, and that it could not be better employed, than by saving a gentleman of that country from disgrace. The offer was accepted, and the English gentleman, soon afterwards repaid the sum, with the addition of a handsome present.

"Another instance of generosity, shewn to an Englishman in distress, occurred while I was at Lyons. A gentleman was arrested for numerous debts, which he had incurred by living in a very extravagant manner with Mademoiselle St. Clair, an actress of great celebrity and some beauty. She had fascinated the gentleman so completely, that he had lavished upon her all the money, and had exhausted all the credit, which he could command. Tradesmen to whom he was indebted, becoming acquainted with his situation, found it necessary to enforce payment by securing his person. None of the English came forward to his assistance, and he was actually placed in confinement. He was not, however, left long in this situation; for Mademoiselle St. Clair sold all her plate and jewels, and released him. When her lover flew to her, to express his gratitude, he was astonished to find a reception very different from what he expected: after expressing in the fondest manner her affection, she declared it to be her fixed determination, to live with him no longer. In vain he pleaded his constancy, his entire devotion to her wishes.

She acknowledged all his claims, but steadily refused to continue a connexion, which must necessarily end in his ruin. She had given such a signal proof of her disinterestedness and affection, that no meretricious motive, or any caprice of sentiment, could be attributed to her conduct; she therefore claimed the merit of the greatest sacrifice in giving him up, to preserve him from himself. All the Lyons world applauded her generosity: she was caressed and invited to some of the best houses in that city. I have dined with her at Madame de Vespillier's, with a large society of the best company. Had I not known that she was an actress, I could not have discovered her situation by any thing in her manners or conversation."

Having returned to England on the death of his wife soon after the birth of a daughter, Mr. E. shortly married Miss Honora Sneyd, and retired to his family seat, Edgeworthstown, in Ireland. On her death, he married her sister Elizabeth.

The second volume is the production of Maria Edgeworth, and infinitely better written than the first, but not so light and amusing from its gossiping character. We select merely one letter, which describes the death of Dr. Darwin.

"Among the foreigners, who came to England about this time, was Professor Pactet of Geneva, brother of the editor of the *Journal Britannique*, who translated *Practical Education*, and with whom my father had had some correspondence on the subject. Professor Pactet visited Ireland, and came to Edgeworthstown. He decided us to go abroad, by the kind offers of introduction to numerous literary friends at Paris; and assurances, that from what they already knew of him, through his writings on Education, they were prepared to receive him and his family with cordiality. The tour was arranged for the ensuing Autumn, and the pleasure of revisiting some of his old English friends, Dr. Darwin in particular, was full in his contemplation, when he received the following letter.

"FROM DR. DARWIN TO MR. EDGEWORTH.

"*Priority, near Derby, April 17, 1802.*

"Dear Edgeworth,

"I am glad to find, that you still amuse yourself with mechanism, in spite of the troubles of Ireland.

"We have all been now removed from Derby about a fortnight, to the *Priority*, and all of us like our change of situation. We have a pleasant house, a good garden, ponds full of fish, and a pleasing valley somewhat like Shenstone's—deep, imbraguous, and with a talkative stream running down it. Our house is near the top of the valley, well screened by hills from the east, and north, and open to the south, where, at four miles distance, we see Derby tower. Four or more strong springs rise near the house, and have formed the valley, which, like that of Petrarch, may be called *Val chiusa*, as it begins, or is shut, at the situation of the house. I hope you like the description, and hope further, that yourself and any part of your family will sometime do us the pleasure of a visit.

"Pray tell the authoress, that the water-nymphs of our valley will be happy to assist her next novel.

"My bookseller, Mr. Johnson, will not begin to print the *Temple of Nature*, till the price of paper is fixed by Parliament. I suppose the present duty is paid."

"At these words Dr. Darwin's pen stopped. What follows was written on the opposite side of the paper by another hand.

"Sir,

"This family is in the greatest affliction. I am truly grieved to inform you of the death of the invaluable Dr. Darwin. Dr. Darwin got up apparently in health; about eight o'clock, he rang the library bell. The servant, who went, said, he appeared fainting. He revived again,—Mrs. Darwin was immediately called. The Doctor spoke often, but soon appeared fainting; and died about nine o'clock.

"Our dear Mrs. Darwin and family are inconsolable: their affliction is great indeed, there being few such husbands or fathers. He will be most deservedly lamented by all, who had the honor to be known to him.

"P.S.—This letter was begun this morning by Dr. Darwin himself.

"The shock, which my father felt, must in some degree be experienced by every person, who reads this letter, where the playfulness of the beginning is in such contrast to the end. There is, in the sudden stroke of death, something that no human creature can behold with indifference, even when it falls on one quite unconnected with ourselves, or on one, who had in no way distinguished himself from his fellow mortals; but how much more awfully the blow resounds through the world, when it levels to the dust one preeminent in talent!"

The following are specimens of Mr. Edgeworth's poetry.

#### EPICRAM

*On some recent Scotch Marriages and Divorces.*

To ready Scotland boys and girls are carried,  
Before their time, impatient to be married,  
Soon wiser grown the selfsame road they run,  
With equal haste, to get the knot undone;  
Th' indulgent Scot, where English law too nice  
Is,

Sanctions our follies first—and then our vices.  
Ed. 1811.

*On receiving a Pencil-case from Mrs. F. Edgeworth, with a Black Lead Pencil at one end, and at the other a gold pen.*

If in some heedless hour my careless strain  
Should chance to give my loved Eliza pain,  
May the rude lines the fading pencil trace!  
May the rude lines her gentle hand efface!  
But when her worth, or when my love is told—  
Oh! may the sterling line be graced with gold.

The work is adorned with neat engravings, and will be found curious to literary readers.

*A New Dictionary for the Fashionable World; translated from the French, with selections and additions. London, 1820. 12mo. pp. 132.*

This is but a weakly performance,

and wants the whim and pungency which alone can make such a thing amusing. We copy a few of the best of the definitions and explanations, as a sample of the work.

*Ability*.—Those who possess the most, frequently make the least use of it.

*Abuse*.—A word of attack against a man in place; a word too often abused in its application. To put an end to *abuses*—to remedy *abuses*—in the mouths of many, means, your place suits me, or, give me a place!

*Answerable*.—A most hazardous thing to be, for any one, or any thing, in this world.

*Apothecary*.—A man who mixes drugs, with the qualities of which he is little acquainted, to operate upon a constitution with which he is still less acquainted.

*Bankruptcy*.—A way to enrich yourself, (A. D. 1815).

*Barrow*.—A great delight to an antiquary, as he finds a method of gratifying his wish of obtaining a few old broken jars, and perhaps may have the luck of getting some of the ancient bones of a Roman or Saxon hero, all which are more to him, than gold and jewels.

*Block*.—A heavy thick sort of head, upon which wigs are placed, sometimes of wood, sometimes upon the shoulders of individuals; and these last are called *block-heads*.

*Books*.—An ornament in all fashionable rooms, and sometimes of use, when they have not been cut down to fit into a beautiful little book-case! which we are assured has been done, by the desire of a lady, who was disappointed to find she could not get her books to fit in without this happy contrivance.

*Botanist*.—A person who delights as much in the antiquary in bones, or the miser in gold.

*Dandy*.—A creature unknown in England till of very late years. It is supposed to have some great defect in the formation of the head: some think the organ of folly is of such an extreme size in these animals, as to push every other organ in the head out of its place, and entirely to compress the brain; for *sense* they certainly have none, and *motion* is almost wholly denied them; incurvation is totally out of their power, and they are the most helpless of any two-legged animal upon the earth; yet they are as imitative as monkeys, and appear to follow every profession; and we have even been shocked to see them in the highest walk of our church!

"We have heard of a buck, maccaroni, and spark, but a dandy, (poor thing) was unknown in the ark."

For Noah had never endeavoured to save A thing of no use from the deluge's wave."

*Delight*.—Experienced in its true sense by the girl who is dressing for her first ball.

*Gratitude*.—The memory of the heart, which reminds us of benefits received, and disposes us to acknowledge them.

*History*.—A word so abused, that it is become synonymous with *folly*.

*Home*.—The seat of every comfort; more particularly understood by the English than any other nation. The French, indeed, have no word in their language for *home*. Nothing can convey a more just idea of the delight of *home* than an old Italian proverb:—"Ad ogni uccello, il suo nido par bello."

*Home (at)*.—A fashionable mode of invitation, and of rendering home the very reverse of a seat of comfort. It fills the house in a way to make it difficult to ascertain whether the mistress really be at home or no [not]. Indeed we have heard of a lady who took advantage of her at home, to go and pay a comfortable visit to a friend, who expressed surprise at seeing her, "Lord, my dear, my at home is just when I cannot be missed!"

*Inventions*.—Old things, by new names.

*Journal*.—A memorandum book for the assistance of those who have a short memory. We have heard of a Frenchman who frequently travelled from Paris to Lyons writing one day in his memorandum book, "Me souvenir de me marier en passant par Nevors."

*Love*.—A privilege for all the absurdities that can be committed, and all the nonsense that can be talked.

*Prodigies*.—Every first child; and if it fortunately remains an only one, continues to be a prodigy to the end of time.

*Vanity*.—A passion which demands every thing, and grants nothing.

Perhaps we ought in justice to annex the author's idea of a critic.

*Critic*.—An unmerciful searcher of faults. Very little wit, and a large share of ill-nature, is all that is necessary to form a good critic.

As we have made the writer his own critic, it will appear that he is wrong in parts of this character. His extracts indeed display 'very little wit': but they are not ill-natured.

*An Historical Sketch of the Campaign of 1815, illustrated by Plans of the Operations, &c.* By Captain Batty, of the 1st Grenadier Guards. 2d. edition. London 1820. 8vo pp. 162.

This very able general view of the operations of the important year 1815, with the excellent plans that illustrate its skillful and impartial narrative, may be consulted historically as a corrective to the partisan accounts which have issued from the press relative to the war. For military men, we presume its value to be still greater; but as its literary merits come most within our purview, we need only exemplify them by a brief extract. The following is the conclusion of the sketch of the battle of Waterloo.

A victory of such magnitude, and of such importance from its consequences, could not of course be achieved without great loss

on the part of the victorious army. It is impossible to enumerate in this place the many instances of brave and distinguished officers who fell or were severely wounded in this hard fought battle. The Prince of Orange at the head of his corps had distinguished himself throughout the day, by the example of his gallantry and activity, in rallying the troops when partially disorganized by the severe attacks of the enemy, till he was severely wounded and borne from the field. The Earl of Uxbridge, who, during the contest, had headed the different charges, was seen in his splendid uniform moving like a meteor across the plain, followed by the British cavalry, whose course was marked by the slaughter it made. In the advance of the whole army, at the close of the day, he was one of many who suffered from the last deadly volley of the enemy's artillery, and had one of his legs shattered by a cannon shot. Many of the Duke of Wellington's personal staff were killed or wounded. The brave Gen. Barne, Adjutant-General to the army, was severely wounded, and the Quarter-Master-General, Col. De Lancey, received a wound, which, unfortunately for the country at large, proved fatal. It is but a just tribute to this distinguished officer's great worth, to add, that when assistance was offered to him on the field, he declined accepting it, from a consciousness that his wound was mortal, and at the same time desired that those who came to assist him would give their immediate attendance to such of his brave countrymen who might be benefited by it, and he remained on the field during the night.

It appears from all accounts that Napoleon was confident of being enabled to defeat the army of the Duke of Wellington without the assistance of the troops which he had detached under Marshal Grouchy: he should have remembered the peculiar qualities of English troops in days of battle; the campaigns in the Peninsula should alone have proved to him that in the open field they were never defeated; and he should have borne in mind one of the essential rules, in which, in his instructions for days of battle, he impresses, "cette maxime, qu'un homme de guerre ne peut pas se graver dans l'esprit, que ce sont les plus opiniâtres qui gagnent les batailles."

And when, later in the day, he received intelligence of Bulow's corps being in march upon his right flank, he seems to have calculated on Marshal Grouchy being able to come up with its rear, notwithstanding the distance and difficult roads between Mont St. Jean, and Wavres, whither Grouchy had received instructions to proceed. However, it seems to be the opinion of many able men, that Marshal Grouchy should at once have marched upon the scene of action at Mont St. Jean, as the cannonade which he heard evidently was that of the whole force of Napoleon engaged against the Duke of Wellington's. With regard to the policy of accepting battle from the enemy on the plains of Waterloo, which the French writers have considered so great a fault in the tactics of

the Duke of Wellington; it must be observed, that had Belgium been a country whose political and commercial interests would have led it to oppose invasion with energy, the best system to have been followed by the army of the Netherlands would be that of availing battles and drawing the enemy further from his resources, and thus extending, and consequently weakening, the line of his operations, and compelling him to a warfare in detail; whilst the allies, retiring on their resources, would have accumulated strength, and might have selected their own time and place for giving battle to the invading army; and whilst the immense armies collected on the Rhine and in Lombardy, by invading France, would of necessity compel the French troops in Belgium to retreat.—But as Belgium had for so long a period formed an integral part of the French empire; as both her political, and yet more her commercial interests, were assimilated with those of France, and, as may reasonably be supposed, a great portion of the population eagerly looked for the advance of Napoleon, it is manifest under these circumstances, that the farther he could penetrate into the country, the greater probability there would be of his success. The proclamations and other documents found in his baggage, which was captured, prove his confident expectation of gaining over the whole country to his cause, and the losses he might sustain in actions would then have been recruited in the country he invaded. It was therefore as much, nay more, the interest of the Duke of Wellington to meet the enemy, if not on the very frontier, as near to it as possible, and by an obstinate defence, still to secure the plan arranged for the combined efforts of all the allied armies against France. Could the Duke of Wellington have merely maintained his ground at Waterloo, so as to prevent the farther advance of the French army; or could he effect a junction with the Prussian army, his object would have been equally gained; but, to prevent the enemy from gaining possession of the Flemish capital was of vital importance. It would appear, therefore, that as the French army, inferior in numbers to the united forces of Wellington and Blücher, could not at the same moment defeat both armies, there can hardly be a doubt that, subsequent to the battle of Ligny, all his efforts should, without delay, have been exerted against the Duke of Wellington's army, and these, with every man who could be spared from the pursuit of the Prussians, for it would have been against all the rules of war to quit with his main forces the road between Charleroi and Bruxelles, which was the true base of his operations, to follow the Prussian army along the bad cross roads in the direction of Louvain, and thus leave open his communications to the army of the Netherlands.

These opinions of an experienced and peculiarly well informed officer, are worthy of attention on the contested subjects to which they refer. The appendix contains several interesting documents, including Mr. Samuel Ro-

gers's account of the attack of Colonel Ponsonby's regiment, drawn up on the gallant Colonel's own month, and originally published in the Literary Gazette.

PRINCE MAXIMILIAN'S TRAVELS IN BRAZIL.  
(Concluded.)

Between the Rio Doce and St. Matthews, we have a characteristic trait of Brazilian travelling.

We missed the first watering-place, called Caçimba do S. João, but found the second, which is a *lagoa*, in a small low valley called Piranga, on the road side, at noon, when we had dispersed in all directions in search of water: it afforded some refreshment to us and our cattle. At the place where we stopped for the evening our search for water was however fruitless; none was to be found, and we were consequently unable to make use of the provisions which we had brought with us, they being too hard to be eaten without the addition of water. Our only resource was to satisfy our hunger with a little dry maize flour, and the turtles' eggs fortunately collected by the soldiers, which we could boil in sea water. While our people were employed in fetching some, and in picking up drift wood on the beach, we found to our great surprise, at a short distance from our fire, a prodigious sea-turtle (*testudo mydas*, Linn.) which was just going to deposit its eggs: nothing could be more welcome to our hungry company; the animal seemed to have come expressly to provide us with a supper. Our presence did not disturb it; we could touch it, and even lift it up; but to do this it required the united strength of four men. Notwithstanding all our exclamations of surprise and our deliberations what to do with it, the creature manifested no signs of uneasiness, but a kind of hissing, nearly like the noise made by the geese when any one approaches their young. It continued to work, as it had commenced, with its fin-like hinder feet, digging in the sand a cylindrical hole from eight to twelve inches broad; it threw the earth very regularly and dexterously, and as it were keeping time on both sides, and began immediately after to deposit its eggs.

One of our two soldiers laid himself all along on the ground near this purveyor of our kitchen, and took the eggs out of the hole as fast as the turtle deposited them; and in this manner we collected 100 eggs in about ten minutes. We considered whether we should add this fine animal to our collections; but the great weight of the turtle, which would have required a mule for itself alone, and the difficulty of loading such an awkward burden, made us resolve to spare its life, and to content ourselves with its eggs.

Those huge animals, the *midas*, and the soft-shelled turtle (*testudo mydas* and *coracora*), as well as the *testudo caretta*, or *cawanna*, deposit their eggs in the sand in the warmest months of the year, particularly in

this uninhabited part of the coast, between the Rincho and the Mucuri; they come on shore for this purpose in the evening twilight, drag their heavy bodies up the sandy coast, dig a hole, in which they deposit their eggs, fill it up with sand, which they tread down, and an hour or two after sun-set return to the sea. This was the case with the turtle which had so amply supplied us; when we came back to the strand a few hours afterwards, it was gone; it had filled up the hole, and the broad track left by it in the sand shewed that it had returned to its proper element. A single turtle of this kind can furnish an abundant repast with its eggs for a whole company; for the *midas* is said to lay at once ten or twelve dozen, and the soft-shelled from eighteen to twenty dozen. These eggs are a very nutritious food, and are therefore eagerly sought after on this desert coast by the Indians, and in the neighbourhood of the colony also by the whites.

In the woods on the banks of the river St. Matthew, the uncivilized Indians are very numerous, and they all live in constant warfare with the whites in this part of the country. In the course of the last year seventeen persons were killed by them. The northern bank is haunted by the Patachos, Cumannochs, Machacalis (called by the Portuguese Machacaria, they themselves cannot pronounce the *r* well), and other tribes, as far as Porto Seguro. The Botocados also are numerous, and said to be chiefly in possession of the south bank; they are feared by the other tribes, and are considered as enemies by the rest, who, on account of their inferior numbers, make common cause against them. The plantations belonging to a *fazenda* higher up the river were frequently robbed by the savages, till the proprietor devised a singular expedient to get rid of these hostile visitors. He loaded an iron cannon, which was at the *fazenda*, with pieces of old lead and iron, fastened the lock of a musket to it, placed it in the narrow path by which the savages always used to come in a column, and laid a piece of wood across the path which was connected with the trigger by means of a string. The savages appeared in the dusk of the evening, and trod on the piece of wood, as had been intended. When the people of the *fazenda* hastened to the spot to see the result, they found the cannon burst, and thirty Indians killed and mutilated, some still on the spot and others scattered in the woods. The cries of the fugitives are said to have been heard far around. Since this terrible destruction the *fazenda* is said not to have been again disturbed by the savages.

In the river St. Matthew, the original Brazilian name of which is *Cricaré*, is found a rare animal, which at present is met with in only very few rivers on the east coast. This is the *manati*, or *prairie boi* of the Portuguese. The natural history of this singular animal is still obscure in many points; it is pretty frequent in this river, but is said sometimes to go into the sea, and along the coast, and then into other rivers; thus it has been taken, for instance, in the *Aleboaga*. At St. Matthew, the favourite haunt of the ma-

nati, is a *lagoa*, or inland water, much overgrown with grass and reeds. The hunting of it is attended with some difficulty. The hunter rows carefully and without noise in a small boat among the grass and reeds; if he sees the animal with its back above the water, as it usually appears when grazing, he approaches cautiously, and throws at it a harpoon fastened to a cord. The manati yields a great quantity of blubber, and its flesh is esteemed. The orbicular bone of the ear is looked upon by the ignorant people as a powerful specific, and sold at a high price. Though I repeatedly made great promises, during my three or four months' stay in these parts, with a view to obtain one of these animals, my hopes were disappointed, and I was forced to content myself with the sight of the stuffed manatis, which I saw on my return from Brazil, in the cabinet of Natural History at Lisbon.

At Villa Viçosa, the suite of the Ouvidor, or Commisitant, included ten or twelve of the Botocudos; of whom the Prince says :—

The sight of the Botocudos astonished us beyond all expression; we had never before seen such strange and singularly ugly beings. Their original countenances were farther disfigured by large pieces of wood which they wore in their lower lips and in their ears: the lip is thus made to project very much, and the ears of some of them hang like large wings down to their shoulders: their brown bodies were covered with dirt. They were already very familiar with the *ouvidor*, who had then always in the room with him in order to gain their confidence more and more. He had some persons who spoke the Botocudo language, and let us hear some specimens of their singing, which resembles an inarticulate howling. Most of these young Indians had lately had the small pox: they were still covered all over with marks and scars, which, as their bodies were emaciated by the disease, considerably increased their natural ugliness.

The following picture of the travellers is interesting :—

To form some idea of our mode of life at Marro d'Arara, conceive a wilderness in which a company of men forms a solitary outpost, sufficiently provided by nature with the necessities of life, in abundance of game, fish, and good water; but at the same time, by its distance from inhabited places, entirely confined to its own resources, and obliged to be constantly on its guard against the savage natives of the forest, by whom it is on every side surrounded.

Patachos, and perhaps Botocudos, prowled about us daily, to watch our motions; for this reason we all went constantly armed; we numbered between fifty and sixty able bodied men. The wood on the side of a mountain, on the bank of the *lagoa*, had already been felled, so that it lay confusedly together like a rude abatis. Twenty-four Indians, who were particularly serviceable for this purpose, went out daily to work; some of them were furnished with axes, others

with a sickle-shaped instrument (*fouce*) fixed to a long handle; the former cut down the trees, the latter the underwood and young bushes. When a large tree was felled it drew down many other trees with it to the ground; because all these forests are interlaced and twined together by the strongest lianes climbing plants; many trunks were broken off by others, and remained standing like colossal pillars: prickly plants, especially the stems of the *ari* palm, which are covered with thorns, lay every where on the ground, and made these abatis perfectly impenetrable. The *ouvidor* had caused five or six huts to be built near the *lagoa*, the roofs of which were covered with urucana leaves. Four of our Indians, who, like most of their countrymen, were very good hunters, and still better fishermen and boatmen, were sent out every morning for the whole day, to fish, hunt, and examine our *mundoes*, or traps for animals, and they always brought home in the evening, game and abundance of fish, principally *piabanhas*, *trairas*, *pian*, *robol*, and other species. As soon as all our people were collected together in the evening, we had no cause to fear an open attack of the savages. Against a surprise by night, which they do not readily attempt in dark, but preferably in moonlight nights, we were secured by the vigilance of our dogs. A large dog belonging to the *ouvidor* distinguished himself above the rest; he seemed to scent the savages when they prowled about on the mountain, beyond the *lagoa*. On these occasions he was quite furious, and barked long and without intermission towards the suspicious quarter. The Patachos, from their dark lurking places, doubtless observed us, not without wonder and dissatisfaction, and our hunters had need of great caution not to approach them unguardedly. We often heard these savages imitate the notes of the owls (*carajá*), of the *capucira*, and other animals, especially the night-birds; but our Indians, who were equally skilled in this art, never failed to distinguish the imitation from nature. A person not acquainted with it, would perhaps have attempted to follow the call of the bird, when the arrows of the savages would have shewn him his mistake. When our people danced the *badora* by moonlight, and played the guitar to it, which is always accompanied by the clapping of hands; this clapping was repeated by the savages on the other side of the *lagoa*. The *ouvidor*, who on all occasions took much pains to gain the savages, made frequent endeavours, while we were here, to entice them, and called out to them *Schamanik*! (comrade) or *Capitum Ney*\* (great chief), &c. but all his endeavours were vain; though our Indians, whom we sent out on the watch, frequently perceived by the footsteps of the savages, that they had approached the abatis in the night, and reconnoitred our encampment on all sides. As we ourselves expected one evening to be suddenly attacked, because our dogs were uncommonly uneasy, we were always on our guard, and

those who had to fetch water, collect fuel or do any thing else in the forest, always took care to be well armed.

We must now conclude, which we do with an account of a Botocudo combat.

One Sunday morning, when the weather was most beautifully serene, we saw all the Botocudos of the Quartel, some with their faces painted black, and others red, suddenly break up, and wade through the river to the north bank, all with bundles of poles on their shoulders. Soon afterwards Captain June, with his people, came out of the wood, where a number of women and children, had sought refuge in some large huts. Scarcely had the news of the approaching combat become known in the Quartel, when a crowd of spectators, among whom were the soldiers, an ecclesiastic from Minas, and several strangers, whom I also joined, hastened over to the field of battle. Each took for his security a pistol or a knife under his coat, in case the combat should be turned against us.

When we landed on the opposite bank, we found all the savages standing close together, and formed a half circle about them. The combat was just beginning. First, the warriors of both parties uttered short rough tones of defiance to each other, walked sullenly round one another like angry dogs, at the same time making ready their poles. Captain Jeparack then came forward, walked about between the men, looked gloomily and directly before him, with wide staring eyes, and sung, with a tremulous voice, a long song, which probably described the affront that he had received. In this manner the adverse parties became more and more inflamed: suddenly, two of them advanced, and pushed one another with the arm on the breast, so that they staggered back, and then began to ply their poles. One first struck with all his might at the other, regardless where the blow fell: his antagonist bore the first attack seriously and calmly, without changing countenance; he then took his turn, and thus they belaboured each other with severe blows, the marks of which long remained visible in the large wheals on their naked bodies. As there were on the poles many sharp stumps of branches which had been cut off, the effect of the blows was not always confined to bruises, but the blood flowed from the heads of many of the combatants. When two of them had thus thrashed each other handsomely, two more came forward; and several pairs were often seen engaged at once: but they never laid hands on one another. When these combats had continued for some time, they again walked about with a serious look, uttering tones of defiance, till heroic enthusiasm again seized them, and set their poles in motion.

Meanwhile, the women also fought valiantly; amidst continual weeping and howling, they seized each other by the hair, struck with their fists, scratched with their nails, tore the plugs of wood out of each other's ears and lips, and scattered them on the field of battle as trophies. If one threw her adversary down, a third, who stood be-

\* This is a curious coincidence with the name of a late French Marshal.—*SV.*

hind, seized her by the legs, and threw her down likewise, and then they pulled each other about on the ground. The men did not degrade themselves so far as to strike the women of the opposite party, but only pushed them with the ends of their poles, or kicked them on the side, so that they rolled over and over. The lamentations and howlings of the women and children likewise resounded from the neighbouring huts, and heightened the effect of this most singular scene.

In this manner the combat continued for about an hour; when all appeared weary, some of the savages showed their courage and perseverance, by walking about among the others, uttering their tones of defiance. Captain Deparck, as the principal person of the offended party, held out to the last; all seemed fatigued and exhausted, when he not yet disposed to make peace, continued to sing his tremulous song, and encouraged his people to renew the combat, till we went up to him, clapped him on the shoulder, and told him that he was a valiant warrior, but that it was now time to make peace; upon which he at length suddenly quitted the field, and went over to the Quartel. Captain June had not shown so much energy; being an old man, he had taken no part in the combat, but constantly remained in the back-ground.

All of us then left the field of battle, which was covered with ear-plugs and broken poles, and returned to the Quartel; where we found our old acquaintances Juckerke, Medcann, Ahô, and others, sadly covered with bruises; but they shewed to what a degree man can harden himself, for none of them paid any regard to his swollen limbs; but they sat or lay down on their open wounds, and ate with a hearty appetite the flour which the commandant gave them. The bows and arrows of all these savages had stood, during the whole combat, leaning against the neighbouring trees, without their touching them; but it is sad sometimes to have happened, on similar occasions, that they have thrown aside the poles, and taken to their arms, for which reason the Portuguese do not much like to have such combats in their neighbourhood. It was not till some time afterwards that I heard the cause of the combat, of which we had been spectators. Captain June, with his people, had been hunting on the south bank of the river, in the grounds of Deparck, and killed some wild swine. This was considered by the latter as a great insult; for the Botocudos always observe, more or less strictly, the boundaries of a certain hunting-district, beyond which they are in general careful not to trespass: such offences are the usual occasions of their quarrels and wars. Only one combat similar to that here described had ever occurred before near the Quartel dos Arcos, and it was therefore a peculiarly lucky accident, that afforded me the view of this spectacle during my short stay at this place. It is very rarely that travellers witness such a scene, which is however so important to those who would obtain a thorough knowledge of the savages, and their character. Not long after my departure from the Quartel, as I was informed,

another and a still greater combat took place there, on occasion of the return of Captain Gipeken, who was a friend and ally of Captain June.

This is but the first part of the prince's work, which is, it seems, to follow the modern fashion of publishing periodically; but it is satisfactory to learn, that only one other volume is expected.

By ornithologists in particular, it will be esteemed as contributing largely to extend the bounds of natural history. To common readers, however, it does not offer more attraction than our extracts promise; and the plates are but indifferently executed.

#### LOUIS BONAAPARTE'S HOLLAND.

[Third and last Notice.]

The third volume of this work takes up the history of Louis's government in 1809: the new criminal code, a system of weights and measures, and accounts of furious insurrections in the "anarchicous nation," afford nothing to tempt us into quotation, though their *Watterdoff* is a subject of infinite impudence to our Dutch neighbours.

In attending to the war in Spain Louis displays great ignorance of the events which took place in that country; and, while in relating his own acts, there are some which do him credit, there are others which show how much wanting he was in sincerity and honour to his subjects. We select for extract an instance of each.

A day of prayer and fasting was appointed: on which occasion "the new minister of Vilpen, a village situate a few leagues from the capital in North Holland, indulged himself in a rally of the most violent nature. This village and its vicinity were inhabited by a great number of the principal persons of the capital, most of whom were attached to the court. General indignation was excited, and many of the audience did not fail to express it. Some called for the punishment of the author of a discourse as calumnious as malignant, and so little consistent with the purpose the government had in view, in ordering a day of fasting and prayer. The pastor was sent for by the ministers both of the police and of the interior. The King was desirous of seeing him. He was a very young man, and appeared not without agitation. He deserved severe punishment; and the king was requested to inflict it on him, to make him an example to such as might be tempted to imitate his conduct: but the king would do it only in his own way. He received him coldly, but politely; demanded of him an account of the whole; caused all the expressions the pastor had used to be repeated; then pointed to him his own situation and that of the kingdom; and obliged him to confess, that he had been as cruel as unjust in blaming the government. The young man was convinced of his injustice, promised to alter his conduct completely, and they parted good friends. In fact, he

voluntarily made public atonement for it in his own church; and afterwards conducted himself in an exemplary manner. When it was proposed to the king to punish him severely, he answered, 'It is of more importance to me to convince him, than to punish him.'

The opposite example is displayed when Napoleon, whose detestation of, and tyranny over the Dutch, his brother so completely exposes in every page, chose, without saying a word to him on the subject, to make his son the "Prince Royal of Holland," the grand duke of Berg. In the letter which Louis wrote to the legislative body, announcing this transaction, he says, "The nation will see also in this an incontrovertible proof of the good disposition of my brother and of France towards this country; and it ought to impose silence on the discourses and calumnies of the intriguing and the superficial." After all he has told us himself of the evil disposition of his brother and France, these words evince a spirit of hypocrisy, more congenial to the mystifying manoeuvres of St. Cloud, than the declared obvious policy of Amsterdam. While thus disingenuously acting the king, we may show how the father felt. The historian adds, "Two things in this act could not however fail to hurt him more than the preceding consideration. The first was, the not having been previously advised of arrangements so essentially interesting to his son, and the being informed of the cession by a simple letter. The second, and the most painful of the considerations to which it gave rise, was to find, that his son was separated from him for ever, and he deprived of his indisputable right of having him under his guidance and protection, without his consent, and even without being consulted. He did not give vent however to the resentment arising from his affection."

A notion of the minuteness into which Louis carried the science of legislating, which indeed seems to have been a family characteristic, will be given by the following.

"The king (in one of his progresses) remarked with pain and surprise, that many of the country-women, instead of bringing up their infants on their first and natural food, gave them cow's milk and pap; and enjoined the ministers of religion, to use all their efforts to remove this abuse. He interrogated many of the Zealand women respecting this custom; and perceived with astonishment that it was become a system among a people, whose women are almost without exception excellent mothers and faithful wives. The magistrates avowed the inutility of their endeavours to alter this practice. The women of Zealand are accustomed to wear a sort of half-veil of very fine linen, which falls over the back part of the head and the temples, but does not descend lower upon the face than the forehead, where it is fixed by a slip of gold, which the married women wear on one side of the forehead, and the unmarried on the other. Without infringing on this custom, the king ordered, that those women who suckled their infants should alone be permitted to

wear a complete circle of gold on the forehead; and that three rich ornaments of this kind should be distributed annually to the three mothers who should have suckled the greatest number of infants."

At the conclusion of the last Austrian war, Louis found it expedient to visit his unhappy brother at Paris. The shifts and precautions to which he had recourse, singularly display the posture of affairs.

"He was afraid, that, during his stay in Paris his name would be employed against his will, to authorize many things in Holland: that such acts, as the Emperor might think proper, would be printed in the French papers, while he was deprived of all power of disavowing them: and under this idea he had settled with his ministers, that every act or paper whatever, not ending with some Dutch words, or with the device of the order, *Doe well ensie niet om*, should be considered as a nullity. It was for this reason also, that he gave orders to the commanders of the fortresses of Brabant, not to admit any troops without an order written and signed by his own hand. His aim was to render all diplomatic falsehood or treachery impossible."

It is quite ludicrous to contemplate a monarch of very limited power pretending to resist the strong hand which raised him, and to play the Independent where there was not a chance of success. Buonaparte cared not a straw for these struggles; in his speech at opening the legislative assembly, to which Louis was not invited, he said, "Holland is in reality only a part of France. This country may be defined by saying, that it is the alluvion of the Rhine, the Meuse, and the Scheldt, that is, of the great arteries of the empire. The nullity of its customs houses, the dispositions of its agents, and the spirit of its inhabitants, which incessantly inclines to a fraudulent trade with England, make it a duty to prohibit trade on the Rhine and the Weser. Thus crushed between France and England, Holland is deprived both of the advantages repugnant to our general system, which it must renounce, and of those it might enjoy. It is time, that all this should return to its natural order."

"The astoundment and indignation of the king, when he heard this passage, may easily be conceived. He was then sensible of the great fault he had committed by this cursed journey; and how difficult it would be for him, not to say impossible, to escape the snares laid for him. As Louis and Hortensia had lived almost always separate since their marriage, except three short periods of a few months, they each demanded of the family council a separation, presently after Louis arrived at Paris. But after a meeting of the family council was granted, the separation was refused, though it had long existed in point of fact.

"He was informed of the refusal of the family council verbally: no document whatever was transmitted to him on a result, on which however depended the ease, condition, and fame of a man of honour.

"The marriage of the Empress Josephine was dissolved; a demand for the purpose be-

ing made to the senate on the 15th of December. This demand was *immediately* preceded\* by so many feasts, balls, and amusements, that they might have been supposed the accompaniments of a general peace, rather than of a painful and affecting transaction. Be it as it may, the Empress Josephine gave her consent to it, as did her children. The king, who had affairs enough on his own hands, and had at first refused his consent, yielded to these last considerations. He was required to be present at the ceremony. He was present likewise at the farewell festival, as it might be called, given the Empress Josephine by the city of Paris; and at the ceremony of the 1st of January. These were the only times of his appearing in public during five months stay at Paris."

In point of fact he was a state prisoner; and the narrative proceeds:

"As soon as the king found the turn which affairs took, he made attempts to escape: but measures to prevent it were too well devised, as he was convinced in the different excursions he made with this design at St. Leu. His house was guarded, and the guard made its report every day to the grand marshal of the palace: he was watched most strictly; he was made a prisoner. At first he merely suspected it; but he soon obtained certainty on this point, though he affected not to perceive it. He consented to go and reside at Trianon: but it was not long before he returned from it abruptly. At the moment when he was expecting the fulfilment of the promises made him, at the moment when the projected marriage of the Emperor gave reason to hope for a change of system and conduct with regard to him, the measure of injustice and ill usage was heaped up. He did not despair however of finding means to escape."

In the end Holland was united to France, and the poor fly in the spider's web at Paris was enjôled, tortured, and persecuted in the most infamous manner.

On the subject of Buonaparte's own marriage, it is interesting to read his brother's statement. He says,

"The Emperor had inclined at first to an alliance with Russia; but the latter refused it, after having almost given a promise. The Emperor then caused Austria and Saxony to be sounded, and the answers were favourable. The Emperor decided at once for the former house, for which he always had a kind of respect and regard, sentiments that displayed themselves in spite of himself, even in his hostile proceedings towards it. Though decided, the Emperor held a privy council on the choice of an empress. Prince Talleyrand, Prince Eugene, the Duke of Bassano, and the Duke of Vicenza, were for Austria: the King of Naples, the minister Fouché, and Cambacérès, for Russia: Prince le Brun, Cardinal Fesch, the Duke de Feltré, and the King of Holland, for Saxony. The reasons of the latter were, that the Emperor and France had been too great enemies to Austria, to hope for a sin-

cere reconciliation: he preferred Saxony to both the others; but Austria to Russia, on account of similarity of religion. In this council the King of Naples argued strongly for Russia to the disadvantage of Austria; which the Emperor, in answering him, puzzled with a warmth, eloquence, and success, that not only disclosed his sentiments and partiality for that house, but astonished the assembly extremely."

In April our shadow of a king was permitted to return to Amsterdam, where he lived, "watched by secret agents, ready to poison every word." In Napoleon's letters at this period, are many memorable passages. He tells Louis—

"When you conduct yourself so as to persuade the Dutch, that you act agreeably to my suggestions; that all your proceedings, all your sentiments accord with mine: you will be esteemed and beloved, and will acquire the stability necessary to restore Holland. This illusion still supports you a little. *The journey you took to Paris*, your return, and the Queen's, and other motives founded in reason, make you people think, it is still possible for you, to revert to my system, and my way of thinking: but you alone can confirm these hopes, and eradicate even the least doubt of them. There is not one of your actions, which your fat Dutchmen do not weigh, as they would an affair of credit or commerce: they know therefore on what to depend. When being a friend of France and of me shall entitle a man to be your bosom friend, all Holland will perceive it, all Holland will breathe freely, all Holland will find itself in a natural situation. This depends on yourself alone.

"Do you think, that the letter you caused to be written to Mollerus, and the assurances you gave him of your affection, at the time when you displaced him, will give you any consequence in the country? Unleavely yourself: every body knows, that without me there is no safety, without me there is no credit, without me you are nothing. If then the example you had before your eyes at Paris; if the knowledge of my character, which is to march straight to my object, without being stopped by any consideration, have not altered you, have not opened your eyes, what would you have me to do?"

"You yourself break your own sceptre. Be assured, no person is deceived. Would you be in the path of sound policy? Love France, seek my glory: this is the only way to serve the King of Holland."

"Do you know why you were the harbour of Holland? It is because you were the seal of an eternal compact with France, the bond of a community of interests with me: and Holland, *became through you a part of my empire*, was dear to me as a province, because I had given it a prince, whom I looked upon almost as a son. Had you been what you ought, I should have been as much interested for Holland as for France, I should have its prosperity as much at heart: and certainly in placing you on the throne of Holland, I thought I was placing there a French citizen, as much devoted to the greatness of France as myself, and as jealous

\* So it is in the original, but the author must surely have meant *succeeded*. Tr.

of every thing concerning the mother country. Had you followed this plan in your conduct, you would now have been king of six millions of subjects. I should have considered the throne of Holland as a pedestal, on which I should have spread Hamburg, Osnabruck, and part of the north of Germany; for it would have been a nucleus of people, that would have broken still more the German spirit, which is the first object of my policy. Far from this, you have taken a course directly opposite; I have found myself obliged to forbid you France, and to seize on a part of your country.

"You do not say a word in your council, you do not entrust any one with a secret, that remains unknown, that does not turn against you and annihilate you; for in the minds of the Dutch you are to them but a Frenchman of four years standing; they see in you nothing but me, and the advantage of finding themselves sheltered from the subaltern agitators and plunderers, who have harassed them ever since the conquest. When you show yourself a bad Frenchman, you are less to them than a prince of Orange, to whose blood they stand indebted for the rank of their nation, and a long series of prosperity and glory. Holland is convinced, that your aversion to France has made them lose, what they would not have lost under a prince of Orange or a Schimmelpenninck."

What a picture is here? Louis could only abdicate, which he did on the 1st of July, and set out for Toplitz. Thence he went to Gratz, and though deserted by all those whom he had taken with him and relied upon, but who were in truth his brother's spies, he resisted all the threats and commands to induce him to return to France.

"He led (as he feelingly states) a very retired life at Gratz, endeavouring to re-establish his health. He waited impatiently for the so much desired period of a general peace, that he might go to Rome, that he might implore the assistance of the august head of his religion, on the score of his marriage, and be enabled afterwards to retire to St. Leu; where he hoped to terminate his career, where in 1804 he had deposited the ashes of his father, and where a place had ever since been prepared for himself. Paris and St. Leu he loved beyond all expression, and considered as the places of his birth."

"But heaven ordered it otherwise; and willed, that the man perhaps least in the world framed for solitude and cecily, the man most French, most peaceable, least a cosmopolite; was obliged to live alone, and in a wandering state, and accused of loving neither tranquillity nor France. May this truth convince both his countrymen and the Dutch of the injustice of those reproaches."

When the crisis of Buonaparte's fate drew on, Louis seems to have forgotten his resentment. He endeavoured to renew their fraternal intercourse; but being frustrated, went to Switzerland in order to be near the scene of action. Here a curious interview took place between him and Murat, after the battle of Leipzig.

"The King of Naples was returning home, to endeavour to save himself, if the existence of the French government should be endangered. He advised his brother-in-law to return to Holland by the assistance of the allies. The latter answered, this he would never do; because Holland would not be permitted to remain perfectly neutral, and no throne in the world would bribe him to make war against his country. "If France prove successful," added he, "what reproaches should I not deserve, for having drawn on the kingdom its hostility and vengeance! If she prove unsuccessful, the allies in the end will give the preference to the Prince of Orange. But," after the departure of the King of Naples, he reflected maturely on the singular situation in which he stood. He felt clearly, that it was a favourable moment, to attempt a return to Holland; and that the French government could not do better, than renounce a country slipping through its fingers, and establish in it a French dynasty. He despatched an officer of his guards to Mentz, with orders to await the Emperor there, and deliver to him a letter, in which he endeavoured to persuade his brother, to lose no time in adopting the only step, that remained for France to take at that moment, with regard to Holland."

"As he could entertain no doubt, that a country about to fall into the hands of the allies would be yielded up to him with pleasure, and that it was important to lose no time; he resolved to proceed immediately to Amsterdam, if the French government gave its consent, and would permit the Dutch then at Paris to accompany him. Accordingly he proceeded towards this capital, after having written to the Empress Regent, and to Prince Cambrésis; but was much astonished to find, on his reaching Pont sur Seine, a refusal to receive him at Paris. He returned to Switzerland therefore, where he was informed of the Emperor's answer by letters from Prince Berthier, Duke of Vicenza, and by what the Emperor said to the officer, who had been sent to him. Both these exactly agreed. "I had rather," said the Emperor, "that Holland should return into the power of the house of Orange, than into that of my brother. If he have a hundred thousand men to oppose to me, he may endeavour to take it from me, &c."

In 1814 Louis returned as a private individual to Paris.

"He alighted at his mother's. He could not see the Emperor till ten days after his arrival. Orders to remove to the distance of forty leagues from Paris were hinted to him. The Prince of Neuchâtel, and the Duke of Vicenza, came to him formally to renew to him these orders, which he refused to obey, because no one had a right to prevent him from dwelling in his own house."

"At length, on the 10th of January he saw the Emperor through the mediation of the Empress. They approached each other coolly, without embracing. It would be difficult to form an idea of what Louis inwardly felt at seeing again a brother, to whom his infancy was so much indebted, but of whom he had so many reasons to complain, since

his life and future prospects had been sacrificed to worldly illusions and politics."

On the entrance of the Allies into Paris, he accompanied the Empress to Blois, thence went to Lausanne, and in September to Rome, where he has since resided, superintending the education of his son.

Though rather a heavy work, and not very purely, though faithfully translated, there is a great deal of important matter in these three volumes; which, if not calculated for mere English popularity, will no doubt find their way to most of the libraries of statesmen and politicians.

## ARTS AND SCIENCES.

### LITERARY FUND.

We have felt rather reluctant to give any account of the annual commemoration of this fund on the 4th, because the meeting was altogether unworthy of the occasion. There were indeed several respectable noblemen and gentlemen present, and some literary characters, whose names are known to the public; but the number assembled was very limited, and both in distinction of rank and letters, and in the amount of the subscription, the results fell far short of what ought to mark the anniversary of so generally interesting and excellent an institution. In truth, there is evidently something radically wrong in the management of this noble charity. This year the failure was ascribed to delays and blunders in not getting stewards in time, and in not apprizing those who had been procured, so as to enable them to act efficiently. But the Literary Fund has never occupied the place it ought to fill among the benevolent associations of the country. There is hardly a club of any sort, or hospital of third rate consequence, which does not outstrip it; and as for the more public charities connected with the arts, the drama, &c. their success trebles and quadruples that of one which ought to stand pre-eminent, as its objects are the encouragement of universal literature, and relief of unfortunate authors. There is no part of the community which does not feel a sympathy with the plan; and yet it pines in comparative obscurity, and but for a remarkable legacy, would hardly be competent to assuage the distresses of a dozen perishing scholars in a twelvemonth.

We take this view of the subject without designing, far less desiring, to impute blame to any of the persons whose names appear among the officers of the society. The zeal, talents, and diligence of several of the most official are acknowledged by those who have better opportunities than we possess of appreciating their services. We only say, that from some cause or other,—either from gentlemen being averse to thrust themselves too forward, or from the duty which many should perform being performed by none,—the thing has been ill conducted.

Happily we trust, for the fund, this fact was stated at the meeting in a neat address,

\* (Quæz, Was he born in two places?)

delivered by one of the stewards, the Hon. Mr. Douglas Kinnaird, and further animated upon by the chairman, the Earl of Blessington. It is therefore to be hoped, that the disposition consequently manifested to promote the good cause, with greater concert and vigour, will not evaporate before the next anniversary. Several useful hints as to previous arrangements were thrown out; and, as they seemed to be unanimously approved of, it is to be presumed they will be strenuously acted upon, and that we shall not again have the painful task of censuring, where it is so desirable that we should have only praise and gratulation to utter.

The meeting amounted to about 120, and included, besides the chairman, Lords Pomfret and Bolton, Sir W. Clayton, G. Watson Taylor, Mr. D. Kinnaird, Mr. Heber, Mr. Chalmers, Dr. Symonds, Rev. C. P. Burney, &c. &c. &c. When the customary toasts were disposed of, and the glee peculiar to the day had been performed, by the veteran Shield, and other musicians, Mr. Fitzgerald went upon a table, and recited an address, being the twenty-fourth which he has composed for these anniversaries. Of the good intention and philanthropy of these exhibitions, no one can entertain a doubt; and the author is most deservedly respected for his constant devotion to the interests of the Literary Fund. But we must question the expediency of talar recitations, which are rather inconsistent with English manners, and are, in themselves, more likely to excite ridicule than to inspire respect. We wish they were discontinued, and Lord Byron's taunt\* disproved in both its branches. Several admirable songs, by Brahms, were more exhilarating; and the statement, by Mr. Yates, that the permanent fund for general purposes amounted to above 6000*l*. was still more cheering.

Towards the conclusion of the evening, the noble president was very successful in creating an enthusiasm in favour of the charity: by some stewards of considerable power having been nominated for next year, we anticipate that an assemblage will take place, at which the highest rank, and the proudest abilities, will be seen crowding, as they ought, to honour and promote the Literary Fund.

#### SPOTS ON THE SUN.

Vienna, 27th April.—M. Steinhelbel, who has for nearly four years daily observed the sun, and carefully noted, in a journal, the dark or bright spots which became visible, noticed, on the 12th of February this year, at 45 minutes past ten, A. M. a spot distinguished from every other, by its well defined, circular form, by its circular atmosphere, by its orange colour, and particularly by its singular motion, as it crossed the sun's disk

in five hours, nearly. As he made this interesting observation during an excursion into the country, it was not possible to have the aid of instruments, or to communicate the phenomenon early enough to others. It would be very possible to attain, in this manner, the discovery of a planet nearer to the sun than Mercury.

*Remarkable Phenomena in the late Eruption of Mount Vesuvius, communicated by a scientific writer of distinction.*

Naples, March 6th.—Vesuvius has continued, ever since October 1818, to pour out streams of lava; that in particular of the last eruption, on the 25th November, 1819, not only continues, but increases. M. Gimbernat prosecutes his observations, in hopes of seeing the end of this long series of eruptions, of which he witnessed the commencement, that he may afterwards examine the effects that have been produced in the interior of the crater, to which access is possible as soon as the volcano becomes more quiet. According to his observations, the following are the principal occurrences since the commencement, in November last. In the night of the 1st of January the stream of lava, which, till then, had remained pretty equal, suddenly rose considerably above the sides of its bed, rushed forwards, and divided itself into two streams of fire. At the same time the principal crater threw out flames and stones in great quantities. On the 4th, at two in the afternoon, there was a loud explosion, which the Neapolitans took for a clap of thunder, as in general they never think of Vesuvius, except when it threatens them.\* With this detonation, several ignited substances, and above 30 feet of the edge of the crater, were thrown into the air, by which the top of Vesuvius lost some toises of its height. The great crater therefore, which was higher than that which is called the little crater, is now the lower, as respects the level of the opening. The smoke, which usually rises from the crater in columns, or in round masses, now often assumes a circular or ring shape, ascends in constant rotation, and changes its white colour to blue, as it spreads in the atmosphere. A second brilliant phenomenon appeared in the night of the 13th. A bright, very much extended light, like the Aurora-borealis, diffused an uncommon lustre to a considerable height over the crater. It was caused by the reflection in the clouds of an immense fire burning in the interior of the volcano; but no flames were at this time visible above the crater. This volcanic meteor illumined seven nights successively with increasing splendour; when, on the 16th, a violent eruption threw up so many stones, that they in a short time choked up the two springs (one of fresh water, and one impregnated with muriatic acid) which Mr. Gimbernat had collected, and kept up for above a year on the summit of Vesuvius. At the same time the stream of lava greatly increased, and diverged into three branches, the longest of which

was 1500 toises in length, and 6 toises in breadth. These streams of fire diminished on the 25th, and, on the following day, the crater again threw out clouds of black smoke. On the 27th, fresh showers of stones again hurried the fountains, the utility of which had induced the guide to Vesuvius, Salvatore, to repair it at his own expense, for the use of the numerous travellers who ascend the volcano, and are generally much incommoded by thirst. In the night of the 28th, flames issued in abundance from the cleft out of which the lava flowed. They formed a pyramid of fire, about 50 feet high, which seemed to be a current of ignited hydrogen gas. This beautiful thermolamp burned without interruption through the night, on the top of the mountain; when the sun rose it disappeared, but it shone again in the following night. At the beginning of February the top of Vesuvius was covered with snow, while its fire raged with redoubled fury. There was then occasion to admire the striking contrasts of nature: deep snow surrounded the flaming mouth of the volcano, and the constantly flowing stream of lava.

On the 13th the inhabitants of Torre del Greco, Resina, and Portici, were alarmed by violent shocks at the foot of the mountain, accompanied by loud explosions inside. An electrical conductor, which M. Gimbernat had erected on the summit of Vesuvius, and which was connected with a voltaic electrometer, showed an uncommonly strong positive electricity about the crater, but with continual variations, not to be ascertained, and which, perhaps, were caused by the great mass of vapours spread by the incessant eruptions during this operation. In the following night, a storm from the south brought torrents of rain, which continued for four days. The fires of Vesuvius raged with still greater fury amidst these floods of water. On the 20th of February, a new eruption of lava succeeded this storm. The melted substances flowed with such rapidity, that they advanced 500 toises in less than an hour. The old stream of lava of the 25th of November, had extended to above 1500 toises. At the same time the flames and the stones rose from the centre above 500 feet into the air, as calculated by the time which the highest of the latter took to descend.

The subterraneous motions which were propagated in the whole wide circumference of Vesuvius, several times shook the houses of Torre del Greco, and other towns on the coast. A quantity of lapilli (little pieces of lava), were thrown above an Italian mile from the crater, and suffocating vapours extended beyond Portici. They rushed, with a loud roaring, from the lateral openings of the volcano; and, as these were too narrow for them, they forced open two new and larger ones, in the form of craters, about 50 feet in circumference, through which stones and flames rose at intervals into the air, for several hours. The principal lava stream increased, overflowed, branched into several fiery currents, and extended to above 50 feet in breadth. The fire issuing from both craters exceeded the preceding, being higher and more frequent. In the night of

\* His Lordship notes the period of Mr. Fitzgerald's recitation as that when the company have drunk so much bad port, as to relish bad verses. Now, the host of the Freemasons' takes care to give good port; and, if the verses were withold, the noble bard's accusation would fall to the ground entirely.

\* The first volume of the Memoirs of the Royal Academy of Sciences, at Naples, is just published: it does not contain a single word about Vesuvius!

the 24th, the mountain displayed its whole dreadful grandeur. The next day it seemed inclined to repose; the columns of fire ceased, the lava stood still, and seemed to be going out. This repose was of no long duration. After throwing out vast clouds of black dust (improperly called volcanic ashes), which, on the 25th were so frequent, and thick, as to darken the Apennines at noon-day, the eruptions of burning matter recommenced on the 27th with great fury. Vesuvius threw large stones to the distance of above a mile into the valley which separates it from Monte Somma, and Ottajano. A new stream of lava poured over the old one, and separated into several branches. The detonations were so violent, and the houses in the neighbouring places trembled so often, that the people passed the night in dread of an impending catastrophe. The quantity and thickness of the lava were such, that notwithstanding the full light of the moon, the stream resembled a red-hot iron arrow, a thousand toises in length, aimed in an oblique direction from the clouds at the earth, amidst the darkness. A violent southwest wind raised, on the 29th, a storm from the sea, which continued five successive days, accompanied with torrents of rain, hail, and claps of thunder. During this storm, the sea ran dreadfully high, and Vesuvius seemed to partake of its fury. In general the activity of the mountain has much increased since the 1st of March. An incessant roaring is heard in its bowels, like the waves of the sea in a storm. Numerous subterraneous shocks shake the doors and windows of the houses in the villages at the foot of the mountain, and the eruptions of flame and stones from the crater are more frequent. In the last six days these fiery eruptions filled the whole mouth of the crater, rose above 100 toises into the air, and recurred at intervals of three to five minutes, accompanied with strong detonations. During the day they appear as immense pillars of white smoke. The lava continues to flow in uncommon quantities. The scene is at present the more attractive, because the high pyramid of Vesuvius, as well as the adjacent mountains, is covered with snow two feet deep. This gives the Gulf of Naples the appearance of one of the great Alpine lakes, and combines the wonders of Vesuvius and of Mont Blanc. Thus the mountain has been at work these fifteen months; and its violence increased during the southerly storm in February and March, constantly in proportion with the motion of the sea. M. Gimbernat has already observed this coincidence six times; and it seems inconceivably to prove the efficacy of sea water, as one of the causes of volcanoes. The observers of Vesuvius now living cannot remember so continued a series of eruptions. Of the lava which issued from the mountain on the 1st of January M. Gimbernat has made medals, in honour of the prince whose liberality has enabled him to continue his researches for so long a period. These Vesuvian medals bear on one side the inscription, "Long live King Maximilian Joseph, Bavaria, and the Wittels backs!" and on the reverse, "Lava of Ve-

suvius, 1st Jan. 1820, as a homage from Gimbernat."

## LEARNED SOCIETIES.

OXFORD, MAY 13.

On Saturday last the following Degrees were conferred:

MASTER OF ARTS.—W. Colman, Esq. Brasenose College, grand compounder; Oliver Cave, Balliol College. BACHELORS OF ARTS.—J. Reynolds Johnson, Balliol College; J. Sheffield Cox, Pembroke College.

On Wednesday last the following Degrees were conferred:—

DOCTOR IN DIVINITY.—Rev. William Benson, Rector of Hampton Poyle, &c. and formerly fellow of Queen's College, grand compounder. MASTERS OF ARTS.—Rev. Thomas Walker, University College; Conrade H. Coulthurst, Brasenose College; A. Macdonnell, Student of Christ Church; J. Henderson, Balliol College; Rev. David Williams, and Rev. Walter Powell, Jesus College. BACHELORS OF ARTS.—Sannell Johnson, and John Hampson Johnson, Lincoln College; S. Hartopp Knapp, Merton College; J. Edmund Jones, St. Edmund Hall; E. R. Taylor, Wadham College; G. Edge Larden, Brasenose College.

The subject of the Cambridge Scatonian prize poem for the present year is—*The Omnipotence of the Supreme Being.*

## FINE ARTS.

SPRING GARDEN EXHIBITION.

We gave a general view of this Exhibition on its opening; we now return to notice some of its leading pictures.

No. 17. *The Tight Shoe.*—H. Richter.

Every body can tell where his own shoe pinches, but nobody could excell Mr. Richter in telling, through the medium of the pencil, where another's shoe inflicts this misery upon him. He has given us a truly comic piece, enriched with all the additions of brilliant colouring and masterly execution. The external and internal accessories are made skillfully to augment the humours of the subject; each appropriate, and each in its kind tending to enhance the value of the principal. The stocks in the distance are at once congenial emblems of suffering, and hints at that sobriety of life and conversation of which some of the party may aptly be reminded. The Chelsea Pensioner, with two wooden legs, giving advice, is, rare case! a disinterested counsellor, and his candour is here a matter of innocent joke, and much in unison with the whim of *Tight Shoes*:—

"His limbs are in the grave:  
After life's lengthened marches, he walks well;  
Bullets have done their worst: nor steel, nor  
grape-shot,  
Surgeons domestic, foreign warfare, nothing,  
Can touch him further.

The evident assurance of the cobbler, and his assertions (we hear them), that nothing can fit better; the signs of former suffering in the countryman; and, in short, all the

particulars of this picturesque drama, belong in an eminent degree to the true comedy of art.

*Forty Three Drawings.*—Copley Fielding.

There is hardly one of these drawings but possesses some character of excellence. The artist is fond of extraordinary atmospheric effects; and in some of his delineations of these, the eye which has not looked at these things as a painter's eye does, will be at a loss to reconcile his works to individual truth, though from confessing his powers, it may without an effort be conceded, that his close junction of the utmost warmth and coldness of colour, may in reality have been found in nature.

No. 95. *Jupiter nursed in the Isle of Creta, by the Nymphs and Corymbantes.*—J. Cristall.

This is a highly classical and elevated composition, displaying great powers of poetical feeling, and great skill in some of the superior qualities of art. The tones are however crude, and the purple hues of the flesh are such as no good colourist would admit. The want of keeping, as well as massing, must also be allowed as slight drawbacks to an otherwise very fine performance.

Nos. 103, and 113. *Flora of Windsor and Battersea, from Millbank.*—J. Farley.

Two very clear and beautiful specimens of this artist's talents, uniting the lightness of water-colours with the solidity of oils.

Nos. 2, 3, 12, and about a score of others.—G. F. Robson.

It is difficult to speak in detail of this artist's performances, from the number and variety which they present. Some preference will however fall to distinguish our choice, and the Nos. 12. and 23, of *Sunset and Twilight*, are among the most striking examples of his pencil. No artist appears more master of his means; and the singleness and simplicity of his execution have a charm no labour can bestow.

Nos. 5, 11, &c. &c. &c.—Samuel Prout.

The most prominent picture of the number which this artist exhibits, is 291, an *Indian on Shore*, which is finely adapted to his broad style and pencilling; his ancient towns in France are also of the same character, and display very great genius.

No. 117. *Rival Candidates.*—E. Landreer.

"Two dogs that were as thrang at hame!"

But not the dogs of Burns. In this picture one of the aqueous breed has brought a staff out of the water, which a terrier seizes, and is trying to wrest from him the moment he gets dripping to the shore. The humour and whim of this subject are exquisite: animal expression could not be carried further, and these dogs are exactly what Mulready's boys are, at Somerset House.

No. 141. *Una, from Spenser.*—W. Beick.

We fear that the light in this work is not to be accounted for on rules of art. The painter has attempted too literally to translate the poet. There is nevertheless a degree of stillness and solemnity about the picture, and something of promising execution.

## ROYAL ACADEMY.

No. 79. 89. *Skirmish: Combat, from the Novel of Old Mortality.*—*Ab. Cooper, R. A. Elect.*

These are animated and vigorous illustrations of the same subjects which the artist treated on a smaller scale at the British Institution. They have the merit of being better drawn, and for spirit and execution yield to Wouvermans perhaps in nothing but in the management of the chiar oscuro, and the exquisite touch of his distances. The massing is equally fine; and, if not so highly finished, there is as firm a pencil, and almost similar correctness.

No. 131. *Chreichild, the Widow of Siegfried the Swift, &c.*—*H. Fuseli, R. A.*

This is a scene founded on the ancient superstition, that a corpse would bleed afresh on the approach of the murderers. In our first glance at the Exhibition, we stated that it was composed in a high tone of imagination; and we are sorry that upon further acquaintance, we cannot extend our commendation. Eyes bidding farewell to their sockets, feet like harpy claws, and colouring which involves dead and living in one iron tone, become more and more disagreeable in proportion to the size of the picture; and this is one of the largest which Mr. F. has lately produced. As for perspective, the learned professor seems resolute to confine his knowledge of it to his lectures. The dead body might readily be mistaken for that of a female, instead of a warrior renowned in the Arcutia.

No. 145. *Lear.*—*H. Howard, R. A.*  
With more of elegance than of force, with more of art than of passion, Mr. Howard has made his Lear, at least, far superior as a poetical portrait, to any of his late dramatic representatives. The Dover Cliffs are sweetly painted; but in other respects we observe nothing to distinguish this from the artist's manner in former works.

No. 180. *Village of Waterloo, Travellers purchasing Relics, &c.*—*G. Jones.*

Mr. Jones has advanced far on the high road towards the top of the hill of fame: he is advancing. The present subject is worthy of his talents, and he has applied them admirably to illustrate it. Without going into details, we shall merely state that for design, execution, and interest, we consider his performance to be entitled to the approbation of the lovers of the arts, and of the lovers of their country's glory.

No. 215. *Bargaining for China.*—*W. Ingalton.*

We are glad to notice this artist again in terms of praise. We know not if he reads our remarks, but he has returned to the right path, which he was leaving in one or two of his later pictures. This is an exceedingly clever production, in its class.

No. 274. *Cupid.—H. Owen, R. A.*  
This is a funny-looking arch fellow, of the Puck genus. That his mother was the goddess of beauty, may be doubted. He is the cupid of a Flemish droll, and not of the Midsummer Night's Dream.

## MR. ISABEY'S EXHIBITION.

This celebrated French artist has opened an exhibition of his works at 61, Pall Mall; which he has fitted up in a pavilion fashion, worthy of imitation, both for its neat effect and for the excellence with which it throws the light over the pictures.

It is natural to suppose that the gallery of a foreign artist, and especially of one, like Mr. Isabey, of talents acknowledged to be of so high an order as to rank him among the foremost in the French school, should excite a lively interest among British Painters and Amateurs. With these however it may be a question, whether productions so different from what they are accustomed to admire, and on which their tastes have been formed, can be appreciated altogether without prejudice. For ourselves, we can only say, that we have endeavoured to dismiss from our minds the predilections in favour of particular styles and manners, and not to ground our opinions upon any system of exclusive preference. That there does exist very opposite feelings with regard to art, between France and England, is not to be denied; and if it were denied, this Exhibition would disprove the allegation. The defects, as well as the qualities belonging to each, are distinct; and it may with justice be remarked, that requalifying a portion of dogmatism would be extremely advantageous to either. For if there are errors to avoid, there are also beauties to imitate, on both sides; and in many instances a little of the French finish might be as beneficially bestowed upon our bolder sketches, as in others the spirit of our school might be admitted to elevate the precision of our continental competitors.

Mr. Isabey's Exhibition is attractive on account of its novelty, its variety, the nature of many of its subjects, and its general character, as enabling the public to draw such comparisons as those with which we have set out. On a first visit and examination of the 74 pieces of which it consists, we were most struck by No. 2, "Staircase of the Museum at Paris," in water colours, and painted on copper prepared in a peculiar way by the artist, so as to impart to it the effect of ivory as to finish, and of oil as to vigour and solidity. This is indeed a beautiful specimen. The architecture is admirable, and the figures charmingly painted. A lady in a black gown with a green shawl, is an example of the most successful management of costume and perfect elegance of form.

No. 7, "The Parade on the Tuileries," is the grandest drawing in the room, and eminent both for finish and spirit. The portraits are very interesting; the horses, by Vernet, well executed; and the tout ensemble impresses us with a high opinion of the artist's powers in composition.

Several drawings "à l'estompe" resemble our mezzotint prints. In general we would remark, that Mr. Isabey appears to us to be the Vanderwerf of our day. His miniatures are light, fanciful, and pretty; and these also interest us from the persons of whom they are the likenesses. Some of the

smaller sketches are full of energy;—the frame, No. 61, may be viewed as a good proof of this:—it is only when colours are employed that the artist seems (according to our notions) to fail. In his landscapes of this class, there is no fine feeling, no poetry, nor imagination; and as mere transcripts from nature, the total absence of air-tint, and the use of the crudest green, entirely destroy their claim to consideration as elevated performances. The histre landscapes are better. A few caricatures are exceedingly clever and humorous. The Congress at Vienna is curious, on account of the portraits, but inferior as a work of art to the Parade.

## ORIGINAL POETRY.

[By Correspondents.]

On Mrs. Hoffman's Picture at the Regent's Academy, of "The Ancient City, by Moonlight."

How beautiful! with what rich mellowed light  
The rising moon illumines the evening sky,  
Dispelling twilight's dim obscurity;  
The distant landscape glimmers on the sight,  
Veil'd in the floating mists of dewy night;  
And in the tranquil pride of majesty,  
The glorious city lifts its walls on high,  
Temples, and palaces, and shadowed tombs,  
Where none could disturb the mournful sigh which comes  
From hearts half breaking o'er them.—Silently  
The deep broad waters flow, where breezes die,  
Rippling the surface, and alone betrayed  
Where one long broken line spreads o'er the shade  
With quenchless splendor, sparkling restlessly.  
May 6, 1820. A. S.

## AN EPITAPH,

BY FRANCIS MAYNARD.

Cy git Jean qui baïssait les yeux  
A la rencontre des gens sobres,  
Et qui ploit souvent les dieux,  
Que l'auteur eût plusieurs Octobres.

TRANSLATED.

Here lies friend John, who droop'd his head  
At sight of a comrade sober,  
And pray'd each night on going to bed,  
That every month were October.

## THE DRAMA.

COVENT GARDEN.

VIRGINIUS.—On Wednesday a tragedy, founded on the well known and often dramatized Roman story of the death of Virginia, and the consequent revolution, which overthrew the authority of Appius Claudius and the Decemviri, was produced at this theatre. The author is stated to be an Irish gentleman, of the name of Knowles, and a distant relation of the late Mr. Sheridan. As a dramatic writer, he has sustained his claim to that affinity; for it gives us pleasure to say, that his play was most deservedly successful. It is difficult to speak with any degree of correctness upon the poetry or composition of a tragedy, from merely being present at a first night's performance. The impression upon our minds is, that there is more of natural beauty and pathos, than of the elevation of the tragic muse, in Virginia; that the touches of filial and paternal feeling

are more frequent and just, than sustained and deeply wrought; and, in general, that the effects are produced rather by brief and vivid strokes, than by lofty and magnificent bursts of passion. We further noticed some sweet poetical images—such, for instance, as a comparison of the heroine, between girl and woman, to the season which is more than spring, but not yet summer. Several strongly expressed patriotic sentiments obtained their due meed of applause from the audience; and, with very few and unimportant exceptions, (which should, however, be expunged\*) the language appeared to us to be terse and forcible, and not inconsistent with the dignity of the huskin. (We, of course, do not include in this observation the passages intended to relieve the graver colloquy, and in which one Scircus Dentatus very closely imitates Menenius Agrippa, the humourist in Coriolanus. Of these it is enough to say, that however puns may be doomed extra-tragical by critics, they were relished by the great majority of Mr. Bull's family at the theatre on Wednesday.)

In the construction of his plot, Mr. Knowles has displayed considerable art, and some want of skill. With the death of Virginia under her father's knife, in the fourth act, the great interest of the piece terminates; and the fifth act, in which Virginius, rendered insane by his misfortunes, strangles Appius in prison, is not only a work of supererogatory horror, but improbable in action, and injurious to the nobler sensations previously excited. The improbability consists in the free egress and regress to the dungeon where the fallen Decemvir is immured; and the horror, in the violent process of gripping a man by the neck to suffocation upon the stage (though we have a precedent in Othello); and adding to this brutality, which could only be tolerated on the English stage, the Frenchified incident of bringing in Virginius's funeral urn, craped and pallid, in order to restore her distracted parent to recollection and reason. These things, we are of opinion, are not only objectionable in themselves, but very badly associated together. In other respects, the author has evinced his judgement in making Numatorius the uncle of Virginia; in giving her a betrothed husband, Icilius, and an affectionate matron nurse, Servia; and in the conduct by which he has contrived to render a second appearance before the tribunal of Appius, (a great dramatic difficulty), so far from being a dull repetition, a varied and affecting source of excellence.

The characters are all ably drawn, and well marked. Virginius is a powerful union of fatherly love, and stern public virtue. Appius, a good picture of a mind rendered furious by the indulgence of lawless appetites, and the exercise of arbitrary authority. Virginia, innocent and timid, and Icilius, a lover worthy of her and of her father, on account of his tenderness and bravery. There are fine traits in Dentatus; and even the inferior agents, the sycophant favourite,

\* E. K. In describing Virginius as recovering from a trance, Numatorius says, "When to himself he came."

Claudius; the faithful Servia; the fleetly Numatorius, &c., are sufficiently distinguished for the purpose of general interest.

Having thus noticed the principal features of the tragedy, we would wish, before paying a just tribute of applause to the actors, to add up, in one short sentence, that we think it not only a production of much promise, but one of great intrinsic merit, and extremely honourable to the writer, who, if he does not move among the giants of the highest order, has avoided all turgidity and ambitious bombast, and laid the public under a debt of gratitude, for a very natural, pathetic, and pleasing work.

Macready's acting baffles that praise which must be condensed within small compass. His transitions from affection to rage, from rage to grief, and from grief to madness, are hide-cravily fine. They must be seen and felt in order to have an adequate idea of their truth, their nature, and their force. C. Kemble, with a severe hoarseness, played up to this leading part: in the first trial scene, where he has most scope, he is also eminently effective. Abbott's portiture of the tyrant, is just and admirable. Nothing can be better conceived than the fierce and burning energy of his passion for Virginia. Terry, in Dentatus, is finely discriminating; and Miss Foote, as Virginia, though languid, affords a very fair semblance of the hapless virgin. The minor parts were very respectably performed, and the tragedy was entirely successful.

## VARIETIES.

*Liqueur Names.*—A Hamburgh picarescent letter, which we have now before us, contains among the articles of its "Price-current," the following list of Liqueurs—

"Spirit of Cupid; Fire of Love; Pleasure of Venus; Spirit of Wellington; Spirit of Blucher; Belle Alliance; Choice of the Ladies; Perfect Love; Sacrifice of Love; Courage-Water; Forget me not."

The assensus (three in number) of the Saxon Professor of Painting, Kugeleken, have been discovered, and committed to prison in Dresden.

*Dandy Criticism.*—We are fond of dandy criticism, and gather illustrative anecdotes when we can. Two of those worthies were examining Mulready's picture in the exhibition, in which there is a sneaking cur dog; and the following conversation ensued—*Dandy-prima.* "D—(d fine "pon my soul! d—d expressive! what is it?" *Dandy-secondus.* (blowing over the leaves of his catalogue with a gentle breath, and assisting himself with a gloved hand). "The wolf and the lamb." *Dandy-prima.* "Exquisite, by god—(looking at the cur) I see the wolf, but 'pon honour I can't find the lamb!" *Dandy-secondus.* "Perhaps he has eat it!"

Earl Spencer is spoken of as the probable successor of Sir Joseph Banks, who is about to resign the presidency of the Royal Academy.—*M. Post.*

*Anecdotes of Translation.*—A French poet having lately undertaken the arduous

task of translating Shakespeare into his own language, was much puzzled with the lines in Henry IV—

"'Tis such a man, so faint, so spiritless,  
So dull, so dead in look, so woe begone."

The former epithets he got through pretty well; but at length concluded the scene with, "si triste alles; cou en."

Another of these translators rendered "Out, out, brief candle." *Sortez, naites, courte chandelle.*

A third, thus entitled "Much ado about nothing," which he translated for the Parisian stage "Beaucoup de bruit pour peu de chose."

The Vampire story has been dramatized for the Parisian Theatre of the Porte Saint Martin.

Our correspondents from St. Petersburg are full of the treasures brought from the East by our countryman, Sir Robert Ker Porter, and shipped for England, in the form of Antiquities, Drawings, &c. His drawings of Asiatic Architecture are very curious; particularly those of the times of Darius and Shah Abbas; and not a few novel beauties of architectural decoration may be found in the ancient classic and Sarmenic fragments of the palaces of Persepolis, Isaphan, Bagdad, &c. Sir Robert brings home with him some interesting specimens of, perhaps, the oldest building in the world: bricks and cement from the foundation of the Temple of Belus, at Babylon, believed by antiquaries to be the remains of the Tower of Nimrod.

## METEOROLOGICAL JOURNAL.

MAY, 1820.

Thursday, 11.—Thermometer from 49 to 63.

Barometer from 30, 11 to 30, 12.

Wind S. by W. 3.—Morning and noon cloudy, the rest of the day generally clear.

Rain fallen, 925 of an inch.

Friday, 12.—Thermometer from 42 to 60.

Barometer, stationary at 30, 30.

Wind S. W. 1.—Generally cloudy, with sunshine the greater part of the day.

Saturday, 13.—Thermometer from 37 to 62.

Barometer, from 30, 16 to 30, 07.

Wind S. E. 4.—A foggy morning, and generally cloudy. A halo formed at times in the morning, faintly coloured.

Sunday, 14.—Thermometer from 45 to 65.

Barometer from 30, 04 to 29, 99.

Wind S. by W. 2.—Clouds generally passing, with sunshine, till the evening, when it became clear.

Monday, 15.—Thermometer from 41 to 64.

Barometer from 30, 00 to 29, 97.

Wind S. and S. W. 1.—Generally cloudy, sunshine at times.

Tuesday, 16.—Thermometer from 40 to 58.

Barometer from 29, 87 to 29, 90.

Wind S. W. 2.—Generally cloudy, with showers of rain at times.

Rain fallen, 45 of an inch.

Wednesday, 17.—Thermometer from 45 to 64.

Barometer from 29, 94 to 29, 89.

Wind S. W. 2. and S. by W. 4.—Clouds passing, rain at times. A very strongly coloured halo formed in the afternoon about 3, and a parhellen on each side of it, both very strong. A halo formed in the evening round the moon.

Rain fallen, 1 of an inch.

Edmonton, Middlesex. JOHN ADAMS.

**Miscellaneous Advertisements,**  
(Connected with Literature and the Arts.)

**MR. HAYDON'S PICTURE** of "Christ's Entry into Jerusalem," is now open for Exhibition, at Bullock's Great Room, open to the right, from ten till six.—Admission 1s. Catalogue 6d.  
"Fear not Daughter of Zion! behold thy King cometh, sitting on an ass's colt."

**British Gallery, Pall Mall.**

**THIS GALLERY** will be opened with an Exhibition of PORTRAITS representing some of the most distinguished Persons in the History and Literature of the United Kingdom, on Monday the 20th instant. By Order,

JOHN YOUNG, Keeper.

**Dramings.**

By Mr. Bullock, at his Egyptian Hall, Piccadilly, on Tuesday, May 23d, at one precisely,

A very fine Collection of framed and unframed Water-colour DRAWINGS, comprising some very beautiful hand finished productions, chiefly of the English School, viz.—Dowling, Girtin, Nicholson, Nash, K. and W. Westall, Hill, Owen, Prout, Pugin, J. Varley, Laflite, Rowlandson, Davis, C. Smith, Thurston, Mackenzie, and Burney. To be viewed and Catalogues had three days preceding.

**Pictures.**

By Mr. Bullock, at his Egyptian Hall, Piccadilly, on Thursday, May 23d, at one precisely,

A Small Collection of highly finished CABINET PICTURES, the genuine Property of a private Gentleman; among which are several specimens of considerable merit, particularly the works of Len. da Vinci, Tintoretto, Broussier, Cagliari, Giorgione, Old Tiersen, Jan Steen, Zuccherelli, &c. To be viewed and Catalogues had three days preceding.

**Antique and Modern Marble Sculpture, Italian Marble Slabs, &c.**

By Mr. Bullock, at his Egyptian Hall, Piccadilly, on Tuesday, May 23d, at one precisely,

A very valuable assemblage of Antique and Modern ITALIAN MARBLE SCULPTURE, consisting of Groups, single Figures, and Busts, particularly the Roman Character, and also of fine Promethium; Busts on the Giant Antelion; Capital and Perche, of the school of Canova; a Sleeping Venus, by Locatelli; and Busts and Figures of fine Italian workmanship. Also a pair of Corinthian Columns, of beautiful Oriental Marble with antique Capitals, in high preservation; together with several very fine Verd Antique, Purpurary Granite, and other Italian Marble Slabs, Mosses, &c. To be viewed and Catalogues had three days preceding.

**BOOKS PUBLISHED THIS DAY.**

**The Chronicle of the Times.**

In a thick and closely printed Volume royal 8mo. with a Chart, price 18s. in boards.

**THE CHRONOLOGY** of the last FIFTY YEARS, from 1770 to 1820; printed by one of the most ample general Chronologies extant, from the earliest Records down to 1770. This will prove to be one of the most convenient and useful Books of Reference ever published; and sooner or later it must find its way into every public Library, and into the Book-case of every private family. The period of Fifty Years has been chosen, as being the Term of an active Decade; by which means, Events continue to operate on the Affairs of the World, and on the Interests of Individuals, and during which they are therefore in the highest degree interesting to the News-readers and Recollections of the Contemporaries. Printed for Sir Richard Phillips and Co., Bridge Street; and to be had of W. Pine, St. James's Street; and of all Bookellers. Of whom, &c. &c. Dr. HOBHOUSE'S MODERN HISTORY, from Charlemagne to the Accession of George IV. with 26 engravings. 6s. bound.

**Price 2s. 6d.**

**HENRI QUATRE**, or Paris in the Olden Time. By THOMAS MORTON, Esq. Author of Cure for the Heart Ache, Speed the Plough, School of Reform, &c. &c. Sold by Sampson Low, 42, Lamb's Conduit Street, Foundling Hospital.

**The Coinage—Weights and Measures—and Prison Laws.**

Lackington, Hughes, and Co. beg leave to announce the Publication of the following Works, upon Subjects of Importance, which are likely to engage the attention of Parliament during the present Session.—*February 2nd, May 1.*

**ANNALS OF THE COINAGE OF BRITAIN**

and its Dependencies, from the earliest period of authentic History to the Death of George the Third. By the Rev. ROBERTS RUDING, B. D. Vicar of Maldon, in Surrey. F. S. A. and H. M. A. S. of Newcastle-upon-Tyne, in five large volumes, octavo, and one quarto volume, containing a Series of Coins, extending through a period of 1800 years, including the late issues of Sovereigns and Crown Pieces, price 6s. 6d. 1s.

2. AN ESSAY ON IRISH COIN, and of the CURRENCY OF FOREIGN MONIES IN IRELAND. By JAMES SIMON, F. R. S. 4to. with plates, price 18s.

3. METROLOGY, or an Exposition of Weights and Measures, chiefly those of Great Britain, Ireland, and France; containing Tables of Comparison, and Views of various Standards. Also an Account of Laws and Local Customs relating to the subject, with Parliamentary Records, and other important Documents. By P. KELLY, LL. D. 8vo. price 7s.

4. In this publication the three French Systems of Metrology are explained; namely, the Ancient System; the Metrical or Decimal System of 1793; and the System of 1842, by which ancient names are restored, and binary instead of Decimal Divisions adopted. The last method is now published for the first time, it is believed, in the English language.

5. HINTS FOR THE IMPROVEMENT OF PRISONS, and the Better Regulation and Management of Prisoners, respectfully addressed to the Committee of the House of Commons. By JAMES ELMES. 4to. with plates, price 6s.

Correctly and elegantly printed, in four volumes Octavo, with an Index, and copper plates, price 1l. 12s.

**THE WORKS OF FLAVIUS JOSEPHUS**, the Learned and Authentic Jewish Historian, and Celebrated Warrior. To which are added, Three Dissertations concerning Jesus Christ, John the Baptist, James the Just, God's Command to Abraham, &c. Translated from the original Greek. By WILLIAM WHISTON, A. M. Professor of Mathematics in the University of Cambridge.

"This History has been spoken of in the highest terms by men of the greatest learning, and the soundest judgment, from its first publication to the present time." *Vide Rev. Porteus's Lectures*, vol. 2, p. 206.

London: Printed for Lackington, Hughes, and Co.; Longman, and Co.; F. C. and J. Rivington; Wingrave and Collingwood; J. Cuttler; J. Nason; L. Richardson; Baldwin and Co.; G. and W. B. Whittaker; R. Priestly; T. Hamilton; and Ogle and Co.

Very handsomely and closely printed in columns, in 4 vols. royal 4to. with complete Indexes, price 12l. 10s.

**ATHENÆ OXONIENSIS; the History of all the Writers and Bishops who have had their Education in the University of Oxford, from the Year 1600, to which is added Post-Oxoniensis, or, the Annals of the said University.** First written by ANTHONY A. WOOD, M. A. of Merton College; and now very considerably augmented, in Text and Notes, by PHILIP BLISS, Fellow of St. John's College, Oxford. Subscribers not yet having received all their volumes of this valuable body of English Biography, (which contains upwards of two thousand two hundred Lives,) are recommended to complete the sets without delay, as the publishers cannot undertake to supply any separate volume after six months has elapsed. The work may be bound either in fcar, or in five volumes, at the option of the purchaser; if the latter mode be adopted, the "Annals of the University," now attached to the second and fourth vols. by being placed together, form a fifth volume. London: Printed for Lackington, Hughes, Harding, Evans, and Jones; F. C. and J. Rivington; Payne and Foss; Longman, Hurst, Rees, Orme, and Brown; Cadell and Davies; J. and A. Arch; J. Mawman; Black Kingbury, Barlow, and Allen; R. H. Evans; J. Booth; Baldwin, Cradock, and Joy; London; and J. Parker, Oxford.

**Louis Bonaparte's History of Holland.**

In three Octavo Volumes, price 1l. 10s. in boards.  
**HISTORICAL DOCUMENTS AND REFLECTIONS ON THE GOVERNMENT OF HOLLAND.** By LOUIS BONAPARTE, Ex-King of Holland.

"What you say, what you say, what you say." This work is translated from the original manuscript copy, which was transmitted to this country for publication by the Author, and is deposited in the hands of the publishers, where it may be seen.

Exclusive of the History of Holland, both public and secret, during the important period of the reign of Louis, these Memoirs contain some original Letters of Napoleon, and many curious anecdotes of him, and the various branches of his family, and of different public characters of other nations connected with the circumstances of the eventful times to which the history relates.

The same work may be had in French, printed verbatim from the original MSS. in 3 vols. price 1l. 10s.

\* A very few copies have been struck off on Royal paper, price 3l. 3s.

London: Printed for Lackington, Hughes, Harding, Evans, and Jones, Finsbury Square.

**Donovan's British Quadrupeds,**

With coloured plates, in 12 Monthly Parts; or 3 vols. royal 8vo.

On the 1st of January was published, part 1. price 3s. and Vol. 1. price 1l. 10s. boards; of,

**THE NATURAL HISTORY OF BRITISH QUADRUPEDS**, with Figures, accompanied by Scientific and General Descriptions of all the Species that are known to inhabit the British Isles: including, as well those found in a wild as in the domesticated state; and also such as are clearly authenticated to have been originally indigenous, but are now extirpated, or become extremely rare. The whole arranged in systematic order, after the manner of Linnaeus. By E. DONOVAN, F. L. S. W. B. author of the Natural History of British Birds, Insects, Fishes, Shells, &c. Printed for the Author; and for F. C. and J. Rivington, No. 42, St. Pauls Church Yard, and No. 3, Waterloo Place, Pall Mall.

\* A Prospect of the Work may be had gratis.  
\* Mr. Donovan's Histories of British Insects, Birds, Fishes and Shells, with coloured plates, continue on sale in Volumes, or Parts, at the option of the Purchaser.

Handsomely printed, in 2 vols. 8vo. price 18s. in boards.

**THE ORATIONS OF MARCUS TULLIUS CICERO**, translated into English; with Notes, Historical and Critical. By WILLIAM GUTHRIE, Esq. London: Printed for Lackington, Hughes, and Co.; F. C. and J. Rivington; J. Cuttler; J. and W. T. Clarke; Longman and Co.; Cadell and Davies; Baldwin and Co.; Darton and Co.; G. and W. B. Whittaker; J. Nunn; J. Agnew; J. Booker; E. Jeffery and Son; J. and A. Arch; L. Richardson; J. Richardson; T. Hamilton; Ogle and Co.; Bohn; E. Edwards; R. Scholey; Alex. Black; T. and J. Allman; and J. Mackle. Of whom may be had, uniformly printed, Cicero's Essays on Old Age and Friendship, translated by W. Melmoth, Esq. 8vo. 1l. 4s.

Cicero's Letters to his Friends, translated by W. Melmoth, Esq. 3 vols. 8vo. 1l. 4s.

Cicero on Oratory and Orators, translated by Guthrie and Jones, 2 vols. 8vo. 10s.

Cicero's Morals, translated by Parker, 8vo. 10s.

Cicero's Offices, translated by Guthrie, 8vo. 6s.

Cicero's Readings against Verres, translated by Kelsall, 8vo. 10s.

Cicero's Life, by Dr. Middleton, 2 vols. 8vo. 18s.

**In 2 vols. 12s.**

**THE TRETREAT**; or Sketches from Nature. A Novel. By the author of "Affection's Gift," &c. &c.

**THE following Works**, by MRS. LE NOIR, Daughter of Christopher Smart, A. M. Author of The Song to David, are published by Messrs. Riverton, St. Paul's Church-yard: Village Anecdotes, 8 v. with Poems, 2d edit. The Maid of La Vendee, with Poems, 2d edit. Conversations and Poems for Youth, 2 vols. Forbury Hill, a Poem.

Preparing for the Press, Poems on Various Occasions, by the same hand.

**THE POETICAL WORKS of the Reverend GEORGE CHABBE.** Consisting of I. Poems—II. The Borough—III. Tales—and IV. Tales of the Hall. 3 vols. 8vo. 2l. 18s. 6d. 6 vols. royal 8vo. 4l. 12s. 7 vols. small 8vo. 2l. 2s. Printed for John Murray, Albemarle Street.

**A VIEW of the AGRICULTURE, MANUFACTURES, STATISTICS, and STATE of SOCIETY of Germany, and parts of Holland and France, taken during a Journey through those Countries, in 1819.** By WILLIAM JACOBI, Esq. F. R. S. Printed for John Murray, Albemarle Street.

Second edition, in 3 vols. 8vo. 1l. 11s. 6d.  
**ANASTASIOS, or MEMOIRS of a GREEK,** written at the close of the Eighteenth Century. Printed for John Murray, Albemarle Street.

In the course of May will be published, in 3 vols. 8vo. with 24 coloured plates and Engravings.

**JOURNAL of a TOUR in GREECE, EGYPT, and the HOLY LAND; with Excursions to the River Jordan, and along the Banks of the Red Sea to Mount Sinai.** By WILLIAM TURNER, Esq. Foreign Office. Printed for John Murray, Albemarle Street.

In a few days will be published, in 3 vols. 12mo.  
**WARBECK of WOLFSTEIN.** By MISS HOLFOED, Author of "Wallace," &c. La fin couronne les œuvres.  
Printed for Rodwell and Martin, Bond Street.

Shortly will be published, in 8vo.  
**MARCUS COLONNA, a Poem, in Three Parts** to which will be added, Dramatic Sketches, and other Poems. By HARRY CORNWALL.

Printed for John Warren, Old Bond Street, and C. & J. Ollier, Vere Street, Bond Street; of whom may be had by the same Author, Dramatic Scenes and other Poems, 2d. Edit. 7s.; and A Sicilian Story, with Diego de Montilla, and Poems, 2d. Edit. 7s.

**Summer Excursions.** Price 15s. bound, an improved edition, corrected to the present time, with an entire new Series of Engravings by Geric, mostly from original Drawings.

**THE GUIDE to the WATERING and SEABATHING PLACES for 1829; containing full and accurate Descriptions of each Place, and of the Curious and striking objects in the Environs, and forming an accessible and useful companion during a residence at any of the Places, or during a summer tour in quest of health or pleasure.** By THE EDITOR of the PICTURE of LONDON. Printed for Longman, Hurst, Rees, Orme, and Brown, and to be had of the Librarians and Booksellers at the Places described.

Elegantly printed, in one vol. imperial 4to. embellished with 20 coloured Plates, Portraits, Maps, &c. 6l. 6s. boards; or in 4 parts, at 1l. 11s. 6d. each, the last three of which are sold separately, to complete sets.

**THE DUKE OF WELLINGTON'S CAMPAIGN in the NETHERLANDS, in 1815,** in conjunction with PRINCE BUCHER, compiling the Battles of Ligny, Quatre Bras, and Waterloo. With a detailed Narrative of the Political Events connected with those memorable conflicts, drawn up from the first authorities, and dedicated to HER ROYAL HIGHNESS WILLIAM MURDOCK, Esq. Illustrated by numerous public and private Official Documents, and other Papers hitherto unpublished, communicated by Officers of the highest distinction. Printed for Henry Colburn and Co. Conduit Street.

In 3 vols. 8vo. price 20s.  
**MEMOIRS or CORRESPONDENCE of MADAME DEPIEY.** où elle donne des Détails sur ses Liaisons avec Dupleix, J. J. Rousseau, Grimm, Diderot, Le Baron d'Holbach, Saint Lambert, Madame d'Épouville, et autres Personnages célèbres du dix-huitième Siècle.

"Madame d'Épouville was certainly a woman of considerable talent—her epistolary style is excellent—her remarks on passing events lively, acute, and solid—and her delineation of character admirable."—*Edinburgh Review*, No. 61.

Printed for Henry Colburn, Conduit Street, of whom may be had, *Memoires et Correspondance choisies*, de Baron de Grimm, 7 vols. 8vo. 2l. 15s. 6d.

In three large volumes, 8vo. handsomely printed, with thirty-five illustrative Maps and Engravings, price 2l. 12s. 6d. boards.

**HISTORY of the INDIAN ARCHIPLAGO,** containing an Account of the Manners, Arts, Language, Religion, Institutions, and Commerce, of its Inhabitants. By JOHN CHAWFURD, F. R. S. late British Resident at the Court of the Sultan of Java. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

This work will be found to contain a more full and accurate account of the Indian Islands, than any other which has hitherto appeared. The author's residence in the countries which he describes, and his official opportunities of acquiring information regarding the history, manners, and customs of their Inhabitants, render his details on these subjects peculiarly valuable. The Books on Agriculture and that on Commerce, (now that the India trade is partially opened) will be read with particular interest by those who are directing their capital to this little explored field of commerce; and a great body of useful information will be found under the last of these heads, regarding the articles of exportation best suited to the Indian market, and of the native products which may be most beneficially imported into Europe.

In two large vols. 8vo. handsomely printed, with 33 illustrative engravings, price 1l. 16s. boards.

**A JOURNEY in CARNIOLA, ITALY, and FRANCE, in the Years 1817-1818;** containing Remarks relating to Language, Geography, History, Antiquities, Natural History, Science, Painting, Sculpture, Architecture, Agriculture, the Mechanical Arts, Manufactures. By W. A. CAPELLI, Esq. F. R. S. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

In the description of the Middle and North of Italy, which occupies the greater part of this work, the author has been at pains to compare the accounts of the country, published by ancient and modern Travellers, with what he saw himself. The Geography of Italy, and the ancient Maples of Rome, are treated of in the Appendix. The Map is carefully drawn, and contains notes relating to Geology, and the height of Mountains. The Engravings are in considerable number, and amongst them is a set of Elevations, drawn on one scale, so as to give a comparative view of the magnitude of the principal Buildings of Italy and other countries.

**Cottle's Work on English Jurisprudence.—6d. 6d.**  
**THE PAMPHLETEER, No. XXXI.** containing—1. A Translation of Judge Cottle's celebrated French Work on the Administration of the Criminal Code in England, and the Spirit of the English Government. 2. Notes on a visit made to some of the Prisons in Scotland and the North of England, by J. J. Gurney. (Concluded from No. XXX.) 3. First Report of the Commissioners on the Weights and Measures. 4. Letters on Cash Payments. 5. Summary of Facts and Inferences respecting the Causes, proper and adventitious, of Plague, and other Pestilential Diseases; with Proof of the non-existence of Contagion in the miasma. By C. Maclean, M.D. (Original.) 6. Baron Smith's Charge, delivered on the 9th of March, 1820, to the Grand Jury of the County of Westminster, and published at their unanimous request. 7. The British Metre, and its Derivatives; being a Sketch of a proposed Reformation in the British Measures, Weights, and Coins. (Original.) 8. Speech of the Right Hon. G. Canning, delivered at Liverpool, given on his recollection. Sold by Messrs. Longman and Co. and all other Booksellers.

8vo. price 1s. sewed.  
**FURTHER OBSERVATIONS on the Practicability of Expediting the Liquidation of the PUBLIC DEBT of the United Kingdom,** with reference particularly to the Landed Proprietor; including some considerations on population and the Poor. By RICHARD HEATHFIELD, Gent. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row; J. M. Richardson, Cornhill; J. Harding, St. James's Street; and Waugh and Innes, Edinburgh. 8vo. may be had, by the same Author, Elements of a Plan for the Liquidation of the Public Debt, &c. &c. price 2s. sewed.

**BLACKWOOD'S EDINBURGH MAGAZINE, No. XXXVII.** for April, 1829. Contents.—J. Francis Chaney, Sculptor. 2. The Warbler, No. VI. Speech of the Right Honourable George Canning, at the Liverpool Dinner, given in celebration of his reelection. 3. Letters of a Liberal Whig. No. III. 4. Selections from the St. Priest MSS. No. II. 5. The Rape of Proserpine. 6. Old Songs and Song Writers. 7. The Wind. 8. The Windmill. 9. The Stone-thrower. 10. Moods of the Mind. No. I. Despondency—a Review. No. II. The Woodland Glen. No. III. The Isle of Despair; a Vision. II. Recollections. No. IV. Mr. Macrahn, the Cameronian. Adventure with the Gipsies. 12. Letter from a Proprietor of St. Andrew's square, relative to the proposed monument for Lord Melville. 13. Professor Linnæus's Outline of the Philosophy of the mind. 14. Fanny, a series upon Robert, the son of Captain B. Flaw, a Child five years of age; by James Crossley, Esq. 15. Horæ Danicæ. No. I. Libani Jarl, a Tragedy, by Adam Oehlenschläger. 16. The Warbler. No. VII. 17. Sonnets. 18. Literary and Scientific Intelligence. 19. Works preparing for Publication. 20. Monthly List of New Publications. 21. Monthly Register, &c. Printed for T. Cadell and W. Davies, 24, St. Ann's Street; and W. Blackwood, No. 17, Prince's Street, Edinburgh.

**Cottle's Works.**  
**DE L'ADMINISTRATION de la JUSTICE CRIMINELLE en ANGLETERRE.** Par M. COTTE. 1829. 6s. 6d. Réflexions sur l'Etat actuel du Jury, de la Liberté individuelle. Paris, 1819. 4s. 6d. Sold by Bony and Sons, 4, Old Bond Street, Royal Exchange, of whom may be had, *Caneçons en Louisiana*, beautifully printed by Didot in Paris, in 15s. *Poèmes de Marie de France, Poète Anglo-Normand du XIIIe Siècle*, 2 vols. 8vo. Paris, 1820, p. 21s.

**THE QUARTERLY REVIEW, No. XLV.** will be published on Saturday, the 25th inst. Contents.—1. Life of the Duke of Marlborough. Memoirs of John Duke of Marlborough, with his original Correspondence, collected from the family Records at Blenheim, and other authentic sources. By William Gore, M. A. F. R. S. A. Archdeacon of Wilts. II. Van Diemen's Land.—Michael Howe, the last and worst of the Bush Rangers of Van Diemen's Land. Narrative of the chief atrocities committed by this Great Murderer and his associates, during a period of six Years, in Van Diemen's Land. III. Count Felslin.—Voyage d'Asie Levant. IV. Roads and Highways: 1. Report of the Select Committee on the Highways of the Kingdom; 2. Practical Essays on the Scientific Repair and Preservation of Public Roads. By John Lushington M.A.; 3. Remarks on present System of Road making, by J. L. M.A.; 4. Essay on Construction of Roads, &c. by Richard Lovell Edgeworth; 5. Practical Treatise on Road making, by James Paterson. V. Parga. I. Proceedings in Parga and the Ionian Islands, with a series of correspondent and other justificatory documents. By Lieut.-Col. C. F. de Boscqet; 2. *Exposé des Faits qui ont précédé et suivi le Casse de Parga*, ouvrage écrit originairement en Grec; par un Paraganoite, et traduit et publié par Amour Duval, de Platinat. VI. Modern Greek.—Observations relating to the Modern Greek Language. By M. Coray. VII. Voltaire et M. de Clavelot. VIII. de Voltaire et M. de Clavelot. IX. *Le Voyage de Séjour de monsieur à Circy*. VIII. Poems, Descriptive of Rural Life and Scenery. By John Clare, a Northamptonshire Poet. IX. *De l'Angleterre*. Par Monsieur Richelieu. X. The Fall of Jerusalem. A dramatic Poem. By the Rev. H. H. Milman. XI. Africa.—Voyage dans l'intérieur de l'Afrique aux Sources du Sénégal et de la Niger, par G. Mollin. No. IV. *Le Voyage de Séjour de monsieur à Circy*. Printed for John Murray, Albemarle Street. No. XLV. containing the Second and concluding part of the Index, will be published at the same time. Complete Sets may be had of the first XXX. Vols. of the Quarterly Review.

London: Printed for the Proprietors, by W. POPE, of Chancery Lane: Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 362, (Exeter Change) Strand, where Communications, (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 175.

SATURDAY, MAY 27, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Trivial Poems and Triolets. Written in obedience to Mrs. Tomkins's Commands.* By Patrick Carey, 20th August, 1851. London, 1820. 4to. pp. 67.

This Mr. Patrick Carey, (if such wight there ever were), would be somewhat surprized to see his Trivial Poems in the goodly form of a Quarto, and Mrs. Tomkins's commands enlarged from the small duodecimo volume, which probably contented that lady, into the thin but gigantic shape which they now assume. The introduction assures us that these poems are reprinted from an unique MS. copy which Mr. Murray the publisher presented to Mr. (now Sir) Walter Scott the author; and concludes with an opinion of the latter, that Carey's playfulness, gaiety, and ease of expression, both in amatory verses, and political satire, entitle him to a rank considerably above that "mob of gentlemen who write with ease." When we remember some of the names included in that designation as originally applied, we must, with diffidence, express our dissent from even the high authority of the northern Minstrel here cited; but we rather suspect that it is but a lily, and that the whole production is one of those harmless and good-humoured literary mystifications which put an ideal stamp of antiquity upon the labours of a modern pen. Be that as it may, be Patrick Carey or Walter Scott the bard, and Mrs. Tomkins or Mr. Murray the prime mover, these little poems are only curious and pretty: Ritson, Percy, Ellis, Campbell, are full of finer specimens than any we find among them, of which we shall therefore merely select three or four *exempli gratia*.

Of the Ballades, several are political; and the following verses from one of these, ridiculing the order of the Rump Parliament (in Oct. 1659) that all books of law be put into Engish, are the most poignant that we can pick out.

The shoemaker, beyond the shoe  
Must not presume to hane to doe,  
A painter sayd of old  
Hee sayd aright; for each man oucht  
To meddle with the craft hee's taught,  
And be noe farther bold.

What th' anchor is, few ploughmen know;  
Sayers can't tell what meanes geoe-ho  
Termes proper hath each trade;  
Nay, in our werry sports, the bowler,  
The tennis-player, huntzman, fowler,  
New names for things have made.

See words i' th' lawes are introduc'd  
Which common talke has neuer us'd;  
And therefore sure ther's need  
That the gown'd tribe be sett a part  
VOL. IV.

To learne by industry this art,  
And that none else may plende.  
Our church still flourishing w'land scene  
If th' holy-writt had ever bene  
Kept out of lay-men's reach;  
But, when 'twas English'd men half-witted,  
Nay women too, would be permitted  
To expound all texts, and preach.

Then what confusion did arise!  
Coblers, denies you to dispise;  
See that they could but spell:  
This, ministers to scorn did bring;  
Preaching was held an easy thing,  
Each-one might doe't as well.

This gulfe, church-gouverment did swallow;  
And after will the civill follow;  
When lawes translated are:  
For eu'ry man that lists, will prattle;  
Pleading will be but twittie-twattle,  
And nought but noyse at bar.

Then lett's veng bee content to'bay,  
And to beleue what judges say,  
Whilst for us, lawyers brawl:  
Though fowre or five bee thrice undone,  
Tis better have some iustice donne,  
Then to haue none at all.

Of the love songs which are perfectly in the style of the age assigned to them,—the following are among the better order.

Cease t' exaggerate your anguish,  
Ye, who for the gont complaine!  
Lovers, that in absence laughish,  
Onely know, indeed, what's payne.

If the choyce were in my power,  
Sooner much the racke I'd choose,  
Then, for th' short space of an hour,  
My deare Stella's sight to lose.

Sometimes fcare, sometimes desire  
Seaze (by cruell turns) my heart;  
Now a frost, and then a fire  
(Lass!) I feele in eu'ry part.

Horrid change of paynes! O leue mee,  
With my death else end your spite!  
Absence doth as much because mee  
As both can, of her lou'd sight.

Thus (deare Stella) thy poor louer  
His unlucky fate bemoanes;  
Whilst his parting soule does honour  
'bout his lippes; wing'd by sad groanes.  
Yett thou may'st from death reprieue him;  
Loue such power to Stella giues:  
With thy sight thou canst reueile him:  
As thou wilt hee dees, or liues.

Ned! she that likes thee now,  
Next weeke will leaue thee!  
Trust her not, though she woo  
Ne'er to deceaue thee;

Just as to Tom she swore,  
Yet straight was ranging;  
Then shee'd seerue forty more,  
Still shee'd bee changing.  
Last month I was the man;  
See, if I leue't she can;  
Else aske Francke, Jane, or Nan:  
Ned! fayth looke to itt.

Shee'l prayse thy noyse, thy face;  
Shee'l say, th'art witty;  
Shee'l too try up thy mee,  
Thy state shee'l pitty;  
Shee'l sigh, and then accuse  
Fortune of blindness:  
This forme she still doth use,  
When shee'd shew kindnesse.  
Thou'lt find (if thou but note)  
That t' all she sings one note;  
I'ue le'nd her arts by rote:  
Ned! fayth looke to itt!

With scorning, as now on mee,  
(Lesse may't thou care for't!)  
Ere long shee'l looke on thee,  
Thy selfe prepare for't.  
The next new face will cast  
Thine out of fauour;  
The winds change not so oft,  
As her thoughts wauer:  
If then thou strin't t' enchain,  
Therely thou'lt onely gaine  
Thy labour for thy payne:  
Ned! fayth looke to itt!

And from the second part, which consists of Hymns and other religious compositions, we select the annexed as possessing the greatest merit or originality.

### Scripture Deo, Requiesc.

Are these the things I sigh'd for once, before?  
For want of these, did I complaine of Fate?  
Itt cannot bee. Sure there was somewhat more  
That I saw then, and priz'd at true rate:  
Or a rotten dullness had obscur'd my sight,  
And euen rotten wood glitters i' th' night.

Mine eyes were diuine, I could noe nearer get;  
This trash was with itt's most adun'ce plac'd:  
Noe merayle then, if all my thoughts were sett  
On folly, since itt seem'd so fayrely trac'd.  
But now that I can see, and am gott near,  
Ugly (as 'tis indeed; itt doth appeare.

Now, were I put on th' Eritrean sands,  
I would not stoop the choicest Jewes to take:  
Should th' Indian bring me gold in full-fild hands,

I would refuse all off'ers hee could make,  
Gemmies are but sparkling froth, naturall glasse;  
Gold's but gaily clay, or the best sort of brasse.  
Long since (for all itt's monarchy) that bee  
Which rules in a large hie, I did dispise:  
A nole-hill's chiefest ant I laugh'd to see,  
But any price of men I much did prize.  
The world now seemes to mee noe bigger then  
Mole-hill, or hie; ante, bees, noe lease then  
mee.

Who wishes then for power, or plenty craves,  
O lett him looke downe on them both from  
hence!

Hee'll see that Kings in thrones, as well as graues  
Are but poor wormes, enshroud in mist: see:  
Hee'll find that none are poore who care for  
nought;

But they bawling much, for more hanc soug't.  
Come, poore deluid wretch! clime up to mee;  
My asked hermitage will teach all this:  
'Twill teach thee too where truest riches bee,

And how to geyne a neuer-fading blisse.  
 "Twill make thee see that truly none doe raigne,  
 But those who scur our common souerayne.

*Nulla Fides.*

For God's sake marcke that fly:  
 See what a poore, weakie, little thing it is.  
 When thou hast marck'd, and scor'd it; know  
 that this  
 This little, poore, weakie fly  
 Has kill'd a pope; can make an emp'rour dye.  
 Behold yon sparke of fire:  
 How little hott! how neare to nothing 'tis!  
 When thou hast donce despising, know that this,  
 This contem'd sparke of fire,  
 Has burn'd thow towne; can burne a world  
 entire.

That crawling worme there see:  
 Ponder how ugly, filthy, mild it is.  
 When thou hast seene and loath'd it, know that  
 this  
 This base worme thou doest see,  
 Has quill'd down'd thy parents; shall eate thee.  
 Honour, the world, and man,  
 What trifles are they! Since most true 'tis  
 That this poore fly, this little sparke, this  
 So much abhor'd worm, can  
 Honour destroy; burne worlds; deuoure up  
 man.

*History of the Indian Archipelago; containing an Account of the Manners, Arts, Languages, Religions, Institutions, and Commerce of its Inhabitants.*  
 By John Crawford, F.R. S. late British Resident at the Court of the Sultan of Java. Edinburgh and London. 1820. 8vo. 3 vols.

This copious work is so abundant in useful information, that it will be quite impossible, confined as our limits are, to furnish more than a very cursory insight into its contents. Its general character may, however, be very briefly summed up: it is a complete history of that interesting portion of the earth, known by the name of the Indian Archipelago; and which consists of by far the largest group of islands on the globe; and it places in one point of view the intelligence heretofore to be sought for in Harris's Collection of Voyages, (including Stavorinus), Old Purchas, Marco Polo, Dampier, Sonnerat, Linschoten, Symes, Forrest, Marsden, Hamilton, Raffles, and other authors, to whose stores Mr. Crawford has added the fruits of his own observation, during a residence of nine years in the countries of which he gives an account.

From the north of the great continent of New Holland, to the southern shores of Africa, this mighty clustering of islands extends and fills the ocean. In length, the whole chain "embraces forty degrees of longitude close to the line, namely, from the western extremity of the Island of Sumatra, to the parallel of the Arauc Islands, not including in this estimate, the greater portion of the immense island of New Guinea,

and its breadth thirty degrees of latitude, from the parallel of 11° south to 19° north latitude, thus comprehending, with the intervening seas, an area of 44 millions of geographical, or about 54 millions of statute miles."

Borneo, New Guinea, and Sumatra, are islands of the first rank; and among the other innumerable islands, (exclusive of the Malayan Peninsula) are Java, Celebes, Luzon or Luconia, Mindanao, Bali, Lankook, Sumbawa, Chandana, Flores, or Mangarai, Timor, Ceram, Burao, Gielolo, Puluwan, Negros, Samar, Mandoma, Panay, Leyte, Zebu, &c. &c. better known to the majority of our readers, as the Philippine Islands, Isles of Sunda, &c. &c. or by the names of the more frequented seas that are near them, such as Macassar, Molucca, China Sea, Bay of Bengal, &c. &c.

The Indian Archipelago is throughout of a mountainous nature, and its principal mountains from one extremity to another are volcanoes. It is very generally covered with deep forests of stupendous trees. The number of grassy plains is very small, and there are no arid sandy deserts. It is distinguished from every cluster of islands in the world by the presence of periodical winds, and from all countries whatever by the peculiar character of these. Animal and vegetable productions either differ wholly from those of other countries, or are important varieties of them. In one quarter, even the principal article of food is such as man nowhere else subsists upon. The productions of the ocean are not less remarkable for abundance and variety than those of the land."

The aboriginal inhabitants are, like those of the most southern promontory of Africa, of two distinct races; one of a fair, or brown complexion, and the other a negro race. There are besides many varieties introduced by

\* Since Mr. Crawford wrote, two savages from the Andaman Islands have been brought to Penang, by the crew of a Chinese Junk, who captured them. When pursued in the water, they dived like ducks, and reappeared at a distance. Their limbs and arms are uncommonly small; but they are not ill-formed. One is 4 ft. 6 in., the other 4 ft. 7 in. high; and the weight of each only 76 lbs. avoirdupois. They have large paunches. One is clearly and of ferocious aspect; the other a boy of 17, and of a pleasing expression of countenance. They appear dull and heavy, extremely averse to speaking: when alone, and they think unobserved, they make a noise like the cackling of turkeys. Their skins are jet black, and of an extraordinary glossiness; their bodies tattooed all over; their appetites voracious; and they crunch the bones of fowls as dogs would do. In climbing trees they resemble monkeys. They go quite naked, and being much plagued with insects, their first operation in the morning is, to cover themselves with mud, which drying on, preserves them from bites and stings. Their salutations are performed by lifting up one leg, and smacking the lower part of the thigh with their hand. They are altogether in the most deplorable state of savage nature; and an Andaman (one of a population of from 2 to 3000) may be ranked perhaps as the lowest human being in the scale of creation. Ed.

(Chinese, Hindu, Arabian, Dutch, and Spanish colonists; and the whole population displays man in every intermediate condition, from the brute savage of New Guinea, to the more civilized inhabitant of Sumatra or Java.

The two aboriginal races of human beings inhabiting the Indian Islands, are as different from each other "as both are from all the rest of their species. This is the only portion of the globe which presents so unusual a phenomenon. One of these races may generally be described as a brown complexioned people, with lank hair, and the other as a black, or rather sooty-coloured race, with woolly or frizzled hair. The *brown* and *arago* races of the Archipelago may be considered to present, in their physical and moral character, a complete parallel with the white and negro races of the western world. The first have always displayed as eminent a relative superiority over the second as the race of white men have done over the negroes of the west. All the indigenous civilization of the Archipelago has sprung from them, and the negro race is constantly found in the most savage state. That race is to be traced from one extremity of the Archipelago to another, but is necessarily least frequent where the most civilized race is most numerous, and seems utterly to have disappeared where the civilization of the fairer race has proceeded farthest." The brown coloured tribes are in person short, squat, and robust; their medium height, males about 5 feet, 2 inches; females, about 4 foot, 11 inches, or nearly four inches below the European standard. They are not a well-looking people. The Papua, or woolly-haired race, is a dwarf African negro. A full grown male brought from the mountains of Quenda, was no more than 4 feet, 9 inches high; and the author never saw one from any part whose height exceeded 5 feet. Their frames are spare and puny; their skins not the jet black of Africa, but of a sooty colour; and they are in several physical points so strikingly distinguished from the African Negro, as to be considered a distinct and very inferior variety of the human species. Whenever they are encountered by the fairer races, they are hunted down like the wild animals of the forest, and driven to the mountains or fastnesses for the only safety they can find.

And their cruel hunters are as weak as they are cruel. "All the faculties of their minds are in a state of comparative feebleness; their memories are treacherous and uncertain; their imaginations wanton and childish; and their reason more defective than the rest, when exerted on any subject above the more vulgar train of thought, commonly erroneous and mistaken. No man can tell his own age, nor the date of any remarkable transaction in the history of his tribe or country. If a peasant has been present at some remarkable transaction, such as a murder or a robbery, and is examined ten days after in a court of justice, the probability is, that he can tell neither the hour of the day, nor the day at which such transaction took place, still less give a clear account of what happened."

From the chapter devoted to the description of the manners and customs of the Indian Islanders, we shall now proceed to make a few selections, such as seem to possess the greatest novelty, and to be best calculated to illustrate Mr. Crawford's talents as a historian. For the first characteristic feature, however, we are indebted to Stavorinus, whom Mr. C. quotes as having justly exemplified the patience and fortitude of the natives. A macassar slave was impaled; and the circumstances of this dreadful execution are thus related.—

"The criminal was led, in the morning, to the place of execution, being the grass plat, which I have before taken notice of, and laid upon his belly, being held by four men. The executioner then made a transverse incision at the lower part of the body, as far as the *os sacrum*; he then introduced the sharp point of the spike, which was about six feet long, and made of polished iron, into the wound, so that it passed between the back bone and the skin. Two men drove it forcibly up, along the spine, while the executioner held the coil, and gave it a proper direction, till it came out between the neck and shoulders. The lower end was then put into a wooden post, and rivetted fast; and the sufferer was lifted up, thus impaled, and the post stuck in the ground. At the top of the post, about ten feet from the ground, there was a kind of little bench, upon which the body rested. The insensibility or fortitude of the miserable sufferer was incredible. He did not utter the least complaint, except when the spike was rivetted into the pillar; the hammering and shaking occasioned by it seemed to be intolerable to him, and he then bowed out for pain; and likewise once again, when he was lifted up and set in the ground. He sat in this dreadful situation till death put an end to his torments, which fortunately happened the next day, about three o'clock in the afternoon. He owed this speedy termination of his misery to a light shower of rain, which continued for about an hour, and he gave up the ghost half an hour afterwards. There have been instances, at Batavia, of criminals who have been impaled in the dry season, and have remained alive for eight, or more days, without any food or drink, which is prevented to be given them by a guard who is stationed at the place of execution, for that purpose. One of the surgeons of the city assured me, that none of the parts immediately necessary to life are injured by impalement, which makes the punishment the more cruel and intolerable; but that, as soon as any water gets into the wound, it mortifies, and occasions a gangrene, which directly attacks the more noble parts, and brings on death almost immediately. This miserable sufferer continually complained of unsufferable thirst, which is peculiarly incident to this terrible punishment. The criminals are exposed, during the whole day, to the burning rays of the sun, and are unceasingly tormented by numerous stinging insects.

"I went to see him again, about three hours before he died, and found him conversing with the bystanders. He related to

them the manner in which he had murdered his good master, and expressed his repentance and abhorrence of the crime he had committed. This he did with great composure, yet an instant afterwards he burst out in the bitterest complaints of unsufferable thirst, and raved for drink, while no one was allowed to alleviate, by a single drop of water, the excruciating torments he underwent."

The Indian Islanders are also superstitious; and the author tells us, that "It would require a volume to describe all the forms under which these weaknesses are displayed. They believe in dreams, in omens, in fortunate and unfortunate days, in the casting of nativities, in the gift of supernatural endowments, in invulnerability, in sorcery, enchantments, charms, philtres, and relics. There is not a forest, a mountain, a rock, or a cave, that is not supposed the habitation of some invisible being, and not content with their own stock of these, their comprehensive faith has admitted those of Western India, of Arabia, and of Persia. To lend an implicit belief to all these, characterizes alike the high and the low, from the prince to the peasant. These superstitions are generally harmless and inoffensive, but, at other times, the delusions to which credulity exposes these people operate in the most dangerous and formidable manner. Of the less dangerous forms which it takes, I shall give as an example the frequent practice of professed robbers in Java of throwing a quantity of earth from a newly opened grave into the house they intend to plunder, with an implicit belief in its potency in inducing a deadly sleep. Having succeeded in casting a quantity of this earth into the house, and, if possible, into the beds of the inhabitants, they proceed with confidence in their plunder. It is not the robbers alone that has an entire belief in the efficacy of this practice; the conviction is equally strong on the minds of those who are the objects of his depredations. Quantities of the earth, carefully preserved in cases, have been repeatedly brought to me in the course of my official duties, found on the persons of robbers, who did not fail, when interrogated, to be very explicit in their accounts of its effects. The baleful effects of superstition on the minds of an ignorant and untutored people, is exemplified in the laws against sorcery, which is in force at this day in Bali. The following is an example:—"

"If a person write the name of another on a shroud, or on a bier, or on an image of paste, or on a leaf which he buries, suspends from a tree, places in haunted ground, or where two roads cross each other, this is sorcery. If a man write the name of another on a skull, or other bone, with a mixture of blood and charcoal, and places the same at his threshold in water, this also is sorcery. Whatever man does so, shall be put to death by the magistrate. If the matter be very clear, let the punishment of death be extended to his parents, to his children, and to his grand children. Let no one escape. Permit no one related to one so guilt-

ty to remain on the face of the land, and let their property of every description be confiscated. Should the parents or children of the sorcerer reside in a distant part of the country, let them be found out and put to death, and let their property, though concealed, be sought for and confiscated.

"When the proper cord is touched, there is hardly any thing too gross for the belief of the Indian Islanders. Some years ago it was discovered, almost by accident, that the *spell of a buffalo* was superstitiously conducted from one part of the island to another! The point insisted upon was never to let it rest, but keep it in constant progressive motion. It was carried in a basket, and one person was no sooner relieved from the load than it was taken up by another; for the understanding was, that some dreadful imprecation was denounced against the man who should let it rest. In this manner the spell was hurried from one province to another, and after a circulation of many hundred miles, at length reached the town of Samrang, the Dutch governor of which seized it and threw it into the sea, and thus the spell was broke. The Javanese expressed no resentment, and nothing further was heard of this unaccountable transaction. With whom, or where it originated, no man could tell. In the month of May, 1814, it was unexpectedly discovered, that in a remote but populous part of the island of Java, a road was constructed, leading to the top of the mountain *Samberg*, one of the highest in the island. An enquiry being set on foot, it was discovered that the delusion which gave rise to the work had its origin in the province of *Bangmas*, in the territories of the Sumanan, that the infection spread to the territory of the Sultan, from whence it extended to that of the European power. On examination, a road was found constructed twenty feet broad, and from fifty to sixty miles in extent, wondrously smooth and well made. One point which appears to have been considered necessary was, that the road should not cross rivers, the consequence of which was, that it wound in a thousand ways, that the principle might not be infringed. Another Point as peremptorily insisted upon was, that the straight course of the road should not be interrupted by any regard to private rights; and in consequence trees and houses were overturned to make way for it. The population of whole districts, occasionally to the amount of five and six thousand labourers, were employed on the road, and among a people disinclined to active exertion, the laborious work was nearly completed in two months; such was the effect of the temporary enthusiasm with which they were inspired. It appeared in the sequel, that a bare report had set the whole world in motion. An old woman had dreamt, or pretended to have dreamt, that a divine personage was about to descend from heaven on the mountain *Samberg*. Piety suggested the propriety of constructing a road to facilitate his descent, and divine vengeance, it was rumoured, would pursue the sacrilegious person who refused to join in the meritorious labour. These reports quickly wrought on

the fears and ignorance of the people, and they heartily joined in the enterprise. The old woman distributed slips of palm leaves to the labourers, with magic letters written upon them, which were charms to secure them against wounds and sickness. When this strange affair was discovered by the native authorities, orders were given to desist from the work, and the inhabitants returned without murmur to their wonted occupations. It seldom, however, happens in Java that these wide-spread delusions terminate so happily as in the instances which I have quoted. They are much more frequently accompanied by formidable insurrections, and take place in times of anarchy, or when a province is goaded to resistance by excessive extortion, or other form of mis-government. When a province is in this unfortunate situation, the most contemptible pretender will have a crowd of followers; and one of any talents will be sure to head a formidable revolt. Hence the crowd of pretenders under the name of *Krajan*, that in all ages have disturbed the peace of Java.\* Hardly a year passes that some vagabond does not declare himself a king, a saint, or a prophet, proclaiming his intention of redressing some earthly grievance, or pointing out some new road to heaven. Some of these impostors go the length of preaching a new religion, whilst others content themselves with declaring their lineal descent from some popular monarch of ancient Javan story."

Like other Orientalists, their ceremonies and domestic usages are widely different from those which Europeans are accustomed to look upon as essentially polite and correct, in their external demeanour. With them, for example, "it is respectful to cover the head, instead of uncovering it as among us. It is respectful to sit instead of standing. It is the very highest degree of respect to turn one's back upon a superior, and often presumption to confront him. It is the custom to sit cross-legged and on the ground. When an inferior addresses a superior, his obeisance consists in raising his hands, with the palms joined before his face, until the thumbs touch the nose. This he repeats at the end of every sentence, and if very courtly, at the conclusion even of each clause. When equals meet, their salutation is cold and distant, but in the ordinary intercourse of life, a relative superiority or inferiority of condition is usually confessed, and a demonstration of it constantly takes place. If a son has been long absent from his father, he throws himself at his feet and kisses them. A demonstration of affection, less profound, would extend the embrace only to the knee; but a very obsequious courtier will sometimes take his monarch's foot and place it on his head. The association between loftiness and humility of manner, and physical superiority and inferiority, appears to be constantly present to their minds. An inferior never stands upright before a superior. If he stand at all, the body is always bent; if he sit, it is the same thing, and his eyes are fixed to the

ground. When he advances and retires, he moves as if on all fours, and crawls or creeps rather than walks. There is one mode of demonstrating affection and respect, particularly nauseous and indelicate. It consists in the superior's offering to the inferior the chewed refuse of the betel and areca preparation, as a mark of great affection, which the latter swallows with much satisfaction."

It may be new to many to learn of what this complimentary mouthful consists. The chew is made up of the pungent and aromatic leaf of a species of pepper vine, which grows luxuriantly, and with little care; a small quantity of terra japonica, an agreeable bitter astringent; a minute proportion of quinine; and, above all, the fruit of the areca palm, which, in one or two of the languages, we find distinguished by the name of 'the fruit.' This last is gently narcotic, and hence, no doubt, the charm which renders the whole preparation so bevitching to those who use it. Persons of all ranks, from the prince to the peasant, are unceasingly masticating it, and seem to derive a solace from it which we can scarce understand, and which they cannot explain. When the preparation, through mastication, is mixed with the saliva, the latter assumes a dirty brownish red, which colours the teeth, gums, and lips, leaving, as it dries upon the latter, a black-coloured margin. These nauseous particulars are, to the surprise of strangers, considered a beauty, such is the effect of custom. No mouth is thought handsome that is not engaged in chewing the betel, and in their poetry a lover is often described comparing that of his mistress to the fissure in a ripe pomegranate; the aptness of the simile consisting in the comparison of the stained teeth to the red grains of the fruit, and of the black stain on the lips, to the hue which the broken and astringent rind assumes on exposure to the air.

(To be continued.)

*The Hermit in London; or Sketches of English Manners.* Vols. 4 and 5. London, 1820. 12mo.

No publication can have less to say of this work than the *Literary Gazette*, in which so many of these popular Essays originally appeared. We shall merely state that these two volumes are of a character similar to the three which preceded them, and that they complete the *Hermit in London*. We subjoin one of the papers as a remembrance of their nature; and have only to add that the writer is in the press with the *Hermit in the Country*, from which we shall present our readers with several selections in our ensuing Numbers.

#### LOOKING FOR LODGINGS.

A love of building has been reckoned by some persons, as ruinous a passion as a love of gaming; yet there can scarcely be inclinations of a more opposite description, at least, as far as the principles of each are concerned. It is the province of one to create, of

the other to destroy. One bids magnificent edifices rise "like exhalations" from the earth, to delight the eye with the beauty of their proportions, and the mind with anticipations of the commercial, the charitable, or the hospitable purposes for which they may be intended. The other fells venerable trees to the ground, and robs the face of the country of its greatest ornament, in depriving it of the thick and varied foliage which at once affords shelter to the birds, and shade to the cattle and the traveller; whilst the hearts of those who have associated the remembrance of the spreading branches with every recollection of their youth, are made sad by seeing them laid prostrate at the command of a dupe, to reward the stratagems of a knave. He who builds confers a benefit on posterity. He who games too often affronts the memories of those who have preceded him, by gradually parting with all that they had delighted themselves in amassing for his enjoyment. He who builds, however ruinous the pursuit may be to himself in the end, employs hundreds of industrious persons in the course of it; and at least leaves a memento behind him, that his fortune was not exhausted by low or vicious pursuits. He who games, on the contrary, at every throw of the dice injures the innocent and the helpless; and when he finds himself and those who may unhappily be connected with him reduced to beggary, through his wretched infatuation, he cannot even ascertain who has gained the property which he knows only that he has lost, and lost for ever. I need not, however, undertake the defence of building, for any partiality I entertain towards it myself; on the contrary, the aversion I have for it, in all its branches, even its minor departments of "repairing and beautifying" as the churchwardens term it, is such as to have lately reduced me to the necessity of looking for lodgings, until sundry operations should be performed in my own habitation, which I have deferred so long, that I began to be afraid of literally fulfilling the proverb of "pulling an old house about my ears." To remain under the same roof with a host of bricklayers, plasterers, white-washers, painters, paper-hangers, plumbers, glaziers, carpenters, smiths, and all the rest of the numerous tribe which modern refinements render necessary personages in the constructing or repairing of a dwelling, would be disagreeable to most men; to a hermit, like myself, impossible.—I had only, therefore, to chuse between two evils—to go to an hotel, or to take a furnished lodging. "At an hotel one has perfect liberty," said I to myself—"aye and great comfort too—but then it is comfort that must be paid for—and enormously; one has not the liberty of keeping one's purse in one's pocket—and every time the waiter calls out so briskly, "coming, Sir," he reminds me that my money is going. Shenstone has described the pleasure of being at an inn, but he says not a word of the disagreeable attendant on leaving it—therefore as I cannot expect to share in one without a due proportion of the other, I must content my-

\* *Krajan* is a word of the Javanese language, meaning "rebel."

self with the more moderate accommodation of ready furnished lodgings. But how many *pros* and *cons* are to be considered, in entering upon this kind of uncertain home! The situation; the air; the neighbourhood; the outside of the house; the inside; the furniture; the landlady, generally a weighty consideration; and last, though seldom least, the terms. Innumerable are the fears and doubts on taking a lodging. Does the house smoke? Never, but for the first time. Is the family quiet and orderly? Are there fellow lodgers in this modern ark? (for a man on ship-board and in a lodging house are alike, in being fixed, for a part of their short passage through life, with companions). What sort of a woman is the landlady likely to be? If boisterous, a man wishes to endure the gale as short a time as possible: if talkative, she is the bore of his studies and reflections. Yet there is a degree of humanity as well as complaisance in enduring garrulity, when it has kindness or attention for its main object. Is she curious (she generally is) that becomes troublesome always, and sometimes dangerous. Is she handsome? Still more dangerous. Very ugly? That's disgusting. A large family? Very hostile to a thinking man. A scold? One must move in a week. Has she a drunken husband? or does she herself, in the decline of life, discover that Cupid is a treacherous and mischievous urchin, and therefore turn to Bacchus for support or consolation? Is she over religious, so as to sing psalms aloud? If so, she probably is a hypocrite. But the queries are endless. And now, conceive that I am knocking at the door. "Lodgings to let" appears in a clerk-like hand. *Tout pit!* a fellow of the law perhaps! one who charges legally for every thing: a broken down attorney. But the door opened. There was also a bell. "Well," said I to myself, "if this 'knock and ring' announce an office, I perch not here; or if this is 'Miss Winter's bell,' I will have nothing to do with the concern; and if it be a dancing master's, a tooth-drawer's, an accoucheur's, or a musician's bell, I must also shift my birth, else may I be fiddled, diddled, drummed, trumpeted or disturbed out of my wits."

But now to my landlady. She was a plump woman with a fine healthy complexion. Not a votary of Bacchus, thought I, from this clear tint. She had in her countenance nothing sharp, which always augurs ill. A man may then expect to be felled, directly or indirectly; directly by an exorbitant price, or indirectly by the never-ending outlay for necessary trifles, most of which he neither wants nor are they gotten for him. Neither had she a saucy cocked-up nose: for this a man always pays through the nose, either in money or comfort; and may expect a volley of sharp shot in the way of reproach, if he submit not to the lady's humour, be it what it will. She had a warm smile, a sun-bright eye, and something of benevolence, which made all bargaining impossible.

After mildly showing the apartments, she asked me those unwelcome questions—"are you a married gentleman, or single?" a family or not? an establishment, or are you

to be *done for*?" Now all these are disagreeable queries, because they often remind a man of what he fain would forget; namely, of his misfortune if he be single, and perhaps of his wife, if he be in the holy bonds of wedlock, but separated by fate, by misconduct, or by narrowed circumstances; and the having an establishment or not, is another question of uncomfortable tendency: for it may either remind a man of heavy charges and tradesmen's lengthened bills, or cost him a blush for his want of fortune; and lastly, the being *done for* has such an equivocal sound, that it might puzzle a conjuror to solve the meaning in a moment.

In answer to these kind inquiries, I stated my solitary lot in the world, and begged to ask, in return, if the good lady was married herself? since she came to that. Whether I might expect matrimonial concerts of vocal performance? and whether she could afford me the attendance which I required? She smiled at these counter-questions: which proved that she was not an unmarried person; because she then would have thought it necessary to blush, or to hang down her head, or to look archly, or to play with the ring finger. Neither was she a widow: for then *bon gri! or mal gri!* she would have sighed, and looked as interesting as she could. Nor had she a bad husband: else would she have looked grave, and probably have begun a chapter of grievances. She replied, that she was married, that she had a small family, and that her husband was struggling with the world, and opposing industry to hard times. I immediately felt an interest in their mutual welfare, and paid with tenfold pleasure the stipulated price of my apartments.

A man may proudly enter an inn, command about him, treat all with indifference, from mine host, or fat hostess, down to the flippant waiter and John the ostler. He may be so absent or self-important, as not to know the man of the house from boots, or boots from the bull dog: but in a lodging, it is otherwise. The objects are fewer; they are more immediately proximate; they assume a more important form. The rattling of the fresh post-horses, the snail horn, or Dolly the chamber-maid, does not perpetually ring in your ears, so as to make you wish to be off, giving you at the same time an inimical feeling towards the maker-out of the bill. There one *coup de chapeau* at parting does for host, hostess, family, and all the tribe of charges; but in a lodging, you may have to pass your landlady daily on the stairs, and bows and inclinations of courtesy may be exchanged very frequently in the course of each week between you; so that a man must be void of all sensibility, if he be wholly uninterested about the family in which he lodges.

The common race of lodging-letters, it is true, are guided by self-interest, and are callous to delicacy and scrupulous feeling towards their lodger: but yet there are many exceptions to the rule. How many widows of clergymen, of officers of the army and navy—how many reduced gentlemen are forced to let lodgings? How many half-

provided-for females, or numerous unfortunate, derive benefit from this resource? How many wives of men of talent and genius, struggling to establish the fame they well deserve, cheerfully endeavour to assist their husbands by this means, during the season of obscurity and hardship? Such characters know how to act towards the inmate of their roof; can feel for his wants, take an interest in his welfare, and respect his situation whether retired, studious, sick, or solitary. Can a true gentleman, then, be too delicate towards such as these, too correct in payment, too nice in blending good breeding with his conduct in every respect?

The man who makes an inn of the humble roof of genteel poverty, is an ignorant ruffian. Nay, indeed, I could never enter an inn without a feeling of interest for my fellow men there: and if good treatment and fair charges accompanied my fare, I considered that I owed a subordinate debt of gratitude to the landlord, for the remote species of hospitality named civil and kindly accommodation. A fellow traveller once asked a surly cynic, whether he did not observe that the inn-keeper at whose house they had rested had a remarkably open countenance? The latter replied, that he observed nothing open in the house, except an open door and open hauls. One who could thus close his heart and his accounts with his fellow-creatures, should travel through life alone. To the child of sensibility there is no class, no situation, no abode, which excludes the movements of the heart, which forbids kindly intercourse, or prevents his sympathies from coming into action, whether in a lodging, an inn, a stage-coach, or a passenger-bout: for the journey is always that of life; man is our companion, humanity the first and the most pleasurable duty. I, at least, may catalogize such feelings; for it is owing to them that though some might deem me solitary in the world, I have never yet found myself alone—although I style myself the

HERMIT IN LONDON.

*A Catalogue of the Pictures of Grosvenor House, London; with Etchings from the whole Collection, accompanied by Historical Notices of the principal Works. By John Young, Engraver in Mezzotinto to his Majesty, and Keeper of the British Institution.—London, 1820. 4to. pp. 48.*

Of the splendid collection of pictures at Grosvenor House, this publication conveys an adequate and excellent idea. Without being made out with vain minuteness, the etchings are spirited, and sufficiently detailed for all the purposes for which they are intended. They give a perfect conception of the treasures which the noble Earl possesses from the easels of the greatest masters, whose various qualities are here very happily rendered by the graver, so that a just and accurate notion may be formed of their styles and subjects.

The basis of Lord Grosvenor's Gallery was laid by the late Earl, who purchased some of the best works in Lord Walgrave and Sir Luke Schaub's collections; to which he added a good many capital pictures from Italy, as

well as several of the finest productions of English artists, such as Wilson, West, Gainsborough, Stubbs, Northcote, Hogarth, Hoppner, &c. The present Lord has still further enriched it with valuable specimens of the Italian, Dutch, and Flemish Schools; with the principal portion of the late Lord Lansdowne's paintings; the whole of those belonging to Mr. Agar, and many *chefs d'œuvre* from different countries, including Murillo's, Rubens', Titian's, &c. of almost unequalled merit.

The Rubens's are the most novel, and not the least admirable ornaments to this splendid collection. No. 60 in the Catalogue is the Meeting of Abraham and Melchisedec, one of a series of six pictures, painted by that glorious artist, by order of Philip IV. of Spain, and presented by the monarch to Olivares, for his newly-built convent at Locches. The Duc d'Alva succeeded to these pictures by inheritance; and when the French took possession of Madrid in 1808, he sold four of them to M. de Bourke, the Danish Minister, from whose hands they passed into the hands of Lord Grosvenor about two years ago. The other two found their way to the Louvre, where they now are. No. 60 is on canvas, and of the large size of 14 feet 4 inches high, 19 feet wide. No. 68 is another of the series, 14 feet by 11½ feet, and the subject, the Evangelists. The others are the Fathers of the Church, Pope Gregory, St. Jerome, &c. of the same size; and (we imagine) the *Trasartes* gathering Manna, which is 16 feet high and 13 feet 7 wide.

The Meeting of Jacob and Laban, by Murillo, and one of his masterpieces, is another of the works which the late war in Spain dispersed. It belonged to the Santiago family, and was seized by General Sebastiani, as part of the contributions levied by the robbers under his command.

But it would lead us too far were we to attempt to particularize the chief pictures in this superb collection, of which Mr. Young has etched one hundred and forty-three. Suffice it to repeat, that the catalogue is exactly what an artist or a man of taste would wish, either to refresh his recollection if he has seen the originals, or to furnish him, if he has not, with the means of conceiving their merits.

*Ellen Fitzarthur: A metrical Tale, in five Cantos.* London, 1820. pp. 134.

We observe from a passage in this poem, that it is the production of a female; and gather further, that it is a first essay: its beauty, its purity of sentiment, its merits in descriptive poetry, and its pathos, would do honour to any masculine, or a more experienced pen. It affords us much pleasure to notice it in terms of such high commendation; but we are confident that its popular impression will be even stronger than we rate it at; for its nature and feeling will force a passage to every heart, while the slight blemishes offensive to critical taste, will escape the severity of censure, if not the accuracy of detection.

The story is very simple—Ellen, the in-

nocent daughter of a widowed clergyman, forms the fondest attachment to De Morton, whose life is saved on the coast near their happy dwelling. He desires a secret union, in order to avert the resentment of an uncle on whom he is dependant; but the worthy priest not only refuses his assent to this act, but, censuring De Morton for gaining the affections of his child, when aware of the existence of this obstacle to their marriage, he prohibits further intercourse till it is removed. The lover, after a long absence, returns under the covert of night, and succeeds in persuading Ellen to elope with him. A fictitious ceremony is performed; she bears a child, and is deserted by the ruffian, who has aggravated his guilt by withholding all her applications to her father for forgiveness. Ellen endures the most poignant misery, but at length resolves to seek her once-blessed home, and consign her baby to her parent's care before she expires. Her toilsome journey, and the melancholy catastrophe of its close, are very touchingly painted: she finds her father dead, and gives up the ghost upon his recent grave.

Before coming to those extracts by which we mean to sustain our opinion of this tale of domestic woe, we may briefly observe, that the villany of De Morton is extravagant, and we trust, too, more demoniacal than is consistent with nature. The abandonment of his victim is an event perhaps only too probable; but why he should take means to exclude her and the infant from all chance of paternal mercy, is hardly to be accounted for even on principles of excessive human depravity. In point of versification, a too frequent recurrence of the same common place rhymes and epithets; a few tame lines, and mean phrases; and occasional grammatical oversights, are the most prominent defects. In the management of metaphor, the author is rarely successful. It is in landscape, and in the delineation of tender feminine feeling and distress, that her power and excellence lie. She is also original; for though there are passages which betray an intimacy with Thomson, Goldsmith, Scott, Rogers, and Tigghe, they are new developments rather than reminiscences, and the produce of a mind enriched by judicious reading, rather than the servile labour of partial imitation.

We know not what the author may think of our mentioning the faults of her performance; but we can assure her, that did we not greatly admire the talent she has displayed, we should not have taken the trouble of pointing them out. They are but the errors of carelessness in some, and of the want of practice in correctly critical composition in other instances; but her fine vein of poetic imagination, and her genuine pathos, of which we shall now subjoin several deeply affecting examples, would redeem a hundred fold greater blemishes than those on which we have animadverted.

A tasteful introduction claims a modest place on the bifurcated hill for the fair writer. We quote it entirely.

PARNASSUS! to thy heights sublime,  
Thy awful steep, I may not climb

Where rays of living light surround  
Thy sacred fane, with laurels crowned,  
And gushes with melodious flow  
Thy fountain, from its source below.  
I may not look with eagle gaze  
Unshrinking on those living rays;  
I may not soar on eagle's wing,  
To drink of that celestial spring;  
Reserv'd for bolder hands than mine  
The amaranthine flowers to twine.

That on its borders glow;  
But strays there from that sacred source,  
No wand'ring rill, with silver course  
That seeks the vale below?  
Where peevish willows, on the brink  
Of its pure crystal stoop to drink,  
And the low violet's perfume  
Betrays where lurks her purple bloom.

There might I haunt;—enough for me  
Far off, the laurel'd mount to see,  
To breathe with deep inhaling acme  
The floating odours wafted thence,  
To catch the distant melody  
Of golden harps, resounding high—  
There might I haunt, and haply there  
Of wild-flowers, weave a chaplet fair,  
Such as the virgin brood of Taste  
Might wear, by artless Feeling placed;  
Oh! might I to such mood aspire!  
Blest were thy strains, my simple lyre!  
Companion of my chillblooded thou,  
Friend of my happy youth; and now  
Kind soother of the days, o'ercast  
With sad remembrance of the past.

But should the world's approving smile  
(Reserved for happier minstrel's toil)  
Withhold its sunny light from thee,  
Submit me to the stern decree,  
We'll hush the unsuccessful strain,  
And seek our silent shades again.  
Cold is the fondly partial ear

That would have listened to my lay;  
And clam'd the eyes, whose suffrage dear  
Had smil'd the world's cold looks away.  
But still in solitude and shade  
Lie thy low sounds, my lyre! essay'd;  
No longer with presumptuous aim,  
One kindly foot'sting glance to claim,  
But that on life's dark lonely stream,  
Thou still wilt shed a cheering gleam,  
Smooth its dark passage to the deep,  
And lull me to my latest sleep.

The poem commences with a picture of the good Pastor, desolate in his old age, and then reverts to the chain of incidents by which he was deprived of his sole earthly comfort. The former contains these passages.

One earthly love he still confess'd,  
One tie, the purest and the best,  
That bound a widowed father's care  
To one sweet blossom, frail and fair—  
She whose young life's first clouded ray  
Beamed on a dark and troubled day,  
The guiltless messenger of death,  
Bequeathed with love's expiring breath—  
She who in smiling infancy  
Had clasped his neck, and climbed his knee,  
Whose first imperfect words, dispelling  
The silence of his widowed dwelling,  
Had wakened in his heart the tone,  
That vibrates to that sound alone.  
Oh, moment of parental pride!  
When first those hushing accents tried  
The parent hymn, which earth can raise,  
An infant's, to its Maker's praise.  
Sweet was the task her voice to guide,  
When first they totter'd by his side,

Sustain'd at first with broad firm band,  
Till soon the little clasping hand  
The finger held, and bolder grown,  
A few short steps were triced alone;  
And soon unquitted, firm and free,  
They ranged in wider liberty.  
Then—sweet companion of his walk!—  
She prattled her imperfect talk,  
A broken language of her own,  
Distinct to parent's ear alone.  
Or bounding far, like playful fawn,  
O'er blue-bell path, and daisied lawn,  
Brought to his care her flowery store;  
To treasure, while she sought for more;  
A promised kiss the trifler's lure,  
To make th' important trust secure,  
And never miser's golden hoard,  
Than Ellen's weeds, was safer stored.

Unruffled flow'd with noiseless way  
Their stream of life—each passing day,  
And ev'ry season's course renewing  
Some peaceful joy, some flower-strewing;  
For where the heart's warm sunniness glows,  
Its clime no change of season knows,  
Pleasure but yields a faint perfume,  
A prishing, imperfect bloom,  
And haplessness, of heav'nly birth,  
But drops and languishes on earth;  
Scarce budding on this mortal sphere,  
Its fruit can never ripen here.

The fiendish arts of De Morton verify this  
painful truth. His long absence preys on  
the health of the confiding Ellen.

The heavy hours dragged slowly on,  
Till days, long tedious days, were gone,  
And hope, that with the morning rose,  
Went down in tears at evening close,  
"Twas passing strange! but undesign'd—  
De Morton could not be unkind."  
Some cruel chance, some trust betrayed,  
The promised joy so long delayed:  
Or might it not—Oh blest surmise!—  
Might not that long delay arise  
From happier cause? glad news to bring,  
Perhaps *himself* was on the wing!  
Perhaps, ere night, that voice so dear,  
Might breathe glad tidings in her ear.  
Till came, and days succeeded day,  
Till weeks and months were pass'd away,  
Till still, nor line, nor message came,  
Nor sound that bore De Morton's name.  
Conjecture, baffled and deceived  
So oft, no longer was believed;  
And faint and fainter hope became,  
Till quiv'ring like a dying flame,  
Its fitful flash, and latent spark  
At length expired, and all was dark.  
On Ellen's cheek the roses faded,  
The lustre of her eyes was shaded,  
Exchanged their laughing glances bright,  
For languid rays of humid light;  
Ashy-ashes, the rain drops thro'  
Tremble with darkly liquid blue.  
Yet still upon her lips 'erwhile,  
Larger'd a faint and sickly smile,  
Nearer to grief than joy allied,  
And worn in pious fraud, to hide  
From a fond father's eye, the woe,  
Whose inward depth mock'd outward show.  
Falls on some lonely tomb's decay,  
Shine thus, in seeming mock'ry shed,  
Where all within is cold and dead.  
No proud resentment claimed a part,  
In the deep anguish of her heart:  
All there was silent, meek distress,  
And uncomplaining gentleness;

And still with wonted zeal she strove,  
And tenderness of filial love,  
Those thousand dutious cares to pay  
That strew with flowers life's downward way.

A contrast between the sexes, their virtues  
and their sufferings, is here sweetly  
introduced.

To man, aspiring man! we yield  
The trophies of the battle field;  
To him be valor's lofty meed,  
To him, her blood-stained wreath decreed;  
The humbler garland, woman wears  
Unsprinkled, but by pity's tears;  
Hus be the triumph, proudly prov'd,  
Danger and death to meet unmov'd;  
To brave—exulting in his force—  
The torrent in its mountain course;  
To climb the giddy heights, where fame,  
In her proud roll records his name;  
But not in battle's bloody strife,  
Nor in the mountain storms of life,  
The noblest conflicts may be view'd  
Of the pale martyr, fortitude.  
Off in the low and lonely den,  
She shuns the vain applause of men,  
Content her conflict should be known  
To all—wise—and him alone.  
There seek her in her lowliest dress,  
(Long suffer'd, mild, meek tenderness,  
In woman's fair and fragile form,  
That bends, but breaks not in the storm;  
So bends the ozier, till the blast  
That rends majestic oaks is past;—  
Behold her in the hour of pain  
Her groans of agony restrain,  
Lest, haply, the afflicting sound—  
Some anxious hearer's heart may wound:  
With looks of love, behold her fight  
Expiring nature's filny sight,  
And with her last, low flutt'ring breath,  
Speaks comfort from the bed of death.

Following the story, we copy the description  
of the evening when De Morton returns,  
as a favourable specimen of the author's  
skill in that species of poetry.

'Tis at the hour when day-light fades,  
And stealing o'er the western sky,  
Pale evening draws her misty shades,  
That Mem'ry breathes her vesper sigh:  
For then, mysterious Fancy's dream,  
Holds with the dead communion high,  
And then departed spirits seen  
In plaintive murmurs to reply,  
In ev'ry art that breathes around,  
Their low unearthly voices sound,  
And hands unseen, are sweeping shrill  
O'er viewless harps, with dying thrill;  
Indulging long that pensive dream,  
Had Ellen staid, till evening's beam,  
And dusky twilight was receding,  
And deeper, darker shades succeeding.  
Yet still she lingered, list'ning still  
To the low murmur of the rill;  
Whose rippling music, claimed so well  
With Fancy's fond romantic spell,  
The moonlight on the brook was dancing,  
In its clear stream, the stars were glancing,  
And where th' entwined branches made  
A canopy of deeper shade,  
With trembling beam, one star alone  
In the deep pool's dark mirror shone.  
On its soft margin, green and damp,  
The glow-worm lit her tiny lamp,  
Where waving fern-leaves feath'ry shade  
A bower for fairy revels made,  
And crystal drops of unsummed dew,  
Collected by the moon's pale light,

—The nectar of the elfin crew—  
In cowslip cups were sparkling bright;  
And minstrelsy long drawn, and sweet,  
And full, for fairy banquet meet,  
Was near.—A thrush, with mellow note  
Far sounding, poured his tuneful throat,  
And ever as its cadence died,  
A rival song was heard to swell,  
Where, from her hazel bower, replied  
The strains of answer'd Philoniel.  
Unclouded was the deep serene  
Of Heav'n's dark azure,—save were seen  
Around the moon soft fleeces roll'd,  
Bright with the liv'ry of their queen,  
The snowy flocks of Cynthia's fold.  
One might believe in such a night  
Good angels chase that silv'ry car,  
To watch with looks of heav'nly light,  
Their mortal charge, on earth's pale star.

That charge poor Ellen was not. She is  
tempted by the dread of losing her beloved  
for ever, to desert her paternal abode.

In agony she gazed around;  
No foot approached, no blessed sound—  
Died on her lips her father's name—  
Alas! unheard—no succour came—  
Oh! for a moment's pause to think—  
To breathe—to pause on ruin's brink:  
Yet, yet she fingers on its verge:  
Dark late impels—wild terrors urge:—  
Oh! for some saving hand—too late—  
Behind her swung the closing gate:  
Cold on her heart, as 'twere the knell  
Of peace and hope, its echo fell.

Thus closes the 3rd Canto. The fourth is  
the last part of the poem. The incipient  
wretchedness of the deluded Ellen, when her  
seducer relaxes in his attentions, is thus  
portrayed—she thinks with agony on home.

When by her taper's sickly ray  
She watched the evening hours away,  
List'ning for steps, she'd learnt to know  
"Monstr' all that throng'd the street below—  
Then—whispered thought—those passing feet  
Are hurrying on some friend to greet;  
Those eager steps are hast'ning by  
To some dear home, some kindred tie—  
Alas! no kindred heart, for me  
Awaits in fond expectancy—  
Alas! no home for me prepares  
The welcome sweet of social cares;  
That lovely moon, so calm and pale,  
Now gazes on my native vale:—  
Oh star of night! thy beams may look  
On its thick shades, and rippling brook,  
But Ellen's eyes no more must dwell  
On the sweet scene she loves so well.

Ah, mother! would I were at rest  
In thy dark grave, on thy cold breast;  
All hearts reject me, or forsake,  
And mine—is mine too hard to break?  
No—but one hope—one last rest dear—  
Detains the wretched loiterer here—  
A mother's hope—ah tender thought!  
The last with earthly comfort fraught.

It came, the hour of suffering came,  
And Ellen bore a mother's name,  
And to a mother's throbbing breast,  
A second, dearer self was prest.—  
No voice of soothing love was near  
In the dark hour of pain and fear;  
No sympathising heart was there  
A parent's new-born hopes to share;  
No father with impatient elum,  
Assuming proud that sacred name,

Was there with grateful tenderness  
The mother and her child to bless.  
Poor babe! to this dark world of cares  
Welcomed with sighs, baptized in tears.

The account of her deseculation was  
utterly deserted by the betrayer, is very  
beautiful; and the idea of her wandering  
round a place of worship, (p. 80) as if inter-  
dicted by heaven from entering, is exquisitely  
touching. But our bombs compel us to  
advance towards the conclusion, which, we  
imagine, will beguile others besides our  
female readers of their tears. Her resolution  
to return like the prodigal son is taken, and  
she exclaims:—

"Oh! could I reach my father's door;  
"Oh! could I behold his face once more;  
Once more his gentle accents greet,  
And stretch me suppliant at his feet,  
And cry, My father! I have erred  
From thee and goodness—have deserved  
The wrath of Heaven, thy killing scorn,  
Thy hate, perhaps—yet thus forlorn,  
Thus low, expiring in thy sight,  
Thou who was once thy heart's delight,  
Thy little Ellen; she who smiled  
First in thy face, thine only child!  
Canst thou behold, and turn away?  
My father! oh, my father! stay—  
Canst not me yet a pitying eye,  
"Oh! turn and bless me ere I die.—  
Oh! I could with such prayers as these  
Embrace once more my father's knees;  
Thou! all reject his crying child,  
That heart so merciful and mild,  
My father's heart!—would still relent,  
To the returning penitent;  
The vilest, meanest wretch that prayed  
At my dear father's door for aid,  
Was never known in vain to pray—  
And would he send his child away?  
Oh! no—that hospitable door  
Would open to receive once more  
Its altered guest—this weary head  
Might press once more the peaceful bed,  
That once my happy childhood prest,  
And there at least a deeper rest  
'Than infancy's serene repose.  
The wanderer's weary eyes may close,  
Her last sad sigh, breath'd softly there,  
Where first she drew the vital air.

She approaches her journey's end: it is  
evening, and an admirable view of it is finish-  
ed with these master strokes.

Her task of daily labour done,  
The wild bee to her hive was gone;  
The lark was in her grassy nest;  
The bleating flocks were all at rest,  
Close heaped the tufted furze beside,  
Or spread like scattered snow-flakes wide.  
It was a picture of repose,  
So perfect, as if Nature chose,  
By mortal eyes unseen, alone,  
To keep a Sabbath of her own.

She gains her father's door,  
And fancy coloured into light  
The objects dimly shaped by night.

"In such a night,"  
So calm, so fair, so heavenly bright,  
Had Ellen left her father's roof,  
The peaceful shelter of her youth—  
E'en thro' that very gate she passed—  
E'en here one fling'ring look she cast  
On her forsaken home—that look—  
That agonizing glance! half shook  
Her fatal purpose, but too late:

Terror assumed the voice of fate;  
She passed—her better angel shed  
One tender, pitying tear, and fled.  
Now on that long-forsaken spot  
Once more she stood,—the dear low cot,  
On which the silvery moon-beams played,  
Still peeped from its surrounding shade,  
And all the well-remembered scene,  
Looked still as lively and serene,  
As if the ruthless hand of care  
Had wrought no change or havoc there.  
The elms' ring rises, as of yore,  
Profusely blossomed round the door,  
And crissed the little casement still,  
In garlands, such as Ellen's skill  
Had gaily twined in former days.—  
Herself as fast—the moon's pale rays,  
Just on the parlour-casement fell,  
Where Ellen's heart remember'd well,  
Her father sat;—'twas darkness all—  
No light upon the chamber wall,  
Flushed from within—like Ellen's fate,  
All there was dark and desolate.  
She listened—so intensely still,  
So breathless, that the fluttered thrill  
Of her own heart she seemed to hear;  
Save that, no sound of life was near.  
Trembling, in fearful pause she stood,  
Cold damps her shudd'ring brow bedew'd—  
Oh! dark suggestion of despair—  
Had Death, indeed, been busy there?  
Yet, wherefore so?—day long had closed,  
And all within the cot reposed;  
While guilt its fearful vigil keeps,  
Perchance the poor old pastor sleeps—  
Aye, sleeps—but where? what peaceful bed  
Fellows his venerable head?  
"Hence, dreadful thought! Oh, righteous  
Heav'n!

Spare, spare him, till I die forgiven."  
She dares not call, she dares not knock—  
She dares not leave the dreaded shock;  
Yet come it must, and soon.

She is recognized by the faithful dog, but  
dares not enter to satisfy her terrors; at  
length a simple note suggests itself, as cal-  
culated to determine her suspense.

Near where she stood, the garden gate,  
Just on the church-yard path across;  
Beneath that holy turf, reposed  
Her mother's dust—a simple stone  
Graved with her name and age alone,  
Told where she lay; with vacant space  
Beneath, for after time to trace  
Another name,—and tears would rise,  
Prophetic tears!—so Ellen's eyes,  
When on that vacant spot she gazed,  
And many a prayer to Heaven she raised,  
That long its gracious will would spare  
One parent to her filial care,—  
Ah! little did her heart presage,  
She should forsake him in his age.

Once more, to seek that humble tomb,  
The trembling daughter turn'd—her doom,  
The confirmation of her fear,  
(If all too true) was written there;  
And soon her noiseless footsteps trod,  
Once more the consecrated sod.  
Beneath the venerable shade  
Of an old Lime, her mother laid,—  
Smooth was the verdant turf that spread  
Its dewy pall above her head;  
But now—was it the shadowy light,—  
The flick'ring moon,—that marked her sight?  
Or had some recent cause defied  
The even sod? What hand had placed  
Those blossoms on the grave? Her own  
Had often decked it thus. The stone

Peered not her view—its farther side  
Bore the inscription—agony supplied  
A despairing impulse—no despairing haste—  
Yet, for a moment, o'er her eyes she plac'd  
A trembling hand, close prest, as if to gain,  
'Twixt her and fate, a respite short and rain—  
Short, shudd'ring interval: she fronts the stone—  
The cold hand drops,—one glance, and all is  
known:

One cry, one fearful cry, of wild despair  
Bursts from her heart—another name is there!

A villager, whose dewy way,  
The church-yard cross'd at break of day,  
Stopt, as he pass'd its grassy mounds,  
Whence (faintly heard) low plaintive sounds  
Assail'd his ear:—he paused—'twas night—  
A wailing babe's distressful cry  
Smote on his heart—that feeble moan  
Guided his footsteps to the stone  
Where Ellen lay,—but life was fled,  
And the poor wanderer's weary head  
Had found, at last, a resting-place  
Upon her father's grave; her face  
Was turned on earth, as if to hide  
The bitter pang with which she died;  
And the poor babe's cold form was pressed  
To its dead mother's colder breast.  
Old Carlo close beside was laid  
Resting, near Ellen's cheek, his head,  
As if the poor old servant staid  
To guard the living and the dead.

We shall not add even the pathetic lamen-  
tation of Ellen's nurse to this extract, nor will  
we weaken its effect by repeating our praises,  
far less by recording the trifling blots which  
harshly speak its beauty. If we say that  
something of the skillful use of language,  
obtained only by practice in writing, and of  
poetic art, are wanting, we must in justice  
allow, that there is no deficiency in natural  
expression and true poetic interest.

### Antar; a Bedoueen Romance.

(Concluded from our last.)

The following is illustrative of the state of  
Arab society—

"Now Locat, son of Zurarah, was an un-  
controllable knight; he was the bold one of  
the age and period, and the Arabs called him  
the Eagle of War, and the Knight of Woe.  
Locat had nineteen brothers by the same  
father and mother, and he was the eldest;  
and their father was conspicuous among men  
for his birth and parentage.

"One day, their father being seated in  
his tent, his sons came to him, and com-  
plained of their brother Locat's excessive  
pride and haughtiness, and stated their resolu-  
tion to emigrate. He sent for Locat, who  
in fact was a great coxcomb in his gait, and  
most ostentatious in his general deportment.  
My son, said he (for he was exceedingly an-  
gry and indignant at such conduct), you are  
indeed a most self-sufficient fellow, and be-  
have in a most overbearing manner towards  
your brothers and your comrades. Had you  
even in your pastures a thousand of the As-  
seer camels, or were you possessed of Be-  
dret-ul-Yemen, the daughter of Mozemzen,  
the lord of the Pavilion and the Palace, or  
could you even overcome in battle the Chief  
Antar, the Knight of Hidjaz, you would not  
even then strut about as at present, neither  
would you swagger your limbs in this brag-

ging, mustering style. What! father, said Locait, then these are the three accomplishments which should a man attain, he would acquire the highest glory among the brave and the heroic? What can be superior to these three acquisitions? added his father. At the instant, up started Locait and went to his uncle, and asked his assistance. This uncle was also a brave and valiant hero, and he promised to aid him.

"They mounted their steeds, and taking with them two she camels to carry water and provisions, and two sturdy slaves, they quitted their tents under the cover of the night; and when they were at some distance, after consulting which they should attempt first, they were unanimous in the opinion, that they should first of all proceed to the king Moazem.

"Now this king was a mighty monarch, and a stout horseman. He was the lord of armies, and troops, and lauds, and cities; his country lay on the borders of the cities of Nihaz, and it was called the land of As, where he possessed a strong impregnable fortress, in which was an idol named Jebbar, which this king and his people worshipped. He had also a daughter called Bedret-ul-Yemen, of whom he was very fond; and out of his great affection, he consigned her over to the idol, and rejected every suitor and every wooer.

"Locait and his uncle travelled on till they reached the country of King Moazem, where they beheld populous cities, abundant cultivation, and tents and dwellings, and spears and swords, at which sight Locait was much disordered; he turned towards the fountains and the waters, and having bathed, and clothed himself in magnificent robes, he with his uncle proceeded to King Moazem. Near his palace they met the officers and satraps, to whom Locait addressed himself: My wish, said he, is to visit your king. The satraps entered: the king deliberated, but at last exclaimed, Go out, and ask him his name; for if it be Locait, son of Zarahah, invite him in; if any one else, turn him away: for thus has the idol ordered. Moreover, I saw a dream, in which I was standing in front of the idol, and I demanded of it a husband for my daughter. In these days, it replied, there will be sent for thy daughter a valiant husband, and a brave hero, called Locait, son of Zarahah. Marry him to thy daughter, and let him share in thy favours (but this dream was the result of his fears about his daughter).

"So the attendants went out, and asked Locait his name. He said, Locait! The king Moazem admits thee, said they: and he entered in the presence of the king, who directed him to be seated; and having also imparted to him the dream he had seen, he prepared feasts for three days, after which he pitched the marriage canopy, and introduced Locait to his daughter, without marriage, any dowry, or dower. Locait went to her, and saw she was a full moon no description can attain; but he was ashamed to approach her without a wedding present, lest he should become a scandal in every land. So he turned his back towards her,

and slept till the damsel also fell asleep; when he started up, and awoke his uncle. Arise, my uncle, said he, let us repair to King Numan to procure a marriage dower: and they sallied forth by night."

"Early next day, Locait resumed his journey till he reached the land of Irak. In the excess of Locait's good fortune, he arrived during Numan's days of festivity; when he clothed every one in splendid robes; and as soon as the slaves beheld him, they crowded towards him from every direction, and continued to load him with robes of honour till his horse could move no further. But Locait presented himself to Numan, who complimented him, and asked his rank, and parentage, and his tribe, and his Arab connexion. My lord, said he, I am of the tribe of Darem, lords of honours, and distinctions, and spears, and swords; and I am Locait, son of Zarahah. Be so obliging, said Numan, as to demand what you want, and be sure of attaining it in these days of joy. Upon this Locait took courage, and informed Numan of his marriage, and the cause of his expedition; and I ask of you a marriage dower for my wife Bedret-ul-Yemen. By the protection of an Arab, said Numan, had you demanded my kingdom, I would have made it over to you. And he ordered him a thousand Asnafer she camels, to which he added an infinity of other things, as he said to his attendants, Do ye also give this youth all the cattle and flocks that you drove to the pastures this day. After this, he ordered them to pitch tents for him without the city, and convey him wine and meat.

"Three days Locait passed very merrily, but on the fourth he departed, habited like a powerful monarch, with horses, and mules, and he and the camels, and slaves and cattle; and with his uncle he continued his journey over the deserts; and the world was too compressed for the excess of his joy and exultation. As to the father of his bride, his misfortune was severe; for his countrymen irritated his heart with reproaches; yet he expressed outwardly his resignation, and concealed his affliction and vexation till Locait's return with the cattle and the camels. The whole country was in confusion: with delight the King himself went out to meet him, with the grandees of the tribe, and saluting him, inquired whither he had been? O my lord, answered Locait, you acted towards me on my arrival here as no one ever acted before, and heaped upon me obligations beyond my powers to bear; you even married me to your daughter Bedret-ul-Yemen; but I could not submit to the idea of possessing the daughter of a king without a marriage-donation, and I be called too the Knight of the Universe: so I went away to

"It had happened that Numan, in a fit of intoxication, had ordered two of his companions to be killed. When he recovered, he was so struck with remorse, that he raised a tomb to their memory, and set aside two days in every year, one of which he called his day of sorrow; the other, his day of joy. On the first, whosoever he met, he slew on the tomb; on the other, whoever came to him he would load with gifts, and grant every request.

seek some gain, and the God of old has bestowed on me these favours.

"Thus saying, he gave orders to his slaves, and they led away the noble steeds, decorated with housings of gold, and the Asnafer camels, which are the wonders of wonders, and exhibited all he had of garments, and cattle, and high-priced jewels. The King was astonished at the extraordinary things he beheld, and he gloried in such an illustrious husband for his daughter. He made splendid feasts, and sent for musicians, and made his daughter a second marriage-banquet. He married her to Locait, and all his griefs and troubles were at an end. Thus they caroused and feasted till the day dawned."

"We quote part of a highly poetical account of the marriage of Prince Malik.

"The feast was immediately commenced; the damsels waved the cymbals, and the horsemen flourished their swords; exclamations of joy arose, and the cups went round; and thus they continued till the laughing day was spent, when the nymph was married to Malik. All the chiefs and lords of the tribe soon fell asleep, on account of the watchings and fatigue; but by morning their joys were converted into sorrows, and shots were precipitated at them from arrows, for which there is no surgeon; for fortune never gives, but it pillages; is never stationary, but it resolves; is never merry, but it sorrows; never bestows, but it takes back; never joys, but it grieves; never sweetens, but it embitters."

The cause of this interruption to their happiness is explained; and Malik, the dearest friend of Antar, is slain by Hadifah on his marriage night. The narrative pathetically proceeds:—

"The party opposed to Antar were soon diminished, and most of them being slain, he returned to Malik, just to see him in the agonies of death, where he was lying bathed in blood in front of his horse. At this sight he screamed and threw himself upon him: he smote himself with his hands like a woman deprived of her children. O full moon of perfection! he exclaimed, never, never did I imagine such would be thy end. And he let his head fall upon his knees; he kissed his face till he nearly swooned upon his body; and his tears streamed over Malik's cheeks, who at last just opened his eyes. He attempted to speak and move his lips, but he could not, so violent was the fate that had fallen upon him; he could only point with his fingers towards him; he bade him farewell, and his spirit groined in the excess of agony. Antar's afflictions became more vehement; and whilst they were in this state, behold! Malik's bride rushed forth, her face uncovered, her hair dishevelled, and surrounded by a number of women and high-bosomed damsels beating their breasts and throwing dust upon their heads. Malik's bride smote her cheeks with her hands: and when she reached the death-place of her husband, she thus spoke:

"I will weep for thee, not in festivities or nuptials, but in spears, and swords, and shields. I will weep for him who is gone,

and has abandoned me after having become my husband. I will weep for him who is gone and made me heir to interminable grief, even to the end of time. I will weep for the full moon, whose light is fled, whose glory is eclipsed and destroyed. Alas! my lord has vanished from me; he has left me a solitary being; he is concealed from me in the darkness of the grave. I am left forlorn in the morning to mourn my beloved, whom I knew but yesterday. I will weep for him: I will mourn for him as long as the moon of heaven and the sun shall shine. No joy shall ever again please me; never again shall my soul be at ease. I will weep for my lord; I will grieve for him who has widowed me on my marriage morn. O that before his dissolution I had drunk of the cup of death in my soul. I will make fortune and the world weep in concert with me for my beloved, or my senses must be annihilated. Never will I cease to mourn him in sorrowing strains, as long as the bird of the Enak shall pour its piteous notes."

"Malik's bride did not cease till Malik, with a sigh, expired, and he was united to his God. Antar wrapped him up in his clothes, and tying him on the back of his horse, took him away; and as he sought the land of Abs, he thus exclaimed:

"Alas! O raven hastening in thy flight, send me thy wings, for I have lost my support. Is it true that I have seen the day of Malik's death and murderer, or has it befallen me in dream? The light of day is darkened in grief for the youth, the hero of Abs and of Ghifan. O that Ghafra had never been! that Dahia had never been!—that the day had never been, when that wager was made! O it was a day black in look, harsh and stern, the night wanderers of evil might dread its calamity. O by God! my eyes will ever be ulcered on his account in ever streaming tears, till the moment I see the bones of Hadifah dispersed, and death close upon him. Alas! my force is weakened; I am weighed down by misfortune, and my heart is in continued palpitation for him who was my strength whenever the foes unsheathed their swords against me to cut off my fingers. Now he is gone, who will be our defence when the nocturnal invaders shall surprise us? O woe is me! how fell he from his horse, and my sword and my spear were not near him? The fatal arrow of the all-bounteous Archer cast him down. O that when it cast him down, it had cast me down too! O that my soul had bled freely, and that his hands had not beckoned to me a double adieu! Alas! his kindnesses, were I to comment on them, my tongue would fail ere I could repeat them. I swear I will not sleep from taking vengeance! I will not repose, but on the back of my station. Never shall my sword cease to cleave those Fazearens, till the desert be converted into a sea of crimson blood."

An Arab execution is thus described:—

"Harith having finished these atrocious expressions, all the mob cursed him and reviled him; they dragged him off the camel, and

nailed him against the city-gate, and shot at him with arrows till he was like a hedgehog, and pelted him with stones. After that they dug a pit for him and kindled a fire, and burnt him. And may God never have mercy on the mound of his tomb, or the tomb of his father!"

Portrait of the hero in battle, as drawn by one who wished to attack him:—

"But he saw him a mountain, mountains could not overpower, and a sea visited by no calm, and a measure for which there was no standard."

Among other chivalrous combatants there is a Syrian knight, who encounters Antar, and the mention of a christian in these early days has considerable interest. When he provokes Antar to the fight, for instance, he exclaims:—

"Who am I, that thou shouldst censure me, son of a dastard! and my heart is cauterised with absence, and opposition, and anguish. By the truth of the Messiah, the purest of every living thing, who created a bird out of clay with his miraculous breath, and recalled life into the corpse when it was shrouded and delivered to the bowels of the grave deprived of life, I will stretch ye both on the centre of your land, and I will lead your weeping damsels captive, and I will cry out with a loud voice in the plain of war, Come forth towards me, behold wonders in me."

We intended to copy the details of Antar's own wedding; but our limits do not permit of it. Two or three extracts will afford an idea of its extraordinary character.

"The least, said Oorwah, that you can wish to slaughter on your marriage, will be ten thousand he and she camels, for thy guests will be numerous. O Ebe-oul-Elyez, said Antar, ten thousand shall not suffice for the slaves alone; the least that I shall slaughter will be twenty thousand she camels, and twenty thousand he camels; twenty thousand sheep, and twenty thousand goats, and a thousand lions, for my guests will be many. I wish to make at Ibla's wedding five separate feasts; I will feed the birds and the beasts, the men and the women, the girls and boys, and not a single person shall remain in the whole country but shall eat at Ibla's marriage festival."

At Antar's request Oorwah "wrote numerous letters to all the Arab tribes, and the number of letters he despatched to the tribes was three hundred and sixty, to the three hundred and sixty tribes of Arabs of the cultivated and uncultivated plains."

Wine was procured from Syria. "Antar every day mounted his horse, and roamed over the mountains and the hollows, hunting lions and tigers, till he had taken seven hundred lions and two hundred tigers, which he secured in a valley, and he stationed a number of slaves over them to feed them. He then exhibited the pavilion which he had brought with him from Chosroe, and ordered his slaves to pitch it for Ibla; and when

spread out, it occupied half the land of Shurebah, for it was the load of forty camels, and there was an awning at the door of the pavilion, under which four thousand of the Absian horse could skirnish. It was embroidered with burnished gold, studded with precious stones and diamonds, interspersed with rubies, and emeralds set with rows of pearls, and there was painted thereon a specimen of every created thing, birds, and trees, and towns, and cities, and seas, and continents, and beasts, and reptiles; and whoever looked at it was confounded by the variety of the representations, and by the brilliancy of the silver and gold; and so magnificent was the whole, that when the pavilion was pitched, the land of Shurebah and Mount Saadi were illuminated by its splendour. The Absians produced their richest stores; in short, the dwellings appeared like a flower-garden; the whole country was in agitation; and the sun shone with reflectal rays."

"Oorwah was not absent more than three days, and on the fourth day he appeared, and with him abundance of wine; and whilst they were in this state, behold, some she camels advanced, and he camels came forward from the valleys and the mountains, amounting to sixty thousand she camels, and sixty thousand he camels; and Antar ordered Shibob to conduct three thousand of them to the mountains, there to slaughter them, and skin them, and feed the birds. Shibob obeyed, and went to the mountains, where he slaughtered the camels; and so the slaves flayed them of their hides, Shibob ascended the highest mountain, and cried out in a loud voice, O ye birds of prey, ye cultures of death! come down and eat of Antar's marriage-feast; be this day invite ye all. The next day he took two thousand more, and slaughtered them on the mountain-tops, crying out, O ye voracious hawks, ye mighty tigers, all of ye come down and eat of the marriage-feast of Antar, son of Shedd, for he this day invites ye all. After this, Antar ordered the butchers to slaughter he and she camels, and sheep, and fattened deer, and to prepare every species of viands, and to make the wine to flow, and to decorate the dwellings of his guests and friends for four days."

The arrival and gratulations of Antar's friends, and their carousings, are all described in the same style; but we must conclude with only one brief extract more.

"Now there was a curious custom current among the Arabs at that period. The night on which a bridegroom should wed his wife, they brought a quantity of camel packsaddles, and heaped them one upon the other, decorating them with magnificent garments. Here they conducted the bride, and having seated her on high, they said to the bridegroom, Come on, now for thy bride! And the bridegroom rushed forward to carry her off, whilst the youths of the tribe drawn up in line, right and left, with staves and stones in their hands, as soon as the bridegroom rushed forwards, began beating and pelting

him, and doing their utmost to prevent his reaching his wife. If a rib or so were broken in the affair, it would be well for him; were he killed, it was his destiny. But should he reach his wife in safety, the people quitted him, and no one attempted to approach him. (I inquired about this circumstance, says Assmaee, and what it was they were about. Assmaee, they answered, the meaning of this is to exhibit the bride to the warriors, that should her husband die, any one else might take a fancy to her, and take her off.")

The King abolishes this dangerous custom in the peculiar case of Autur, and he obtains liba in a manner more worthy of his great exploits. So ends the first, and, we presume from its length, the only part of this interminable Arabian Romance which will ever be seen in an English translation.

[*Note on the Review of Carey's Poems.*—We are confirmed in our opinion that these poems are the production of Sir Walter Scott, by referring (since our first article was written) to the Edinburgh Annual Register of 1810, where the first specimens were published, and where that account appeared, a quotation from which forms the introduction to the present volume. Antecedent to that period the same admirable poet, and extraordinary genius, had tried his hand on imitations of the ancient bards; and it was no doubt from his success in these, that he conceived the idea of inventing the machinery of Patrick Carey, Mrs. Tomkins, and the rest of the drama, with which he has chosen to give interest to a collection of performances of this description.]

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

Mr. Campbell concluded his course of Lectures on Poetry, on Wednesday. The works of Aristophanes formed his principal subject on the preceding Wednesday; but the same reasons which we mentioned before, rendered it impossible for us to enter into details. Having taken a rapid view of the Greek Poets subsequent to the age of Alexander, and of the early Poets of Rome, he entered into rather a detailed examination of the works of Plautus and Terence; from which he read several extracts, and with them finished his course. We were we believe, in common with every person who attends the Institution, much disappointed with this abrupt termination. The delight which Mr. Campbell afforded his auditors by his observations on Homer, had naturally excited in their minds high expectations of the gratification they would experience when he came to treat of the Roman Poets of the Augustan age; but at that precise period he stopped—with the intention, however, (though no notification to that effect was given) of resuming the subject next season.

Mr. Soane commences a course of lectures on Architecture, this day.

The Institution was in full activity last week. Monday Sir J. Smith lectured on Botany; Tuesday and Thursday Mr. Millington, Astronomy; Wednesday, Mr. Campbell, Poetry; Friday, Dr. Crotch, Music; and, Saturday, Mr. Brande, Chemistry.

### MOUNT VESUVIUS.

*Remarkable Phenomena in the late Eruptions of Mount Vesuvius.—Letter II.\**

Naples, 24th March, 1820.—Since the 1st of March Vesuvius has continued to discharge from its crater abundance of large stones, so that it is dangerous to ascend it. On the 11th it was uncommonly active; and explosions, which were frequently heard to the distance of four leagues, announced some remarkable phenomenon. M. Gimbernat, the Countess Bathiany Von Skierleer, and the Chevalier Von Menz, Secretary to the Austrian Embassy at Naples, set out together, to observe the volcanic phenomena near at hand. A dreadful and uninterrupted thundering accompanied the travellers as they proceeded. When they had ascended about half way up Vesuvius, they were suddenly stopped by the violent eruptions of stone from the crater, which were thrown to the distance of above 500 toises. They fell by thousands at a time, at least once in a minute, red hot like burning coals, and weighed, probably, several pounds. Prodigious columns of smoke concealed the approach of these volcanic bombs, and made a stay in this spot extremely dangerous, as it was terrible, from the horrid noise of the incessant explosions. The guides were alarmed; but, notwithstanding their fears and their objections, it was resolved to remain on Vesuvius, and await the eruption, which had commenced in so extraordinary a manner. The courageous Countess Bathiany decided the question, by saying, "Vesuvius was too fine to turn their backs upon it." They retired beyond the reach of the showers of stones, and proceeded by a fatiguing and circuitous way to the source of the stream of lava, which has been flowing ever since the 25th of November, 1819. They reached this place in safety. The lava flowed at this time quicker than usual. The breadth of its fiery channel was 10 feet at its origin; it flowed like water, in a state of entire fluidity, under an angle of 60 degrees, over a slope of 1500 toises, when it spread there about 30 feet towards the black sides of the mountain. The sight of the fiery stream was extremely striking; but the crater itself presented another still more wonderful appearance. It incessantly threw up prodigious (*gerbes*) bouquets of fire, which consisted of red hot stones, and, according to M. Gimbernat's calculation, from the time they took in falling, were projected perpendicularly into the air to the height of above 300 toises. These stones rolled in countless number, down the whole declivity of the cone, like so many avalanches of fire of incomparable grandeur. This continued almost without interruption; for scarcely was one burst ended, when another ensued, in which whole columns of fire rose to an incalculable height. Ten seconds seldom elapsed between the eruptions. The circumference of the whole burning mass thus thrown up, was about equal to that of the cone of Vesuvius. The

\* This Letter is nearly three weeks later in date than that in our last Number.

stones, which were projected in an oblique direction, described parabolas, the curves of which were above 1000 toises, and fell in a mass into the valley which separates Vesuvius from the Somma.

In order to observe, at the same time, the flowing of the lava, and the showers of stones from the volcano, the party mounted an eminence, formed by the scorie over a hollow from which the fiery stream flowed like water out of an arched conduit. They looked down through fissures into the burning abyss under this volcanic bridge, while vapours rose from it with a noise louder than that made by fire engines. From the top of the hill, which was a crater in miniature, issued continual flames of the most beautiful blue colour, (indicating the combustion of sulphuric acid gas); and little burning coals were projected into the air. M. Gimbernat placed over one of the fissures the apparatus which he had contrived, to collect the exhalations of the lava, and recognized them to be sea-salt, partly in a fluid state, from which a vast quantity of muriatic acid, mixed with sulphuric acid, was rapidly developed. On the lava itself (though at a heat of 27 degrees at the distance of 12 feet from its bed), he made experiments with saltpetre, which, however, did not inflame as when thrown on hot coals, but evaporated without crackling. This incombustibility of the saltpetre is a phenomenon probably anticipated by chemists, as the lava is properly not combustible, but only the burnt substances from the volcanic furnace. While these experiments were making, and our travellers, with that delight which causes even danger to be forgotten, were contemplating the splendours of the mountain, the guide Salvatore watchful for their safety, who were thus seated over the dreadful abyss, exclaimed, "*Fly!—the mountain trembles—it heaves under my feet.*" On this alarm, the eruption was also indicated by the greater heat, and the more rapid development of the exhalations. They had scarcely gone twenty steps, when the hill, on which they had passed three hours, sunk down with a dreadful noise into the torrent of lava, and a horrid abyss opened wide its fiery jaws, pouring forth immense masses of lava, which, taking a different course from the old bed, and forming a new stream, traversed a space of 1000 toises in less than six hours. It is hardly possible to conceive, and still less to describe, the awfully terrible, the frightful sublimity of this eruption, which arose, as may be said, under the very feet of an intrepid woman.

Immediately after this great discharge of lava, the showers of stones, and the explosions in the crater, diminished; and the latter ceased entirely on the 12th of March, in the morning. They were succeeded by the discharge of vast quantities of dust, like coals, or volcanic ashes, which rose to a great height, in thick clouds, and was driven by the wind to a distance of several leagues. A great quantity of these ashes fell on the 13th upon Naples, and beyond Posilippo. On the 17th it fell in still greater abundance at Pompeii and Sorrento. M. Gimbernat,

who happened to be at Pompeii at the time, made a comparison between the real ashes of Vesuvius, and the substance with which that city is covered, and which is said to be composed of such ashes. He found no similarity between them; so that this time, nature gave no favourable testimony in support of the uncertain accounts of historians respecting the destruction of Herculaneum and Pompeii. The discharge of ashes continued almost without intermission for eight days; and mean time the lava increased considerably by several discharges; and flames, but with very few stones, rose frequently from the crater. On the 19th, at eight o'clock in the evening, the eruptions began with renewed violence, and the mouth, which had opened in the night of the 11th, discharged an immense quantity of lava. This stream exceeded all those that had been seen during the last fifteen months. It spread, with extraordinary rapidity, over a space of 400 feet in breadth. Happily this broad stream of fire passed over like a scene on the stage: for it suddenly stood still. Had it not done so, the poor town of Torre del Greco would have been laid in ashes.

The morning following this extraordinary eruption, the lava appeared to be already extinguished; and it might have been concluded, from the quietness of the mountain, that it was going to repose after the activity which it had displayed ever since the 20th of October, 1818. But this repose was only momentary. On the 21st, at ten o'clock at night, the lava again issued forth, in as large quantities as the preceding days, but from a new mouth, rather lower down.

On the 22d, Mr. Gimbernat examined the place where he had so fortunately escaped on the 11th. He ascended from the extreme end to the source of the present stream of lava, always walking on that lava which had flowed out on the 19th, which he found sufficiently cool to tread upon, though it still showed a heat of 25° of Reaumur. When he came to the spot where the eruption took place before his eyes twelve days before, he was astonished at the changes which he found. On the spot where the Countess Bathian had braved the fury of Vesuvius, a crater had opened, from the middle of which rose two conical hills of scoriae, one of which may be 70, the other 50 feet in height. The circumference of the opening, from the middle of which these two hills rose in one night, is about 400 feet. The whole surface of this new crater, which is like a copy of the large one, is covered in the most wonderful manner with saline incrustations of the most varied colours, and in all the shades of yellow, green, and red oxidism. It is not easy to imagine any thing more interesting and remarkable than the strange and picturesque forms which are seen in the interior of the crater, and in the productions of the volcano. The most remarkable is the sea salt, which is found there in great quantities, sublimated, and combined with sulphuric acid natron; a circumstance which seems to M. Gimbernat to be a proof of the influx of sea water, as a principal agent in volcanic eruptions. The sudden

appearance of all these wonders, the consequences of the eruption of the 11th of March, has contributed to attract many travellers to Vesuvius, and greatly excites the curiosity of naturalists, which will, probably, not remain unsatisfied, as the crater, though rather more quiet for these two days, is still very actively at work.

## FINE ARTS.

### ROYAL ACADEMY.

No. 7. 30. 197. 216. 255. 337. 591. *Horses, Dogs, &c.*—by J. Ward, R. A.

In these pictures Mr. Ward reveals in all the vigour of his genius. Animal painting never was carried to greater perfection. No. 255 is an admirable portrait of a dog, if indeed we might not say it is the dog itself, ready to step out of the canvas, and bark at the spectator. The principal of these works, however, is No. 337, "Fox Hunting"—Calling the Hounds out of cover." The hounds are alive, and the whole composition imagined and executed in a style which, in our opinion, could not be surpassed. The landscape too is worthy of Rubens; though only the back ground of a hunting scene, it absolutely eclipses every picture about it. A white horse near Leslie's work is also an exquisite performance: not so 197, which, wanting the wings of Pegasus, could not conveniently move, as he is doing, with all four legs off the ground.

No. 317. *Londoners Gypaying*.—C. R. Leslie.

All the details of this picture are excellent, though as a painting it is deficient in effect. The cockney passion for ruralizing is happily ridiculed in the male Londoner, whose recreation, in the midst of nature's loveliness, is the reading of the Newspaper. On the ground are two children tumbling in all the glory of unrestrained freedom, and not more checked by their mother's cautionary gesture that their noise will awaken baby in her arms, than encouraged by the fond admiration with which their grandmother or nurse contemplates their gambols. An episode of two lovers is delightfully arch and sweet; and the whole does infinite credit to the taste of the artist.

No. 194. *The Theft discovered*.—From the *Marriage of Figaro*.—A. E. Chalon, R. A.

The vivacity of the artist's imagination has here kept pace with the *vis comica* of the writer; and the skill of the pencil has embodied what the pen of the dramatist so happily described. It is one of Mr. Chalon's ablest productions, and is aided by more than his usual skill in the use of the means. The satin of the countess's gown is well painted; and though the flesh of his Suzanne is still in his usual crude style, the expression is not lost,—for the development of intrigue, Mr. C. deserves to be made painter to the Court of Love, or Paradise of Coquettes.

No. 428. *View of the Patent Wrought Iron Bridge over the Tweed, &c.*—A. Nasmyth.

A landscape with all the quiet solidity of

Mr. Nasmyth's pencil, which needs no obtrusive violence of colour to produce scenic effect. It is in a low tone, but the picture exceedingly interesting, from its fidelity to nature; while it is also curious from the subject. The weight of the sky seems to be heavy upon a part of the canvas, and does not sufficiently separate from the land.

No. 271. *Etrick Banks*.—W. Wilson.

This is also a sweet landscape. The scene is of an interesting kind, and it is treated with great truth and harmony. This artist has done much to illustrate localities of his native land, with which the most poetical and national feelings of his countrymen are associated.

No. 269. *Venturesome Boys, or the Magpie's Nest*.—W. R. Bigg, R. A.

We cannot tell whether this is meant for tragedy or farce; but the subject is very seriously whimsical. Boys climbing for a magpie's nest, are precipitated with their prey into a pond or lake beneath. These birds have always been reckoned unlucky; and they appear to be peculiarly so in the present instance: a warning to mischievous lads, and a great improvement upon the print in the Primer, whence the idea has been taken. It is one of the artist's cleverest productions.

No. 310. *Venus supported by Iris, complaining to Mars, and shewing the wound she has received from Diomed—Homer's Iliad*.—G. Hayter.

As a composition, this piece has considerable merit, and the colouring is generally good. A rainbow is admirably painted. The horses' heads are spirited, and in classical gusto. Mr. Hayter has however failed in poetical expression; or rather, he has given the subject a character entirely different from that which Homer gave it. The livid wound is a scratch; Venus, like a lady carelessly alarmed at the sight of a spider; the stern and attentive Mars is shamming concern; and Iris is downright laughing at the jest. In this point of view the story is well told; but Homer ought not to be quoted as the text for it, unless it were Homer burlesqued.

No. 432. *Melenger and Atalanta*.—R. T. Bone.

This artist has a fine eye for colour, and has here presented us with a very spirited work upon a grand subject. There is great vigour both in the imagination and pencil; the chief defect is in the drawing.

No. 546. *A Maccan, and other Birds*.—A. Pelletier.

Most splendid specimens of natural history. The brilliancy of the colours is extraordinary, and the feathered tribe hardly lose a pile of their plumage, under the hand of this clever artist.

### SIR JOHN LEICESTER'S GALLERY.

It has been mentioned in some of the newspapers, that Sir John Leicester does not open his fine Gallery of British Art this year. We are sorry to confirm this statement; and to add, that a severe rheumatic complaint is the cause which prevents this distinguished encourager of our native school from gratifying his own liberal disposition,

and the public, in the manner so agreeable to both. As Sir John is, however, adding to his collection, we may hope next season for an exhibition more splendid than before. We have seen one of Northcote's most beautiful productions, (one indeed of rare and extraordinary character, as coming from his easel) and another of Harlowe's sweetest works, which already enrich this superb gallery; and it affords us indeed high satisfaction to notice circumstances which show, that though our annual treat is, unfortunately, impossible, the worthy Baronet is steadily pursuing that course which has procured for him the fame of being, not only the effective patron of British painters and contemporary merit, but the man who has most distinctly contributed to give a right direction to living genius, and promote the formation of a great National School.

## ORIGINAL POETRY.

## RECOLLECTION.

His mind?—It was a melancholy chart,  
Wherein the shoals on which his youth had  
struck,  
Were well laid down. There love, a bank of art,  
Tho' worn by time, might still be seen in ruins,  
And Passion calmed by Guile, (like oil thrown on  
The turbulent wave), and glittering Vanity  
That peeped out here and there; yet only seen  
At the soul's elb, or when laid bare by storms;  
And there Ambition stood, like a dark rock  
Towering above the rest, dangerous and still  
Unworn—it was a melancholy chart.  
There seemed to be no harbour where repose  
(or safety might be found, and yet a spot  
Of land was seen in the distance;—there his  
youth  
Had been directed, and he had been told  
That the way led to Heaven. R.

## VICK.

It is the curse of vice, that, in some sort,  
The mind doth reach perfection.—He who hath  
sold  
His brother to the yoke, or rifled her  
That trusted him. These have the quicker sight  
For dangers,—stratagems. 'Tis guilt that rules  
From off the human eye its film, and shows  
All the dark world of Terror.—'Tis the knave  
Who best can read the subtle look, and trace  
Amidst the windings of the heart, (tho' smiles  
May deck the visage), each most dark intent.—  
In his own soul, which, like a mirror, holds  
The portrait of his own similitudes  
Up to his view, he reads it all. H.

## VERSES,

Written in India, by a Lady, in answer to Lines  
on her Birth-day, in the Literary Gazette of  
last year.

The circling year has brought again,  
To me, the well-remembered day,  
You honor'd by your graceful strain,  
When she you sung was far away.  
Oh! tell me, may I not in turn  
The flow'ry path of verse pursue,  
And gather from her fragment urn  
One wreath, one little wreath, for you?  
And while with willing hand I twine  
That votive chaplet for your brow—  
Let not the meed of praise be mine,  
But yours, for whom it learnt to flow.

Oh! could your harmony of strain,  
Across the waste of waters float,  
And Echo lend her airy strain,  
To bind awhile each fairy note—  
Then would I borrow from your lay,  
A small, but deeply thrilling part,  
And bid it find its speedy way  
To Friendship's ear, and Feeling's heart.  
But 'tho' the province be not mine,  
To rest in Fancy's haunted cell,  
Where Genius sheds a ray divine,  
To gild the spot he loves so well;  
Still there is much of fairy ground,  
For wand'ring feet like mine to trace,  
Where lovely scene and gentle sound  
Adorn the poet's dwelling place.  
Then deign to listen to my strain,  
Altho' it be of lighter tone;  
Nor let it imitate in vain,  
The friendly image of your own.  
So shall the grateful line express  
The heart-felt wish, the hope sincere—  
That much of health and happiness  
May gild your path for many a year.  
And may we meet in days to come,  
The mutual wish fulfilled to see;  
And sweeten all the joys of home,  
By Friendship and by Courtesy.

Nov. 24, 1819.

ANNE.

## TO MY WIFE AND (THE) SUN.

[By Correspondents.]

When first, great sun! thou leavest thy bed,  
(Scarce able thro' the clouds to move),  
Staring, and round, and rosy red,  
Thou'rt like, (how like!) the wife I love.  
Yet not in all things like, for thou  
Sink'st at silent on thy couch of light;  
She scares the slumber from my brow  
With rapid nonsense all the night.  
Scarlet she looks, all day—for thee;  
Thou but at eve are like the rose;  
Thou keep'st a steady course; but she  
Stumbles, and waddles as the goose.  
So much I love thee, gentle sun,  
There's nought but I would give to thee;  
My wife?—Yes, all her fat and fun—  
Except—that she might smother thee.  
And then, there'd be no day, no light,  
Nor lamps, nor ladies' eyes would shine,  
Long; and I know what endless night  
Would be with chattering wires like mine.

H. T.

## SKETCHES OF SOCIETY.

## OYA POE.

The German papers mention the following  
trick, which was lately played at Vienna:

"A man entered a coffee-house, with his  
hand pressed close against his cheek, groan-  
ing, stamping, and exhibiting every symptom  
of violent indisposition. He took a seat,  
called for some punch, and made useless ef-  
forts to swallow it. Several people collected  
round him, and inquired the cause of his  
illness; he replied, that he was tormented  
by a violent fit of tooth-ache, which resisted  
every remedy. Various things were pre-  
scribed for him, but without effect. At  
length, a man who was playing at billiards  
in an adjoining room, stepped forward, and  
said, 'allow me to prescribe for the gentle-  
man. I possess a remedy which I am cer-

tain will cure him in five minutes.' He  
drew from his pocket a box, filled with small  
chips of a yellow kind of wood. 'Here, Sir,  
(said he) apply this to your tooth.' The pa-  
tient did as he was directed, and, to the as-  
tonishment of every one present, he imme-  
diately experienced a diminution of pain;—  
the remedy operated as if by enchantment,  
and in less than a quarter of an hour he was  
completely relieved, and drank his bowl of  
punch to the health of his deliverer. 'Sir,  
(said he) you have performed a most won-  
derful cure, and I shall be eternally grateful  
to you, if you will inform me where your  
valuable remedy can be purchased.' 'No  
where,' replied the billiard player: 'I pro-  
cured it during my last visit to South Ame-  
rica, and brought it home with me for my  
own private use; the Indians of Oya Poe  
never use any other remedy.' 'Well, surely  
you will not refuse to let me have a few  
pieces of the wood.' 'Impossible.' 'I  
only ask for twenty pieces, and I will give you  
a ducat for each.' 'Well, I consent out of  
pure humanity; but mind, you are the only  
person to whom I can grant such a favour.'  
Every one present now wished to have some  
portion of the divine wood of Oya Poe; all  
were subject to the tooth-ache; all claimed  
the sacred rights of humanity, and the com-  
passionate traveller was obliged to part with  
nearly all his chips of wood, and to fill his  
box with ducats. The master of the coffee  
house himself, unwilling to suffer such an  
opportunity to escape him, had the good for-  
tune to purchase ten pieces of the wonderful  
wood. We know not whether the remedy  
will operate as effectually on the good people  
of Vienna as on the savages of Oya Poe; but  
the keeper of the *café* has remarked, that  
neither the doctor nor his grateful patient  
have ever since made their appearance in his  
house."

## THE DRAMA.

## COVENT GARDEN.

*The Battle of Bothwell Brigg*:—A sort of  
Scotch Romance, founded on the story of  
Old Mortality, and confoundedly dull, was  
brought out at this theatre on Monday. Not  
one of the characters realized the novel; and  
indeed, they were rather caricatures than  
imitations. Emery's Yorkshire dialect had  
to pass muster for Cuthbert Heddlrig's Clydes-  
dale accent; Farley made Balfour of Burley  
a swaggering pantomimical ruffian, no bull  
watch for the poor Sergeant Bothwell of the  
farce; and neither the king's officers, nor the  
covenanters' leaders, were such as to aid  
the illusion of the scene. Mrs. Davenport's  
spangled gown was the only brilliant thing  
which we noticed in the whole drama; and  
at the end, though the piece itself did not  
go off well, two pieces of cannon, which were  
dragged upon the stage, did. Miss  
Tree sang the delightful air of "Kind Robin  
loo's me," with rather too much of or-  
nament; and there was a pretty duet be-  
tween her and Duriset. The scenery is  
beautiful; but the general effect too sopori-  
fic to afford any promise of longevity to this  
shoot of Old Mortality.

## VARIETIES.

Thorlaksen, the Icelandic poet, who rendered Milton into the language of his country, and to whom the Literary Fund presented a donation, died on the 6th instant. His MS. of the *Paradise Lost* was handed about at the anniversary meeting of the fund.

The French Royal Academy of Sciences has chosen M. Aubert du Petit-Thouars in the room of the late Chevalier Palisot de Beaulieu, whose botanical pursuits were of considerable interest.

**SPORTING ANECDOTE.**—When the present Marquis of B. came to the title, he was very anxious to preserve the game upon his estates, and desired that none of his tenants would keep sporting dogs. One of them, having a favourite, cropped and docked him, rather than part with him. Some time afterwards, a gentleman seeing this animal following a man driving a team, enquired to whom it belonged? "To Farmer \* \* \* \* \* said the fellow,—"Of what breed is he?" "Why, Sir, he was a greyhound, but master cut his ears and tail off, and made a mastiff on him."

**Oyer and Terminus.**—The bar wits have got up a punning definition of our excellent Lord Chancellor and the Vice-Chancellor: the former is said *oyer sans terminer*; and the latter *terminer sans oyer*.

**Form of Payment.**—A fellow in the dockyard at Deptford, had lent a friend five guineas, which he promised to repay at a given time; instead of which, however, he shunned his creditor, and postponed the return. The latter at length met him, and reproached him with this conduct; to which the reply was a long statement of disappointments: "but I assure you (said he), that I will contrive, in a week or so, to pay you in some shape or other." "Well, (said the lender), I'm content to wait; only let it be as much in the shape of two guineas as you can!"

**Equanimity.**—One has heard of Socrates and other philosophers, who bore the ills of life with wonderful patience; but few, in this respect, ever excelled Mr. . . . , a pithy, pragmatic Englishman. His acquaintances said, that nothing could put him out of temper; but the following anecdote proves that it was possible to ruffle him. While shaving one day, his servant ran into the room with looks of horror. "Oh! Sir, Sir!" "What is the matter?" "Oh my God! the nurse has overlaid and killed the poor baby!" (his only child). Mr. . . . wiped, and laid down his razor, exclaiming, "I believe the devil is in that woman, she is always doing some mischief or other."

It is said that a manufacturer at Warwick has succeeded in an invention, by which the smoke of a steam-engine is internally consumed. This would add greatly to the convenience of steam-packets, and to the comfort of every one in the vicinity of manufactures, &c. where these potent machines are employed.

The Paris Journals mention the arrival at Bordeaux, of a Frenchman who has resided long in Cochín-China, and obtained there the

rank of a *mandarin*. He was permitted by the government to visit his native country.

Louis Binaparte has inserted in the *Journal* at Rome, the *Notizie del Mondo*, a notice, that he is not the author of the work published under his name at Paris, and entitled, "A History of the Parliament of England."

**Egyptian Sugar.**—Samples of sugar cultivated and refined in Egypt, have reached Trieste. This is a new wonder of its celebrated Pacha.

**Eastern Titles.**—To a grant of land of the annual value of 20 Kahuns of Cowries, or four Rupees, the following assemblage of titles is attached. "Shree Shree Shree Shree Joot Govind-Chundra Narayana Bahadur, Chief of the race of Pandurvas, descended from the moon, whose actions are glorious as the effulgence of the white umbrella, worthy of homage from all the sovereigns in the universe, the mighty King of Heeramba, Lord of Lords!" Our readers may like to be informed, that the kingdom of Heeramba is a territory more extensive than Yorkshire, and containing half a million of population. It is situated between the north of Bengal, and China.

At Berlin a paper manufactory has been begun on the new plan, for making paper of any length, by rolling it out: it is wrought by a steam engine.

## DESTRUCTION OF A VILLAGE.

The village of Strow in Bohemia, not far from the town of Saatz, has suffered very severely by the sinking of a mountain. In the night of the 21st of March a part of the chain of mountains, extending from that town to the bank of the river Eger, and upon which the village of Strow was built, detached itself from the mass. Of three and twenty houses and two churches, sixteen have been overthrown and are in ruins. According to the account given by the inhabitants, they heard a not very violent noise on the 20th of March, about midnight, at which time probably a part of the mountain gave way; and on the 21st, towards ten o'clock in the evening, the walls of a firm house, and afterwards the very solid parsonage house, fell down; before twelve hours had elapsed, most of the buildings, including the two churches, were a heap of rubbish. Many of the houses were carried forward two hundred paces from the places where they stood, and the ruins are for the most part covered about a fathom deep with earth. Of the seven buildings still left, one has already half fallen down, and the others will hardly be able to escape destruction, as it is feared that a still greater part of the mountain will loosen. That which has already taken place proceeded very irregularly, so that the buildings sometimes advanced 10 paces in an hour, and sometimes 20. No lives were lost on this occasion. This accident appears to have been prepared by the wet seasons which preceded the present, and to have been principally caused in the last instance by the heavy snow of this winter. The spot over which the motion extended, presents the appearance of flakes of ice piled one over the other; and it is even

feared that the river Eger will be partly, if not totally filled up, as the masses of earth have already advanced to its banks.

**Prevention of Contagion.**—Gauze veils, on the principle of Davy's Safety Lamp, have been recommended by a Mr. Bartlett, as preservatives from contagion. This hypothesis is of so much importance to humanity that we hope to see it tried by the most critical experiments.

## LITERARY NOTICES.

The *Memoirs of the Life of Granville Sharpe*, by Prince Hoare, Esq., are, we hear, in a state of considerable forwardness.

We are informed that the translation of the celebrated German tragedy of *Sappho*, of which some extracts appeared in the *Literary Gazette*, is from the pen of Mr. Brauns, a gentleman not unknown in the literary world.

"The Abbot," which is a sequel to the novel of the Monastery, has, we understand, already made considerable progress under the printer's hands. These celebrated novels are quite the rage at Paris at present. "The Heart of Mid-Lothian" has been translated into French, under the title of "Les Prisons d'Edimbourg."

## METEOROLOGICAL JOURNAL.

MAY, 1820.

**Thursday, 19.**—Thermometer from 45 to 57.  
Barometer from 29, 50 to 29, 36.  
Wind N.W. 1 and 3, S. h.W. 5 and 2.—Cloudy and raining till the evening, when it became clear.  
Rain fallen .525 of an inch.

**Friday, 19.**—Thermometer from 47 to 66.  
Barometer from 29, 62 to 30, 08.  
Wind S.W. 2 and 1.—Clouds generally passing, with showers in the afternoon. A distant clap of thunder, about 1 P.M. and a halo formed about 10 o'clock round the moon.  
Rain fallen .15 of an inch.

**Saturday, 20.**—Thermometer from 45 to 66.  
Barometer from 30, 30 to 30, 41.  
Wind S. W. 2 and 1.—Clouds generally passing. The upper part of a halo formed about 3 in the afternoon.  
Rain fallen .25 of an inch.

**Sunday, 21.**—Thermometer from 40 to 63.  
Barometer from 30, 50 to 30, 47.  
Wind S. W. 1.—Generally clear. A fine halo formed about 10 o'clock in the evening.

**Monday, 22.**—Thermometer from 39 to 74.  
Barometer from 30, 39 to 30, 30.  
Wind S. E. 1.—Clear.

**Tuesday, 23.**—Thermometer from 42 to 75.  
Barometer from 30, 20 to 30, 10.  
Wind E. 1.—Clear.

**Wednesday, 24.**—Thermometer from 45 to 72.  
Barometer from 29, 92 to 29, 99.  
Wind E. h. S. 1, and S. W. 2.—Generally clear; clouds passing.  
Edmonston, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

**Erratum.** In the notice of Mr. Fœn's picture, in our last Number, the word perspective was erroneously placed for anatomy.  
Mr. Mordant forgot to put his Address. The owner deposits entirely on the merit and fitness of the papers to which he alludes.

## THE QUARTERLY REVIEW, No. XLV.

Contents.—I. Life of the Duke of Marlborough. Memoirs of John Duke of Marlborough, with his original Correspondence, collected from the family Records at Blenheim, and other authentic sources. By William Coxe, M. A. P. II. The Archæology of Wales. III. Van Diemen's Land.—St. Michael's House, the last and worst of the Bush Rangers of Van Diemen's Land. Narrative of the chief atrocities committed by this Great Murderer and his associates, during a period of six Years, in Van Diemen's Land. III. Count Turbin.—Voyage dans le Levant. IV. Roads and Highways: 1. Report of the Select Committee on the Highways of the Kingdom: 2. Practical Essay on the Scientific Repair and Preservation of Public Roads. By John Loudon MacAdam; 3. Van's New Picture of Naples, 10s. 6d. Post Roads in Europe, 8s. 6d. Bayce's Belgian Traveller, 8s. 6d. Elbel's Guide through Switzerland, 8s. 6d. Elbel's Atlas of Switzerland, with Keller's Map, 8s. 10s. 6d. Genli's Manual du Voyageur, three Languages, English, French, and Italian, 6s. 6d. 10s. 6d. Ditto, in six Languages, English, French, Italian, German, Spanish, and Portuguese, 2s. 6d. 10s. 6d. Blagdon's French Interpreter, 6s. 6d. 10s. 6d. Whitaker's French Grammar, 6s. 6d. 10s. 6d. Bomber's New Picture of Brunnich and its Environs, 8s. 6d. Art of Correspondence, 4s. 10s. 6d. Catalogue of the Pictures in the Louvre, 4s. 10s. 6d. A large Map of France, Belgium, Switzerland, &c. 6s. 10s. 6d. A canvas case, and Hamann's New Pocket Dictionary, in French and English, and English and French, revised by C. P. Whitaker, 8s. 6d. Tourist's Journal, 2s. 6d. Printed for Samuel Leigh, 18, Strand.

THE DUKE OF WELLINGTON'S CAMPAIGN IN THE NETHERLANDS. Drawn up from the first authorities by WILLIAM MURDOCH, Esq. The Subscribers to this Work are respectfully invited to complete their sets without delay, for the purpose the Parts continue at present to be sold separately. The publishers regret much that in consequence should have been delayed considerably beyond the period originally fixed; but that delay has arisen from an anxious endeavour to collect authentic information, to verify important statements, and to receive positive communications, which have greatly augmented the labour of the work. The delay therefore, it is presumed, have had no other effect than the corresponding convenience to subscribers, and the public generally. The memorable events, whose history it embraces, are long to all time; and a record of them, like the present, in which it has been endeavoured to approach the perfection of the subject, must always possess a proportionate claim to notice.

Condout Street, May, 1820. On the 1st June will be published, in 4s. price 11s. 6d. PRIVATE CORRESPONDENCE OF DAVID HUME, with the History, and several documents, &c. Persons; now first published from the Originals, in the possession of the Editor. Printed for Henry Colburn and Co. Condout Street.

Completion of the Hermit in London. Price 12s. the 4th and 5th vols. of THE HERMIT IN LONDON, or Sketches of English Manners. "Tis pleasant, through the loop-holes of retreat, To peep at such a world; to see the stir Of the great Babel, and not feel the crowd."—*Copied* Printed for Henry Colburn and Co. Condout Street.

THE SUBSCRIBERS TO WILD'S LINCOLN CATHEDRAL, and the Public in general, are respectfully informed, that a similar Work, on the Architecture and Sculpture of the Cathedral Church of Worcester, is preparing for publication. It will contain, besides Plans, a Longitudinal Section; various Engravings, Details; Specimens of the Sculpture; Selections from the Monuments, and Perspective Views, executed by the most eminent Line Engravers, on twelve plates, each ten by twelve inches, from Drawings by C. WILD; accompanied by an Historical and Descriptive Account of the Fabric. To be delivered in boards, in the course of Subscription, on the following terms:—*Twelve* Impression on French Paper, quarto Atlas, 8s. 6d. Subscribers' names received by Mr. C. Wild, 3s. 6d. Also, the names (and of all respectable booksellers) must be had, The Illustration of the Architecture and Sculpture of the Cathedral Church of Lincoln, containing sixteen Plates, price 5s. 6d.

The Chronicle of the Times. In a thick and closely printed Volume royal 18mo. with a Chart, price 15s. in boards. THE CHRONOLOGY OF THE last FIFTY YEARS, from 1770 to 1820; prepared by one of the most ample general Chronologies, and revised by one of the most convenient and useful Books of Reference ever published; and sooner or later it must find its way into every public Library, and into the Book-case of every private family. The period of Fifty Years has been chosen, as being the Term of an entire Generation, within which, Events continue to operate on the Affairs of the World, and on the Interests of individuals, and during which they are therefore in the highest degree interesting to the Reasonings and Speculations of the Contemporaries. Printed for Sir Richard Phillips and Co. Bridge Street; and to be had of F. Sams, St. James's Street; and of all Booksellers in the Kingdom, may be had, Dr. ROBINSON'S MODERN HISTORY, from Charles Dugue to the Accession of George IV. with 36 engravings, 8s. bound.

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane: Published every Saturday, by W. A. SCRIPPS, at the Literary Office, 85, W. (Exeter-Change) Strand, where communications, post paid, are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom : but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 176.

SATURDAY, JUNE 3, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Memoirs of Granville Sharp, Esq. Composed from his own manuscripts, and other authentic documents, in the possession of his family and of the African Institution.* By Prince Hoare. With observations on Mr. Sharp's Biblical Criticisms, by the Right Rev. the Lord Bishop of St. Davids. 4to. pp. 496.

This interesting biography of a man, who fills as large a space in the annals of philanthropy as any human being that ever existed, will be before the public within a few days of this notice. When complimented with the privilege of an anticipatory inspection of any work about to issue from the press, we hold ourselves bound, if we find we cannot commend it, simply to lay extracts, without opinions, before our readers : and, in general, we wish it to be understood by the public, that as the object of the Literary Gazette is the direct promotion of literature, our course is rather to bring forward books containing something valuable, than to display any critical smartness by lacerating those which are unworthy. This, to liberal minds, will explain the common principle of our conduct, and the prevailing tone of our miscellany. We would rather report on what seems worthy of attention and pass the worthless over in silence, than acquire the reputation of talent for cutting up the unfortunate attempts of mediocrity. It is only when circumstances, the fame of the writer, the presumptuous mode of publishing, or other causes, which render some observation imperative occur, that we are compelled to convert impartial praise into honest reprehension.

But to return to the volume now in hand. Its size and our time prevent us from doing more, at present, than merely introducing it; anxious as we are to contribute our humble share to the knowledge of so excellent a work. Justly was it said by the virtuous conditor of Mr. Sharp in many deeds of charity (Mr. Witherspoon), that "it is desirable to raise to distinction those whose private character has contributed to influence the happiness of mankind;" and we rejoice to see this duty so ably performed as it is by Mr. Hoare. To an exceed-

ingly numerous class of the British community, his labours to raise a monument worthy of his subject, will need no recommendation: that subject, and his qualifications to treat it as it ought to be treated, are quite sufficient. We shall, therefore, abstain from any supererogatory remark upon this point, and as briefly as possible, endeavour to give some idea of the nature of this publication.

It sets out with an account of Mr. Sharp's early life. Of a good family long established at Bradford-cum, Yorkshire, Granville was born at Durham, 10th Nov. 1735, old style. He was the grandson of the well-known Archbishop of York; his father a dignitary in the church. As his elder brothers were devoted to divinity, physic, &c., he was destined to trade, and consequently bound apprentice to a linen draper on Towerhill, a quaker. Owing to various causes, his term was served out under a presbyterian, a Roman catholic, and a free-thinker, so that his young mind had singular opportunities of being formed on liberal religious principles. He relinquished commerce, and obtained an appointment in the Ordnance Office, in which he continued many years, and privately studied deeply the Greek and Hebrew languages.

His first distinguished public efforts in the cause of humanity were those in favour of slaves in England. It is generally notorious, that his exertions on behalf of the negro Jonathan Strong, in 1767, led to the declaration of the Law of England, that freedom was the lot of every man who landed on our shores. "The following expressions, which occurred in the course of Mr. Davy's pleadings, are deserving of being here quoted:—"This was in the case of Cartwright, who brought a slave from Russia, and would scourge him; for this he was questioned, and it was resolved, That England was too free an air for Slaves to breathe in. (See Rushworth's Collections, p. 468). That was in the 11th of Queen Elizabeth. I hope, my Lord, the air does not blow worse since. But, unless there is a change of air, I hope they will never breathe here; for that is my assertion,—the moment they put their foot on English ground, that moment they become free. They are subject to the laws, and they are entitled to the protection of the laws of this country, and so are their masters, thank God!"

His next efforts were directed to extend the blessing to American negroes, to the Caribbees in St. Vincent, and finally to the total abolition of the slave trade and slavery. To pursue these objects he resigned his office; and how much he thus sacrificed on the altar of christian charity may be gathered from the following extract, which is

also eminently characteristic of the good family of which he was a branch.

"Granville's situation, after he had resigned his employment in the Ordnance Office, was sufficiently singular. His resignation had in it all that is considered, in a worldly view, as an excess of imprudence. He had expended the remains of his paternal inheritance and the fruits of his employment in acts of bounty; and the protector of the helpless stood himself without the means of sustenance. But the cordial attachment of his brothers (all now prosperous) brought them instantly around him. In a family overflowing with mutual love and benevolence, the accession to their household of such a relation as Granville had ever been accounted as a treasure, not as a burden. They revered that obedience to conscience which had deprived him of his competency, and they strove to compensate his loss by every act of respect and kindness. The following affectionate testimonial will shew that they had anticipated both the event, and the feelings of their beloved brother in consequence of it.

To Mr. Granville Sharp.

"London, October 5, 1755.

"Dear Brother Granville,—Many thanks for your very affectionate letter of the 26th of last month. We very much approve, here, of your asking a further leave of absence. It will give you a little leisure, which you so very much want, and it will let you have a little enjoyment of the friends you see so seldom; and, above all, it may give some chance for a turn in public affairs: and of this I do not at all despair; but if it should be otherwise, and you should think it proper to give up your employment—I will now speak for my brother William as well as for myself—we are both ready and willing, and, God be thanked, at present able, to take care that the loss shall be none to you; and all that we have to ask in return is, that you will continue to live amongst us as you have hitherto done, without imagining that you will, in such a situation, be burdensome to us, and also without supposing that it will then be your duty to seek employment in some other way of life; for, if we have the needful amongst us, it matters not to whom it belongs—the happiness of being together is worth the expense, if it answered no farther purpose. But I will go farther, I have no doubt but the mutual assistance we are of to each other, and the consequence we acquire by it, is more than adequate to any third employment we might reasonably hope could be obtained; and, in case of the death of either party, much more would be lost to the family by your absence than perhaps might be produced by other means. These

are only a few reasons drawn up in haste, as they appear to me to enforce what I have said above; but I trust you will have no occasion for it: it is not every part of office-duty you object to—you will, of course, refuse particular parts. It may pass on so till times come round—but if not, I shall not be at all uneasy at the resignation, if what is now said shall be agreeable to yourself.

“Your sincerely affectionate Brother,

“JAMES SHARP.”

“Dear Granville, I most heartily approve of what my brother has written above; and I hope you will think of the matter as we do.

“Much love, as due, from your affec-

“tionate Brother,

“WILLIAM SHARP.”

“This offer Granville accepted, and continued to share the table and the purse of those excellent brothers for several years, until an accidental acquaintance with General Ogilthorpe (as will be afterward mentioned) restored him to independence.”

But there was no work of philanthropy in which he did not embark with equal zeal. His attention to the religious instruction of Omai when he visited this country, is an example of this, and one to which we allude in order to enliven our page with a curious extract—

“Of one of his conversations with Omai he has left the following singular relation, of which it may be doubted whether the sense, simplicity, or virtue be most to be admired. It is extracted from an Address to the Maroons in the new English settlement at Sierra Leone, delivered to Mr. Dawes, the governor, at the Court of Directors, November 13, 1800, on the subject of their polygamy.

“..... With respect to the particular point upon which I now address you, it was this, ‘perfect law of liberty, which enabled me, many years ago (in March 1776), to convince a pagan native of the very distant island of Ulaieta, Mr. Omai, a *Black man*, who by custom and education entertained as inveterate prejudices in favour of keeping several wives, as any Maroon or African whatsoever. But though he was entirely ignorant of our religion, yet he had a good share of that natural knowledge of good and evil which is inherited by all mankind since the fall of our first common parents; a knowledge which they willfully took upon themselves, contrary to God’s command, and which, of course, has rendered every man guilty before God, because we do not always act consistently with that assumed knowledge; which, however, may direct us to regain what we have lost, if we persevere in making a right use of it, by choosing the good and rejecting the evil; but more especially by choosing and preferring, before all other considerations, the supreme good, which includes a perfect love of God, and a grateful acceptance of the means he has freely given us to partake of the Divine nature (2 Pet. i. 4), and become sons of God, and joint heirs with Christ (Rom. viii. 14—19; 1 John iii. 2).

“This is the first branch of the *perfect law of liberty*; and we cannot possibly attain it, if we neglect to measure our conduct

towards our neighbours by the second branch of the same *regal law*,’ which enabled Mr. Omai (when it was fairly stated to him upon the case in question) to condemn, with full conviction of the truth, the injustice of his former opinions against the rights of women.

“When sitting with him at table one day after dinner, I thought it a good opportunity to explain to him the Ten Commandments. I proceeded with tolerable success in reciting the first six Commandments. He had nothing to object against any of them, though many explanations were required before he understood all the terms; and he freely nodded his assent. But when I recited the seventh Commandment, ‘Thou shalt not commit adultery,’ he said, ‘Adultery! what that? what that?’

“‘Not to commit adultery,’ I said, ‘is that, if a man has got one wife, he must not take another wife, or any other woman.’—‘Oh!’ says he, ‘two wives—very good; three wives—very, very good.’—‘No, Mr. Omai,’ I said, ‘not so: that would be contrary to the first principle of the law of nature.’—‘First principle of the law of nature,’ said he; ‘what that?’—‘The first principle of the law of nature,’ I said, ‘is that no man must do to another person any thing that he would not like to be done to himself.’ And for example, Mr. Omai,’ said I, ‘suppose you have got a wife that you love very much; you would not like that another man should come to love your wife.’ This raised his indignation: he put on a furious countenance, and a threatening posture, signifying that he would kill any man that should meddle with his wife.

“‘Well, Mr. Omai,’ said I, ‘suppose, then, that your wife loves you very much; she would not like that you should love another woman; for the women have the same passions, and feelings, and love toward the men, that we have toward the women; and we ought, therefore, to regulate our behaviour toward them by our own feelings of what we should like and expect of faithful love and duty from them toward ourselves.’

“This new state of the case produced a deep consideration and silence, for some time, on the part of Mr. Omai. But he soon afterwards gave me ample proof that he thoroughly comprehended the due influence of the law of liberty, when it is applied to regulate, by our own feelings, the proper conduct and behaviour which we owe to other persons. There was an instant on the table, with several pens in it. He took one pen, and laid it on the table, saying, ‘There lies Lord S—’ (a Nobleman with whom he was well acquainted, and in whose family he had spent some time); and then he took another pen and laid it close by the side of the former pen, saying, ‘and there lies Miss W—’ (who was an accomplished young woman in many respects, but, unhappily for herself, she lived in a state of adultery with that nobleman); and he then took a third pen, and placing it on the table at a considerable distance from the other

“‘The royal law, according to the Scripture, ‘Thou shalt love thy neighbour as thyself.’ James ii. 8.

two pens, as far as his right arm could extend, and at the same time leaning his head upon his left hand, supported by his elbow on the table, in a pensive posture, he said, ‘and there lie Lady S—, and cry!’

“Thus it is plain that he thoroughly understood the force of the argument from the law of liberty, respecting the gross injury done to the married lady by her husband in taking another woman to his bed.

“There was no need to explain the rights of women any farther to Mr. Omai on that occasion.”

His exertions relative to the impressment of seamen; his attempt to reconcile the differences between Britain and America; his labours for the establishment of Episcopacy in the latter country; his advocacy of parliamentary reform (with annual parliaments, and more frequent if need be); the foundation of the colony at Sierra Leone in 1786, besides his connection with a multitude of benevolent and patriotic institutions, are all subjects treated by Mr. Hoare in detail, and in a most interesting manner. The early history of Sierra Leone is particularly so. Mr. Sharp was also a strenuous friend to the British and Foreign Bible Society, and as sturdy an opponent to the Catholic claims, as a member of the Protestant Union.

Among many miscellaneous anecdotes, we may cite the following extract from Mr. Sharp’s diary.

“Aug. 20, 1781.—Called on Mr. Eaton, chaplain to the Bishop of London, to complain of the shameful change of the habits of the two sexes at the theatres. He soon afterwards informed me that the Bishop would speak with me about it. I waited on his Lordship, and obtained his permission to acquaint the Archbishop of Canterbury that he wished to confer with his Grace on that subject, in order to apply to the Lord Chamberlain.

“Sept. 6.—Acquainted the Archbishop of Canterbury with the Bishop of London’s message. I read to him the remarks that I had drawn up on the text of Dent. xxi. 5. His Grace promised to consult with the Bishop of London, and to inform me of the result.

“Dec. 22.—The Archbishop desired to see me. His Grace promised to speak to the Lord Chamberlain on the first opportunity.”

“On the subject of morals, to which the three last notes allude, it will be sufficient to recall to the reader’s recollection the representation, then in vogue, of the ‘Begger’s Opera,’ in which the women’s parts were performed by male, and the men’s by female actors!—Granville, in common with many other sensible men, was scandalized at the public indecency of such a performance.

“Nearly at the same time he presented a remonstrance, on an indecorous party of the same nature, to the Archbishop of York, whose son had acted the part of *Thais*, in Terence’s comedy of the ‘*Eunuch*,’ at Westminster school. He read his remonstrance also to Dr. Smith, the master of the school, who promised to represent it to the Bishop of Rochester, and said, that ‘the plays mig

be prevented next year; but the custom of acting them had continued two hundred years, and (he believed) was enjoined by the Statutes."

"I find among Mr. Sharp's papers on this subject, the following stanzas, in his own hand writing, "On the Prospect of planting Arts and Learning in America, By Dr. Berkeley, Bishop of Cloyne."

There shall be sung another golden age:

The rise of Empire and of Arts,

The good and great inspiring epic rage,

The wisest heads and noblest hearts—

Not such as Europe breeds in her decay;

Such as she bred when fresh and young,

When heavenly flame did animate her clay—

By future poets shall be sung.

Westward the course of Empire takes its way

The four first acts already past,

A fifth shall close the drama with the day:—

Time's noblest offspring is the last."

(*d for further extracts will appear next week.*)

*Antiquities of the Jews, carefully compiled from authentic sources, and their customs illustrated from modern Travels.* By William Brown, D. D. Minister of Ekdalemuir. London, 1820. 2 vols. 8vo.

A popular history of the Jews, compiled from works of great price, or in languages not generally understood, is unquestionably a work of much interest, and it is but justice to the present author to say that he has bestowed adequate pains and labour upon his subject. Not only have the Pentateuch, the Talmudical writings, Josephus, and such authorities as Lamy, Lightfoot, Calmet, Parkhurst, Godwin, Owen, Buxtorff, Basnage, Spencer, Harmer, Jennings, &c. &c. been carefully consulted, but a new and important feature has been superadded from references to recent Travels in Syria, Arabia, Persia, and the East. Probably something more might have been done in this way; but where the reverend Doctor has employed the productions of modern travellers, he has done so judiciously and aptly. What we most miss among his researches, is that species of illustration which could have been drawn from a knowledge of Chinese literature, especially in respect to the very earliest periods of the world's history. Much valuable information has been published within the last twenty years relative to this ancient race, whose records extend to an era coeval with those of the Hebrews; and it is in itself extremely curious to contemplate a people still existing, with customs transmitted through probably no fewer than 70 generations, almost in the same freshness as at their origin, while their quondam contemporary empires,

Chaldean, and Assyrian, and Egyptian, have passed away; but still more important to a work like Dr. Brown's to consider them attentively as connected with the first diffusion of man after the deluge; and not unlikely, the only unchanged descendants of the patriarchs of that age. The omission of this branch of elucidation is the only marked defect which occurs to us on reviewing the "Antiquities of the Jews:" the learned author shows perhaps a rather partial leaning even to the errors of the Israelites; but due allowance being made for this, he seems no where fully in error, but on the contrary, painstaking, candid, and just. His book is certainly one well calculated for general perusal; and we know few publications that we could more conscientiously recommend for that species of reading, which the good and the grave would allow as the most profitable and instructive for the sabbath evening, or for any serious hour which courted at once amusement and instruction.

The first volume being chiefly occupied with a minute description of the tabernacle, the temple, and its service; the three great festivals of the passover, pentecost and tabernacles, and the inferior feasts and fasts; the synagogue, and other topics familiar to the readers of scripture; we shall copy the few passages which we think necessary to exemplify the author's manner, from the second volume, in which he treats of the idolatry, learning, laws, customs, commerce, agriculture, and sciences of the Jews. After a very copious discussion respecting the marriages of this extraordinary people, the following is the account of one of their peculiar tenets.

"The only other circumstance connected with the Jewish forms of marriage, is that which regards the brother's widow, and is known by the name of *Jus Leviratus*, the law concerning which is given in Deut. xxv. 5—10, and enjoins the brother of the deceased to take his widow, and rear up seed unto his brother, to perpetuate his name and heir his effects; an instance of which we have in Matth. xxii. 25. It is evident, however, from the case of Ruth iii. 12, 13, iv. 5, 10, that the law extended farther than the husband's brother, namely, to such kinsman as had the right of redemption. And it is also plain, from Genesis xxxviii. 8, that the custom of marrying the deceased brother's wife was far more ancient than the Mosaic law. It was under that law, however, that it became doubly binding, for it connected the love of preserving a brother's name with the preservation of property in the several families and several tribes. The name given to it by the Jews was *Ihum*, or "the husband's brother;" and it required no betrothing, for he acquired his sister-in-law by a divine right; neither were there any ceremonies as at ordinary marriages,

only all the effects of the deceased were delivered up to him, and all his claims, for the behoof of the child who should be accounted his heir; yet she was allowed to marry none till three months after her husband's death, that it might appear to all that there was no child.—Such was the practice in ancient times, but it is not now insisted on; that is to say, they go through the form, but they do not oblige the surviving brother to marry the widow. The practice of the Jews, in Buxtorff's time, was as follows: On the preceding evening, after evening prayers at the synagogue, one of the Rabbins was chosen to preside, and two others to assist him as judges. Next morning, after prayers, these with the levir, the widow, and two witnesses, met at a certain place, and the presiding Rabbi asked whether the husband had been dead three months? Whether she was the wife of the levir's brother? Whether the deceased and he were of the same father? And whether the widow had reached her twelfth year? On all which being satisfied, he proceeded to ask whether the levir was willing to marry her, or wished to be separated? Whether he acted willingly or by constraint? And being also satisfied as to these, especially as to the brother's refusal to comply with the law—he commanded the widow to keep the spitte in her mouth till farther orders. A shoe was then brought; it was put upon the right foot of the levir; the woman stepped forward and repeated the following words: "My levir refuses to raise up the name of his brother in Israel. He does not choose to wed me according to the law of the levir;" and the levir assented to her accusation, which being done, she loosed with her own right hand the thong of the shoe; pulled it from his foot, and cast it to the ground, at the same time (not spitting in his face), but spitting on the ground before his face, she distinctly repeated three times the following words: "So shall it be done to the man who does not wish to build up the house of his brother, and his name shall be called in Israel—the house of him that hath his shoe loosed;" after which the judges and spectators all repeated, "The shoe is loosed." The judge then asked the shoe to be kept as an evidence of the transaction; the widow received a writing from the judge to the same effect, a copy of which is given by Maimonides, and the parties were dismissed. It is somewhat remarkable that the Athenians appear to have adopted the spirit of this law of the levir; for "no heiress could marry out of her kindred, but resigned up herself and her fortune to her nearest relation, who was obliged to marry her;" and among the modern eastern nations we still meet with the law or custom of marrying the brother's widow. Thus Olearius informs us, concerning the Circassians, that, "when a man dies without issue, his brother is obliged to marry the widow, to raise up seed to him." The Hon. Mr. Elphinstone says, that "among the Afghans, as among the Jews, it is thought incumbent on the brother of the deceased to marry his widow; and it is a mortal affront to the brother for any other person to marry her with

out his consent. The widow, however, is not compelled to take a husband against her will." Mr. Volney, in his travels into Syria, tom. ii. p. 74, observes, that "the Druzes retain, to a certain degree, the custom of the Hebrews, which directed a man to marry his brother's widow; but this is not peculiar to them, for they have this, as well as many other customs of that ancient people, in common with the inhabitants of Syria, and with the Arabians in general." But Neubuhr says, "It does, indeed, happen among the Mahometans, that a man marries his brother's widow, but she has no right to compel him so to do." So far, then, respecting the levirate."

From the chapter entitled "Marks of honour and disgrace," we extract the following.

"The princes of the East, even at the present day, have many changes of raiment ready, both as an article of wealth, which large wardrobes have always been in that country, and to suit the occasion; and in Persia they are of different degrees of fineness and richness, according to the rank or merit of the persons to whom they are given; but in Turkey they are all nearly of an equal fineness, and the honour lies in the number given. Party-coloured garments are also, in these countries, counted a mark of honour, and were worn even by kings' daughters. Perhaps Joseph's coat of many colours resembled the stuffs in Barbary, which are formed of pieces of cloth, of different colours, sewed together; or it may have been richly embroidered like that which Telemachus, when leaving the court of Sparta in quest of his father, received from Helen, whom Menelaus had received again into favour after the destruction of Troy. For a superior to give his own garment to an inferior was reckoned a great mark of regard. Hence Jonathan gave his to David; and the following extract from Sir John Malcolm may serve to throw some light on Elishah's request to have the mantle of Elijah. "When the Khalifa," says he, "or teacher of the Sooffees, dies, he bequeaths his patched garment, which is all his worldly wealth, to the disciple whom he esteems the most worthy to become his successor; and the moment the latter puts on the holy mantle, he is vested with the power of his predecessor."

"Therent informs us that superiors, in order to court popularity, sometime use the salutation which is given to equals, instancing, as an example, the Grand Signor, when riding along the streets of Constantinople; and every one knows the arts which Ahsalun used to win the hearts of the people from his father: he put forth his hand, and took them, and kissed them; a mark of kindness which David shewed to Barzillai for a better end. I shall next add, that a horn in ancient times was an emblem of power, which the following extract will set forth in a new light. "One thing observable in the caracade which Mr. Bruce witnessed in Abyssinia was the head-dress of the governors of provinces. A large broad fillet was bound upon their forehead, and tied behind, in the

middle of which was a horn, or conical piece of silver, gilt, about four inches long, much in the shape of our common candle extinguishers. This is called *kira*, and is only worn at reviews, or parades after a victory." In the quarto edition of Bruce, a plate is given of this ensign of office, and I may add, that the Abyssinian word *kira*, is the same as *keren*, which is the Hebrew word for horn, and is often alluded to in Scripture. Thus in Ps. lxxv. 4, 5, "I said unto the fools, Deal not foolishly; and to the wicked, Lift not up the horn: lift not up your horn on high; speak not with a stiff neck." Ps. xcii. 10, "But my horn shalt thou exalt, like the horn of the unicorn." And in Ps. cxli. 9, "His horn shall be exalted with honour." Perhaps a remnant of this ancient practice is to be found still in the neighbourhood of Lebanon; for Captain Light, anno 1814, saw the females of the Maronites and Druzes, "wearing on their heads a tin or silver conical tube, about twelve inches long, and twice the size of a common post horn, over which was thrown a white piece of linen that completely enveloped the body. The horn of the civil wife was of gold, enriched with precious stones, and in the vignette prefixed to part ii. ch. 3, he gives us a drawing of a Druze female, in the costume of the country."

"But after having spoken of their marks of honour, we may also notice their marks of disgrace. These were many, but the chief of them were the following: sometimes they condemned men to the employments of women, like the Jewish youth to grind corn in Babylon; cutting off the beard was accounted a great insult, and plucking off the hair was adding cruelty to insult. To spit in the face of a person was also accounted disgraceful, and it is still practised in the East; for Hanway tells us, that in the year 1744, when a rebel prisoner was brought before Nadir Shah's general, "the soldiers were ordered to spit in his face, an indignity," adds the historian, "of great antiquity in the East." Clapping the hands, making a wide mouth, pushing out the tongue, and hissing, were likewise the marks of malignant joy and contempt. Accordingly Job says, "Men shall clap their hands at him, and shall hiss him out of his place." And Jeremiah mentions clapping their hands, hissing, waggling their heads, and gnashing their teeth, as the tokens whereby the inhabitants of Jerusalem showed their hatred. Whilst Isaiah says of Israel, "Against whom make ye a wide mouth and draw out the tongue?"—We formerly noticed the conduct of Shimei to David, in throwing dust in the air, and may now add, that the Jews insulted Paul, many centuries after, in a similar manner: "for it is said of them, that "they gave him audience unto this word, and then lifted up their voices and said, Away with such a fellow from the earth—and they cried out, and cast off their clothes, and threw dust into the air." On which conduct of theirs the following, extract from Captain Light's Travels forms an excellent commentary: "They (viz. the inhabitants of Galabesha, a village on the Nile), seemed more jealous of my appearance among them

than any I had seen. I was surrounded by them, and 'a present, a present,' echoed from all quarters, before they would allow me to look at their temple. One more violent than the rest threw dust in the air, the signal both of rage and defiance, ran for his shield, and came towards me dancing, howling, and striking the shield with the head of his javelin, to intimidate me. A promise of a present, however, pacified him."

"But, perhaps, the greatest insult that could be given, apart of bodily injury, was the contempt that was cast on their mother. Hence the cutting reproach of Saul to his son Jonathan, for the friendship he had shown to David, "Thou son of the perverse, rebellious woman, do not I know that thou hast chosen the son of Jesse to thy own confusion, and unto the confusion of thy mother's nakedness? David, likewise, when reproving Joab, his nephew, uses similar language—"These men, the sons of Zeruiah, be too hard for me." And when Abishai, the brother of Joab, wished to kill Shimei for cursing David, the king replied, "What have I to do with you, ye sons of Zeruiah?" which Zeruiah was David's full sister; but it is not difficult to explain the origin of this tenderness for a mother's character, and desire to resent any affront that is cast upon her. It is owing to polygamy, where the children of the same family became naturally more attached to her, and to each other; and it is to the same source that we have the names of the mothers of the kings of Israel so frequently mentioned. It distinguished them from the other children of the kings by their other wives, and served to ascertain their descent and propinquity. But marks of disgrace were not confined to the living; they often extended even to the dead, by refusing them the rights of sepulture, or raising them after they had been interred; or forbidding them to be publicly lamented; or allowing them to become the prey of ravenous animals; or casting them, like Urijah's, into the graves of the common people; or burning their bones unto lime, as Moab did the king of Edom's."

"Josephus, when deserted by his soldiers through the intrigues of John of Gischala, while governor of Galilee, showed his sense of the disgrace they had put upon him as their general, in the following striking manner: "He leaped out of his house to them, while they were going to set it on fire, with his clothes rent, and ashes sprinkled on his head, with his hands tied behind him, and his sword hanging at his neck." At this humbling sight, they pitied his situation, repented of their fault, and returned to their duty. This suspending the sword from the neck is several times mentioned in Sir John Malcolm's History of Persia, as the mark either of degradation or deep supplication: and the same thing may be said of those who, with sackcloth on their loins, and ropes on their necks, supplicated the conquerors for mercy."

In describing the entertainments of the Jews, we find this notice.

"The most ancient example that is per-

haps, to be met with of a grace, or short prayer before meat, is at a feast which Ptolemy Philadelphus gave to the seventy-two interpreters; and it is thus mentioned by Josephus: "When they were thus sat down, he (viz. Nicanor, who had been appointed by Ptolemy) bade Dorotheus attend to all those that were come to him from Judea, after the manner they used to be ministered unto in their own country. For which cause he sent away their sacred heracle, and those that slew the sacrifices, and the rest that used to say grace; but called to one of those that were come to him, whose name was Eleazar, who was a priest, and desired him to say grace, who then stood in the midst of them, and prayed, 'That all prosperity might attend the king, and those that were his subjects.' Whereupon an acclamation was made by the whole company, and when that was over they began to sup." The next example we have is the practice of the Essenes both before and after meat in Josephus' Jewish War. The next is that of our Saviour, in Mark vii. 6. John vi. 11, 23, and St. Paul, Acts xxvii. 35; and the next is the form of a grace or prayer for Christians at the end of the fifth book of the Apostolical Constitutions, which seems to have been intended both for before and after meat.

"Having said this much as to the probable manner in which the ancient Jews might have lived, I shall add from Buxtorff that of the modern Jews, in those countries especially where they are most populous. They are very particular, he informs us, not only in the selection of the articles of food, but in the manner of preparing them. As to the selection of food, those guests only are eaten which have the hoof divided, and chew the cud, as oxen and sheep; fishes that have fins and scales, &c. They do not eat the fat of the inward parts and kidneys; have a book with directions for killing; and the butcher who can fulfil them gets a certificate from a Rabbi as to his qualification for the business, which commonly procures him much employment. The certificate is as follows:

"To day (in such a month and year) I saw and examined the excellent and remarkable N, the son of N, and found him skilled in the art of killing, both by word and hand, therefore I permit him to kill and examine cattle; and whatsoever he hath killed and examined, may be freely eaten, on this condition, that for a year to come he shall once every week persevere diligently the directions for killing and examining; the second year once a month; and during the rest of his life once every three months only. Attested by Rabbi M." In examining the faults of cattle, particular attention is paid to the lungs; and if the butcher is found negligent, he is admonished the first time, and his certificate taken from him the second. With respect to their manner of preparing their victuals, their culinary utensils are either bought new, or if of metal or stone, at second hand, they undergo the purification of fire and water. They have two kinds of vessels for the kitchen and table, the one for flesh, and the other for preparations of milk. The vessels for milk have three distinct marks, because

Moses had thrice said, "Thou shalt not see a kid in his mother's milk." Sometimes, however, they write the words, *Heleb*, milk, and *Hecher*, flesh, to show the distinction. They have also two knives to each, the one for flesh, and the other for cheese and fish: if they use the one instead of the other by mistake, it undergoes a strict purification. Preparations of flesh, and preparations of milk, are not cooked together on the same fire, nor brought to table at the same time, and they have distinct table cloths for each. He who eats of flesh, or of broth made of flesh, ought not to eat cheese for an hour after, and those who affect piety abstain for six hours; but if he eat cheese first, he may eat flesh immediately after. If fat fall into a dish of milk, it becomes unclean; but flesh may be never so fat and yet eaten. The eggs of clean birds only are eaten. Flesh and fish are not brought to table at the same time—they even wash the mouth between them, or eat fruit, or a crust of bread. No milk that has been drawn by a Christian, or cheese or butter that has been made by one, is permitted; and they refrain from drinking from a covered well, for fear of poisonous animals. As to their preparation of bread, we may remark, that as it is said in Num. xv. 20, "Ye shall offer up a cake of the first of your dough for a heave offering," therefore at every baking they separate a portion called *Holeb*, which, as they cannot now offer to the Lord, they throw into the fire. The size of a grain of barley is sufficient; but the wise men had fixed upon the 40th part for private families, and the 48th for bakers. These last, however, are considered only to have been binding while the temple stood, and the priesthood required maintenance, for a small portion now is reckoned sufficient, and they even find no difficulty in some countries of eating bread that hath been baked by Christians. Indeed, when we inquire into the customs of modern Jews, we find them much affected by local circumstances; for the Jews in Germany have usages different from those in Britain, and the same may be said of other places.

(To be concluded in our next.)

*Chefs d'œuvre of French Literature, consisting of interesting Extracts from the Classic French Writers in Prose and Verse, with Biographical and Critical Remarks on the Authors and their Works. Vol. 2. Verse. London, 1820. 8vo. pp. 400.*

In our Literary Gazette for the 22d of January last, p. 56, we noticed the first volume of this interesting publication, which consisted of extracts from the French prose writers; the second part has now appeared, including the most celebrated French poets. The terms of commendation which we thought it our duty to bestow on the former volume, are in a high degree applicable to the present: the selections have been made with the greatest attention, as well to beauty as to delicacy; and the extracts display in many instances great felicity of thought and elegance of expression. In the examples of

the style of Bernard, (usually called le gentil Bernard) perhaps it would have been as well to have inserted his famous "Elegy on the Rose," which is certainly superior to the specimens here afforded. The short biographical notices of the poets, prefixed to the quotations from their respective works, are in no respect unworthy of those in the former volume, exhibiting great clearness of style and compression of matter: and we cannot close the book without expressing our hearty approbation of the correctness and beauty of the edition, in the minor but still important department, of printing. Among the poets whose works afford the flowers from which the honey is here collected, will be found the names of Scarron, Corneille, Racine, (with a beautiful extract from his *Athalie*) Boileau, La Fontaine, J. B. Rousseau, Bernard, Piron, Bernis, Voltaire, Florian, La Harpe, De Lille, &c. &c. We copy one or two of the lighter pieces, for the amusement of our readers.

The following is from the charming pen of the Duke de Nivernois.

*Le Chien mal secouru, ou le Combat de Nuit.*  
Par une nuit tout-à-fait noire,  
Un voyageur à pied traversoit de grands bois,  
Il n'y voyoit pas clair jusqu'à un bout de ses doigts;  
Mais il vouloir arriver à la foire,  
Qui dans un village prochain  
S'ouvroit, à ce que dit l'histoire,  
Dès l'aurore du lendemain.  
Un gros bâton armoit sa main;  
Un gros chien lui servoit de page:  
C'étoit-là tout son équipage.  
Il marchoit sans songer à rien,  
Quand, pour le malheur de son chien,  
Un loup se trouve en leur passage.  
Aussitôt grand combat: le dogue étoit puissant,  
Le loup passé maître en carnage.  
L'homme au bâton, dans ce péril pressant  
Voulut secourir l'innocent.  
Eile gourdin dans les airs se dépiole;  
Mais, attendant l'obscurité,  
Trop aïssent il se fourvoie,  
Et maintes fois tombe à côté.  
A la fin il frappe un tête,  
Mais ce n'est pas celle du loup;  
Le bon matin reçoit le coup.  
Et c'est fait de la pauvre bête.  
Or, j'en appelle à la sincérité  
De messieurs de la faculté:  
N'est-il pas vrai que dans cette aventure  
On reconnoît un accident  
Qui leur arrive assez souvent!  
La maladie et la nature  
Sont les deux agens du combat:  
L'homme au bâton survient pour finir le débat;  
Mais pas malheur, la nuit est bien obscure.

Scarron, whose life was a series of vicissitudes, writes the following epitaph on himself.

Celui qui cy maintenant dort  
Fait plus de pitié que d'envie,  
Et souffrit mille fois la mort,  
Avant que de perdre la vie,  
Passant, ne fais ici de bruit;  
Garde bien, que tu ne t'éveilles;  
Car voici la première nuit  
Que le pauvre Scarron sommeille.

A madrigal, by Alexandre Lainez, thus concludes.

Quoi! toujours, raison trop sévère,  
Tu t'opposes à nos desirs,

Et viens troubler tes trais mes plaisirs !  
Vois-tu cette hoché : imite sa lumière ;  
Elle anime nos jeux et ce charmant repas ;  
Éclairc mes plaisirs, et ne les trouble pas.

LITERARY BIOGRAPHY.—*Memoires de M. de Coulanges, suivies de Lettres inédites de Madame de Sévigné, de son fils Armand d'Audilly, D'Arnaud de Pomponne, de Jean de Lafontaine, &c.*

In the atmosphere of glory which surrounded the reign of Louis XIV.—among the *Cornailles, Racines, Molières, &c. &c.* it certainly would have required a penetrating eye to discern the literary merit of *Coulanges*, not had his witty cousin, Madame de Sévigné, taken his fame under her protection. She so frequently mentions *Coulanges* in her charming letters, that she has succeeded in making him known to the literary world ; and his name will descend to posterity, when other authors of greater talent will probably be forgotten.

The present volume contains an entertaining account given by *Coulanges*, of a visit which he paid to Germany in his youth. The contrast which then existed (in 1657) between the two courts of Bavaria and Wurtemberg, is extremely curious. The former, he tells us, resembled a monastery : it was customary to rise at six in the morning, to hear mass at nine, to dine at half past ten, and to attend vespers every day. At six in the evening no one was to be seen in the palace ; all stripped and retired to rest at nine o'clock. The court of the Duke of Wurtemberg was not quite so edifying. *Coulanges* and his travelling companions were invited to dine with the Duke, who began by drinking the health of the King of France, and successively of all the powers in the world. Our author, who before he got out of Europe, felt the necessity of mixing water with his wine, called for the former in vain. He was told that "water was never allowed to enter the hall of a great prince like the Duke of Wurtemberg." His Highness paid the utmost attention to his guests ; four servants were in attendance to carry out those who were unable to move ; and the court carriages were in readiness to convey them home. This wicked philosophy has occasioned such a perversion of manners, that it is probable the good people of Munich neither attend prayers so regularly, nor retire to rest quite so early, as they formerly did ; but, though a little more water be drunk at Stuttgart, it must be confessed there is at least some compensation.

A real literary treasure, contained in this collection, is a poetic epistle from La Fontaine to the Duke de Bouillon, and some letters to his wife, in which he gives an account of a journey to Limoges, and a description of the Chateau de Richlieu, which at that time was a kind of Museum, filled with works of art. The style of the *bonne homme* is apparent throughout the poem and the letters : in the latter he relates to his wife even the amorous aberrations of his journey, which certainly proves he knew how plainly he could deal with her. We content ourselves with this slight notice of the volume.

*Mazeppa Traveled : a Poem. With an Address to the Goddess of 'Milling.'*  
London, 1820. pp. 34.

The fastidious will doubtless call this production "d—d low" ; for it relates the adventures of a higgler, who for an intrigue with a Tophill-feld companion's lady, is tied neck and heels upon a jackass, and set scampering, just as his prototype *Mazeppa* was upon a wild horse, for his amour with the Polish countess. It is full of slang, or fancy terms, but not deficient in humour. Without venturing to follow the long race, the circumstances of which it records, as told to Scroggins while resting under a tree after his beating at Monleury Hurst, and still less the affair that gave rise to it, we do not see any impediment to laying one example before even our gentlest readers. We pitch upon a bit of the run. The unhappy culprit undergoes all the earlier troubles of the nobler mounted *Mazeppa* ; and at length, having forded a pond, the narrative proceeds—

Like a drown'd rat, with skin all dripping,  
Shiv'ring with cold and hunger, still  
Neddy went onwards, without whipping,  
Straight up a neighbouring hill :  
We topp'd it, and I look'd around—  
Before me what a space of ground !  
That stretch'd as far as I could see,  
(For a thick fog much bother'd me,)  
With here a tree, or stump of one,  
And there a bush to look upon,

A ditch, a puddle here,  
As through the mist the moon look'd down,  
(Just as she look'd when we left town,)

With visage rather queer.  
Small use the light she did bestow ;  
No house of call that light did show ;  
No candle bright in window flaring,  
Could I see there, though I sat staring.  
Not a glim could I behold ;  
But all was dark, and drear, and cold.  
Then had some straggling *brig* pass'd by,  
Although he'd laugh'd to see my plight,  
I had been glad to view the sight,  
As sign to me that aid was nigh.

We toddle'd on—but not so fast  
As we had gone before and so ;  
His sullen heart gave in at last ;  
His back was raw and sore :  
A tailor might have rode him then,  
Or e'en your neighbour's boy, young Ben ;  
But that to me was nought.  
His sudden weakness was no use ;  
Though tir'd, I could not get me loose :  
I knew that if I sought,  
My strength would fail ; but hard I strove  
To break the rope—too well 'twas wove,  
Alas ! 'twas fast as ever.  
Though cunning I as many men,  
I tried, and tried, and tried again—  
The knots they would not sever.  
The donkey's strength seem'd nearly done :  
Just then I saw the rising sun ;  
I thought it very lazy.  
I thought the day would never break,  
And with that thought began to quake ;  
I knew not what of it to make,  
The weather was so hazy.

At length he came—the stars fell back ;  
The dinky moon he gave the snick, †  
• "The word that is now all the go,  
Go wherever you will, sir, is toddling."  
Song.—"Chapter of Todding."  
† Sent her off.

And fill'd the earth, the shining elf,  
With light made good by himself.  
Up jump'd the sun ; off went the fog—  
As fast away as it could go,  
From heath, and hill, and fell, and bog—  
But what avail'd it Joe ?  
Heath, hill, or fell, bog, valley, plain,  
They did not give me ease from pain ;  
No soul was there whom it might suit  
To set me free, nor man nor brute,  
Not e'en the cawing of a rook ;  
It seem'd as all the spot forsook  
At sight of me. Along we went—  
How his poor knees beneath him bent !  
And his rough sides so lean had grown,  
It would have touch'd a heart of stone !  
At length, as we along did pass,  
I heard the braying of an ass,  
Behind a heap that look'd like clover—  
Is it a bray ? and is it over ?  
No ; from behind that heap a score  
Of asses come, with voices loud ;  
Perhaps their number might be more—  
There was indeed a motley crowd.  
My donkey join'd them in their roar ;  
They come along with shuffling trot—  
The devil a rider have they got :  
Aye, look a score—nay, doubt me not—  
With whisking tails, and lifted legs,  
Tossing about their nely mags,  
Without or either bit or bridle,  
On they come, with legs not idle.  
The sight of such a frisky set  
Made my poor bearer lively get ;  
He ran to them ; but ere they met,  
He tumbled o'er a stone.  
'Twas over with him—one low bray  
He gave, as on the ground he lay—  
His wind from him had flown.  
The brood came up, and on his creep  
They saw Mill-Gardie tied ;  
I thought that all with me was up,  
So aly my plix they ey'd.  
They look'd at me, as up they pass'd,  
Male and female, every ass ;  
But when they saw the flannel jacket,  
And apron blue, that I had on,  
All in a moment ceas'd their racket ;  
They turn'd, and soon were gone.  
They left me there, nor came again,  
Tied to their dead and brother beast,  
In whose cold carcase life had ceas'd,  
The most ill-us'd of men.  
Outworn with pain I'd borne so long,  
A shadow of what once was strong ;  
He dead, I nearly—there we were,  
Stretch'd out upon the plain,  
A pretty melancholy pair !  
I never thought again  
To find myself alive, so much  
That jolting did my *cats-meat* ; touch.  
The whole twelve hours did I lay there,  
Expos'd alike to sun and air ;  
With patience great as Job pines'd,  
I saw the sun go down to rest,  
Not knowing, when he sunk, if I  
Again should see him in the sky,  
In all that sulkenness of mood  
We feel when by ourselves we brood  
On things, and fear that we shall cease,  
Till Death at last appears a joke ;  
Albeit, when our pleasures falter,  
We seek the fellow with a halter,  
Or in some paitry brook :  
And yet Death is a thing unpleasant,  
Though lightly on't we talk at present,  
However fair it look,

; Lungs, &c.

Perhaps a little more gross than Lord Byron, or we had better say a little less refined, there is nevertheless a good deal of parodical fun in this poem, which is at once a travesty and a satire.

#### INDIAN ARCHIPELAGO.\*

Gaming, the almost universal vice of mankind, is most passionately pursued by most of these islanders; and some of their means of gratifying the propensity, (besides games of hazard, cards, dice, &c. chess, and other games on checkers, cock and quail fighting, and other animal combats) might contest the palm for ingenuity with our most celebrated gamblers.

"The Javanese (says Mr. C.) do not disdain to be amused by a battle between two warlike crickets, called, in their language, *jangkrek*, nor hesitate to bet considerable sums on the result. The little animals are excited to the combat by the titillation of a blade of grass judiciously applied to their noses!!

"The puerility of the Javanese in matters of this sort does not end here. They will risk their money on the strength and hardness of a particular nut, called the *keniri*, and much skill, patience, and dexterity, are consumed in the selection and the strife. At other times the combat, which is to decide the fortune of the parties, is between two paper kites: the object in this strife being the fall of the adversary by the destruction of its string. In a favourable day, fifty or sixty of these will be sometimes seen hovering over a Javanese city. Other diversions, depending on the courage or ferocity of animals, and independent of play, are common. Among the Javanese, the most interesting of these is the combat of the tiger and buffalo. The buffalo of the Indian islands is an animal of great size and strength, and of no contemptible courage; for he is an overmatch for the royal tiger, hardly ever failing to come off victorious in the fight with him. It must be confessed that there is no small satisfaction in seeing this peaceful and docile animal destroy his ferocious and savage enemy. Neither are possessed of much active courage; the tiger, indeed, is a coward, and fights only perfunctorily, or through necessity. On this account, it is necessary to confine them within very narrow limits, and farther, to goad them by various contrivances. A strong cage, of a circular form, about ten feet in diameter, and fifteen feet high, partly covered at the top, is for this purpose constructed, by driving stakes into the ground, which are secured by being interwoven with bamboo. The buffalo is first introduced, and the tiger let in afterwards from an aperture. The first encounter is usually tremendous; the buffalo is the assailant, and his attempt is to crush his antagonist to death against the strong walls of the cage, in which he frequently succeeds. The tiger, soon convinced of the superior strength of his antagonist, endeavours to avoid him, and when

he cannot do so, springs insidiously upon his head and neck. In the first combat of this nature to which I was witness, the buffalo, at the very first effort, broke his antagonist's ribs against the cage, and he dropped down dead. The buffalo is not always so fortunate. I have seen a powerful tiger hold him down, thrown upon his knees, for many seconds; and in a few instances, he is so torn with wounds that he must be withdrawn, and a fresh one introduced. In nineteen cases out of twenty, however, the buffalo is the victor. After the first onset, there is little satisfaction in the combat; for the animals, having experienced each other's strength and ferocity, are reluctant to engage; and the practices used to goad them to a renewal of the fight are abominable. The tiger is roused by firebrands and boiling water, and the buffalo, by pouring upon his hide a potent infusion of capsicums, and by the application of a most poisonous nettle, (*amadu*), a single touch of which would throw the strongest human frame into a fever.

"Wild hogs, which are in vast abundance in Java, are ensnared and fought against rams and goats, a ludicrous, but bloodless combat. The wild boar of Java is an animal of little ferocity, and not much strength.

"A combat between two bulls, such as the people of Butan, and other countries to the north of Bengal, delight in, is a favourite exhibition among some of the people of the island of Madura."

The heat of the climate disposes the natives to all sorts of active exercises; even their dances are infected with the slothful habits of a tropical temperament.

"This dancing is of three kinds: viz., "their serious dances on public occasions—the private dances of individuals at festivities—and the exhibitions of professed dancers."

"Of the first kind are the war dances of the people of Celebes. If a warrior throws out a defiance to his enemy, it is done in a dance, in which he brandishes his spear and kris, pronouncing an emphatic challenge. If a native of the same country runs a duck, ten to one but he braves death in a dancing posture. When they swear eternal hatred to their enemies, or fidelity to their friends, the solemnity is accompanied by a dance. There is (observes the author) a good deal more vivacity on these occasions than I ever saw exhibited on any other of the same kind.

"All orders executed in the presence of a Javanese monarch, on public occasions, are accompanied by a dance. When a message is to be conveyed to the royal ear, the messenger advances with a solemn dance, and retreats in the same way. The ambassadors from one native prince in Java to another follow the same course when coming into and retiring from the presence of the sovereign to whom they are deputed. When the persons whose business it is to let the tiger loose from his cage into the hollow square of sparsmen, as above mentioned, have performed their duty, and received the royal nod to retire, on an occasion, one would think, when dancing might be spared, they do so in a slow dance and solemn strut, with

some risk of being devoured by the tiger, in the midst of their performance.

"Previous to the introduction of the Mahomedan religion, it appears to have been the custom of all the oriental islanders, for the men of rank, at their public festivities, when heated with wine, to dance. Upon such occasions, the exhibition appears to have been a kind of war dance. The dancer drew his kris, and went through all the evolutions of a mock-fight. At present the practice is most common among the Javanese, with every chief of whom, dancing, far from being considered scandalous, as among the people of Western India, is held to be a necessary accomplishment. Respectable women never join in it, and with that sex, dancing is confined to those whose profession it is. In the most crowded circle of strangers, a Javanese chief will exhibit in the mazes of the dance with an ordinary dancing girl, or, in other words, with a common prostitute. I have often seen the sultan of Madura, a most amiable and respectable prince, in this situation. The dance at such times is nothing more than the slow and solemn pacing exhibited on other occasions.

"The professed dancers differ little but in inferiority of skill, from the common dancing girls of Hindustan. The music to which the dancing is performed is, indeed, generally incomparably better than that of Western India, although the vocal part of it is equally harsh and dissonant. Now and then a single voice of great tenderness and melody may be found, but whenever an effort is made at raising it for the accommodation of an audience, it becomes harsh and unmusical. The songs sung on such occasions are often nothing more than unpremeditated effusions; but among the Javanese, to whom I am now more particularly alluding, there are some national ballads, that might bear a comparison with the boasted odes of the Persian minstrels."

The dramatic productions and performances of a people have generally been considered a tolerable test of their barbarity or civilization. (Heaven forbid that the present state of Britain should be tried by that standard.) The following relates to the stage of Java.

"Among the Javanese there are no dramatic writings; there is no stage, and no attempt at scenic deception. The acting is of two kinds, in equal esteem among the people themselves, one consisting in the performance of living actors, and the other in that of puppets. The first sometimes exhibit without masks, but much more frequently with them. They are invariably men, for women never perform. The second are of two kinds, one consisting of ordinary puppets, much inferior, in ingenuity, to those among ourselves, and the other of certain scenic shadows, which are peculiar and marvellous. Those that are monstrous and grotesque figures, of about twenty inches long, cut out of a stiff untanned buffalo hide, and commonly very highly gilt and painted. In the representation they are moved by the prompter behind an oblong screen, of ordinary white cloth, rendered translucent by having a lamp suspended behind.

\* Continued from Crawford's History, 3 vol. 6vo. Vide Lit. Gaz. No. 173.

"All their acting may be considered as a kind of pantomime, for, even in the most perfect exhibitions, there is little dialogue. Each player does not study his part, or, at least, get it by heart; but the little he says he furnishes unprompted, as his recollection of the story, or his fancy, may assist him.

"The great mover in the drama, whether mock or real, is the prompter, or *dalang*, as he is called in the native language. This person's office is very inadequately described by calling him the prompter; he is the soul of the whole drama, and his functions are better depicted by comparing him to our ancient bards or minstrels. He sits full in front of the audience, holding before him one of the common metrical romances, from which, in the chaunting accents of the *East*, he repeats, before the interlocutors commence acting, the narrative of what they have to perform. This practice he preserves in from the beginning to the end of the play. He does the same thing with the scenic shadows, seldom venturing, however, to furnish a dialogue for the puppets.

"From this account of the Javanese drama, it will be easily seen that a play or piece is not intended to be a skillful and interesting representation of the real business of the world, or of human passions, enjoyments, and sufferings, but the simple and artless relation of a common tale, some of the most prominent adventures of which are dramatized in the representation, while the principal stream of the narrative is conducted by the relation of the bard.

"The acting, consistent enough with the manners of the people, is heavy and monotonous. There is no life nor action in it, and nothing natural. The players dance instead of walking, and when they speak, it is in a counterfeit and fictitious tone of voice, burly, in short, in the accents of human beings. Their dresses are characteristic and proper, generally in the ancient costume of the country, suitably to the parts they have to perform. A full band of Javanese music, in the manner of a chorus, constantly accompanies every kind of acting.

"The subjects of the Javanese drama are the Hindu legends of the Rannyan and Mahabarat, and those of the fabulous periods of their own history. The empire of custom, so arbitrary among all barbarians, renders it a rule not to be transgressed, that the performance by scenic shadows should be confined exclusively to the representations of Hindu story; the true acting to the most ancient portion of their own legendary history, and the ordinary puppet-show to the more modern.

"Besides the more regular dramatic entertainments now alluded to, there are two others occasionally introduced, in the manner of interludes, between the scenes of the more regular performances, which afford more amusement to the stranger. One is an exhibition of buffoonery, which I have seen so well acted as to afford much merriment. The only personages who can be *factions*, by the rules of the Javanese drama, are

*Samar* and *Bugeng*, the redoubted friends and servants of Arjuna and Rama. The acting of the persons who represent these characters is less constrained, more bustling, and more natural than that of any others. So much drollery is frequently displayed as to convince us that the Javanese have considerable comic powers; and that, if the sphere of their acting were enlarged, and their talent cultivated, they might make excellent comic actors.

"The second description of acting is a kind of pantomimic exhibition of wild beasts, where the players, dressed out in the figure of the various animals of the forest, personate their habits and exhibit their manners. The matter is so well managed as to make us almost believe that we are in the disagreeable company of the tiger, the leopard, or the wild boar."

We advise Messrs. Harris and Elliston to pay particular attention to this subject, from which very useful hints may be gathered. The former may produce novelty and improve his melodramas, by importing a few Javanese beast-actors; and the latter may bring over a clever *dalang*, as a co-adjutor to Dr. Busby, the present sole *dalang* of Drury Lane.

## ORIGINAL CORRESPONDENCE.

### ANIMAL MAGNETISM.

Dr. Meissner, a German Physician, who, with a view to improvement in his profession, lately visited the principal medical schools of Europe, has published at Halle an account of part of his tour, under the title of *Bemerkungen aus dem Taschenbuch eines Arztes*, &c. (Observations extracted from the Memorandum Book of a Physician).

Among other curious matter contained in this work, is a description of the establishment formed at Berlin, by Wolfart, for the cure of diseases by Animal Magnetism, and of the practice followed by that zealous disciple of Mesmer.

The author arrived in Berlin towards the close of the year 1816. In visiting the principal medical establishment of that city, he had to chuse between *La Charité* and Wolfart's Magnetic Hospital. He decided in favour of the latter; indeed the opportunity of seeing nearly all diseases without exception, treated, and even, as many asserted, cured, by means of magnetism, was so novel and extraordinary, that he was eager to avail himself of it.

The following is his account of what he saw and heard during a three months constant attendance on Wolfart's magnetic practice and lectures.—

"That magnetism is not a mere chimera, I was fully convinced during my residence at Bamberg; though the mode in which it is there practised is far from being the right one. The youthful vivacity which characterizes the whole conduct of old Dr. Marcus, and his unconquerable desire to make him-

self acquainted with every thing new, whether relative to medicine, philosophy or art, naturally urged him to devote attention to the subject of animal magnetism, which had a short time before been revived. A number of female patients in the hospital were magnetized; but I do not recollect a single case in which a cure was effected. Attention was chiefly devoted to displaying the phenomena of somnambulism; and it was a grand point gained, if the patient could be made to distinguish metals, to play at cards, or perform tricks during the crisis.

"Thus all was caricature at Bamberg: every individual connected with the hospital was ridiculous, and would have snuffed a writer of comedy with abundance of subjects. A young physician of the hospital, who was engaged in magnetising from morning to night, became at length so exhausted that he glided about like a ghost; and it was said that his drowsy and languid appearance had the effect of putting the patients to sleep. In my medical practice I have but seldom had recourse to magnetism; and its composing power in disorders of the nerves is all I can attest from my own experience. During my long absence from Germany I had no knowledge of the works that have been published on the subject; I had not seen a banquet, and never dreamed that magnetism had again been adopted as a universal remedy.

"My first visit to Professor Wolfart was in the evening. I readily gained access to his establishment, and he invited me to accompany him to the apartment where he was engaged with his patients. I do not recollect having ever witnessed a more extraordinary sight. I was ushered into a spacious chamber, illuminated only by two study-lamps, shaded by screens, which diffused a kind of mystic light. On two benches were seated about twelve patients, men, women, and children, all set in motion by means of friction on the conductors. Here, as well as in the adjoining apartment, which was still darker, a number of females were sitting asleep in arm chairs, shaded by screens, and muttering incoherently during the crisis. Large glass globes lined with tin-foil, were suspended from the ceiling, for the purpose, as I was afterwards informed, of reflecting and strengthening the magnetic power. The gloomy effect of the light, the strange motions of the patients, and the deep silence that prevailed all around, were singular enough; but the whole was rendered still more fantastical by the appearance of Wolfart himself, who stalked about like an enchanter, holding a long iron rod, resembling a magic wand, in his right hand, with which he alternately agitated the conductors, and traced large circles above the heads of the sleepers, or, with his wand in his left hand, made the most singular motions before those whom he wished to rouse. The water bottles which stood on the benches were repeatedly replenished, for the consumption of water was immense. Having for some time silently observed these mysteries, I turned to a spectator, who, as I afterwards learnt, was one of Wolfart's most intimate friends;

he furnished me with some explanations, and strongly advised me to study Mesmer's work, which he assured me, displayed the profoundest penetration. Wolfart now joined our conversation. He observed that it is entirely erroneous to proceed by fixed degrees in the progress of magnetism; and that it were as easy to lay down seven thousand as seven rules, since the treatment is totally different in every individual patient. "In diseases of every kind," added he, "whether fever, cutaneous eruptions, or debility, magnetism may be resorted to; out of six or seven hundred of my scarlet-fever patients, only one has died: indeed, in this disease, I merely make a pretext of administering medicine. Magnetism may be applied in every case: if a patient has a splinter in his finger, of course it must first be extracted; but the suppuration will be most speedily removed by magnetising the finger." He pointed to one of his sleeping patients, who had been cured of staphyloina; I could no longer conceal my astonishment; and he desired me to call on the following morning, when I should see patients who had recovered from staphyloina, and other diseases of the eye still more inveterate. During the two succeeding months I did not venture to visit Wolfart's establishment in the evening, as the patients who came to the banquet were for the most part persons of the first rank, who might have felt offended at the idea of being thus exhibited to strangers. I was, however, the more regular in my attendance in the morning, the time assigned to the poorer class. Mondays and Thursdays were the days appointed for magnetising the male patients, and Tuesdays and Fridays for the females. The operation of magnetising is far more speedily performed than is generally imagined; in the space of an hour, from 20 to 30 patients were magnetised, including the medical examinations of the new visitors. None but those who have been eye-witnesses can form a notion of the superficial mode in which these examinations are performed, partly by Wolfart himself, and partly by two of his most confidential pupils; one of whom, Dr. E.... was a young man only twenty years of age. Wolfart is a mere Diagnosticist; and probably his total want of every requisite essential to the physician induced him to resort to the universal specific of magnetism. His pupils, who are all provided with rods, which they constantly carry about with them, are even more deficient in medical knowledge than their master. They deem it sufficient to ascertain in which of the three regions of the system, traced out by Wolfart, the disease is seated; whether in the head, the thorax, or the abdomen; and as the organs of the senses are the poles of the brain, the hands, those of the thorax, and the feet those of the abdomen, the magnetising physician effects his cure of each region by magnetic attraction, towards its pole. The medicinal applications consist solely of elderberry juice, infusions of cummin or camomile, foot-baths, linseed-poultices; and magnetised water: in fact I never heard Wolfart prescribe any thing else.

"After my first morning visit to Wolfart's

establishment, I noted down in my Journal the following observations on the most important cases that came under my observation:—

"1. Five patients with staphyloina; on the eye of one, merely a spot on the cornea was observable, though he had been deprived of the power of vision in both eyes by complete staphyloina. In the other patients, as I was informed, the tumours had diminished to about half their original size; this was particularly remarkable in the case of a child, who, when first brought to Wolfart, was unable to close its eyes, though when I saw it, the staphyloina permitted the eye-lid to be drawn down with ease. Wolfart assured me that this was the largest he had ever seen. I asked him what further recovery he expected in the case of this child; and he replied, "You see from what I have effected in the space of four weeks, and also from the first case, in which all that remains of the staphyloina is merely a slight obscuration of a part of the cornea, that I am entitled to all the merit of a complete cure. The child's eyes will soon become as good as yours!"

"2. Several cases of amaurosis. One of the patients was a woman who had been stone blind for twelve years, and who can now distinguish the colour of a dress.

"3. Only a slight dim spot on the cornea was observable in many cases, in which it had originally been totally obscured.

"4. A child with Rachitis. Wolfart assured me, in the presence of the mother, that only a year before the child was a perfect monster. When I saw it, its deformity was not by any means remarkable.

"5. Several cases of paralytic and rheumatic Ophthalmia, Hemiplegia, and a woman for tape-worm. The latter patient received two touches on the abdomen with the wand, and, unlike all the rest, she manifested no symptoms of amendment; she was, however, dismissed along with the rest, with the best hopes for future recovery. Among the new visitors, there were several with inflammation in the eyes, a woman with a wen, and a man with a liver-complaint. Only one patient, namely, a girl, with a cancer in her throat, was sent to Hufeland's Polyclinical establishment.

Most of the above patients were declared recovered, and dismissed, in the course of eight days; and in no case did the operation of magnetising occupy more than three minutes. I every morning saw a number of various cases, and Wolfart pronounced every patient to be convalescent. Every one, however, whom I recollect to have seen a second time, after an interval of a week or fourteen days, and who were for the most part afflicted with diseases of the eye, appeared to me to have undergone but little change. The following circumstance, which occurred during the second month of my visits to the establishment, did not greatly contribute to strengthen my faith in Wolfart's declarations.

"On the 4th of February, 1817, a girl of eight years of age named Bertha Schwartz was brought to Wolfart by a woman, apparently either her mother or her nurse. On being asked how the child was, the woman replied, that her eyes were quite well, and

that she brought her merely because Wolfart had expressed a wish to see her occasionally. 'This patient has been cured of Amaurosis,' said Wolfart, turning to me; and after I had examined the child, he carried it to two Polish ladies, who were seated on the banquet, and said:—'Voilà, mesdames, un enfant, qui a été tout-à-fait aveugle, et qui maintenant a parfaitement regagné sa vue.' Whilst the ladies were expressing their astonishment, and Wolfart was noting down the result of the cure in his journal, I had time to exchange a few words with the woman\*. Our conversation was as follows.

"Was the child quite blind?—Heaven forbid!—Did she suffer from head-ach?—Never!—Did she sometimes feel as if sparks or small insects were flying before her eyes?—I never heard her complain of any such thing.—Then what ailed the child?—When at school she complained that she did not know her letters, and that they appeared to float on the paper.

"Wolfart now returned from his writing-table, and I was obliged to relinquish my examination. I carefully noted down the day when I saw the child, together with her name, for it appeared to me almost incredible that a Physician should suppose he had cured a child of amaurosis, and declare her to have been *tout-à-fait aveugle*, because she could not tell her letters when at school!

"The following is all that I can attest respecting the healing powers of magnetism, exercised according to Wolfart's method; and all that I ascertained while I continued for three months an impartial observer of his operations:—

\* Those who visit Wolfart's establishment must not place implicit faith in all his declarations; for if they venture to question the patients, they will often meet with similar commentaries on his cures. But such unbelievers will not be the most welcome visitors to Wolfart; for he will regard their scepticism as impeding the operative power of the magnetiser. I subjoin a few observations from Wolfart's lectures respecting the advantages of the magnetic treatment. The passage is remarkable in more than one respect.

"The magnetic treatment must not only secure the advantage that the opinion of the magnetiser cannot be called in question, but also that the thing ceases to be a spectacle to the bye-standers. All that tends to give the treatment the appearance of a spectacle must be carefully avoided. The doubts of any person present will weaken the operation; for such persons operate anti-magnetically, and banish the pure harmonic working. They exercise their confused, inharmonious magnetism on the patient; therefore it is wrong to attempt to magnetise in a large party, to recover any one from a fainting fit. Magnetised remedies may be administered to the patient without his knowledge. In Gothe's *Natural Daughter*, the Doctor, in order to bring Eagonia to herself, merely pours a few drops of some liquid on a pocket-handkerchief. Yet it is probable that Gothe had no correct idea of magnetism.—It is not necessary that particular effects or phenomena should be manifested during the magnetic treatment; it is sufficient if the patient derive benefit from the operation."

"1. I never witnessed any complete cure of amaurosis, cataract, or staphyloma, though the deformity of the latter was, in many instances, greatly diminished. This was particularly remarkable in the case of a soldier, whose staphyloma was the consequence of what is termed the Egyptian inflammation of the eyes; before my departure from Berlin it had diminished one half. The man was at first completely blind; but latterly, owing to a transparency round the rim of the cornea, he could distinguish light from dark colours.

"2. I observed a visible diminution of specks on the cornea, though I never knew of an instance in which they entirely disappeared.

"3. I witnessed great amendment in cases of lameness, nearly a perfect cure of Anchylosis, and immediate relief in an epileptic attack.

"But even in cases where evident convalescence or cure took place, it is not certain that those effects are to be solely attributed to magnetism. Several of my acquaintances saw patients who had attended Wolfart's establishment, in those of Professors Grafe and Verends. I myself saw a patient with a rheumatic inflammation in the eyes, magnetised for nine hours, and he afterwards received the application of eye-water in Professor Busse's establishment, for twelve hours. In Wolfart's Journal many patients may be stated to be cured, who have been receiving medical aid elsewhere; for it is supposed by the people, that magnetism cannot do harm if it be not productive of good, and they therefore continue to visit Wolfart's establishment. It is also very probable that many patients sit on the baguet and jest with the credulity of the magnetiser. I myself once saw an old Polish lady, who, whenever Wolfart came near her, pretended to be asleep, and opened her eyes as soon as he turned his back; turning to one of her countrymen who was sitting near her, she said in the Polish language:—"I feel not the slightest sensation, I only pretend so for the Joke's sake!" This lady was, if I mistake not, a countess; she little suspected that I understood what she was saying.

"I mention these circumstances, not with the view of turning the thing to ridicule, but merely to shew how much self delusion on the part of the magnetiser, and deceit on that of the magnetised, are daily displayed in the history of diseases. After an impartial observation, I conceive myself justified in coming to the conclusion, that magnetism, as it is practised by Wolfart during the morning hours among the poorer classes, cannot be regarded as a general remedy for disease. The phenomena of animal magnetism would certainly be deemed incredible were they not confirmed by the testimony of unquestionable witnesses; yet it is not to be presumed that the cure of the most complicated diseases, which have resisted every previous remedy, can be effected merely by the will, and by a momentary touch of the magnetic rod, which is frequently given only after long interrupted intervals. Only absurd and unavailing obstinacy will now attempt to deny

the relationship existing between the magnetiser and the magnetised, the disclosing and foretelling faculty, and the many inconprehensible facts within the region of sympathy; but no cool observing physician is yet fully convinced, that a few rotatory movements with the rod can produce, in the cornea, changing through staphyloma, a magnetic inflammation, as Wolfart terms it, thereby to effect reabsorption, and finally fully to restore the visual power; or to impart transparency to an obscured crystalline lens, or susceptibility to a squabbed retina. Does it follow from this, that Wolfart plays the hypocrite? Certainly not; but inconceivable self deception, credulity, and blind devotion to the declarations of Mesmer, have occasioned this inconsistency in a man, who is in other respects shrewd and sensible. He gives implicit credit to whatever Mesmer asserts—he quotes in his lectures that the tying of the umbilical cord is the seed of most of the diseases of children, and to this the prophet Ezekiel is dragged in to bear witness. He declares that all the discoveries in natural philosophy which can be made for ages to come, will only serve to confirm Mesmer's system, in which they are already anticipated. Owing to his boundless credulity, he is not disgusted by intercourse with men who entertain the most absurd notions; for if they bind implicit faith to what he advances, he in return readily believes all they assert.

"During the last months of my residence in Berlin, I attended Wolfart's establishment in the evening, and I was often much amused by the ridiculous stories of Dr. E. one of the magnetisers. He had cured a woman, who, according to his own account, was entered in Wolfart's journal as suffering from *Pithia Cordialis*; which term, I understood, was employed to designate a contraction of the veins of the heart. That such was really her disease, Dr. E. was fully assured, both by the declaration of the patient herself, during the crisis, and that of another magnetised subject. The latter slept for three successive days, during which period she rose, ate, drank, and bathed. In the course of this remarkable crisis, she also wrote mystic verses of astonishing beauty, in the Album of a Mr. B. He asserted that he had, received from another patient some important disclosures respecting the future, which he intends one day to publish. She likewise satisfactorily explained to him the origin of meteoric stones; namely, that iron and nickel are melted and volatilized in Vesuvius, and formed into meteoric stones in the upper regions. This patient declared, that a Jew could never become a good magnetiser; and that the presence of a Jew, or any one who does not love Christ, is insupportable to a magnetic seer. Dr. E. further assured me, that the power of the Bourbons to heal scrofula is an incontrovertible fact; and that this power was first communicated to them by the anointing at Rheims. To my enquiry whence the kings of England had received this power? he replied, that they never possessed it. I referred to the English name of the disease, and to the allusion of Shakespeare in *Macbeth*; but Dr.

E. attached no consequence to either, as the patient had distinctly affirmed, that the consecrated oil of Rheims was alone capable of conveying this power.

"To the honour of the human understanding, only a small number, I believe, of Wolfart's pupils carry their absurdity thus far. It must be confessed, however, that animal magnetism is a subject on which many sensible men may be misled; for it is one of the first peculiarities of this species of superstition, that, those who once yield to it, generally come at length to set no bounds to their credulity; and it is therefore possible, that many conceive the acquiring a confused notion of the seat of the patient's disease, the wishing for a cure, and the aiding that good wish by common family medicines, the best of all medical systems. Woe to the state, were its physicians ever to imagine, that they can effect cures solely by the *croyez et vous serez gué* system."

## ARTS AND SCIENCES.

### SOCIETY OF ARTS, &c.

The annual distribution of the rewards adjudged by this Society took place on Tuesday at the Argyle Rooms. These rooms were unfortunately too small for the occasion, and several hundreds of persons provided with tickets were disappointed of admission and turned from the doors. Such arrangements are extremely faulty, and should be amended hereafter. It is quite absurd to issue twice as many cards as can by possibility obtain entrance. We were little more lucky than those who did not get in at all; for early possession of the seats, which were besides, (awkwardly for a Society of Arts) contrived to stand sideways towards, instead of fronting, the Royal President (the Duke of Sussex) doomed us to so distant and inconvenient a station, that we could neither hear nor see what was done. We are sorry to have thus been deprived of the pleasure it always affords us to promulgate the advances and promote the interests of this useful and valuable body: should we be able to procure the notes of any intelligent friend on the subject, we shall present the result to our readers next week.

## LEARNED SOCIETIES.

### OXFORD, MAY 20.

On Wednesday last the prize compositions were adjudged as follows:—

#### CHANCELLOR'S PRIZES.

*Latin Essay*.—"Quoniam sacris Conciliis Amphitheatrum constituto, et quam vim in tuendis Gemis libertatibus, et in Populorum motibus studentibus habuerit."—James Shergold Broom, Student of Christ Church.

*English Essay*.—"On the influence of the Drama."—Alexander Macdonnell, M.A. Student of Christ Church.

*Latin Verse*.—"Newtoni Systema."—William Ralph Churton, some time of Lincoln College, and now of Queen's College, on Mr. Michell's foundation.

SIR ROGER NEWDIGATE'S PRIZE.

*English Verse.*—"The Temple of Diana at Ephesus."—William Ewart, Commouer of Christ Church.

CAMBRIDGE, May 19.

The following degrees were conferred on Wednesday last:—

**DOCTOR IN DIVINITY.**—The Rev. Thomas Canston, of St. John's College, Prebendary of Westminster. **MASTER OF ARTS.**—The Rev. Owen Darys, of St. John's College. **BACHELOR IN CIVIL LAW.**—The Rev. Furtenque Todd, of Jesus College. **BACHELOR OF ARTS.**—R. Beeline Radcliffe, T. H. Hall, R. Abercrombie Denton, Fellows of King's College. H. T. Burne, of Trinity College. Gostwick Prideaux, of Sidney College.

## FINE ARTS.

## BRITISH INSTITUTION.

**GALLERY OF PORTRAITS.**—This exhibition possesses greater interest for vision than for report; and we hardly know how to convey any adequate idea of it to our readers. As paintings, few of the pictures rank very high: there are some, however, of the very foremost character; and what the others want as specimens of excellence in that respect, they make up as likenesses of famous men, and as examples of what is curious in ancient art. There are 183 subjects, monarchs, statesmen, warriors, beauties, scholars, poets, painters,—names familiar to history, or dear to science. It is impossible to contemplate such an assemblage without being plunged deeply into feelings of no common cast;—without being transported in imagination to periods full of extraordinary events, recalling vividly the deeds and the destinies of persons for whom our passions have been intensely touched, and almost living in ages far distant from our own time. In an inferior degree the costumes of other periods attract our attention; and the means and manners of the artists whose works are thus brought together, afford an abundant field for speculation and inquiry. From specimens more antique than Holbein, we follow the chain adorned by Rubens and Vandyke, to the later productions of the last reign. Among the rest are More, Zuccherro, Dobson, Cooper, Riley, Lely, Kneller, Horath, Reynolds, Copley, Dance, Gainsborough, and Hoppner; and among their subjects, many of the most remarkable personages of the last three centuries.

His Majesty has graciously contributed a number of the portraits from the royal palaces, than which nothing could more enhance the value of the exhibition; for these are little known to the world, and very curious in themselves. A descriptive catalogue has been published at the Gallery; but if we, as we intend, return to this subject, we shall endeavour to entertain our readers with notices both of the painters and of their patrons, with which a good deal of research has enriched the common-place book of a very able contributor to the Literary Gazette.

MR. FAWKES' GALLERY.

Mr. Fawkes, with the same liberality which induced him last year to throw open his splendid mansion, and admit visitors to view his collection, of water colour paintings, (a collection, we may repeat, unequalled in the world), has this season again devoted every Thursday for several weeks to the same laudable purpose. We observe few alterations in the pictures, though there are some interesting additions; and we only notice the matter in order to make a public record of conduct well calculated to encourage the arts; to gratify foreigners as well as residents with a very pleasing recreation; and to display the matchless achievements of British artists in this peculiarly national style. On the 23d of June the privilege ends.

## ROYAL ACADEMY: PORTRAITS.

It will not be too much to say of the new President of the Royal Academy, that in him the elements of fine taste, and most of the essential qualities of art are so happily blended, that his name must shed a lustre on the arts of the country, and his works furnish examples both for instruction and imitation to the rising and future generation of artists. And while we say this, we are no less aware of the power and excellence of contemporary talent: we view the variety of styles as creating a charm, by which the pleasure of contemplating works of art is continued through an endless diversity of means, to arrive at the same end. Hence our portraits have the air and character of historical subjects; and it is impossible to pass over, either in this or any exhibition since the first establishment of the Royal Academy, the great talents which have brought this branch of the fine arts to its present state of unrivalled excellence.

No. 171. *The very fine whole length of Sir W. Grant, by Sir T. Lawrence*, has already had our remarks, from a private view; and now that it is publicly seen, bears out to the utmost our encomiums on its merits. In this portrait, the admirable lawyer is expressively contemplative, and full of dignified thought; and this excellence is rendered more striking from the same subject being far less happily treated in these respects, on the same walk, though by one of the chief ornaments of our native school.

No. 115. *Portrait of J. Abernethy.*—The same.

An admirable and speaking likeness. The expression is that of cunning combined with good humour. Shrewdness, we take it, would have been more just; but, Lavater's rules are not infallible. The subject and the execution, except in the drawing, alike deserve this picture to future celebrity.

No. 122. *Portrait of the Daughter of the Archduchess Charles of Austria.*—The same.

This avoidance of the mention of the father, is rather an odd sort of insinuation, which we suppose the able president, by this time so well acquainted with continental courts, can explain. Be the parentage as it may, the child is a little fat imperialist, tying a red shoe.

No. 32. *The Duke of Kent.*—Sir W. Beechey, R. A.

This we consider to be one of the best whole lengths ever exhibited by the artist. It is a good likeness, and a feeling picture. The air and attitude are deserving of much praise; and upon the whole, we reckon it one of the most valuable reminiscences of the deceased prince. Turnerelli's bust of his Royal Highness, which we mentioned when nearly completed, and which is now in the sculpture room below, furnishes an interesting opportunity for comparison with this portrait.

No. 1. *Portrait of W. Williams, Esq. Provincial Grand Master for Dorsetshire, &c.*—H. W. Pichersgill.

This is a clever work, and does credit to the artist. It is, perhaps, worthy of being observed, that though splendid and curious, we never saw a picture in masonic emblemata that was at all interesting.

No. 18. *Portrait of the Earl of Hopetoun.*—H. Becham, R. A.

A well-toned and excellent whole length, with a war horse, painted in a grand style. The possessor may be sorry if time lowers this canvas; for it is now (if our eye be not deceived by the surrounding exhibitionary glitter,) precisely what it ought to remain, in point of colour.

No. 31.—*Portrait of the Duke of Wellington.*—G. Hayter.

An able performance of the same kind; but wanting something of the heroic elevation of the preceding.

No. 51. *Portrait of Earl Grey.* 304. *Mr. Brougham.*—T. Phillips.

We couple these together, rather politically than according to numerical order in the full list (8) of Mr. Phillips' productions. As works of art they bear the impress of that master's hands—are finely coloured, clear, and natural. As likenesses, we certainly cannot compliment them; and whatever liberties criticism may allow on behalf of ladies—

— "Ever fair and young;—

we think that statesmen ought not to be beautified in this way.

No. 404. *A Lady.*—S. W. Reynolds, Jun.

This picture of a fair damsel, with a harp, wants what these of Mr. Phillips has got—

"A little flattery does well, sometimes."

No. 379. *Portrait of a Gentleman.*—T. Stewardson.

This portrait (one of six or eight by the same able artist) rises to our view (we say rises, because it is placed somewhat below the eye) with all the distinguishing marks of character and genius; which we can no more mistake than we can the skill of the artist in giving it a form. We may be led away as to the traits, by our knowledge of facts, but to the power of the painter every eye will bear witness; and the acknowledgment will be unanimous, that this performance confirms him high in the scale of merit. The head is vigorous, well painted, and full of intellect.

No. 270. *Portrait of D. Laing, Esq. F. A. S.*—S. Lane.

A picture of great merit, painted with vi.

gor and strength both of colouring and character. The choice of attitude is good, and the whole exhibits the artist's talents to great advantage.

## ORIGINAL POETRY.

[By Correspondents.]

ADDRESS TO LOVE.

Quem non mille fere, quem non Sthenelus  
hustus,  
Non potuit Juno vincere; vincit Amor.

OXFORD.

By the Author of *Lines on the Death of Sir John Moore*.

Sovereign Love! with insidious art,  
Thou approachest the unsuspecting heart,  
There to abide, in life's happy morn,  
Destroying its peace with remorseless scorn!

Bearing thy quiver, with wings for flight,  
A blind, naked, young elfe, of unequalled might,  
'Tis said thou art—so, the muse thee arrays—  
So the painter's skill, thy form portrays.

Yet how vain to say that Love is blind—  
When full'd he, the mark'd-out prize to find?  
How foolish to think, a wanton boy  
The heart's living-peace, had the power to destroy!

Then com'st thou, Love, in a warlike guise,  
Helmed with steel, to seize thy prize?  
Art thou seen amidst the battle's strife,  
On the blood-stain'd field where death is rife?

Or, ridest thou in the raging storm?  
Or, appear'st thou by night, in some fairy form,  
Thy vigils and influence alone to keep,  
While we lie echin'd in the arms of sleep?

Till thy silken net was thrown around me;  
Till thy Syren charms, as with spells had bound  
me;

Methought I scorn'd thee in life's happiest hour,  
And talk'd lightly of thee, and thy boasted power.

I saw thee glancing from full-dark eyes—  
I mark'd thy smile from dewy lips rise—  
Though death lay concealed, in the labyrinth's maze

Of locks, like the raven's wing,—yet would I gaze—

As heedless of danger I gaz'd, nor felt dread  
For 'twas thou, (sly deceiver) who seem'd most afraid;

As thou needest but dissemble well,  
To ensnare thy slaves with prevailing spell.

K. A. E. A.

*Lines addressed to His Grace the Duke of Marlborough, on his composition of the song entitled "You gave me a Rose."*

As flies so often brilliant seem,  
Reflected thro' the amber's gleam;  
Thus my poor words and verses shine,  
When circled by such notes as thine.

RICHARD RYAN.

## SKETCHES OF SOCIETY.

### THE HERMIT IN THE COUNTRY.

I am so partial to Scotland that I always peruse even the humblest tribute in its praise with great pleasure. A couple of letters on the subject having accidentally fallen into my hands, I accordingly lay them before my readers, that they may sympathize in the delights of a cockney, escaping from the noise and dust of Cheapside, to freedom and fresh air in the land of cakes and heather.

EDINBURGH.

*Letters from Mr. Peter Prig, traveller to the house of Clumph and Company, to his friend in London.*

"Dear John,—What an advantage travelling gives a man over the rest of his neighbours! A fellow who stands like a fixture behind his counter, has no chance of enlarging his mind, whilst the traveller who shakes off the London dust from his trowsers, divests himself of prejudice and the vernacular tongue together, and becomes not a citizen of London, but a citizen of the world; he is easily naturalized (not neutralized as Mrs. Clumph would call it) any where, because he is himself a child of nature, and takes his mother for his guide. I was never so much convinced of this, as after sojourning a while in the Caledonian metropolis, that Emporium of Science, the great northern mart, as we say. How you untravelled Cocknies do mistake the Scot! You think Sandy a heavy, uncouth, uncultivated creature: he is nothing of all this. Well then you consider the Aberdonian to be a sharp, tricky, shippy, selfish fellow: this is equally false. He may have a bit of these ingredients in his composition; but he is just as honest as ourselves,—much pleasanter and easier to deal with, but that's not to my purpose,—sink the shop!

"On my first arriving on the Scottish borders, I was brimful of prejudice, and was prepared to quiz Sandy, as much as I could; and to mark the decided inferiority betwixt him, and ourselves. How my heart and my reason smite me for such an unworthy thought! kindness and hospitality have taken their revenge of me, in this point. The first savage sound which assailed my ears, was, "come, Ben." For this familiarity I took the liberty of observing, that I did not stand nick names, that I was neither Ben nor Dick, and that I thought the address more free than welcome. The chambermaid stared; she was a pretty girl; and blushing modestly and enchantingly, she replied, "I hope, Sir, no offence; will you step in, to the fire?" "No, my dear," replied I, "for if I did, I should burn myself; and as it is, I am between two fires, a noble one of Scotch coal, and your bright eyes, which is the most ardent of the two." "What's your will," replied Jeannie (such was her name). "Why, love, I have not made my will, and I have no will of my own near such a sweet creature as you." "Tut," cried Jeannie, "I cannot be fashed wi' you; you speak over high English for me, but my mistress will be at you in a moment." What this meant

I knew not, but I was resigned. Her mistress came in—as lady-like a woman as ever I saw, and treated me with the most courtly respect and attention; I was half reconciled to Scotland already.

"At this moment a barbarous fellow entered with "come awa' lassie; fire my choppers weel, and be dune as quick as possible; where awa's the guid wife?" "What gibberish!" "I hope," thought I to myself, "that they went to tempt to fire my choppers; but I'm determined, for the fun of the thing, to have a complete Scottish dinner. I therefore ordered a sheep's head and a baggis, with the view of seeing as much of the country manners as I could, and I left the third dish to the landlady's good taste, calling for whiskey by way of beverage. Now, John, the sheep's head was singed, and had whole turnips around it; so that it looked like a black-amoors head garnished with snow balls; 'twas the most disgusting thing I ever saw. At this moment my epicureanism got the better of my politeness and knowledge of the world, and I cried, with an oath, "take away that monster of a thing!" "Oh! said a pert hussy, with coal black eyes, and auburn hair, (a very pretty girl too) "you dinna like sheep's heed, abins you'll hae enough o' that at hame!" "Devilish sharp, thought I—

"She now brought me some decentish barley broth, and a boiled fowl, which was tol' low, but overdone; some very fine fish, and a bottle of as good port as any in the Lord Mayor's cellar. This made me a little easy; and the active buxsome style of the lass quite struck my fancy. I had, however, only seen her face. Looking down I beheld her naked feet, which quite turned my stomach; but I was determined to be condescending, and to make myself agreeable to the natives; so smiling, "Bonny lassie," said I, (for I am an apt scholar, and had picked up that much Scotch already) "I think you have got your birth-day stockings on!" "An you hae gotten your ball stays," replied she, alluding to my Cumberland corset. "Oh! Oh!" thought I, "quizzing, which I had made the order of the day, went do here; so I changed my tone.

"I now came to the haggis. Genial! what a horror! It looked like a boiled bagpipe; and when I stuck my knife in it, out gushed such a flood of abomination, that I was almost suffocated. I dispensed with master baggis; but when I came to taste the whiskey, it took me so powerfully by the throat, that I thought it would have suffocated me again. I can compare it to nothing but blue blazes, and gunpowder, fire and smoke. I now drank a bottle of Bell's ale—nectar and ambrosia! finished my wine, and ordering my horse, paid a very moderate bill, and prepared for my departure.

"Well, said I to myself, first impressions are strong. I am now but a few miles in Scotland, and I find civil treatment, moderate charges, good wine, and pretty girls: a man may do well enough here. I took a private lodging at Edinburgh, and made myself comfortable. I lodge and board in the new town, which beats Bath hollow, at a widow McClarty's. I took her at first for a

- "Is he a God that ever flies the light? — Or, naked he, disgru'd in all untruth? If he be blind how hitteth he so right? How is he young that tam'd old Phœbus' youth?"

Sir Philip Sydney.

† Just published.

poor distressed woman; but she has a fine sideboard of plate, engraved with the arms of the McClarty family, as proudly as if she were a duchess; table linen enough to set up a draper's shop, and the most splendid Bible I ever saw in my life, which she is always quoting; besides a very decent library, and handsome furniture. She says the late lodgings for company's sake, being a lone woman, but that's all my eye. However she is an uncommonly worthy, good sort of person.

"At table, I expected to show off, for the party consisted of two ministers (as they call the parsons) and two young students, one of physic and the other of law; but I could scarcely get in a word edgewise. I began to flash a little about the state of Europe, when the elder minister, who might have been a minister of state for his knowledge, opened upon me, until I was quite dumb-founded. He had history at his finger's ends, and he knew more about the continent than I did about the counting-house, altho' a very uncouth shabby looking chap. The younger parson, too, would quote you all the British poets, and authors, with a facility that astonished me, but all in a broad accent, which proved that he had never crossed the borders. The law fellow seemed to want to talk nothing but Greek and Latin, mathematics, arts, and sciences; but the medical gentleman, an Irishman, was as gay and flighty as you could wish, and seeing how flustered I was, he took me under his wing to shew me life. We finished the evening together, and with this I will finish my letter. Edinburgh is a rare place for learning, as you shall hear another time. In the mean while I remain,

"Dear John, Yours very truly,

"PETER PRIG."

"P. S. The lace *takes* finely; *vous m'entendez*, as we say in French. Pray take care of my bull-bitch, and pay up my subscription to the club."

## THE DRAMA.

### DRURY LANE.

*Virginius*.—We write doubtfully touching this play, because we are not sure that it will survive to reap the benefit of our criticisms. It is a very feeble piece of work, and destitute of any one quality to recommend it. The language is not poetry—the incidents are not affecting—the manners are not Roman; altogether it is sadly *infra dig*. The author, a Mr. Barlow, we hear, has succeeded in parodying many passages of preceding dramatists; and his genius, far from refining and elevating what it borrowed from others, has invariably debased their standard, and deteriorated their currency. It is hardly worth while to notice any particular blemishes in such a production; but what will classical readers think of a story founded on events that occurred during the iron customs and ascendancy of Rome, the only tolerable scene in which depends on a moonlight *strategic* meeting between the Decemvir Appius and Miss Virginia, the daughter

of Virginius, the Centurion, but here represented as the Commander in Chief of the Roman legions, with Nobles, Senators, Consuls, Decemvirs, and all, quite obedient to his orders! What will readers of common sense think of the *patriot* Virginius, banning the soldiers for offering to march home because they were (only) starving to death; but ordering them to march when his own private affairs required their swords against the government! Perhaps this was meant for a sly hit at professed patriotism; if so, a tragedy is not the proper vehicle for political satire. What will the ladies think of the means taken to degrade the heroine, and of the scandalous author, instead of rendering her worthy of being the cause of a splendid revolution, making her the object of even her father's suspicions. This is surely a proof of a very bad taste, as well as of a lamentable want of judgment. It was impossible, with the materials afforded by the poet, for even Mr. Kean to produce any effect. (He tried fairly in one or two scenes to make hits; but though a man may strike hard with a sword or sledge hammer, it is out of his power to dent an audience with a bodkin or a bladder.) Mrs. West was as lachrymose as the bad dreams with which her part was impregnated could warrant, and indeed so far was she, or any of the performers, from getting rid of the frequent night-mare with which the author afflicted them, that we were often tempted to fancy that they were all dreaming together, bound by a somnulent spell, out of which lethargic state neither dagger, fistic, nor tyranny, could rouse them. Mr. Penley however held his head up like a man, in Julius, and so doubtless would Dentatus have done, who we dare say would have been the ablest character in the play, but he was murdered before it began. From the similarity of the invented characters in this play and that at Covent Garden, we presume that the frame-work has been more entirely copied than we before imagined. An energetic prologue, spoken by Mrs. Egerton, and a somewhat tedious lump of fun, in the epilogue way, by Oxberry and Knight, were the accessories to this dramatic tragedy.

An amusing Extravaganza, entitled Giovanni in London, originally performed at the Pavilion Theatre, has been successfully transported to this theatre. Madame Vestris, Miss Carew, and Harley, are its prominent supports; but the whole is whimsical and amusing. In these dull times one is glad to laugh at any thing; and pleased with any thing at which one can laugh.

### THEATRE FRANCAIS.

*Revue of Les Templiers*.—This representation attracted a numerous audience. In addition to the desire of witnessing the revival of the tragedy, public curiosity was excited by the new debut of Talma, who, for the first time, performed the part of the Grand Master, in which Saint-Price gained such high and deserved reputation.

It cannot be said that the new *Molay* was inferior to his predecessor. At least, it is certain, that in the third act, and particu-

larly in the invocation scene, Talma displayed such a degree of religious sensibility, as, perhaps, no other tragedian of the present day is capable of delineating. But considering the performance as a whole, St-Price more fully corresponded with the idea which is naturally formed of the Grand Master of the Knights Templars.

Saint-Price, besides his athletic form and sonorous voice, had an air of rude and phlegmatic frankness, which well accorded with the unpolished manners of the 14th century, and with the historical character of *Molay*. Talma, however, with fewer physical advantages, and a less profound study of detail, was infinitely more affecting. In him we admire the resignation and pious philosophy of the christian, and the firmness and heroic qualities of the warrior. In spite of their extreme difference, the two styles are equally good, at least in many respects; and it is easy to conceive that a third performer, and who might partake of both these styles, would be preferable to either Talma or Saint-Price.

## VARIETIES.

The Emperor of Austria has given orders for the building of a Temple at Vicenza, which is to be in every respect a copy of the celebrated temple of Theseus at Athens. The famous group of Theseus, by Canova, is to be placed in this temple.

A trial of Mr. Parke's invention for the consumption of smoke in steam engines, and other furnaces, has, we observe from the newspapers, been tried at Messrs. Barclay's Brewery, before several gentlemen of science, whose opinions were unanimously favourable to the experiment.

1200l. was collected at the Drury Lane Theatrical Fund Anniversary, on Saturday week.

A subterranean cemetery of very remote antiquity, was lately discovered by a farmer on the Carmichael estate, near Hyndford Bridge, between Douglas and Lanark. Several stone coffins have been found.

L'ABBE DENOIS.—The following particulars respecting this distinguished historian of Oriental Manners, &c. are extracted from the *Journal* of Mr. John Haids, a Missionary at Bellary, Mysore. "His principal residence is at his chapel in the Pettah, near Seringapatam. He regards the obstacles which oppose the progress of Christianity (the Roman Catholic religion) in his congregation, as insuperable; and looks on the Hindoos as rejected of God. The last 25 years of his life he has spent entirely among this people, of whom he has about 6,000, called Christians, under his charge in the Mysore. The Abbe is a venerable looking old man, with a long flowing beard. He has adopted most of the customs of the Hindoos, in respect to dress, diet, &c. His Canara congregation amounts to about 200 persons.

Mr. Pond and Dr. Young, Englishmen, and Professors Hausmann and Stroneweyer, Germans, have been elected members of the class of Natural Philosophy, by the Danish

Academy of Science: General Mudge, a member of the Mathematical Class.

**Precious Stones.**—A diamond said to be worth 20,000*l.* and consequently one of the largest in the world, was among the spoils of the Peishwa, and is now in the East India Company's treasury, to be sold for the benefit of the captors. It was brought to England by the ship York. A block of amethyst, or rather a mass of amethysts, has been sent from Brazil to Calcutta. This extraordinary specimen is four feet in circumference, and weighs 98 pounds. It is in its rough state, and consists of more than 50 irregular columns, smooth, transparent, purple and white, shooting up like crystals from a common matrix.

The Protestant Bible Society of Paris has published its first Annual Report.

A great number of authors, composers, actors, &c. connected with the Parisian Theatres, have presented a petition to the Minister of the Interior, requesting that they may be shut during the summer months, like the theatres of the rest of the world. They plead that the worst consequences to health ensue from visiting these crowded resorts in hot weather.

Moliere's *Tartuffe* has been translated into Swedish, and performed at Stockholm.

A German Journal asserts, that an artist at Cumberg, in Prussia, has constructed a watch which imitates the human voice, and answers questions in German and Polish; besides executing musical airs.

**Philosophic Girl.**—The Italian Journals mention that a young lady, only 13 years of age, named Maria Caterina (Gherardi, a native of Serola, has maintained in public a series of philosophic theses, in the Latin language.

**Perfect Horse.**—It has become a proverb, even among the most experienced horse-jockeys, that the best horse is never without some fault. The race has indeed derived some amelioration from its increase, but every endeavour to obtain perfection has only served to shew the impossibility of effecting that object.

A person residing at Ransville, about two leagues from Caen, who has been engaged all his life in breeding horses, pretends to have met with that which amateurs have so long sought for, namely, a horse perfect in every respect. This animal has already been visited by the inspectors of the French Government, and it is said that even the most fastidious connoisseurs have not been able to discover any blemish in him. He will no doubt excite great curiosity in the sporting world; if it be really declared perfect, it will deserve to be named the *Phoenix*. It is said that the breeder demands 60,000 francs for him; and a considerable premium in addition to this price.—(*French Journal*.)

## LITERARY NOTICES.

Mr. Mills, the author of the *History of the Crusades*, with which our review has shown how highly we were gratified, is, we hear, engaged in preparing for publication,

*Travels in Europe, during the Pontificate of Leo X.*; a work, though different in subject, similar in plan, to the Abbe Barthelme's *Travels of Anacharsis*.

Readers are always pleased, we know, to have a peep, *a priori*, into the preparations of the critics: the forthcoming Number of the Edinburgh Review, we are informed, will contain articles on the Life of Curran—Spence's Anecdotes—Restrictions on Foreign Commerce—History of Music—State and Prospects of Manufactures—Dispositions of England and America—Sanskrit and Greek—Sanskrit Poetry—Macculloch's Western Islands—Civil List and Retrenchment—Education of the Poor in France.

### GRECIAN LITERATURE.

*Athens, February 26, 1820.*—The society of "*Lovers of the Muses*," established here about five years ago, begins to flourish through the activity of its directors. Its chief object is the instruction of the Greek youth; and they have now a professor of ancient as well as of modern Greek language; and also of the French: they have besides engaged a professor of the Italian language, who will likewise give instructions in Geometry, Trigonometry, Geography, &c. These new instructors use all their diligence to bring this school to the same point of perfection as that at Chios. The school has a library, which has been already greatly enriched by the contributions of the members. Each of these contributes annually three Spanish Pistres for the salaries of the professors, the support of poor students, the expenses of the building, &c. The Athenians have sent four young Greeks to Italy and Germany to study, to enable them, some years hence, to fill professorships at home. The society of "*Lovers of the Muses*" consists at present of 300 members.

### LEIPZIG BOOK FAIR.

*Season, April 18th, 1820.*

From the catalogue of this fair, it appears that the number of booksellers who have either come in person, or sent their publications, is 354; 18 more than last fair: and the number of publications furnished by them, is 2907; 49 more than in the last year's Easter fair. On a cursory examination of this catalogue, we find it to contain in the various branches of knowledge, as follows:—

*Education and Instruction.*—Elementary works, 65; books for children and youth, 162.

*Philology in general*, 169; the German language, 25; and foreign languages, (including the books in those languages on different subjects brought to the fair) 272.

*Elements of Rhetoric*, &c., 24; single poems and collections, 68; Plays, 63; Novels, 148; Music, 11; the Arts of Design, 44; Archaeology, 22; Calligraphy, 19.

*Arithmetic*, 51; *Geometry*, 27; *Astronomy*, 14.

*Natural History in general*, 13; *Mineralogy and Mining*, 20.

*Botany, including Horticulture*, &c., 78; *Zoology*, 27.

*Natural Philosophy and Chemistry*, 43. *Medicine, Surgery, and Farriery*, 179.

*Rural and Domestic Economy*, 86.

*Mechanics*, &c., 37.

*Commerce*, 36.

*Geography, Topography*, &c. 131; *Maps*, 43; *Plans*, 14; *complete Atlases*, 8; *State Atlases*, and *complete Atlases*, 13.

*History, general and particular*, 115.

*Political Institutions*, and *Law*, 70.

*Political Economy and Administration*, 28.

*Legislation and Jurisprudence*, 81.

*Police*, 21.

*Military Sciences*, 42.

*Speculative Philosophy*, 28; *Ethics*, 30.

*Divinity*,—Catholic elementary works, 31; Protestant, 86; Protestant books of devotion, 60; Catholic, 70; Protestant Prayer Books, 56; Catholic, 20.

*Ecclesiastical Law*, 28; *Ecclesiastical History*, 31.

Works for and against the Jews, 18, among which are two Jewish books of Sermons in the German language.

*Bibliography*, 35.

Academical and other collections of writings on miscellaneous subjects, together with such as cannot be chased under any of the above head; 65; *Journals for entertainment*, &c., 40.

## METEOROLOGICAL JOURNAL.

MAY, 1820.

*Thursday*, 25.—Thermometer from 46 to 63. Barometer from 29.94 to 29.90.

Wind S.W. 2 and 4.—Cloudy and showery.

Rain fallen .5 of an inch.

*Friday*, 26.—Thermometer from 40 to 65.

Barometer from 29.89 to 29.93.

Wind S.W. 2.—Morning fair; the rest of the day cloudy with rain at times.

Rain fallen .125 of an inch.

*Saturday*, 27.—Thermometer from 49 to 60.

Barometer from 29.95 to 29.80.

Wind N. N. W. 1 and S. W. 4.—Sunshine and rain alternately.

Rain fallen .175 of an inch.

*Sunday*, 28.—Thermometer from 47 to 58.

Barometer from 29.78 to 29.68.

Wind S. W. 2.—Cloudy, and almost generally raining. A little sunshine at times.

Rain fallen .35 of an inch.

*Monday*, 29.—Thermometer from 43 to 56.

Barometer from 29.50 to 29.53.

Wind S. b. W. 1.—Generally fair, with rain at times. Several claps of thunder, about 11 A. M. and showers of hail in the afternoon.

Rain fallen .15 of an inch.

*Tuesday*, 30.—Thermometer from 42 to 61.

Barometer from 29.51 to 29.54.

Wind S. W. 3.—Clouds generally passing.

The upper part of a halo was formed about 7 A. M. with two parallel east and west of it; and about noon, the greater part of a halo.

Rain fallen .225 of an inch.

*Wednesday*, 31.—Thermometer from 43 to 60.

Barometer from 29.54 to 29.59.

Wind S. W. and W. 3.—Clouds generally passing; at times clear.

Edmonton, Middlesex. JOHN ADAMS.

*Erratum.* By an error of the press, the word *Africa* was printed instead of *Asia*, in line 8 from the bottom of the first Column, page 338 of our last Number.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

**MR. HAYDON'S PICTURE of "Christ's Entry into Jerusalem,"** is now open for Exhibition, at Bullock's Great Room, beguiling to the right, from the left, Admission is, Catalogue 6d.

### CENOTAPH to the MEMORY of her Royal

Highness the late PRINCESS CHARLOTTE.—As great an interest has been excited upon this subject, and as the final erection of it in some public spot must be yet a work of time, Mr. WYATT thinks that the EXHIBITION of the MONUMENTAL GROUP will be gratifying to the Public; he therefore begs to inform them, that it is NOW OPEN to their view, at 19, Henrietta Street, Cavendish Square.—Admission, One Shilling.

On Six Sheets, price 6s. 6d. or 7s. 10s. mounted, either on Binders or in a Case.

**A GEOLOGICAL MAP of ENGLAND,** Coloured, accompanied by a Memoir; to which is added, an Alphabetical Index to the Hills, and a List of the Hills arranged according to Counties. By G. B. GREENOUGH, Esq. F.R.S., F.L.S., President of the Geological Society. Published by Longman, Hurst, Rees, Orme, and Brown, Paternoster Row; and C. Smith, 172, Strand, London. The Memoir may be had separate, in Quarto, 1s. sewed.

#### Sunday Newspaper.

**THE BRITISH LUMINARY, and Weekly Intelligence.** Consisting of 24 Columns of closely Printed Matter, price Seven Pence, or 6d. per Quarter.

"This is not the Cause of Faction, or of Party, or of any Individual, but of the Common Interest of every Man in Britain."—*Junius.*

This Weekly Paper is conducted on the principles of *Liberty, Impartiality*, and presents an impartial Report of the Domestic Occurrences of the Week, the most important Foreign News; Proceedings in Parliament, and the Courts of Justice in the Metropolis and at the County Assizes; State Papers; Public Documents; Commercial, Agricultural, Civil, Military, Naval, and Philosophical Intelligence; Notices of Works of Science, Literature, and the Fine Arts; Transactions of the Universities, of Religious, Bible, Missionary, and all Public Societies; Memoirs of Eminent Persons; choice Poetry; Political Criticisms; Accounts of Public Amusements, Exhibitions, Discoveries, Inventions, and Patents; Poetry; Regiments; Prices of Stocks; State of the Markets; Lists of Births, Marriages, Deaths, &c. &c. &c. The steady extensive circulation of this paper renders it needless to expatiate on its utility. Suffice it to say, the Public will find in its contents general information, and that liberal inquiry which is connected with the Policy, Manners and History of their own and every Nation. Heads of Families, and those concerned with the education of youth, may safely confide in the British Luminary, as nothing of an offensive nature will pollute its columns. In short, the Proprietors are determined that no exertions or expense shall be spared to maintain the respectability of this publication. Subscribers, therefore, who preserve the numbers after their weekly use, will by binding them at the end of the year, possess a valuable Annual Register, and complete Epitome of the Times. The British Luminary is regularly received at the distance of upwards of 100 miles from London, every Sunday Morning; and it contains all the news of Saturday, in addition to that of the week, it is particularly calculated for the County, Scotland, Ireland, and all our Colonial Posses-

sions. Published by W. Chambers, One Bell Yard, Strand, where Orders and Communications for the Editors are requested to be addressed, post paid. Orders are likewise received by all Post-masters, Booksellers of the Roads, Booksellers, and Newsellers, in the United Kingdom.

New Works to be published in June, by Longman, Rees, Orme, and Brown, London.

**1. THE HISTORY of the REBELLION in 1745,** and 1746, containing the Causes of the Pretender's Defeat at Culloden, and a Variety of interesting Anecdotes hitherto unknown. By Chevalier Johnstone, Aide-de-Camp to Prince Edward Charles Stewart, and Lord George Murray. With an Account of his subsequent Adventures in Scotland, England, Holland, France, Russia, and America. The Manuscript of Chevalier Johnstone was originally deposited in the Scots College at Paris.

2. Letters written during a Tour through Normandy, Brittany, and other Parts of France, in 1818; including Local and Historical Descriptions, with Remarks on the Manners and Character of the People. By Mrs. Charles Nothard. With numerous Engravings, after Drawings by Charles Nothard, F.R.S.

3. *Bygone and the Real.* By a Travelling Member of the Royal Curate Society, extracted from his Journal. By Thomas Brown, the Younger, author of the "Fudge Family," "Twopenny Post Bag," &c.

4. The Reign of George the Third. To which is prefixed, a View of the progressive Improvement of England in Prosperity and Strength. By Robert Duguet, L.L.D.

5. *Author of the Life of Burke, &c.* Continued to the Death of the King. In six vols. 8vo. A new edition.

6. *Tales of the Heart.* By Mrs. Opp. 4 vols. 12mo.

7. *Transactions of the Literary Society of Bombay.* Vol. 2. In 4to. Illustrated with engravings.

8. *Historical Sketches of the South of India.* In an attempt to trace the History of Mysore. From the Origin of the Hindoo Government of that State, to the Extinction of the Mahomedan Dynasty in 1760; founded chiefly on authentic authorities, collected by the author while officiating for several years as Political Resident at the Court of Mysore. By Colonel Mark Wilks. In 3 vols. 8vo. Second Edition.

9. Letters from Mrs. Delany, Widow of Doctor Patrick Delany, to Mrs. Frances Hamilton, from the Year 1779, to the Year 1788, comprising many unpublished and interesting Anecdotes of their late Majesties and the Royal Family. Now first printed from the Original Manuscripts.

10. *Sir Francis Darrell; or, the Vortex.* A Novel. By R. C. Dallas, Esq. author of Percival, Aubrey, Morland, &c. In four volumes.

11. *Bibliographia Sacra; or, an Introduction to the Literary and Ecclesiastical History of the Sacred Scriptures, and the Translations of these into different Languages.* By the Rev. James Townley, author of Biblical Anecdotes. In 3 vols. 8vo, with Plates.

12. *The Poetical Works of William Wordsworth.* Esq. In 4 vols. fols. 4s. 6d.

13. *Principles of Education, Intellectual, Moral, and Physical.* By the Rev. Lat. Carpenter, L.L.D. In 1 vol. 8vo.

14. *Literary Hours.* By Nathan Drake, M.D. 4th edition. 3 vols. post 8vo.

15. *Essays and Sketches of Life and Character.* By a Gentleman who had left his Lodgings. Post 8vo.

16. *The Life of Wesley, and the Rise and Progress of Methodism.* By Robert Southey, Esq. Second Edition. In 2 vols. 8vo, with Portraits.

17. *The Village of Mariendort. A Romance.* By Miss Anna Maria Porter. 3 vols. 12mo.

18. *A Narrative of the Persecutions of the Protestants of the South of France, during the years 1684, 1685, and 1686.* By Mark Wilks. In 1 vol. 8vo, illustrated with a Chart of the Department of the Gard.

19. *The Natural History of Anta, by M. P. Huber, translated from the French, by J. R. Johnson, M.D. F.R.S., F.L.S. &c. &c.* 12mo.

20. *A Grammar of Botany, with Plates.* By Sir James E. Smith, &c. In 8vo.

21. *Accounts of Timbuctoo and Houssa, Territories in the Interior of Africa.* By El Hage Abd Salim Shabecine, a Native of Morocco, who personally visited and resided as a Merchant in those interesting Countries, with Notes, Critical and Explanatory. To which are added, Letters descriptive of various Journeys through

West and South Barbary, and across the Mountains of Atlas. By James Grey Jackson, Esq. 8vo.

22. *Tales of the Priory.* By Mrs. Holland. 4 vols. 12mo.

23. *Historical Account of Discoveries and Travels in Asia.* By Hugh Murray, F.R.S. &c. Author of Historical Account of Discoveries in Africa. In 3 vols. 8vo.

24. *A General History of the County of York.* By T. Dunham Whitaker, L.L.D. F.R.S. F.R.S. &c. Part III.

25. *Bibliotheca Britannica; or, a General Index to the Literature of Great Britain and Ireland, Ancient and Modern, with such foreign Works as have been translated into English, or printed in the British Libraries; including also a copious Selection from the Writings of the most celebrated Authors of all Ages and Nations.* By Robert Watt, M.D. In 4to. Part IV.

26. *A Picturesque Voyage round Great Britain; containing a Series of Views illustrative of the Character and prominent Features of the Coast.* By William Daniell, A.R.A.

27. *Volume IV, comprehending the Isles of Skye, Harris, and Lewis; the North-west and Northern Coast of Scotland; the Orkney; and the East Coast from Dunmaddy Head to Dundee.*

28. *Tales of Imagination.* By the author of "Bachelor and Married Man." 3 vols. 12mo.

29. *Annals of Oriental Literature.* To be published Quarterly. Part I.

The object of this Work is to afford the Student in Oriental Languages a ready opportunity, of gleaning and receiving such information as he must find it convenient to obtain, and may be willing to communicate.

30. *An Expurgated Series of Picturesque Views in Paris and its Environs. Consisting of Views on the Seine, the Original Drawings, Characteristic Scenery, &c. &c. from Original Drawings by Mr. Frederick Nash, and a Literary Department by Mr. John Scott, Author of "A Visit to Paris," and "Paris Restituted." Part 18th.*

31. *The Personal Narrative of M. De Humboldt's Travels to the Equatorial Regions of the New Continent; during the Years 1790-1804.* Translated by Helen Maria Williams, under the immediate inspection of the Author. Vol. V.

32. *Selections from the British Poets, with Biographical and Critical Prefaces.* By Dr. Aikin. In one large Volume of 812 pages Medium 8vo. price 18s. extra 10s.

The object of this Work, which is entirely new, is to comprise, within a single volume, a Chronological Series of our Classical Poets, from Ben Jonson to Keats, without mutilation or abridgment, with Biographical and Critical Notices of their authors.

*Engraved Woodcuts, by W. B. Cooke, handsomely printed.*

**VIEWS of HASTINGS and its Vicinity,** consisting of the most select Landscapes and Marine Scenery, displaying the grand character of this part of the Coast, from Drawings by J. M. T. CUNNINGHAM, Esq. with Historical and Scientific Descriptions. Part I. is now published. Super Royal folio, price 8s. 1s. 6d. 10s. India Paper Proofs, 3s. 10s. By a new arrangement, this elegant work will be completed in two Parts. The second will contain nine plates, including a Frontispiece of Hastings, from the Sea, which is engraving on a large scale, from an original drawing.

**OBELISK and TEMPLE of POMPEII.** Part II. Folio, designed by W. B. Cooke, from Drawings by Major Cockburn, printed uniform with Stuart's Athens, price 4s. 4s. 6d. 10s. 12s. Proof on India Paper, 12s. To be completed in four Parts. The two Parts already published contain Fifty Plates, of Views in Pompeii, in their actual existing State. A few valuable Drawings in colours of painted sites of rooms, and Mosaic Pavements, were lent to the work by the late Samuel Eysen, Esq. which are accurately coloured at a great expense. Part III. will contain a highly finished engraving of Mount Vesuvius, in a state of Eruption, from a powerful Drawing by J. M. W. Turner, R. A. forming a Frontispiece to Vol. I.

**VIEWS on the THAMES.** Five Parts are now published, containing upwards of Fifty Plates, from Drawings by De Wint, Owen, Havell, Stirling, and Roberts. The work will be completed in Six Parts. Quarto, 11s. 12s. large paper, 12s. 10s.; India Paper Proofs, 2s. 2s. each Part.

**SOUTHERN COAST of ENGLAND.** No. 10, 1st Part. Published by W. B. Cooke, 13, Judd Place East, New Road; Kidwell and Martin, New Bond Street; and J. and A. Arch, Cornhill.

No. 177.

SATURDAY, JUNE 10, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### BARRY CORNWALL'S NEW POEM.

MARCIAN COLONNA, with an early copy of which we have been favoured, will issue from the press next week.

Its author has within a very short period risen upon the poetical horizon, and attained a degree of fame, such as many bards of no mean talents have toiled for during life in vain. There seems to have been a unanimous consent in the critical world to place him, even on his first essay, among the crowned heads of modern poetry... (heaven send that all crowned heads were equally popular): and he, like other potentates, again comes travelling forth, preserving his well-known incognito title of *Barry Cornwall*. But though he affects this privacy, it is impossible that he should avoid the homage due to genius; and it gratifies us to be the foremost to lay a tribute before his throne. Nor will he, we trust, be so despotic as to require a slavish adherence... our allegiance must be that of Britons to a limited monarchy; and as poetic kings have no responsible ministers, we must be permitted to notice those points wherein we think themselves do wrong.

Thus understood, we proceed to *Marcian Colonna*.

*Marcian Colonna*, though very different in many essentials, reminds us powerfully of *Hamlet*. His mind is unsettled by various supernatural impressions, and severe usage from his parents. He loves, and is repelled—he feels the pressure of fate upon him, and has a sure presentiment that he never can be happy. Haunted by all the horrors of a morbid imagination, and, perhaps, tainted with a hereditary insanity, he is plunged into a convent in order that his elder brother may enjoy without division the nicely-portioned fortunes of his house. In his cell, *Marcian* alternately raves in despair, and is soothed by the vision of *Julia Vitelli*, whom he had seen in *Rome*. After the lapse of one time, the heir of *Colonna* dies, and his younger son is restored to the world. He also revisits Italy, the widow of a rural husband, *Orsini*, reported to have perished at sea. She is united to *Marcian*, from love redemptive from the gloom of his misery, and they are blessed in each other, till alas! the current of true love never did

VOL. IV:

run smooth;—*Orsini* returns, and *Marcian* and his bride fly their native land, she unconscious of the cause of their sudden departure. For a period they dwell on the shore in the humble disguise of fishers; but here they are discovered by a “slave” of *Orsini*. Again they fly, and take up their residence in a cave on the Apennines, near the convent where *Marcian* spent his early years. *Julia* at length learns the fatal truth that her first husband is alive—he cannot, dares not, live in love and sin, but takes poison from the hand of *Colonna*, and dies.

Such is the general outline of the story, from which we annex as many examples as our limits permit, and with as few remarks as possible, because we think they stand in need of no index to point attention to their beauties.

The first of the three parts, of which the poem consists, opens with an apostrophe to Italy, and contains a fine *coup d’œil* upon her poetic ornaments.

Yet first of all thy sons were they who wrote  
Thy silent language into tales of love  
And sailest forth the gentle forms that shine  
In thy own poets’ lary songs divine.  
Oh! long as lips shall smile or pitying tears  
Rain from the eyes of beauty,—long as fears  
Or doubts or hopes shall sear or soothe the heart,

Or flatteries softly fall on woman’s ears,  
Or witching words be spoke at twilight hours,  
Or tender songs be sung in orange bowers:  
Long as the stars, like ladies’ looks, by night  
Shall shine,—more constant and almost as bright.

So long, tho’ hidden in a foreign shroud,  
Shall Dante’s mighty spirit speak aloud;  
So long the lamp of fame on *Petrarch*’s urn;  
Shall, like the light of learning, duly burn;  
And he be loved,—with his hundred tales,  
As varying as the shadowy cloud that sails  
Upon the bosom of the April sky.  
And musical as when the waters run  
Lapping thro’ sylvan haunts deliciously,  
Nor may that gay rhapsodist who hath told  
Of knight, and damsel, and enchantment old,  
So well, be e’er forgot; nor he who sung  
Of *Salern*’s holy city, lost and won;  
The seer-like *Tasso*, who enamoured hung  
On *Leonora*’s beauty, and became  
Her martyr,—blasted by a mingled flame.

The author’s descriptive powers may be appreciated by his landscape of the mountain scenery, where the convent of *Laverna* stood—

There is a lofty spot,  
Visible amongst the mountains Apennine,  
Where once a hermit dwelt, not yet forgot  
He or his famous miracles divine;  
And there the Convent of *Laverna* stands  
In solitude, built up by saintly hands,  
And deemed a wonder in the elder time;  
(Chasms of the early world are yawning there,  
And rocks are seen, craggy and vast, and bare,

And many a dizzy precipice sublime,  
And caverns dark as Death, where the wild air  
Rushes from all the quarters of the sky:  
Above, in all his old regality,

The monarch eagle sits upon his throne,  
Or floats upon the desert winds, alone,  
There, belted ’round and ’round by forest-drear,  
Black pine, and giant beech, and oaks that rear  
Their brown diminished heads like shrubs between,

And guarded by a river that is seen but  
Flushing and wandering thro’ the dell below,  
*Laverna* stands.—It is a place of woe,  
And ’midst its cold dim aisles and cells of gloom,  
The pale *Franciscan* meditates his doom.

While *Marcian* is immersed with these, far different are the hours, in the palace of *Colonna*. *Revel* reigns, and at one of the splendid entertainments, *Julia*, the heroine, is thus introduced and painted.

On that same night of mirth *Vivell* came  
With his fair child, sole bedress of his name,—  
She came amidst the lovely and the proud,  
Fearless; and when she moved, the gallant  
crowd

Divided, as the obsequious vapours light  
Divide to let the queen-moon pass by night;  
Then looks of love were seen, and many a sigh  
Was wasted on the air, and some aloud  
Talked of the pangs they felt and swore to  
die.

She, like the solitary rose that springs  
In the first warmth of summer days, and flings  
A perfume the more sweet because alone—  
Just bursting into beauty, with a sigh  
Half girl’s half woman’s, smiled and then forgot  
Those gentle things to which she answered not.

She inquires for *Marcian*, and gathers his dark doom from the guilty looks of his brother—and

—She dwelt upon that night till pity grew  
Into a wilder passion, the sweet glow  
That linger’d in her eye ’ for pity’s sake,  
Was—(like an exhalation in the sun):  
Dried and absorbed by love. Oh! love en-  
take

What shape he pleases, and when once begun  
His fiery inroad in the soul, how vain  
The after-knowledge which his presence gives;  
We weep or rave, but still he lives and lives,  
Master and lord, ’midst pride and tears and  
pains.

We pass to the reception of *Marcian*, when recalled to his father’s mansion.

Then *Marcian* sought his home. A ghastly  
gloom

Hung o’er the pillars and the wrecks of *Rome*,  
And scarcely, as the clouds were swiftly driven  
In masses shrouding the blue face of heaven,  
Was seen, by treacherous glimpses, the pale  
moon.

Who looked abroad in fear, and vanished soon.  
The winds were loud amongst the ruins, where  
The wild weeds shook around their ragged hair,  
And sounds were heard, like sobb from some  
lone man,

And murmuring 'tween his banks the Tyber ran.  
In the Colonna palace there were tears  
Flowing from aged eyes that seldom wept;  
Their son was gone—the hope of many years  
Cold in his marble home for ever slept.

—The father met his child: with tremulous grasp

He pressed his hand, and he returned the clasp,  
And spoke assuring words—'that he was come  
'To soothe his grief and cheer his desolate home.'

And then he bade him quite forget the past.  
Thus hand in hand they sat awhile; at last  
A deep deep sob came bursting from the gloom  
That hid the far part of the palace room,  
And, after, all was silent as the grave.  
Colonna 'rose, and by the lamp that gave  
A feeble light, saw, like a shape of stone,  
His mother couching in the dusk, alone:  
Her hand was clenched, and her eye wandered wild

Like one who had lost and sought, (in vain,) a child;

And now and then a smile, but not a tear,  
'Told that she fancied still her darling near;  
And then she shook her head and crossed her arms

Over her breast, and turned her from the light,  
And seemed as tho' she muttered lowly words

To scare some doubtful phantom from her sight.  
He spoke to her in vain: her heart was filled  
With grief, and every passion else was stilled.  
Was buried,—lost. Just as the mighty rains  
Which, gathering, flood the valleys in the days  
Of Autumn, or as rivers when slow decays  
Sweep all things in their course, 'dill nought remains

Distinguishable,—earth, and roots, and grass,  
And stones, and casual things, a mingled mass,  
Driven onward by the waters, and o'erborne  
'Till but the stream is seen: So they who mourn  
Deeply, and they, 'tis said, who love the best  
In one wild mastering passion lose the rest.

The first meeting of the lovers, is very delightful, and we quote it also as explanatory of the poem.

And Julia saw the youth she loved again:  
But he was now the great Colonna's heir,  
And she whom he had left so young and fair,  
A few short years ago, was grown, with pain  
Of thoughts unuttered (a heart eating care),  
Pale as a statue. When he met her first  
He gazed and gasped as though his heart would burst.

Her figure came before him like a dream  
Revealed at morning, and a sunny gleam  
Broke in upon his soul and lit his eye  
With something of a tender prophecy.

And was she then the shape he had seen,  
By day and night,—she who had such strange power

Over the terrors of his wildest hour?  
And was it not a phantom that had been  
Wandering about him? Oh with what deep fear

He listened now, to mark if he could hear  
The voice that lulled him;—but she never spoke;

For in her heart her own young love awoke  
From its long slumber, and chained down her tongue,

And she sat mute before him: he, the while,  
Stood gazing on her melancholy smile,  
Till o'er his eyes a dizzy vapour hung  
And he rushed forth into the freshening air,  
Which kissed and played about his temples bare,

And he grew calm. Not unobserved he fled,  
For she who mourned him once as lost and dead,

Saw with a glance, as none but women see,  
His secret passion, and hence silently  
His sweetest rejoicing, 'till Vitelli asked  
'Wherefore her spirit fell,'—and then she tasked  
Her fancy for excuse wherewith to hide  
Her thoughts, and turn his curious gaze aside.

The second part commences with an invocation to love.

Oh power of Love, so fearful and so fair—  
Life of our life on earth, yet kin to care—  
Oh! thou day-dreaming spirit, who dost look  
Upon the future, as the charmed clock  
Of Fate were open'd to thine eyes alone—  
Thou who dost call, from moments stolen and gone

Into eternity, memorial things

To deck the days to come—thy revellings  
Were glorious and beyond all others: Thou  
Didst banquet upon beauty once; and now  
The ambrosial feast is ended!—Let it be  
Enough to say 'It was.'—Oh! upon me  
From thy o'ershadowing wings ethereal

Shake odorous airs, so may my senses all  
Be spell-bound to thy service, beautiful power,  
And on the breath of every coming hour  
Send me faint tidings of the things that were,

And aid me as I try gently to tell  
The story of that young Italian pair,  
Who lov'd so lucklessly, yet ah! so well.

The union and happiness of the youthful pair now occupy the foreground; but these are not perfect.

Once—only once—('twas in a lonely hour)

He felt the presence of his evil power  
Welching upon him, and he left his home  
In silence, amidst fresher scenes to roam.  
—'Twas said that he did wander far and wide  
O'er desert heaths, and on the Lætan plains  
Hared his host forehead to the falling rains,  
Which there bring death; and, with a heart allied

To gentle pleasures still, on the green hill's side

Would stretch his length upon the evening grass,

Shedding sweet tears to see the great sun pass  
Away like a dream of boyhood. Darkness then  
Grew his familiar, and he caverns then

(By the strange voice of silence lulled asleep,  
He oft would hide himself within its arms;  
Or gaze upon the eyes of Heaven, when

She stands illustrious with her midnight charms  
Revealed—all unobserved by moon or sun,  
Glow-tinted cloud, or airy rainbow won

From light and showers; and when storms were high

He listened to the Wind-God riding by  
The mountain passes, and there took his stand,  
Harkening his voice of triumph or command;

Or heard him thro' the piny forests rave,  
Ere he went murmuring to his prison cave.

And then unto the rocks of Tivoli

He went: Alas! for gone Antiquity—  
Its holy and mysterious temple where

The Sybil spread abroad her honny hair,  
And spoke her divine oracles. Her home  
Is crumbling into dust, and sheeted foam

Now sparkles where her whitened tresses hung;  
And where her voice, like Heav'n's, was freely sung

Unto the echoes, now fierce torrents flow,  
Filling with noise and spray the dell below.  
Not useless are ye yet, ye rocks and woods  
Of Tivoli, altho' long since have vanished

From your lost land its gorgeous palaces,  
And tho' the spirit of the place be banished  
The earth for ever—yet your silver floods  
Remain, (immortal music!) and the breeze  
Brings health and freshness to your wailing trees.

For weeks amongst the woods did Marcius rove

And wilds: At last, unto his widowed love  
He came again, while yet the fever stained  
His cheek and darkness on his brow remained.

This is, however, but a passing cloud—  
The dreadful storm appears in the shape of  
Orsini, whom Marcius encounters in one of  
his rambles. This event is exquisitely introduced.

Oh! full of anguishment, too deep to last,  
The bridal hours in happy beauty passed,  
(The feather-footed hours!—and hourly Time  
Smoothed his pale brow, and with a look un-  
like mine,

From out the stream of joy a measure quaffed,  
And young love shook his rosy wings and  
laughed.

Dance and Arcadian tale and sylvan song,  
While to these moments did of right belong,  
Went round and then returned; the morning Sun

Met brighter eyes than e'er he glanced upon,  
And evening saw them still the same, and night  
Looked from her starry throne on stars more bright.

The morn was given to tale, the noon to ease  
And musing beneath shade of branching trees;  
The night to slumber; but at evening gray,  
When the too fiery sun had passed away,  
Music was heard beneath the smiling moon,

Till midnight came, (it ever came too soon),  
And songs which lovers once were wont to sing  
Of knight forlorn and lady tripping;—

And flowers that lie upon the breast of May,  
Like gems, were plucked to fashion garlands gay.

And luxury green to deck the poet's head,  
For then the bard was loved and honoured.

We now leave the narrative, as condensed in  
our introductory notice; and passing by  
the admirable account of the storm \* which  
overtook Colonna and his love, when fleeing  
from Italy, hasten to lay before our readers,  
we think, the most beautiful passage that  
the author has yet written:—an apostrophe to  
Ocean—worthy of the highest name in the  
records of poetry.

O thou vast Ocean! Ever sounding Sea!  
Thou symbol of a dream immensity!

Thou thing that windest round the solid world  
Like a huge animal, which, downward bur'd  
From the black clouds, lies wetting and alone,  
Lashing and writhing till its strength be gone.

Thy voice is like the thunder, and thy sleep  
Is as a giant's slumber, loud and deep.

Thou speakest in the east and in the West  
At once, and on thy heavily laden breast  
Fleets come and go, and shapes that have no life

Or motion yet are moved and meet in strife.  
The earth hath nought of this; no chance nor change

Ruffles its surface, and no spirits dare  
Give answer to the tempest-waken air;  
But o'er its wastes the weakly tenants range

At will, and wound its bosom as they go;  
Ere the same, it hath no ebb, no flow;

This passage appeared in the Literary Gazette, No. 167,

But in their stated rounds the seasons come,  
And pass like visions to their viewless bowe,  
And come again, and vanish: the young Spring

Looks ever bright with leaves and blossoming,  
And Winter always winds his sullen horn,  
When the wild Autumn with a look forlorn  
Dies in his stormy manhood; and the skies  
Weep and flowers sicken when the Summer  
dies.

—Thou only, terrible Ocean, hast a power,  
A life, a voice, and in thy wrathful hour,  
When thou dost lift thine anger to the clouds,  
A fearful and magnificent beauty shrouds  
Thy broad green forehead. If thy waves be  
driven

Backwards and forwards by the shifting wind,  
How quickly dost thou thy great strength un-  
braid,

And stretch thine arms, and war at once with  
Heaven.

Thou trackless and immeasurable Main!

On thee thou couldst ever live again

To meet the land that writ it: line nor lead  
Hath ever fathomed thy profoundest deeps,  
Where haply the huge monster swells and  
sleeps,

King of his watery limit, who 'tis said  
Can move the mighty ocean into storm—  
Oh! wonderful thou art, great element:  
And fearful in thy spleenful humours bent,  
And lovely in repose: thy summer form  
Is beautiful, and when thy silver waves  
Make music in earth's dark and winding caves,  
I love to wander on thy pebbled beach,  
Marking the sunlight at the evening hour,  
And hearken to the thoughts thy waters teach—  
"Eternity, Eternity, and Power."

The catastrophe comes:—

—Hark! the timbers part  
And the sea-billows come, and they clasp  
His pale pale beauty, closer to his heart,  
The ship has struck. One kiss—the last—Love's  
own.

—They plunge into the waters and are gone.  
The vessel sinks,—'tis vanished, and the sea  
Rolls boiling o'er the wreck triumphantly,  
And shrieks are heard and cries, and then short  
groans,

Which the waves stifle quick, and doubtful  
tones

Like the faint moanings of the wind pass by,  
And horrid gurgling sounds rise up and die,  
And noises like the choking of man's breath—  
—But why prolong the tale—it is of death.

The state of the Colonna family is now po-  
etically described:—

The palace of his fathers, once so gay,  
Was mossed and green, and crumbling to de-  
cay:

The pillars yellowed in the marble halls,  
And thro' the ruined casements the wild rains  
Rushed with destroying wrath, and shapeless  
stains

Ran o'er, disfiguring all the painted walls.  
Few servants tended on their antient lord,  
And mirthful revel, banished from his board,  
Sought refuge with the humble. Song or sound  
Edged no more within the gallery's bound,  
But in a lonely tower a lamp at times  
Was seen, and starting thro' the silent air  
Few shrieks; as from a wretch whom many  
crimes

Had seized, and driven to life's last hold,—De-  
spair—

Friends passed, by one, and one, and one, away:  
His foes grew glad; his brother's children gay  
Cut dice for his domain.

The lovers, however, escape the sea.

—When the winds and thunder met  
In tumult, and around in many shapes  
Death hovering with his dart, Fate turned aside  
The arrows, laughing o'er the waters wide,  
Till the sea trembled. Ah! but who escapes—  
Who can escape from Fate? It frowned, and  
lune

Darker than Death itself, the foreheads o'er  
Of that sad pair, and when the billows flung  
Their limbs in scorn upon the foamy shore,  
Uprose the veering wind, and the next wave  
Scarcely touched the ringlet of Colonna's hair,  
Which, screaming black upon the strand, lay  
there

The image of his fortunes—Dark and wild,  
Neglected, torn,—with an unquiet grave  
Open beside him, there Colonna smiled,  
Or so it seemed, in death; but in his grasp  
Still held the lost and lifeless Julia.

There tempest-stricken—in each other's clasp,  
Beautiful on the sea-beat shore they lay:  
Around her body were his arms enwove,  
Her head upon his bosom, close as love.

We are warned by our space to the con-  
clusion. Julia is poisoned, and thus ends  
the tale.

He sat and watched her, as a nurse might do,  
And saw the dull sun steal across the blue,  
And saw, and felt her sweet forgiving smile,  
That as she died, parted her lips the while.  
Her hand? Its pulse was silent—her voice gone,  
But patience in her smile still faintly shone,  
And in her closing eyes a tenderness,  
That seemed as they would fain Colonna bless.

She died, and spoke no word; and still he  
sat

Beside her like an image. Death and Fate  
Had done what might be then: The morning

Rose upon him: on him?—his task was done.  
The murderer and the murdered—one as pale  
As marble shining white beneath the moon.

The other dark as storms, when the winds rail  
At the chafed sea,—but not to calm so soon—  
No bitterness, nor hate, nor dread was there;  
But love still clinging 'round a wild despair,  
A wintry aspect, and a troubled eye,  
Mourning o'er youth and beauty, born to die.

Dead was she, and her mouth had fallen low,  
But still he watched her with a steadfast brow;  
Unaltered as a rock he sat, while she  
Lay changed to clay, and perished'd. Drearily  
Came all the hues of death across her face;  
That look, so lovely once, had lost its grace,  
The eye its light, the cheek its colour, now.

—Oh! human beauty, what a dream art thou,  
That we should cast our life and hopes away,  
On thee,—and dost thou like a leaf decay,  
In Spring-tide as in Autumn?—Fair and frail,  
In bud or blossom, if a blight prevail.  
How ready art thou from the world to fly;  
And we who love thee so are left—to die.

Fairest of all the world, thy tale is told:  
Thy name is written on a record old,  
And I from out the legend now rehearse,  
Thy story, shaping it to softer verse.  
—And thou, the lost Colonna,—thou, whose  
brain

Was fever-struck with love and jealous pain,  
A wanderer wast thou lonely thro' the earth?  
Or didst thou trudge, clad in thy pride of birth,  
With high patrician step the streets of Rome?  
I know not; no one knew. A heavy gloom  
Wrapped thy last fortunes, luckless Marcon!  
—Some told in after times that he was found,  
Dying within the inquisition's bound;

Some said that he did roam, a wretched man,  
In pilgrimage along the Arabian sands,  
And some that he did dwell in the far lands  
Of vast America, with savage men,  
The chase his pastime, and his home a den.

What object is there now to know? what gain?  
He passed away, and never came again.  
He left his house, his friends, his titles, all,  
To stand, or live, or perish in their pride,  
And, seeking out some unknown country,—died.  
He died, and left no vain memorial  
Of him or of his deeds, for scorn or praise;  
No record for the proud Colonna race  
To blot or blazon, cherish or compare,  
His fate is lost: his name (like others,—air.

My tale hath reached its end: yet still there  
dwells

A superstition in those piny dells,  
Near to Laverna. For 'tis said, as seen  
Beside the cave where once Colonna lay,  
And shadows linger there at close of day,  
And dusky shapes amongst the forests green  
Pass off like vapours at the break of morn;  
And sometimes a faint figure, (with a star  
Crowning her forehead,) has been seen afar,  
To haunt the cliff and hang her head forlorn:  
And peasants still at the approach of night,  
Ere at distance, smitten that starry light,  
And dread 'the Lady of the Mountains' when  
She rises radiant from her haunted glen.  
The convent? still it stands: its pile is strong,  
And well it echoes back the tempest's song;  
And still the cave is there; but they, alone  
Who made it famous,—they are passed and  
gone.

Having finished our extracts from the  
principal poem (for the volume contains  
some dramatic scenes, and miscellaneous  
poesies for notice hereafter); we shall be very  
short in our closing remarks. The great  
popularity which attends this writer, is, we  
think, to be traced to a simplicity of manner  
peculiarly his own; to a fine feeling for the  
pathetic, with which his verse abounds; and  
to a taste and refinement of perception, which  
lends him to revel among the delicate luxu-  
ries of poesy. If we add, that there is some-  
times a little apparent affectation in these  
elegancies, it is but in verbal criticism, and  
not to the ideas or images, that we can ap-  
ply the charge. For example, we are of  
opinion that the verb to do, is too often  
employed; after a few repetitions of that  
form of construction, the recurrence of *did*  
becomes a mere expletive. A like obser-  
vation may be made on the superabundant  
use of parentheses, and of such expressions  
as "Twas said," &c. The phrase, "pro-  
gress'd," (p. 23) is one of American politics,  
not of English poetics. "Weuch" has been  
rendered *pleby* custom, but a low word for  
a young girl, however sanctioned by the  
olden bard; and the author seems too  
fond of "beauty" (we mean the *word*) with  
all its derivatives. Homer sleeps occa-  
sionally—the boat in which the lovers  
sail, is afterwards a barque and a ship; but  
these are mere specks on a very brilliant  
production. What the composition is, will  
be seen from our quotations: there are some  
rugged, and one or two prosaic lines, which  
infect the passages where they occur with an  
air of blank verse; but upon the whole, the  
style is eminently sweet, as the conceptions  
are truly poetical.

*Essays, and Sketches of Life and Character.* By a Gentleman who has left his Lodgings. 12mo. pp. 248.

There is no truth in this title page: the writer is too clever a person to need to leave his lodgings. We mean neither of the branches of this proposition in the invidious sense—we do not by “clever man” insinuate what the Recorder of the city of London insinuates, when, in passing sentence of transportation, he tells the culprit that he is too clever a man to stay in this country; and as to leaving his lodgings, our only notion of the author is, that though he has seen a great deal of the world, and consequently quitted many a temporary residence, he never did so clandestinely, without paying his rent, in the manner here pretended. In fact this is clearly an assumed character, and so inconsistent with the liberal and enlightened principles maintained in the work, that the mask drops off with the preface; and we become acquainted with a very correct, able, and intelligent essayist.

National manners, politics, dramatic criticism, the study of mankind, and lighter subjects, occupy this neat volume. In the treatment of these, we discover a mind excellently stored, the opinions of a temperate whig, and the views of a scholar and a gentleman. For our own parts, we should have been glad if more illustration had been assigned to general and literary topics, and less to political inquiries: the latter are indeed important enough to claim a full share of attention; but newspapers and pamphlets have so surfeited us with the eternal theme, that it has become,

As tedious as a twice told tale,  
Vexing the dull ear of a sleepy man.

What the author has done in this way, we must however admit he has done well; but in submitting him to the public tribunal, we shall, owing to the feeling just intimated, direct ourselves in preference to some of the other matter.

We commence, as in order bound, with the preface, which sketches the frame-work of the design, in a pleasant manner.

“About a year ago a gentleman, without a servant, took an apartment on the first floor of my house. He was, apparently, a young man; but his look was not diffident and unpractised, like that of most young men, but bold and decided, like the countenance of a lieutenant of hussars, who has served a campaign or two, and as piercing as that of an Old Bailey lawyer. He wore long black hair over his forehead, and used some words in his language, which I never saw any where but in the Bible and Common Prayer, and which, I suppose, are now out of use. He took two servants, and began to frequent the world. I observed he went to Almack’s, and the French play; was admitted into the Travellers’ club, wore stays, and used much starch in his neckcloth. Notwithstanding this, his life was not so regular as that of most young men of fashion. He did not always go out to dinner at a quarter before eight, nor always come home at five

in the morning, nor always get up at half-past two in the afternoon. I thought this extraordinary, because I had observed, that those who pretend to any fashion, and claim merit from their want of punctuality, are generally the most exact people possible to be always twenty minutes too late wherever they go.”

My lodger on the contrary, very often went out riding upon his return from a hall, and then came and dined by himself, or with my family, at four or five o’clock: nor was he of the usual placid, indifferent humour, that men of the world generally are. Sometimes a darkness would come over his face, and he would sit frowning at the chimney-piece in his own room for a fortnight together. Every now and then too he would go away for a few days to Dublin or to Edinburgh, without any apparent reason. But, on the 6th of February last, he set out from my house, about twelve at night, saying, he should return in a few days. Since that time I have heard nothing of him; and being in great want of money to pay my taxes, I went to search, to see if there were any thing I could sell for rent, of which I had not received one farthing. I found a few old clothes, a dozen pair of boots, and a large number of manuscripts: these were written in all kinds of languages, ancient and modern, more than I had ever heard of: some few were in English; and one called, “On the State of the Constitution,” is a totally different hand. I suspect it was written by the gentleman, for there was only one, who used sometimes to pay my lodger a visit. With these papers in my hand, I went off directly to Mr. Longman; and he has given me some hopes that I may recover a part of my rent by their means. Who the author may be, I do not pretend to say; or whether the last paper relates at all to himself: I leave that to the courteous reader; and I beg him to recollect, that I am not answerable for the opinions of a gentleman who has left his lodgings.

JOSEPH SKILLET.

*Sackville Street, May 24, 1820.*

The following paper is recommended as a specimen by its brevity.

#### FOREIGN TRAVEL.

Paris, 1815.

“The English and the French, after an absence of twenty years, have again met in the common intercourse of life, and are exchanging bows, ideas, and sentiments.

“I overheard, one day, a young Englishman entertaining a French lady with profligate principles, and profane jests: although she had often heard morality and religion attacked before, she was so scandalised by the coarseness of his conversation, that she,

“Our author’s definitions in this respect are not quite so decisive as those of a celebrated dandy, of which we have heard. Walking one day with a friend on the Mall, he was saluted by a fashionable looking person, to whom he bowed in return. “Who’s that?” enquired the friend. “I don’t know,” was the answer, “all I know is, he’s not a gentleman.” How do you know that? Why, I dined with the fellow the other day, and he was helped twice to fish, and wore a blue under-waistcoat!—he’s not a gentleman.”

at last, told him his language might suit the vicious society of London, but was too wicked for Paris: his companion, was, at the same time, telling an obscene story to a young lady who fell asleep in the middle of it;—these young men are not improved by travel.

“An English married lady, whom I knew, was remarkable for the plainness of her dress, the modesty of her manners, and the piety of her conduct. She went from Paris this year, with her head made into a stand for flowers, her ears never open but to flattery, and her mouth full of the pretty phrases, “a little flirtation,” “innocent behaviour,” “harmless dissipation,” “stupidity of married women in England,” “greater liberality in general society,” &c.—she is not improved by travel.

“I know a sensible English tradesman, who used to shut a Frenchman out of doors; and laughed at every body who did not speak English as correctly, and even as vulgarly as himself; he was so pleased with the kind reception he got in France, and the patient attention with which all his blunders were listened to, that he promises he will go and do likewise!—he is improved by his travels.

“A farmer of good sense, and good heart, travelled through France soon after the peace: he found that the people were neither sulky in their manner, nor full of hatred against the English, nor utterly abandoned to vice and folly, as he had been told; but on the contrary, civil, gay, and ingenious; say, he found tolerable farmers, and honest fathers of families: fewer papers than in England, and much good effected by the revolution; he imputed the old quarrels of his nation with theirs to the government, and recommends to the people to give each other the right hand of friendship:—this man is improved, and will improve others.

“Travellers from the Continent seldom stay long enough in England to understand the nature of her institutions, and sound the deep seas of her prosperity. The French think they have shown great discernment, as well as liberality, in establishing *Trial by Jury*. They do not seem to perceive that the goodness of the stuff depends on the material of which it is made, and that a jury must not only consist of twelve men, but of twelve honest men; otherwise it is only a shirt very well made with rotten thread. As long as the members of juries in France are liable to be gained, or awed by Government, the institution is good for nothing, and indeed rather pernicious.

“The Spaniards, in the same humour, borrowed from England the liberty of the press; but they forgot to provide for the liberty of the individual who was to print; and the consequence was, that any author who published against the reigning authority, was immediately seized and imprisoned. England, like a work of genius, deserves and requires a slow and frequent perusal to understand its beauties.

“Many an anomalous custom contains an important lesson, and many a paradoxical law is deduced from a profound and salutary observation.”

That the author has reaped much benefit from travel, his acute and sensible observations on national character prove. In an excellent essay in which Spanish, Italian, German, French, and English claims to precedence, are drawn with a skilful hand, we find the Frenchman, after dilating on the glories of the *grande nation*, its restaurateurs, and theatres, observe—

"You will affirm that these sensual, and marketable enjoyments destroy the taste for domestic happiness; but it is not so: no people are more attached than the French to their near relations; and England cannot easily produce a mother more attached than Madame de Sevigné. It is the same with all the domestic relations; and it is sufficient to go to the *cimetière* of Pere la Chaise, to be convinced how true the affection which the mothers, and sons, and sisters of France have for each other. How simple, and yet how tender the inscriptions upon the tombs! There the sister goes to renew the tender recollection of her sister, and a son to place a garland over the grave of his mother. With you, the dead are never mentioned, never visited, and, I believe, seldom remembered. With the kindest feelings to their relations, the French, it is true, do not think it inconsistent to mix the sociability of a larger circle; and they endeavour to be happy through the short period of existence allotted them: whilst the English lose half their lives in becoming acquainted with those who are jumbled into the same half-century as themselves."

We have quoted this passage, not so much for its peculiar applicability and merit, as for the purpose of illustrating it, by a copy of a few of the inscriptions referred to, with which we were struck, as the author seems to have been, on visiting the interesting cemetery of Pere la Chaise, and which we consequently transferred to our memorandum book. The following are a few of them.

*Written in pencil on the tomb of a girl aged 16.*

Adieu, doux charme de la vie,  
Plaisir d'aimer que j'éprouvais,  
Adieu, trop malheureuse ami,  
Qui me quitte, hélas! pour jamais.

A ma Théodore.

A notre bon père,  
Ses fils reconnaissants.

Oh ma fille chérie, tu m'es donc ravi! Je n'aurais que toi sur cette terre de douleur. Ah! pourquoi m'es-tu abandonnée? Chère enfant, il me reste plus à toi malheureuse mère, que les larmes et le desespoir.

Repose-toi en paix, ma bien aimée. Celeste! demain nous reviendrons te voir.

A peine cinq printemps vécut notre Pauline. C'était le gage heureux de l'homme le plus doux. Chacun aimait son air et sa grace enfantine— Ah! de notre bonheur le destin fut jaloux!

Le Malheur, l'Amour,  
La Reconnaissance,  
Au modèle de toutes les vertus,  
Delice,  
A son excellente Zéphirine.

Tu reposes, mon fils, et ta mère  
Est dans la douleur!

*On the monument of St. Jean d'Angely, who died on the day of his return to Paris from his exile.*

Français! de son dernier soupir  
Il a salué la patrie.  
Le même jour a vu finir  
Ses maux, son exil,  
Et sa vie.

The following description of a great ruling passion appears to us to be finely expressed.

"Ambition, instead of being always a bad passion, is one which has led to many of the enterprises most beneficial to mankind. A desire of distinction inspired a Sully and a Franklin, as well as a Richelieu and an Alberoni. The difference is, that this passion is subservient to the welfare of mankind in good and well regulated dispositions, whilst, in bad hearts; it tends only to the aggrandisement of the individual. A man of pure ambition will always sacrifice his own elevation to his principles, whilst he whose ambition is impure will always sacrifice his principles to his own elevation." And the same essay contains these just reflections. "Great merit is often placed in abstinence from sensual enjoyments. There are, undoubtedly, examples of men who give so exclusive attention to the preparation of luxuries for their own personal use, that they can hardly afford time for the duties which they owe to their God and to their neighbour: but for a person to say, that he must renounce the indulgence of the senses altogether, for fear of being entirely absorbed by it, is to confess a degree of physical appetite and a want of moral taste, which does but little honour to his temperance. Nor is there any sense in supposing that we are intended to derive all our pleasures from the mind. Our bodily constitution is so joined to the mental, that our pains are always communicated from the one to the other; and the Stoic himself could not be insensible to the attack of a cholera, or the amputation of a leg. Why, then, should we not take advantage of the dispensation of nature, which also gives a participation of pleasures? And ought we to lose any opportunity of partaking in the bounty, and being grateful for the providence of our Creator? The man who gives a feast is offended is none come to partake of it; may not the Supreme Being have somewhat of the same feeling to those who reject his gifts? But, say the well-meaning persons who disdain and despise the usual conduct of the world, is it not wicked to consume in luxuries what might afford subsistence for thousands of poor people? This argument, which might have had weight in times of ignorance, is indisputably disproved by the science of the present day. It is now evidently demonstrated, that the industry which is spent on manufactures of convenience and luxury supports the families of industrious labourers, whilst that which is indiscriminately given in charity too often tends to the increase of an idle and miserable population.

The result which I would enforce is,

that we should enjoy the conveniences of this life, without setting too great a price on them. Our occupation should always be to improve our own lives, and add to the happiness of our neighbours; but a pleasure which fairly offers itself, and which has no vice in it, should not, because it is a pleasure, be avoided."

A view of the state of society in London must conclude this notice.

"It may happen, that, although individuals may exist in a society, endowed with every power of entertaining and enlightening, yet the forms of society may be such that it is very difficult to obtain the full advantage of their superior qualities. This difficulty is the misfortune of London, where there are more men of cultivated understanding, of refined wit, and literary or political eminence, than in any metropolis of Europe. Yet it is so contrived, that there is little freedom, little intimacy, and little ease in London society. "To love some persons very much, and see often those that I love," says the old Duchess of Marlborough, "is the greatest happiness I can enjoy." But in London it is equally difficult to get to love any body very much, or to see often those that we have loved before. There are such numbers of acquaintances, such a succession of engagements, that the town resembles Vauxhall, where the dearest friends may walk round and round all night without ever meeting. If you see at dinner a person whose manners and conversation please you, you may wish in vain to become more intimate; for the chance is, that you will not meet so as to converse a second time for three months, when the dice-box of society, may, perhaps, turn up again the same numbers. "Not that it is to be inferred that you may not hardly see the same features again; it is possible that you may catch a glimpse of them on the other side of St. James' Street, or see them near to you at a crowded rout, without a possibility of approaching. Hence it is, that those who live in London are totally indifferent to one another; the waves follow so thick that any vacancy is immediately filled up, and the want is not perceived. At the same time the well-bred civility of modern times, and the example of some very popular people, have introduced a shaking of hands, a pretended warmth, a sham cordiality, into the manners of the cold and the warm alike—the dear friend, and the acquaintance of yesterday. Hence, we hear continually such conversations as the following:—'Ah! how d'y'e do? I am delighted to see you! How is Mrs. M.—?' 'She is very well, thank you.'—'Has she any more children?'—'Any more! I have only been married three months. I see you are talking of my former wife—she has been dead these three years.'—'Oh! My dear friend, how d'y'e do,—you have been out of town some time—where have you been—in Norfolk?'—'No, I have been two years in India.'—

"Thus, ignorant of one another's interest and occupations, the friendships of London contain nothing more tender than a visiting-card. Nor is it much better,—indeed it is

much worse,—if you renounce the world, and determine to live only with your relations and nearest connections: if you go to see them at one o'clock they are not up; at two the room is full of indifferent acquaintance, who can talk over the night before, and of course are sooner listened to than yourself; at three they are gone shopping; at four they are in the Park; at five and at six they are out; at seven they are dressing; at eight they are dining with two dozen friends; at nine and ten the same; at eleven they are dressing for the ball; and at twelve, when you are going to bed, they are gone into society for the evening. Thus you are left in solitude: you soon begin again to try the world—let us see what it produces.

"The first inconvenience of a London life, is the late hour of dinner. To pass the day *impudens*, and then to sit down to a great dinner at eight o'clock, is entirely against the first dictates of common sense and common stomachs. Some learned persons, indeed, endeavour to support this practice by precedent, and quote the Roman supper; but those suppers were at three o'clock in the afternoon, and ought to be a subject of contempt, instead of imitation, in Grosvenor Square. Women, however, are not so irrational as men, in London, and generally sit down to a substantial luncheon, at three or four: if men would do the same, the meal at eight might be lightened of many of its weighty dishes, and conversation would be no loser; for it is not to be concealed, that conversation suffers great interruption from the manner in which English dinners are managed: first the host and hostess (or her unfortunate co-adjutor) are employed during three parts of dinner, in doing the work of the servants, helping fish, or carving large pieces of venison to twenty hungry souls, to the total loss of the host's powers of amusement, and the entire disfigurement of the fair hostess's face. Much time is also lost by the attention every one is obliged to pay, in order to find out (which he can never do if he is short-sighted) what dishes are at the other end of the table; and if a guest wishes for a glass of wine, he must peep through the Apollos and Cupids of the *plafond*, in order to find some one to drink with him; otherwise he must wait till some one asks him, which will probably happen in succession, so that after having had no wine for half an hour, he will have to drink five glasses in five minutes. Convenience teaches that the best manner of enjoying society at dinner, is to leave every thing to servants that servants can do; so that you may have no farther trouble than to accept of the dishes that are offered to you, and to drink at your own time, of the wines which are handed round. An English dinner, on the contrary, seems to presume before-hand on the silence, dullness, and stupidity of the guests, and to have provided little interruptions, like the jerks which the chaplain gives to the archbishop, to prevent his going to sleep during sermon.

"Some time after dinner comes the time of going to a ball, or a rout; but this is sooner said than done: it often requires as

much time to go from St. James's Square to Cleveland Row, as to go from London to Hounslow. It would require volumes to describe the disappointment which occurs on arriving in the brilliant mob of a ball-room. Sometimes, as it has been before said, a friend is seen squeezed like yourself, at another end of the room, without a possibility of your communicating except by signs; and as the whole arrangement of the society is regulated by mechanical pressure, you may happen to be pushed against those to whom you do not wish to speak, whether bores, slight acquaintances, or determined enemies. Confined by the crowd, and stifled by the heat, and dazzled by the light, all powers of intellect are lost; wit loses its point, and sagacity its observation; indeed, the limbs are so crushed, and the tongue so parched, that, except particularly well-drest ladies, all are in the case of the traveller, Dr. Clarke, when he says in the plains of Syria, that some might blame him for not making moral reflections on the state of the country; but that he must own the heat quite deprived him of all power of thought.

"Hence it is, that the conversation you hear around you, is generally nothing more than 'Have you been here long?'—'Have you been at Mrs. Hottroom's?'—'Are you going to Lady Deathsqueeze's?' Hence, too, Madame de Stael said, very justly, to an Englishman, 'Dans vos ronds le corps fait plus de frais que l'esprit.' But even if there are persons of a constitution robust enough to talk, they yet do not dare to do so, as twenty heads are forced into the compass of one square foot; and even when, to your great delight, you see a person to whom you have much to say, and, by fair means or foul, elbows and toes, knees and shoulders, have got near them, they often dismiss you with shaking you by the hand, and saying, 'My dear Mr.—how do you do?' and then continue a conversation with a person whose ear is three inches nearer. At one o'clock, however, the crowd diminishes; and if you are not tired by the five or six hours of playing at company, which you have already had, you may be very comfortable for the rest of the evening."

There is a curious paper entitled the *Wandering Jew*, but too long for our miscellany; and we close our page with an observation on a celebrated comedy, which is probably new to most of our readers.

"The *School for Scandal*, which is, perhaps, the best of our comedies, contains imitations of no less than three of the comedies of Moliere. The design and the character of Joseph Surface are evidently taken from the *Tartuffe*, the scandal scene from the *Misantrope*, and the broker scene from the *Avare*."

*Journal of a Tour through part of the Snow Range of the Himala Mountains, and to the Sources of the Rivers Jumna and Ganges.* By James Baillie Fraser, Esq. London, 1820. Large 4to. pp. 548.

Of this copious and highly (we speak

without a pun) interesting work, which has just been published, we can hardly be expected, within so short a period, to afford more than a very cursory view.

The bare reading of the title page will, we think, be a strong recommendation. There is in human nature, an innate curiosity respecting the sources of rivers, not unminged with reverence. From the Nile and Niger, to the inmost streamlet of our native Isle, our minds are excited in no ordinary degree, whether by accounts of the exploration of their origin, or by personal visits to their nascent springs. How strongly then must the feelings be affected when the subject is so raised by all the accessories which can add to its novelty and awfulness; when the most remarkable regions of the earth, the cradle of one of the earliest religions of mankind, the ultimate abode of a mythology which still has credence among one tenth of the people of the earth,—when the mighty, celebrated, and sacred Jumna and Ganges, are traced to their snowy birth-place, for the first time, by a European footstep.

The Himala range of mountains is in every way worthy of attention; as now the last boundary between the British power in Asia and the jealous empire of China; as a phenomenon in the grand structure of our globe; as replete with extraordinary productions of nature, and as the ground on which remarkable variations in the great families of the human race meet and mingle. No notice from such a site can be otherwise than valuable; and though the author, in a very diffident preface, and frequently in the body of his work, laments his scientific deficiencies, we may say that, with a few exceptions as to manner, we have found him abounding in useful information, eminently instructive as a geographer and topographer, entertaining as a historian, and pleasing and, unassuming as a relator of facts, which in the course of a hitherto unexplored route came under his own observation.

Such is in our opinion a fair character of this volume; whence, passing over the details of the Nepal war, which has annihilated the Ghoorka tyranny in these parts for ever, and what relates to the lower districts, we shall for the present, extract only a few passages descriptive of the author's journey to Gungtore, near the source of the Bhagiruttee (the principal fount of the Ganges), in the centre of the range of the Himala, called Roodroo Himala.

In ascending to this stupendous altitude, Mr. Frazer and his party, experienced that difficulty of breathing, which is felt on reaching the height beyond the region of vegetation, and which, notwithstanding that circumstance, the natives very strangely attribute to the perfume of flowers! The author says,

It was ludicrous to see those who had laughed at others yielding, some to lassitude, and others to sickness, yet endeavouring to conceal it from the rest. I believe I held out longer than any one; yet after passing this gorge every few paces of ascent seemed an insuperable labour, and even in passing along the most level places my knees trembled under me, and at times even sickness of stomach was experienced. The symptoms it produced were various: some were affected with violent headache; others had severe pains in the chest, with oppression; others sickness at the stomach and vomiting; many were overcome with heaviness, and fell asleep even while walking along. But what proved the fact that all this was the effect of our great elevation, was, that as we lowered our situation, and reached the region of vegetation and wood, all these violent symptoms and pains gradually lessened and vanished. The appearance of the higher cliffs, however, both snowy and rocky, and the sensations of this day, proved most satisfactorily that it would be a very arduous undertaking, if not an impracticable one, to ascend even nearly to the tops of these loftiest hills. We could not have been within several thousand feet of even those peaks of snow which were tolerably near us.

The vegetable productions of this day's march are very various, and many of them new, and differing from those formerly met with. Two flowers particularly attracted attention. One was called *goo-gool*, and grew somewhat like the common flat thistle, with leaves radiating from a centre like a sun, in which centre grew a flower, on a level with the flat leaves, and much resembling the blossom of a pine-apple. This plant is held in much religious veneration. The other was a very curious one; a stalk covered with large and long leaves, somewhat like those of a primrose, ended in a cup like that of a tulip, but which appeared merely the continuation of those leaves closing, and forming the petals of a very noble flower, in the centre of which the stamens and pistil were seen. The leaves which compose this flower have a green tinge at their insertion like those on the stalk, but the middle and higher parts are black and yellow, as is the centre of the cup, but more vivid. It is called by the hill people *brimah counla*, because, as the guide informed us, it was like the rajah among the other flowers; the "sequitur," of which I vain searched for, particularly as I could get no translation of the component parts of this name. It has since been suggested to me that the name is *brimah counla*, the latter part of which (*counla*) means the flower of the lotus plant, from which Brimah was produced at the commencement of creation,

according to Hindoo mythology, and therefore of course a flower held in high esteem, which caused its being likened to a rajah among the flowers.

Various, rich, and lovely were the myriads of large and smaller blossoms which decked these wild scenes, and I much regret my inability to give their names and botanical descriptions. Many varieties of the primrose and polyanthus, many orchids, and others resembling our common meadow flowers, grew in profusion. The only other plant, however, that I shall notice, is one which was found on the very extreme verge of vegetation alone: like the *goo-gool* it was low, but not quite flat, perhaps about four inches high, somewhat resembling a thistle just blooming; but the leaves did not lie on the ground; they shrouded the blossom, which was enveloped in a thick covering like the web of a spider, which, spangled with dew, had a most singular appearance. The root was small, but firmly fixed in the ground: it displayed no colour but a brownish green. I could not obtain any name for this very curious mountain production. It seems to delight only in the close vicinity to the snow. During this day's march no living thing was seen except the monals, which flocked together, and which I suspected to be of a species somewhat different from that which is met with lower down. They sat on the gray stones like ptarmigans on the loftiest hills at home, and in the short brown moss and grass looked exactly like grouse. I shot only one young one, which was a little larger, but precisely like a young moorcock or blackgame, but could not succeed in killing any of the older birds.

The scenery of the upper parts, mentioned in the first of these quotations, is afterwards painted with a pencil which fills the mind with ideas that shrink the boldest landscape of Salvator into a wart as compared with Ossa.

It is not easy to describe the change of scene effected by this change of situation: not only is luxuriant foliage more rare, all rich and lively greens giving way to the dark brown of the fir, which spots the face of the rock, but even that rock is evidently more continually acted on by the severity of the storms. Instead of being covered with rich and varied hues, the effect of lichens and the smaller herbage, that usually clothe and variegate even a precipice, the rocks here are white, gray, red, or brown, the colour of their fracture, as if a constant violence was crumbling them to pieces. Their sharp and splintered pinnacles spire up above the general mass: their middle region and feet are scantily sprinkled with the sombre unvarying fir-tree; while the higher parts, retiring from the view, present little more than brown rock, except where a lofty mass of snow overtops them, and calls to our recollection how nearly and completely we are surrounded by it. No green smiling valleys yield their waters to the river: the white and foul torrents which swell its stream pour their troubled tribute through chasms cleft in the solid

rock, or are seen tumbling down its face, from the snow that gives them birth.

The whole scene casts a damp on the mind: an indefinite idea of desert solitude and helplessness steals over it: we are, as it were, shut out from the world, and feel our nothingness. Like the scenes they are placed among, the inhabitants of this village are wild in their appearance, and uncouth in their manners; but there is no essential difference between them and those with whom we have heretofore met. I met, indeed, with one or two who were peculiarly intelligent; but their language forms a considerable obstacle to taking advantage of their acuteness: it was still Hindoostanee, but so dignified by accent and dialect, and altered by new terminations and expletives, that it was difficult to understand the simplest sentences without an interpreter, or frequent repetitions. The Pandit was not only an intelligent man, but gave his information in the most intelligible language. Their dress is the same as that of the peasantry at Cursalee, black and gray blankets of coarse wool.

Just at the entrance to this village I found a true gooseberry-bush, a plant I had long looked for without success: it was to all appearance wild and neglected; but there was fruit nearly ripe on it, small and sour; and there could not be a shadow of doubt concerning the plant. Thus almost all the European garden fruits had now been recognized in these hills.

It is related that, about thirty-five years ago, a band of four or five hundred men from Bhurassoo, and the remote parts of Gurkhal, made an incursion through the hills into the Chinese country, with a view to plunder the cattle. I could obtain but few particulars, either relating to their route, or to the length of time they were absent; but they did effect their purpose, and brought back a good many sheep. This, if true, itself proves that there are passes, besides those which are well known and frequented, through these hills, which lead into the Chinese territories, and that, though difficult, it is yet practicable to bring even small animals by those routes.

There is an acknowledged, though small portion of that territory which approaches very near to this place, not more distant, it is said, than one day's journey; but it is a mere desert, an uninhabitable mass of rock, no village being within many days' march.

(To be continued.)

#### BROWN'S ANTIQUITIES OF THE JEW.

Having, in our last Number, quoted enough to indicate the style and nature of this publication, especially as applying to the manners of the Hebrew people, we shall only offer one extract more, on the treatment of the dying; and conclude with a singular passage on the most important of all subjects to a Christian reader, touching one of the greatest miracles at the death of our Saviour.

Visiting the sick was enjoined to be neither in the three morning, nor in the three evening hours, from motives of delicacy and convenience for the distressed, and when they went, they commonly said, "God pity you, and all the sick among the Israelites." If the person was dangerously ill, either the friends or some Rabbi discoursed with him on subjects suited to his situation; and if near death, they had a formula for the confession of sin, which is given by Buxtorff: for they considered a natural death as the expiation of all his sins; a doctrine which, although it might soothe the patient with a false hope, was yet of dangerous tendency to his eternal interests. At the approach of death, the person dying assembled his children round his bed and blessed them, well knowing that the heart was then susceptible, and that the instructions of a dying parent might be remembered when his body was mouldering in the grave. The patient then, if not formerly, made his will, bequeathing his property equitably among his children, and if he was rich, he gave legacies to the poor, for the endowment of schools, and for the erecting of synagogues. They had a strange custom of changing the name of a person before he died, the reason of which will be seen in the following prayer: "O God, take pity on N, and restore him to his former health; let him be called henceforth O; let him be glad in his new name, and let it be confirmed to him. Be pleased, we intreat thee, O God, that this change of name may abolish all the hard and evil decrees against him, and destroy the bad sentence. If death be decreed upon N (his former name), it is not decreed upon O (his present one). If an evil decree was made against N, lo, this hour, he is another man, a new creature, and, like a child, born to a good life and length of days." In the prospect of death, the patient was never left alone, that he might receive advice and every attendance; and when about to expire, the nearest relation, or dearest friend, closed his eyes, and kissed him. Hence Philo, when relating Jacob's complaints on the unexpected death of Joseph, makes him say, that "He will not have the comfort of closing his eyes, and giving him the last embrace."

**Treatment between the death and funeral.**—When the person had breathed his last, the nearest relations tore their upper garment from head to foot, but the spectators tore about a handbreadth in length on the left side, which was also a heathen practice. Immediately upon the decease, dismal cries were raised by the people in the house and their neighbours, who thronged in on hearing of the event; and at the death of persons in better condition, women were hired to howl, and sing doleful ditties, in which honourable mention was made of the age, beauty, strength, courage, virtues, and actions of the deceased, with the intention of increasing the sorrow of the afflicted relations; and minstrels were employed to accompany them with instruments of music. But what kinds of lamentations these were, will be best understood by the following extracts from Sir John Chardin's manuscript observations, as

quoted by Harmer: "I was lodged, in the year 1676, at Ispahán, in Persia, near the royal square. The mistress of the house next mine died at that time in the night. The moment she expired all the family, to the number of 25 or 30 people, set up such a furious cry, that I was quite startled. These cries continued a long time, and then ceased all at once. They began again at daybreak, as suddenly, and in concert. It is this suddenness which is so terrifying, together with a greater shrillness and loudness than one can easily imagine." In Barbary they term this screaming *scoullah wao*, because it consists in the repetition of that word.—But let us attend to their care of the corpse. The first thing done was to extend the body on a cloth, on the floor or table, with the face covered, and to wash it with a warm infusion of camomile flowers and dried roses. This was done for two reasons; to restore life if suspended, and to make the perfumes enter the pores more easily. Women were the persons formerly employed in this office, and hence the two Marys went to the sepulchre of our Lord, but afterwards it was thought more decorous to employ persons of the same sex. When the washing was completed it was laid on a table, all the vents shut up, and the body embalmed. This embalming was different according to the rank or vanity of the deceased. The most common way was to anoint the body with a solution of some odoriferous drugs, and wrap it in linen; but to persons of affluence, spices in great abundance were used. Thus Joseph of Arimathea and Nicodemus, because they were wealthy, and wished to do honour to Jesus, wrapped his body in a linen cloth, with a hundred pounds weight of myrrh and lign aloes, which was said to be the manner of the Jews to bury; not that they all employed so many spices, but thereby implying that they merely wrapped the body in spices, and did not embowel it. The two Marys, not knowing what was done by these worthy men, and never suspecting a resurrection, had also prepared spices and ointments. After the washing with water and embalming, the body was bound up in grave-clothes, and laid in an upper chamber. The shrouds were either simple or magnificent, according to circumstances, and sometimes they retained their ordinary clothes, or were buried in a shroud of their own preparing. But although embalming, by being wrapped in spices, was the usual way of the Jews to bury, it was not the only one, for they also embowelled, in the manner of the Egyptians, and the common way of doing of it was this: "The body was given to the embalmers, who first took out the brains and entrails, and washed them in palm wine, impregnated with strong assurgent drugs; after which they began to anoint the body with oil of cedar, myrrh, cinnamon, and cassia, and this lasted thirty days. They next put it into a solution of nitre for forty days longer, so that they allowed seventy days to complete the embalming; after which they wound it up in swathes of linen, besmeared with gum. Being then able to resist putrefaction, it was delivered to the relations, inclosed in a paper or

wooden figure, somewhat resembling a coffin, and laid in the catacomb or cave belonging to the family. Thevenot says, that "the mummy he examined had above a thousand ells of filleting about the body, besides what was wrapped about the head." The ancient Jewish method seems to resemble the modern eastern practice, however, rather than the ancient Egyptian, which, according to Dr. Perry, consists in wrapping up the body in two, three, or more different sorts of stuffs, according to the circumstances of the deceased, with spices intermixed.—

Those who were engaged in preparing the body for burial were considered ceremonially unclean for seven days; the first three more so than the remaining four, and on the last of the first three days they were sprinkled with water, in which were some of the ashes of the red heifer. According to Sir John Chardin, however, the Persians carry matters farther after the death of their kings, for they displace (mazouli) the physicians and astrologers; the first for not having driven away death, and the second for not having predicted it; and he very ingeniously conjectures that Daniel had been displaced, or mazouli, on the death of Nebuchadnezzar, which was the reason why he was unknown to Belshazzar the son, but well known to the queen his mother, who had seen him frequently, and knew his worth in the days of Nebuchadnezzar, her husband.—From the time that the corpse was shrouded, and taken to an upper chamber, it lay upon a bed till the time of burial, and was either in greater or less state, according to circumstances. If poor, it lay upon a plain bed, in an open coffin or bier; but if rich, on a magnificent bed, and in a magnificent coffin, open to the inspection of all who chose to visit it.

#### At the funeral—

When come to the sepulchre, they said, "Blessed be God, who formed thee, fed thee, preserved thee, and has taken away thy life. O dead! He knows the number of thy members, and shall one day restore thy life. Blessed be he who takes away life and restores it." They then placed the coffin on the ground, walked round it seven times, repeated a prayer, and sometimes an oration, recounting his virtues; the relations threw a handful of earth upon the bier, and in places where burial was used after the present manner of inhumation, they filled up the grave, consigning the dust of their relation to the dust of death. Coffins were not in general use in Judea, nor are they general even at present in the East. They were very ancient, indeed, in Egypt among the great, and were made of sycamore wood, or of a kind of pasteboard, formed by folding and gluing cloth together a number of times, which were curiously plastered, and then painted with hieroglyphics. But in Judea they seem to have been contented with wrapping the body closely in spices, and carrying it to the grave, like the widow of Nain's son, in a bier, from whence it was taken to be laid in the sepulchre; or, if poor, it was tumbled into the grave, and the bier brought back for

further use. Hence a coffin to Joseph was looked upon as an honour.—Before leaving the churchyard, the modern Jews each pluck up three handfuls of grass, and throwing it behind them say, "They shall flourish like the grass of the earth." They also, in some places, throw dust on their heads, and say, "We shall follow thee as the order of nature shall require." At a burial none saluted each other, and when they retired, then began the standings and sittings, as they were called, by which the company comforted the relations. The number of persons which composed the minivan in this duty was ten; but it might be as many more as pleased. The common number consisted of all the company, and the custom was, at each sitting and standing, for the relations to sit, and the company to stand round them, and weep aloud. Between the grave and the house were seven of these sittings and standings, and they might not be nearer each other than what could contain four cabs of seed, which was fixed to be thirty-three cubits and two hand-breadths broad, by fifty cubits long, or, as others explain it, the distance between them was regulated by circumstances, but the space allowed them to stand on was of that extent, that they might not be interrupted by the persons who passed.

The entertainment of the company invited to the funeral did not precede, but follow the solemnity. Among the heathen it was over or around the grave, but the Jews had it at home. This entertainment was commonly liberal: they drank two cups of wine before it, five while eating, and three after; at least they had the offer of so many. But as this implied greater abundance than was in the power of many to give, the want was supplied by the liberality of their neighbours, both as a mark of sympathy, and in the expectation that they would return the compliment when themselves should be visited with a similar affliction.

The passage to which we have above alluded relates to the eclipse at the crucifixion of Jesus Christ.

This darkness was not confined to Judea, for we read of a heathen philosopher, in a distant land, who on seeing it, and knowing that it could not be occasioned by an eclipse, exclaimed, "Either the God of nature suffers, or the frame of the world is dissolving." I shall conclude the article with an extract from the *Tracts* of Mr. James Fergusson, well known for his popular writings on various branches of Natural Philosophy. "I find by calculation," says he, "that the only passover full moon, which fell on a Friday from the twentieth year after our Saviour's birth to the fortieth, was in the 4764th year of the Julian period, which was the thirty-third year of his age, reckoning from the beginning of the year next after that of his birth, according to the vulgar era; and the said passover full moon was on the third day of April. Phegon informs us, that in the 2024 Olympiad, or 4764th year of the Julian period, there was an eclipse the same as this mentioned here, which could be no other than this; for an ordinary one never totally

hides the sun from any one part of the earth above four minutes. Besides, it must have been miraculous, because no eclipse ever happens at full moon, it being at that time in the opposite side of the heavens." One is pleased to hear the sentiments of a person so well qualified to judge.

We finish as we began, with recommending this book as a sensible, useful, and sound compilation, well calculated to please the grave and inform the general reader.

#### *Prince Hoare's Memoirs of Granville Sharp, Esq.*

This volume has been published since our last Number appeared, and we continue the extracts there begun. "Among his (Mr. Sharp's) MSS. is one thus inscribed, 'A letter by G. S. to the Author of a Tract on Prophecy, entitled, *Application of a Prophecy in the eleventh Chapter of Daniel to the French War.*' To this superscription is added, in the hand writing of Mr. Sharp, the following notice, which discloses a circumstance, probably little known, and of no common stamp in the annals of the political world. 'The anonymous writer, to whom this letter was addressed by G. S., as an *unknown Author*, very soon afterwards acknowledged the receipt of it, as well as his full approbation of the contents. That author was the *late very worthy and learned Spencer Perceval, Esq.* at that time his Majesty's Solicitor-General, but afterwards Chancellor of the Exchequer. During all the time of his last high and important office of Prime Minister, he steadily maintained a just and proper sense of the anti-Christian principles of the papal apostacy, and regularly, to the day of his death, opposed the false and mistaken benevolence of the inconsiderate advocates for what they call *Catholic Emancipation.*'"

Some additional, though less important, memoranda, taken from these manuscript Notes, for which no place in the narrative obviously-presented itself, are proper to be here added, as contributing to the display of his opinions and affections, and of his constant and various actions.

"1786. May 26. Met Dr. B., who talked of Dr. Johnson in the highest terms. When I replied, that I thought he was apt to build arguments on false foundations, and contrary to natural rights, he said, 'Dr. Johnson thinks, that the *garrulosity* of the people about their rights did infinite harm, and is injurious to good government and morality.' Thus the quondam professed advocate for popular rights and liberty has swallowed the perverted notions of the *prisoners*, and indiscriminately adopted his groundless sophistry, in favour of passive obedience, and, in his own words, *garrulosity.*'"

"1786. January 10. Mr. Strasburg, a Jew, read the two texts on Jeremiah exactly like myself.

"11th. Called on Mr. Shiph, priest of the Portuguese synagogue.

"12th. On Mr. Moses, priest of the Dutch synagogue.

"16th. Read to Mr. Shiph, the priest of the Portuguese synagogue, the answer to the queries which he gave me.

"1793. July 16. Attended at Guildhall, and was bound to prosecute the young man and boy who picked my pocket on the 11th. Jocelyn, the constable, swore to the fact. I only swore to my property, and that I had lost my handkerchief.—(The trial about the 31 of September.)

"June 28th. Called on Mr. King, the American Ambassador, to enforce the necessity of *frank-pledge* in America.

"1798. May 18. Society for Propagation of the Gospel: spoke to the Archbishop about schools at Sierra Leone.

"September 3. Colonel Tatcham called about his new work of embanking fens, &c. Sat the whole morning, from half-past eleven to three o'clock, in searching etymology of words for him.

"1804. December 8. The Bishop of St. Asaph called upon me, and has consented to form a compendium of my rules for the Hebrew Syntax."

"1806. October 8. Wrote to the Bishop of St. David's about forming a compendium of Hebrew Grammar and Syntax, which the Bishop of St. Asaph (Howley) had undertaken, of whose death I was informed last night.

"1813. Jan. 14. The whole morning with Mr. Way, at my chambers, talking on religious subjects.

We have not left ourselves room to speak of Mr. S.'s private life. It was as amiable as his public life was admirable. We select a few descriptive passages.

"After the last meeting of the *Protestant Union* in 1813, Mr. Sharp's efforts were few. He had for some months experienced a failure of quick recollection, wholly unusual to his ready and methodized intellect. At the meetings of the African Institution, he rarely took any share in the discussions; and, though he was welcomed with a respect approaching to veneration, the advantages, which his powerful mind had so long continued to afford, were no more to be gained from his presence. At those of the Bible Society, though he did not wholly forbear to express his sentiments, his arguments were vague; his reason wandered from its aim; and regret and silence were all that was left to his hearers, when he ceased to speak. He seemed, however, less aware than his friends, of the rapid change that was taking place, and he persevered in a strict attendance on the public meetings of both establishments. These exertions were contemplated by his anxious family with a dread which the affections of our nature prompt on such occasions. They entreated him to desist; but in vain: he could not consent to yield a post which he thought it his duty to maintain. One effort, at length, which had nearly proved fatal to him, turned the scale, and compelled him to submission."

"The term which bounds mortality now rose to Granville's view. But, although formed, by the fixed habits of a pious mind,

to a submissive acknowledgment of the dispensations of Providence, and a cheerful resignation to the Divine will, he beheld the approach of death not wholly without emotion. The ardent prosecution of his religious studies had gradually led him to indulge a persuasion, which many of sainted memory have felt, that the epoch foretold in Scripture, when the reign of holy men shall be established on the earth, was on the eve of its commencement. He conceived that it might even precede the natural period of his own earthly existence. The encouragement of this favourite idea had tended incessantly to exempt him from the apprehensions of a time, when the consciousness of Being was to be suspended under the hand of death. That expectation was now shaken—in *what degree* shaken, or how far the soothing image might yet have continued to impress his soul with belief, during the remaining portion of his existence here, is known only to that All-seeing Mind, to whom the hearts of men are open, and who, amidst the darkness of decline and death, is to the righteous an everlasting light and glory\*.

"The distress, which the approaching loss of this excellent man brought on a house of which he was now the sole male representative, needs not be described. He was attended with the most faithful care and tenderness; and the even, although rapid, decay of life within him, allowed almost to its last hour the melancholy pleasure of viewing him still forming a part of the small domestic circle, at the once happy mansion of Fulham. On the day preceding his death, he breakfasted as usual with the family. His weakness was much increased; and he was several times obliged to lie down on his bed during the course of the afternoon. He appeared often to labour for breath. Night, and partial repose, came on. In the morning, his countenance was changed—in colour only;—in expression, it remained unaltered. About four o'clock in the afternoon he fell into a tranquil slumber, in which, without a struggle or a sigh, he breathed his last. His decease was a

"\*An anecdote of an extraordinary nature is related of Mr. Sharp on the above-mentioned point. From an opinion which he had adopted, of the striking resemblance of many actual circumstances of his own time to those which, in the scriptural prophecies, are believed to announce the happy state of the good on earth, he had encouraged in his mind a belief that the desired period was speedily approaching, and once, in the fervour of his hopes, declared its probable arrival in the coming spring. Being then in company with several ministers of the Gospel, he was asked by one of them if he did not speak of these things *foolishly*. 'Not at all,' was his reply, 'but as a positive truth.' Mr. H—, a Baptist preacher, exclaimed, 'What would we give, Mr. Sharp, for such a faith as yours!'

"† Some circumstances, just now communicated by a near relation, are too interesting to be wholly omitted.

"During the further decline of his strength, he frequently entered the room where the family were assembled, and, taking a seat near to them, continued—sometimes for hours—to look steadily on them, appearing pleased with be-

gratual (and, to those who watched around him, an imperceptible) decline into a total rest. He only ceased from his mortal state;—and who shall presume to judge, if the prepossession of his pure and holy feelings was not in that moment accomplished? He ceased from life, when that life could no longer be powerfully exerted to combat the pride, to promote the virtue, and enlarge the happiness, of his fellow-creatures. May it not be pardonable to think, that Providence had allotted to a creature of so pure a spirit the entire development and use of his high faculties in this his station, and that their exhaustion was the signal of his departure? The talent, which had been entrusted to him, was faithfully disbursed, and he returned to the bosom of the Giver.

"He expired on the 6th July, 1813.

*Erratum.* In our last the date of James Sharp's letter p. 353, col. 3, should have been 1775 not 1755.

## ORIGINAL CORRESPONDENCE.

*Extract of a Letter from the Cape of Good Hope.—Cape Town, October 24, 1819.*—On the 4th September, the first stone of a new Exchange was laid with great ceremony. His Excellency the Governor, who laid the foundation, and all the superior civil and military authorities were present, and also a great crowd of spectators of all classes. On the 5th August a market was held for the first time with a savage nation, the Bricquas, who are of a much darker colour than the Hottentots. It took place at Kook Fontein, lasted from the 5th to the 10th, and ended to the satisfaction of both parties. The Bricquas sent a deputation to the Governor to thank him for this mark of his favour, and the value of the business transacted is estimated at fifteen thousand rix dollars. The savages amounted to about a hundred and twenty persons, besides five and twenty carriages, and about fifty teams of oxen. The English, on their side, brought with them, besides manufactured goods, tobacco, fruits, brandy, &c.

"We have a theatre here; at which was lately acted a piece called *Montoni*, or the *Castle of Udolpho*. The dresses and decorations were very superb, and the performances deserved great praise. The play was in the Dutch language. We are in expectation of a tragedy, called *Diego*, or the *Spanish Beggar*. There are ballets with every representation."

ing in their company, but without uttering a word.

"When on his death-bed, his two widowed sisters were his constant attendants. To the last he continued frequently to look at the family portraits, which hung round the room, with the most earnest and affecting expression, as if tracing the resemblances, and then naming them one by one—'My dear Father,' 'My good Mother,' 'My dear brother William.' These affectionate ideas seemed to occupy his mind to the latest moment."

## ARTS AND SCIENCES.

### METEORIC PHENOMENON.

In the night of the 11th of May some fishermen, who were engaged in the Shad fishery, at Neuenhof, near Coblenz, observed a very remarkable phenomenon. At midnight a light appeared over the firmament so brilliant, that the whole horizon seemed to be on fire: when this blaze had continued for some minutes, it drew together to a point, formed itself into a ball about the size of a grenade, which had a tail or train about an ell in length; the ball then darted with incredible velocity, and with very loud crackling and hissing, in nearly a horizontal position, but rather verging upwards, towards Andernach, and vanished in the mountains. They now heard, for about ten minutes, a crackling and thundering from the mountains, which at last slowly died away. The sky was again clear, and the stars shone bright as before the phenomenon.

A letter from Palermo says, that the Academy of that city had sent some persons to Mount Etna, who affirm that, while they stood on the crater of that volcano, they heard from it the thundering of the late eruption of Mount Vesuvius; which gives room to conjecture that these two volcanoes have some subterraneous communication with each other.

### NOTICE AND WARNING TO MARINERS.

The naval board at Amsterdam has just published the following extract from the Journal of the Ship *Sanarano*, Capt. Jan Scholtys, on a voyage from the Cape of Good Hope to Batavia.

*Aug. 4. 1818.*

At noon the south latitude as observed by six instruments was  $36^{\circ} 43'$ , on longitude by calculation  $52^{\circ} 41'$  E. of Greenwich; longitude by the chronometer  $51^{\circ} 4'$ . Toward 1<sup>h</sup> 3<sup>m</sup> P. M. we discovered to the S. E. by E. something rising above the surface of the sea, and as it appeared to us when viewed through the telescope to be a rock, we steered towards it, and found when we had approached within half a league, that it was really a very considerable one inhabited by a number of birds of different kinds. On the east, as well as on the west side, it had a reef; the direction of E. N. E. and W. S. W., of which that on the east side was a little under water, extended about half a league from the rock to the E. N. E. and caused very little surf; and the more so, as we had very fine weather and little wind. That on the W. S. W. side stretches about half a league into the sea, rises above the surface in two or three small pointed rocks, and has a great surface.

This rock, or sand-bank (*droogte*), is marked in the English chart of the Indian Ocean by J. W. Nouë, in 1814, in latitude  $36^{\circ} 55'$  and longitude  $52^{\circ}$  east of Greenwich, and there called "Atlantes Shoal, doubtful." The mean of our estimated longitude and that of the chronometer is  $51^{\circ} 52'$  east of Greenwich, and according to Dutch calcula-

tion, 08° 37' east of the Peak of Teneriffe, which is very nearly the same, and thus differs only 12' in latitude and 8' in longitude, from Atlantis Shoal. As one of our boats had been washed away by a heavy sea, and we could not have hoisted out the other without great trouble and loss of time, we were unable to approach the sand-bank to bring away any production, stones or the like as a proof of its existence, as it is indicated in the English chart as doubtful; but we are convinced of its existence, and have named it Scholly's Rock, in honor of him who was properly the first discoverer. We have all signed this account, which we are ready to certify on oath, if required.

[Then follow the signatures.]

## LEARNED SOCIETIES.

Calcutta, 7th Sept. 1819.

At a meeting of the Asiatic Society, at which the Marquis of Hastings presided, 5th Sept. last, among other papers—A letter was read from Dr. Wallich, transmitting descriptions of several plants, by Dr. Govan, Superintendent of the Botanical Gardens at Saharanpore, to which additional remarks are appended by Dr. Wallich. In the observation on the *Aconite*, called by the natives *Berkh*, or *Beez*, it is said that the idea of its effluvia affecting the air, so as to produce deleterious effects upon those exposed to it, is very prevalent among the inhabitants of Bissapore and Gurhwal. Dr. Govan having been himself, as well as all those who accompanied him, repeatedly exposed both during the day and night to its influence, without having ever experienced any inconvenience, he is inclined to attribute this belief to the circumstance of the plants always occurring at very high elevations, where, we are informed by the highest authority, great inconveniences, similar to those believed to be produced by it, are often felt, viz. giddiness, fainting, somnolency, and difficult respiration; the latter of which symptoms has been usually ascribed to rarefaction of the air, and said to occur when the body remained perfectly at rest. The plant occupies the highest situation in the forest belt investing the sides of the Himalaya, Dr. Govan never having met with it much below where the barometer stood at 19 inches. With regard to his own personal experience of the effects above mentioned, and that of the people who accompanied him in crossing the Himalaya by the Role or Panning Pass in Bissapore, where the barometer stood at 17 inches,—after passing the night, at what he conceived the upper limit of perpetual snow, he can assert that no other inconvenience or difficult respiration was felt, than what was the necessary result of the exertion in ascending, and which ceased whenever the body remained at rest.\* On one occasion a degree of sickness and giddiness was experienced, with anxiety of respiration, not

during the exertion of ascending, and several of the servants would willingly have remained behind to sleep for a short time on the snow; but here the plant was not to be found for many miles, and as the situation was much inferior in elevation to that above mentioned (the barometer having only sunk to 19 in.) Dr. Govan could not help attributing the sensations experienced to the exertion of walking more than ankle deep among snow for nearly six hours, during which the feet were benumbed, and the head exposed to the very powerful action of the rays of the sun. This was in crossing Manjee-ke-khanda, between the Tunes and Tinnontri, in the beginning of October, 1818. *Aconite* is imported into the plains, and sold at the rate of one rupee the seer. It is used in chronic rheumatism, by the native practitioners.

## FINE ARTS.

### BRITISH INSTITUTION.

This Exhibition augments our respect for the judicious zeal which the Directors of the British Institution have manifested for the promotion of their magnificent object, from the commencement of their plans; and we are the more ready to pay them this tribute, being aware of the difficulties that attend the collecting together, and selecting such continued stores of pictures, for the gratification of the public. We feel assured, that the good and the wise will applaud their exertions, which must ultimately produce that general diffusion of taste, so much desired, and so essential to the growth of genius, and the perfection of art. Had such a body of noble and distinguished patrons as that which constitutes the British Institution, appeared half a century ago, in support of the enlarged views of our late sovereign in his regard for the Fine Arts, what might not British genius have achieved ere this? Then had Proctor not died neglected, nor Wilson wanted bread; nor would that genuine child of nature, Gainsborough, have been compelled to quit the sylvan haunts, where he delighted to exercise his rare talent, to ply his reluctant pencil in the study of portraiture.

But happily, we live in "better days," when modern art, as a marketable commodity, commands a higher price\* than the works of ages past. When native talent is sought, to meet its highest desert,—when the pictures of Ward, Turner, Calcraft, Wilkie, Collins, Mulready, Birt, and many other

\* This is a gratifying fact. The experience of the last three years has abundantly proved that the pictures of the Old Masters, excepting where they are of the highest merit—unequivocally so, are sold by comparative superficial measurement, at a fourth, or even a tenth of the sum awarded for the works of native artists.

The elegant pen of the worthy author of *RHYMES ON ART* has mainly contributed to this happy change; and we congratulate him on the beneficial influence, his generous exertions for the profession of which he is so distinguished a member, has wrought on public taste.

distinguished artists, whose pencils, employed in the delightful pursuits of their own imagination, find patrons that do honor to the age that has produced the talent they cherish;—when the sister art, Poetry, too, no longer pining in obscurity, smiling steps forth in native grace, and hand in hand with Painting, is invited to partake of the substantial consideration of the world:—This then is the epoch, the "consummation so devoutly wished," when the first ranks of the country munificently condescend to do the kind offices of agents for the concerns of taste, and devote their time and fortune to promote the interests of genius.

We are gratified to observe, the first portrait that heads this catalogue of British worthies, is that of our late sovereign.—For to his majesty must be ascribed this felicitous change in the affairs of taste; as no sovereign since the time of that unfortunate king whose love of *vergi* induced Vandyke, and other illustrious painters to sojourn in England, has done so much for the Arts.

What we owe to our late king, may now be expressed without the apprehension of censure on the score of flattery. He, nobly superior to religious or political prejudices, disdaining the idle speculations of cold philosophy, determined to extend his fatherly protection to all his deserving subjects; nor feared, that to encourage those pursuits that give the last finish to man in an age of improvement, would weaken the energies of the manufacturer or the commercialist, or lessen the martial spirit of the rising generation, or in any way curb the enterprising souls of Britons. His wisdom, superior to the notions of the worldly wise, foresaw that the cultivation of genius in all the elegant pursuits that become the moral man, was not incompatible with national glory. Hence, architecture, painting, poetry, music, and all the arts and sciences, may, talent in all the ramifications of polite study, have most flourished whilst commerce increased beyond example; whilst our great naval and military achievements have astonished mankind; and when religion and virtue, under the banners of this king of BLESSED MEMORY, had "fought the Good Fight," and restored peace and reason to a disturbed world!

These general reflections are meant to preface anecdotal and biographical notices of this interesting gallery, in our next; and which may form a sort of sequel to the excellent historical catalogue of the Institution.

### ROYAL ACADEMY.

No. 123. *View in the Vale of Chamouny, &c.* No. 150. *An Evening View, with Mont Blanc in the distance, &c.*—Sir G. Beaumont, Bart. II.

The knowledge and taste displayed by Sir Geo. Beaumont, as well as by several others of our amateur artists, are widely different from those acquisitions which suffice for the theoretical prattle of the connoisseur; and display in fact the thorough practice of the regular professor, arriving at the same degree of excellence by the same arduous means. The view in the Vale of Chamouny is a variety in the studies of Sir G. Beaumont;

\* May not the properties attributed to the Ups-tree, be accounted for on grounds equally natural and rational?

those which have principally met our eye from his pencil, have been compositions in which the localities of nature were always preserved, along with the union of other qualities of art, such as breadth, firmness of pencil, and harmony of colouring. The first of the views before us partakes of these qualities in an eminent degree; and there is superadded the singular and abstract effect of the scene, in which the contrast of warm and cold objects is brought to harmonize by the most skillful management.

In the Evening View, No. 150, we imagine Sir G. Beaumont has kept Wilson in his eye. It is a sketch of great promise, and we hope to see it realized on a more ample scale at a future period.

No. 361. *The Castle of Chillon, on the Lake of Geneva.*—Rev. W. H. Carr. H.

This appears to us an effort of a picture of Claude Lorraine, brought to bear upon a local view. This is an excellent mode of practice when not carried on too exclusively. The performance does great credit to the taste and skill of this gentleman. A little more firmness and decision of pencil might, we think, further assist his powers.

No. 315. *Study of Beech Trees in Knoll Park.*—H. Howard, R. A.

The painter of landscape was sometimes in the habit of recurring to the pencil of the historical painter for the introduction of his figures; but it seldom happens that the painter of portrait, or of history, has occasion to call in other powers than his own. The back grounds of both the one and the other necessitate this general practice; and we need only instance this Study as an example of the skill with which these varieties of art are managed. The effect, as well as the colouring, is well suited to the scene, in which character and simplicity equally prevail.

No. 338. *Portrait of a Lady preparing for a Masked Ball, attired in the Costume of Charles the First.*—J. Green.

This picture, both from its costume and arrangement, has the air of an interesting subject. It is painted with great care and skill, is rich and harmonious in its colouring, and creates great interest from its design and management.

No. 345. *A celebrated Horse, the property of — Wilson, Esq.*—A. Cooper, R. A. Elect.

More truth and simplicity, both of execution and design, were never, we think, produced; in this the charm of the work consists, and its power will be readily felt and acknowledged by all who see it.

No. 539. *The West Porch of the Cathedral Church at Remen, Normandy.*—H. Edridge.

This, and other edifices of a like kind in France, have been given with great accuracy and spirit by the pencil of Mr. Edridge, and add greatly to the stock of Gothic architecture with which this country has enriched the portfolio of the antiquary, and of the lovers of art.

No. 543. *Portrait of the Earl of Duchan.*—J. J. Managrace.

This, and 272, (Mrs. Elliot Drake) by the same artist, are very clever specimens of portraiture, though both unfortunately hung

so high as to disable the eye from distinguishing all their merits. The Earl of Buchanan's is an uncommon head, and seems to belong to a family of genius. The likeness of the Eskines is strong, and the lineaments those of intellect and intelligence.

**ASTIQUE ACADEMY.**—In this inconvenient and crowded room, where many pictures are hung and few are seen, and in which miniatures, drawings, and paintings in oil, all huddled together, solicit our regard; our notice has been attracted by specimens in each department highly deserving of attention.

The enamels by H. Bone, are in his usual style of ease and finish, exhibiting at once the varied characters of the different schools, and ensuring to posterity their lasting and unalterable record, by means of enamel painting; of which hazardous and tedious process it is but justice to say, that the improvement was first begun, and persevered in, till it reached the high and perfect state which it has now attained, by this eminent artist. See 466, &c.

No. 478. *Imitation of Three Ben Beliecos.*—F. Ferriere.

These beautiful imitations are only less perfect than those of bronze, exhibited last year by this artist; which, like the certain famous in ancient art, imposed alike upon the ignorant and the skilful. In the present objects of our notice, the failure seems to be in the quality of substance; they appear to have been studied from wax rather than from ivory.

No. 846. *Portrait of Master Hutcheson Atkinson.*—S. P. Denning.

This nearly circular miniature is no less conspicuous as a centre, than for its excellence as a work of art. Simplicity, strength, and character, mark its claims to applause.

No. 464. *Portrait of the Earl of Belfast.*—I. S. Rochard.

The character of this artist's pencil very much resembles that of the late Mr. Shelly, clear, fresh, and transparent.

No. 481. *Portrait of Mrs. Scott Moncrief.*—Edinburgh.—W. Nicholson.

One of the clearest and most tasteful whole length drawings we ever remember to have seen, and combines as much talent as the largest scale of painting exhibits.

#### WRECK OF THE MEDUSA.

The great picture, by Mr. Jerricault, 24 f. by 18, which represents the raft from the Medusa, on the 13th day after it was so inhumanly cut adrift, and its burthen of 150 souls reduced to 15, will be publicly exhibited at the Egyptian Hall, on Monday. From a previous view of it, we are enabled to intimate that it is one of the finest specimens of French Art, which have been seen in this country. For character, anatomy, nature, and interest, it is eminently conspicuous; and the fault of colour, with a few partial exceptions to the general merit, alone reminds us of the school to which the performance belongs. The drawing is admirable, and a group of the wretched party throwing out the signal to the vessel which finally rescued them, belongs to the highest

class of painting. Indeed the whole pertains to the true epic; and the tragical subject loses none of its force under the hands of the artist. As present we have no space for detail. The Morgue seems to have been studied as far as it could be without exciting horror;—the head of a father is perhaps the worst, a dead negro the best thing, in the production.

*Extract of a Letter from Rome, dated 28th April, 1820.*—"You ask whether the establishment of an English Academy at Rome, would be beneficial to the arts of our country?—Certainly it would.—Those who urge as an argument on the contrary, the improved state of English art, and our actual wealth in pictures and statues, either have not had an opportunity of observing, or have not duly appreciated, the peculiar advantages offered to the student in Italy. England, it is true, is rich in examples of art; but how and where are they to be consulted? The liberality of some few of the nobility, in opening their collections occasionally for public inspection, is highly honorable to them, and will tend, undoubtedly, to the diffusion of general taste; but I doubt whether much advantage can result to the practical student, from observations made in the heat and throng of a fashionable assembly. The Royal Academy is miserably encumbered with petty regulations\*. The annual Exhibition at the British Institution supplies a wider range of facilities:—perhaps all that can be expected from an establishment whose materials are not fixed and permanent, as a national property. In Rome, on the contrary, the student may turn at all times to the galleries, without the chance of delay, disappointment, or interruption; and we all know the advantages of working from the immediate impression of great examples; but, setting aside the consideration of convenience, the intrinsic quality of the great works in high art, which are to be seen in Rome, and no where else, decides at once the question of that precedence which is due to her. It was here that the present school of France was formed; and the historic style of that school is undoubtedly superior to ours.—I do not allude to individual powers; for I am convinced that the Painters of England would leave, not only those of France, but those of all Europe, at an immeasurable distance, in the historic class of art, as they have already done in every other, if to their strong feeling for nature and executive force, were superadded that severity of conception and correctness of design which would result from the discipline of the Roman Academy. I have just seen a picture which is a full comment on, and confirmation of what I advance. I allude to Mr. Lane's immense picture of THE ANGEL APPEARING TO JOSEPH AND MARY IN EGYPT. Here the design of the artist had evidently been to combine the principles of the Roman and Venetian Schools; and his picture I am certain, will furnish a practical confutation of that hypothesis of Reynolds, which asserts those

\* Why does it not maintain several promising students at Rome.—Ed.

principles to be incompatible, whether in relation to the union of ideal character with the truth of nature, or the correct and determined discrimination of parts with general comprehension, and magnificence of effect. This performance ranks among the greatest examples of art which I have seen. On such works it is that a nation must rest the reputation of its graphic capabilities; but the combination of talents and resources necessary to produce them are not often the lot of any particular student. The magnificence of a nobleman (Lord de Dunstanville) has, I believe, enabled Mr. Lane to pursue his art through a long course of arduous and expensive studies. We shall see the effect; his work will be exhibited in the Pantheon here; and afterwards in London. Let public liberality keep pace with individual energy, and England will not long have to sustain the reproach of wanting an Historic School.

## ORIGINAL POETRY.

[By Correspondents.]

A MAY MORNING.

Hail lovely morn, slowly you break  
Thro' bronzed clouds, and boldly take  
Thro' her empire from her, 'tis to make  
All nature glorious; for her sake  
Thou dost appear—How freshly green  
The shining leaves! Apollo's beam  
Burns from the east, and then is seen  
One golden flood, the mountain stream;  
And hark, the lark's blithe carolling  
Pours a delicious welcoming.  
While all around, the speckled thrush,  
And the sweet blackbird, gaily sing;  
Making the woods with music ring;  
And from you dew besprinkled bush  
The lively sparrow spreads her wing  
Upon some airy ramble;—there  
The insect tribe disport in air,  
Almost as light as the clear sky  
On which they flutter gracefully.  
Now from her bed of snowy hue  
The youthful village maid is ris'n,  
With glowing cheek and eyes so blue,  
They rival e'en the tints of heav'n.—  
From her window then she glances  
As her lover swift advances  
To meet the sparkling of her eyes,  
All radiant with delight and love,  
Tho' with a laugh of feign'd surprise  
She hides the joy, her blushes prove.  
See, feels she not the morning's power  
To introduce new happiness?  
When e'er where afflictions lower  
The mind an instant loses its distress:  
Behold the wretched captive, see  
How haggard on his couch of straw  
He lies in sleepless misery,  
A victim to despotic law;  
Yet when some bright resplendent streams  
Of light are dancing o'er his cell,  
When joyous dawn in smiling, gleams  
Thro' his grate like some bewitching spell—  
Oh! how his glories he must bless,  
That sweetly bring forgetfulness.  
And this is in the morning,  
Shedding its fairy hues of light,  
E'er' object fresh adorning,  
Making the beautiful more bright;  
Of late each feeling heart, the voice  
Of nature cries aloud 'rejoice.'

## SKETCHES OF SOCIETY.

THE HERMIT IN THE COUNTRY.

EDINBURGH.—NO. II.

DEAR JOHN,

I improve every day in my knowledge of the Scots, and every day they improve in my esteem; which I attribute to the enlargement of my views, and my liberality. The student has taken me all over Edinburgh, and shown me a good deal of high life, and low life; of both of which you will easily conceive that there is plenty, when I tell you that I breakfast with a learned doctor, in the first floor from heaven, that is to say, in the seventh story from the ground floor; (high notions you'll allow) and that I dined reels, and supped seven stories below the doctor. Such a breakfast, John! tea and coffee, eggs, hain, boiled fish, honey, marmalade, cold moor-fowl, dried fruit, besides a hundred kinds of bread. I think a fellow must be difficult indeed, if he is not pleased with such fare, tacked on to a hearty welcome.

The doctor is a young beginner, but no doubt he will soon get into practice, for he is very intimate with the fashionable undertaker here, who can introduce him, and then there may be a mutuality of service. Deadly bad, I hear you cry! But I assure you that all is fashion here, from the doctor and the doer, down to the coachmaker and to him whose vehicle is "the carriage after all."

Now lest you should suppose that the doctor and the doer are synonymous terms, I beg leave to tell you that the former is the physician, and the second the lawyer; both, as well as the undertaker, belonging to *grave* professions. Well, in spite of that, the Scotch have fine constitutions, and their lawyers are the honestest I ever met with. One of them recovered a debt for me, free, gratis, for nothing, only because he met me at a twenty-seventh High-land cousin's, whereas my attorney in London dined with me once, and then charged me for his dinner, and almost every word of our conversation.

At the ball below stairs, I expected to be quite the go, but I found that I fell short in my performance there, as well as in the scientific conversation, for every body reads, and every body dances, and learning is so cheap in the Scotch metropolises, that it is no wonder they call it the modern Athens: you may be served out at any price. By-the-by, talking of Athens, I never met with a *Greek* in Scotland: that's another good thing. But to return to dancing, the Scotch women dance with all their souls: such activity! such steps! such good timists! 'Tis admirable indeed! *Entre nous*, I have got a dancing master to give me private lessons, and you may take your oath that I shall be quite the *kick* at the Crown and Anchor. A very peculiar thing here is a practising, and a dancing master's ball; the former in the morning, the latter (of course) at night. There you may see as good dancing, for a mere trifle, as you can upon a London stage. They have what they call a *high dance*, which is inimitable. You see they are fond

of high things, high dances, high living, high stories, and (I assure you) high courage.

But what particularly interested me, is the peculiar character of maternity in which the Scotch dames excel so much. You may see aged grandmothers, and elderly mamas, with half a dozen, or a dozen of their children on the floor at once. The look of lore, of interest, of anxiety, of approbation, and even the tremulous wish that they should excel, do honor to the women of the country, and prove how much heart there is even in this little example. You may, (while, as the Scotch say) detect a look of intelligence between man and wife, kindling into the kindest expression, nay, a tincture of reflectiveness, as much as to say, "such were we, on these very boards, a few fleeting years back."

*Appropos*, the women call their husbands "my man," which you southern blades laugh at; but let me tell you, that there is something very fond in the term; very appropriate, very possessive; and I know some husbands amongst us who do not merit it, in any sense of the word. Happy the husband who is a good *man*! 'Tis a noble title!—From the practising, let me direct your attention to the theatre. It is very fair; but not much attended. I expected to find the mob all quietness; but the gods, as we call them, can kick up a dust even there.

As to the learned professions, why they'll knock you off a gross of Doctors in a morning! I went to see the ceremony, and we had 'em of all nations and colours. They've a grinding machine that hits 'em off to perfection! Mercy upon the poor patients! There was such a lot of 'em, that my Irish conductor, cried out "Oh! murder," as he saw them go up for examination.—They have very learned lectures, too, upon law, physic, divinity, chemistry, and I don't know what besides. What is most extraordinary is, that there is virtue in the *chair* of a professor, so that he who succeeds to it is sure to be a learned man. This virtue, too, goes by inheritance, like a name or an entailed estate, so that some of them descend regularly from father to son. How clever that must be! By the way, it runs in my head, that there is something in the old doctorial hat, which they put upon the candidate at graduation, and you'll allow that if they can thus put an old head on young shoulders, it is a wonderful effort of genius.

The Scotch students *ing* like dray horses, at their studies, but the rest of the pie-balled party of Irish West Indians, foreigners, yankees, &c. are the greatest bloods in the town; so that one would think they must have the merit of inspiration, if they out-do the others, which, nevertheless, is sometimes the case. My student, however, informs me that fashion goes a great way in medicine; so that it is only necessary to put a good face on the business, in order to succeed. I almost wish that I had been brought up to physic, instead of the counting-house, for I know that I have an accommodating manner, which the M. D.'s consider as the placebo, and which I am told is half the battle.

My landlady is an excellent woman. She

introduced me to a writer who "lives on and off with her," that is to say (for I am sure the term will puzzle you) they inhabit the same floor, which they call a land; and he kindly took me to a half uncle's in the country; one of the best fellows I ever met with. Mr. Muckleweir, the lawyer, promised to shew me his policy and his park; but to my great disappointment, the policy was nothing but a very small plantation, and the park was about two acres of grass-land without a tree in it. Well, but the inside of the house was well furnished, and he had as good a library and a cellar as any lord. I just looked over the one, and I slipped a little more into the other, by which means I got what they call *fove*.

After supper we had an exquisite thing which they call *plotty*, that is to say, a little plot against the brain, and it succeeded with me perfectly. I was somewhat mortified at one thing. The next morning, I dressed myself in a complete highland dress, belonging to a young officer, on a visit at Govanbank; and I expected to have attracted the eye of my landlord's niece, a very pretty girl; but she did nothing but laugh at me, whilst a foreigner present cried, "*Il n'est pas montagnard qui rent*!"—he is not a mountaineer who wishes to be one.

Recovered from my vexation, I was overwhelmed with hospitable attention, and I have set down Govanbank in my memorandum book, as one of the places to which my memory will pay a tribute of gratitude, whenever I think of it.—But the post hour approaches fast, and I must conclude. Therefore farewell, and believe me still,

Your faithful friend,

PETER FRIG.

## THE DRAMA.

**KING'S THEATRE.** A grand ballet, on the beautiful, classical, and mythological story of Cephalus and Procris, was brought out on Tuesday. The equally inconstant and equally constant pair, furnish a fine subject for the higher order of dance; and, both in execution and in scenery, this has been so ably produced, as to be one of the most attractive things of the kind ever performed at the King's Theatre. An Aurora scene is admirable.

The theatres are now principally devoted to Benefits; and many performers who have the foremost claims to public encouragement and reward, are, we fear at an unlucky time, when all minds are occupied with the higher drama of politics, before us for the annual acknowledgment of the delight and amusement their talents have afforded. At Covent Garden, Mr. C. Kemble, one of the most general, pleasing, and efficient actors that ever adorned the stage, took his night on Tuesday, but without any novelty. On Wednesday, that admirable comedian, Liston, had we trust that reason to laugh which the proverb assigns; for surely he deserved to win who had so often excited irresistible mirth in his audience. Last night Macready played *Macbeth*, for the first time—his own benefit—of which we shall render some account in our next.

At Drury Lane, the entertaining Don Giovanni does more than Lear, *Virginius*, tragedy or comedy; a strong proof, if any were wanting, that what is slight, agreeable, and humorous, is best suited to the taste of the present day. Madame Vestris, who acquits herself so well in it, had her benefit on Wednesday, and seemed to be rewarded by a full house.

Mr. Keau, we learn, is absolutely bound for America: his "last benefit" is, we hope, solemnly announced for Monday; and a rather egotistical piece is announced for it, in which, in the character of the *Admirable Crichton*, this phoenix of the drama is to give imitations, and display the universality of his attainments in fencing, dancing, singing, harlequinading, &c. &c. This will, we fancy, draw a bumper, and it will be a most deserved one; for though our opinion of Keau, as an actor, is not so enthusiastic as that of many, his rare merit, the service he has done the stage by exciting emulation, his power, energy, and passion, entitle him to the warmest testimony of public approbation.

**Vauxhall Gardens.**—On Wednesday commenced their season, though the weather is as yet unfavourable. Taylor, Miss Percy, a Mrs. Austin, and a Mr. Shaw, were the principal vocalists, and filled the orchestra with considerable effect. Madame Saqui again astonished the natives with fireworks and rupewalks.

## VARIETIES.

**Remains of a Giant.**—A few days since, as some workmen were employed in excavating Knightstone Rock, at Weston Super Mare, (an island lately purchased by Mr. Howe, of Bristol, for the construction of hot and cold baths) the skeleton of a man of enormous stature was discovered a few feet below the surface, and near it an antique earthen vessel, containing bones of a smaller size: the urn and the skull of the larger skeleton were unfortunately broken to pieces by the carelessness of the workmen; but many of the bones are preserved in possession of the curious. Conjecture is very busy as to the antiquity of these remains, and the character of the gigantic personage whose frame they once held together; some suppose they belonged to one of those giants, who, old historians assert, peopled this country many ages before the invasion of Caesar; but as there is an ill encumbrance hard by, which from its construction is probably of British origin, there is little doubt but they are the remains of an aboriginal soldier of distinction. Persons conversant with anatomy infer, from the size of the bones, that he must have been nearly nine feet high.—(*Provincial Journal*.)

**Scotch Bull.**—In the 26th number of Blackwood's Magazine, (May 1819), the following notice, under the head of literary and scientific intelligence, may be perceived by the learned and curious. "STREAM BOAT.—A trial was made at Milan, on the 19th of February, with a boat on a new construc-

tion, which moves either with or against the stream, by means of machinery, *without the aid of steam*, moved by the power of six men, carrying a load of one half of its own weight, which is stated to have answered every expectation." Bravo! a steam-boat without steam!

**English Bull.**—In the 7th volume of the Historic Gallery, a work published a few years ago, there is a print from Rubens' picture of the Education of Mary de Medicis. In the explanation of the plate the following *marceur* occurs:—"If the figures of the men, and particularly that of *Minerva*, exhibit those heavy shapes for which Rubens has been frequently reproached, the females are depicted with greater delicacy!!

**Curious Coincidence.**—In Percy's relics, vol. 1. p. 313. in the ballad of the Patient Countess, extracted from Warner's *Allison's England*, there are the following lines:—

The poor old couple wished their bread

Were wheat, their wish was pretty.

Does not this look like a prophetic anticipation of the great whig oracle, even by name?

A MOVING ORATOR.

Yes, Sir, your speech is moving, I must say,—See half your audience it has moved away.

**Imprudent on the Broken II in Pterodactyl.** Lights! lights! Wood's loyal mob in London reigns:

Heaven save our gracious queen, and all our panca.

## METEOROLOGICAL JOURNAL.

JUNE, 1820.

**Thursday, 1**—Thermometer from 41 to 52. Barometer stationary at 29.72. Wind S. W. 2.—Morning clear, the rest of the day generally cloudy.

**Friday, 2**—Thermometer from 45 to 62. Barometer, from 29.75 to 29.77. Wind S. W. and W. 2.—Clouds generally passing with showers at times; heavy rain and hail in the evening.

**Saturday, 3**—Thermometer from 40 to 50. Barometer from 29.92 to 29.97. Wind W. 4 and W. B. N. 1.—Clouds generally passing. Rain fallen, 3 of an inch.

**Sunday, 4**—Thermometer from 45 to 53. Barometer from 30.05 to 30.09. Wind W. B. N. 4.—Generally cloudy. Rain fallen, 0.75 of an inch.

**Monday, 5**—Thermometer from 30 to 62. Barometer from 30.16 to 30.10. Wind N. N. W. 4 and S. W. 4.—Morning clear, the rest of the day generally cloudy.

**Tuesday, 6**—Thermometer from 48 to 59. Barometer from 30.00 to 30.27. Wind N. E. 4 and N. 2.—Generally cloudy; a misting rain at times. Rain fallen, 1.75 of an inch.

**Wednesday, 7**—Thermometer from 45 to 62. Barometer from 30.22 to 30.15. Wind W. 1. and N. W. 4.—Clouds generally overcast; sunshine at times. Rain fallen, 0.25 of an inch.

On Thursday June 15th, at 2 hours, 21 minutes, 21 seconds in the morning, (clock time) the 2d. Satellite of Jupiter, will immerse into an eclipse.

Edmonton, Middlesex.

JOHN ADAMS.

Consisting of Views on the Seine, Public Buildings, Characteristic Scenery, &c. &c. from Original Drawings by Mr. Frederick Nash. The Literary Department by Mr. John Scott, Author of "A Visit to Paris," and "Paris Revisited." Part III.

29. *The Personal Narrative of M. De Humboldt's Travels to the Equinoctial Regions of the New Continent*; during the Years 1796-1804. Translated by Helen Maria Williams, under the immediate inspection of the Author. Vol. V.

30. *Select Works of the British Poets*, with Biographical and Critical Prefaces. By Dr. Aikin. In one large Volume of 812 pages Medium 8vo. price 16s. extra 6d.

The object of this Work, which is entirely new, is to comprise, within a single volume, a Chronological Series of our Classical Poets, from Ben Jonson to Keble, without mutilation or abridgment, with Biographical and Critical Notices of their authors.

### BOOKS PUBLISHED THIS DAY.

**NEW EDITIONS of STANDARD SCHOOL BOOKS**, edited and illustrated by JOHN HUNTER, LL. D. Professor of Humanity in the University of St. Andrews.

1. **RUDDIMAN'S LATIN PRIMER**, carefully revised; with an Appendix, containing an original View of the Moods and Tenses of the Latin Verb, and of the Subjunctive and Optative Moods of the Greek Verb; by Dr. Hunter. 12mo. price 1s. 6d. bound.

2. **RUDDIMAN'S LATIN GRAMMAR**, 12mo. 4s. bound.

3. **SALLUST**, 8mo. 1s. 6d. bound.

4. **VRGIL**, 16mo. 3s. 6d. bound.

5. **HORACE**, with Notes Critical and Explanatory, 3s. 6d. bound.

6. **The First Five Books of LIVY'S HISTORY of the SECOND PUNIC WAR**, with Notes Critical and Explanatory. 12mo. in the press.

The long experience, and justly-merited celebrity, of the Editor, as an acute philologist, a profound classical scholar, and a professor—successful, for upwards of forty years, to a degree almost unprecedented in this country, enable the Publishers to recommend these Works with the utmost confidence.

Of the first edition of Dr. Hunter's Virgil, the Edinburgh Review speaks in these terms:—

"The Preface, which may be considered as a specimen of Dr. Hunter's talents for annotation, contains a considerable number of very interesting discussions. The punctuation of this edition appears to be peculiarly judicious. We may safely recommend this as one of the most correct editions of Virgil that has yet been offered to the public. We do not know, indeed, that it contains a single typographical error; and in the reading and punctuation of the text, it is sufficient to say, that Professor Heyne has publicly declared it to be superior to any that he had previously examined."

Of the other Classics, it is only necessary to say, that they are edited with equal skill and care: the Notes on Horace are peculiarly valuable. The Rudiments and Grammar are freed from the Villain of unskillful Editors, and may be considered as the most pure and valuable editions of these long-established and highly popular Works; and the Appendix to the former is a specimen of the Philosophy of Language, equally useful, original, and profound.

Printed for Oliver and Boyd, Edinburgh, and sold by G. and W. B. Whitaker, London.

In two volumes, 12mo. price 10s. sewed.

**A NEW METHOD for STUDYING the FRENCH LANGUAGE**, by the aid of which it may be learned at home, without a Master, in the course of three or four months. Printed for G. and W. B. Whitaker, 13, Ave Maria Lane; and A. B. Dulau and Co. Soho Square.

In 8vo. 9s. 6d.

**HISTORY of the several ITALIAN SCHOOLS of PAINTING**, with Observations on the present state of the Art. By J. T. JAMES, M. A. Author of *Travels in Germany*. Printed for John Murray, Albemarle Street.

In 4to. 32. 3s. 6d. 2s. 2d. and 1s. 6d. 10s. 6d.

**AN INTRODUCTION to MODERN HISTORY**, from the Birth of Christ to the present Time, in Continuation of an Introduction to Chronology and Ancient History. By W. JILLARD HURT. Printed for Longman, Hurst, Rees, Orme, and Brown. Of whom may be had, by the same Author.

A NEW HISTORY to be published of *CHRONOLOGY and UNIVERSAL HISTORY*, in Questions and Answers, in 18mo. price 4s. 6d. 10s.

THE NEW PANTHEON; or an Introduction to the Mythology of the Ancients, &c. &c. in 18mo. with 17 Engravings, 3s. 6d.

In 2 vols. post octavo, price 11s. 12s.

**THE POETICAL DECAMERON**; or Ten Conversations on English Poets and Poetry, particularly of the Reigns of Elizabeth and James I. By J. PAYNE COLLIER, of the Middle Temple. That brilliant era of English Poetry, during which Shakespeare, Spenser, Ben Jonson, and their contemporaries flourished, is treated, in the present work, in a more popular and easy manner than in most of the publications which have yet appeared on this subject. The scattered notices which have been brought to light in the *Censura Literaria*, *The British Bibliographer*, *Reprints*, and other works of the same kind, are here concentrated in one point of view; together with much new information, and many valuable notices, not hitherto generally known. The work resembles in its plan the elegant dialogues of Bishop Hall on similar subjects. Printed for Archibald Constable and Co. Edinburgh; Hurst, Robinson and Co. Chesapeake, London.

**FAMILIAR LESSONS on MINERALOGY and GEOLOGY**, price 6s. second edition, with coloured Engravings. A Miner in South America with the Alluvial Soil for Gold-stuff and Diamonds; below which is a section of the Strata at Mexico. Also a Plate with twenty-two Minerals, coloured from specimens. To which is added, an Engraving intended to shew the appearance of Primitive Rocks; also the Primitive and Secondary, and the Hertz Formation, in which are represented Flowers, Veins of Ore, Stratification of the metalliferous Limestone, the Coal Beds, Clay Strata, and the Alluvial deposits. By J. MAGEE, Esq., Student. Where may be had, Minerals of every description, several cases being lately arrived from the continent. Also, instructive Collections, arranged and described for Learners, at various prices, as the specimens are more or less numerous and select. Two hundred specimens and cabinet, particularly calculated for those who travel, from three and a half to five guineas. Next boxes, fitted with the acids, and apparatus, with which the learner may determine the metals, &c. Chemical Test Books, describing the use of the Acids, &c. in the Analysis of Minerals, &c. 6d. New Descriptive Catalogue, 3s. Shells of the greatest variety.

Price 7s. 6d. 10s.

**LYRICAL DRAMAS, with DOMESTIC HOUSES**, a Miscellany of Odes and Songs. By CORNELIUS NEALE, late Fellow of St. John's College, Cambridge. Printed for B. J. Holdsworth, 18, St. Paul's Church Yard, (South side).

"It is of the delightful trains of imagery which pervade this production, and of the beauty and delicacy of the expressions in which they are conveyed, that an adequate idea may be formed from the lines I am about to quote, which the apt and creative of a similar kind, as lovely in their color, and as delicious in their perfume."—*Drake's Winter Nights*, No. 15.

Post 8vo. price 10s. 6d.

**NICE DISTINCTIONS**. Dublin. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and J. Cumming, Dublin.

In one volume, 1 cap 8vo. price 6s. 10s. 6d.  
**PETER FAULTLESS** to his BROTHER SEYMOUR. In 18mo. price 10s. 6d. 10s.  
By the Author of *NIGHT*. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. 50, Chancery Lane, London.

Continental Guides.

The following New and Portable Books, with correct Maps, Plans, Views, &c. are just published, for the use of Travellers on the Continent.

**PLANTA'S New Picture of Paris**, 8s. 6d. with Costumes, 15s. Reichardt's Itinerary of France and Belgium, 6s. 6d. Reichardt's Itinerary of Italy, 10s. 6d. Reichardt's Itinerary of Germany, 12s. 6d. Reichardt's Itinerary of Denmark, Sweden, and Russia, 7s. 6d. Reichardt's Itinerary of Prussia and Portugal, 7s. 6d. Schreber's Guide under the Rhine, 8s. 6d. Vaux's New Picture of Rome, 12s. 6d. Vaux's New Picture of Naples, 10s. 6d. Post Roads in Europe, 8s. 6d. Boyce's Belgian Traveller, 8s. 6d. Ellis's Guide through Switzerland, 8s. 6d. Ellis's Atlas of Switzerland, with Kellner's Map, 8s. 6d. Ellis's Guide for Travellers, France, Germany, and other Countries, 10s. 6d. Ellis's Guide in six Languages, English, French, Italian, German, Spanish, and Portuguese, 8s. 6d. Ellis's Guide through the Pyrenees, 8s. 6d. Ellis's Modern French Grammar, 6s. 6d. Ellis's Nomenclature of French and German, 6s. 6d. Ellis's New Picture of Brussels and its Environs, 8s. 6d. Art of Correspondence, 4s. 6d. Catalogue of the Pictures in the Louvre, 4s. 6d. A large Map of France, Belgium, Switzerland, &c. 6s. 6d. 8s. 6d. and 10s. 6d. Hanoir's New Pocket Dictionary, in French and English, and English and French, revised by C. P. Whittaker, 8s. 6d. Tourist's Journal, 2s. 6d. Printed for Samuel Lewis, 15, Strand.

London: Printed for the Proprietor, by W. POPE, 67, Chancery Lane; Published every Saturday, by G. A. SCRIPPS, at the Literary Gazette Office, (Exeter Change) Strand, where Communications (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom : but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 178.

SATURDAY, JUNE 17, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*A Queen's Appeal.* London, 1820. 8vo. pp. 83.

This poem takes a very poetical, i. e. imaginary view of the affair which now unfortunately occupies so much attention. It is written as if by the Queen, and gives an account of her various travels, adventures, &c. in a very sentimental way, interspersed with sundry discursive flights, and appeals to Britain, to the King, to the present age, and to posterity. Not addicted to politics, even when pressed upon us, our readers will not expect that we should take up this text for an essay upon so disagreeable a topic. When the elevated and powerful content, the commonality must suffer by being drawn into the vortex ; and it is this consideration which gives to the royal differences a character of national importance. We therefore trust, should it appear that personal passions stand in the way of the public tranquillity, that there is enough of manly spirit and honest independence in the legislature, to lay down a right and fitting course, honourable to all who merit honour, just to every interest, and above all, calculated to save the people of England both from moral taint and from factious convulsion. The duty owing to the country, is paramount to every other ; that to the head of the government is only a part of this whole ; and the civil list is yet so far unsettled as to afford parliament a means of enforcing its recommendations. We now quote a few stanzas as specimens of the poetry of the Queen's Appeal, which, though somewhat involved and high-flown, indicates considerable talents.

### Verse VII.—*Personal feeling.*

It could not be that I should cease to feel  
Both what I am, and what a perjured hand  
Would make me seem. Nor could I wholly  
steal

My heart with pride ; nor yet my tears command.

By thinking on my station in the land.  
How has my bosom swelled, as I have known  
Directed at my false the piteous brand  
That malice where it burns not ! O what throne

On earth, for all my wrongs and sorrows can  
atone ?

VOL IV.

### Verse XVII.—*Waterloo.*

Not that in that great day in which the world,  
As to the flight of eagles in the sun,  
Upturned to the vast war its gaze, you hurried  
The selfish tyrant from his throne, and won  
Sway for the Lilies, that nor toiled nor spun,  
Right glad that any hands for them would toil,  
Content that rivers of true blood should run,  
So they the Corsican's keen eyes might foil,  
And once more strike their roots in abdicated soil.

### Verse LI. LII. LXVI.—*The original cause of separation.*

She had—I mean the source of all my woe—  
The soft persuasive voice, the manners bland.  
The insinuating smile, that those who know,  
Tho' false they know them, scarcely can  
withstand.  
E'en I, her victim—tho' the withering brand  
She lighted first, hath left within my heart  
Some fires, to tell me of her treacherous hand—  
E'en I must own, that more accomplished art,  
Or fairer in display, ne'er acted feuds apart.

Well could she read the human heart, and  
well  
Had studied that, on whose approval hung  
The dearest hopes that e'er in mine might  
dwell.  
She knew if bitter thoughts in secret stung  
The breast, whose cold consent perchance was  
wrong  
By hard necessity, to bear the yoke, &c.  
Against whose weight the indignant spirit  
sprung :  
And hers were all the arts that might provoke  
The pride of such a breast, and skill those arts  
to cloke.

Pence to her dust !—and pardon to her soul !  
Low in the inevitable tomb she lies.  
Death has no ear that flatteries cajole.  
But sculptured marble o'er her grave may rise,  
And the recording chisel, that supplies  
The golden words, that constitute the fame  
Of what we noble call, and good, and wise,  
E'en now, perchance, hath placed around her  
name

All titles that become a high and virtuous dame.

### Verse CHII. CX.—*Travels.*

And Partici sits laughing at thy feat,  
Even on the long accumulated food  
Of Lava fixing in disdain her seat,  
Reckless of that tremendous overthrow  
Of Herculesum bedded deep below.  
So rests the traveller, near the bones of men  
Who sits unheeding, nor appears to know  
From the sad relics spread before his ken,  
He tastes his last repose before the lion's den.

Ye verdant hills that rise o'er Como's towers,  
And in the Larian lake's expanse so clear  
Gloss your high brows ! with you more tran-  
quil hours

I hoped to pass, where nothing insincere,  
Constrained, or courtly hollow might appear.  
I sought you with such keen impatient haste  
As speeds the thirsting traveller, when near

He thinks the pool upon the burning waste,  
And presses panting on, the cooling wave to  
taste.

### CLXII. CL. CLII.—*Argument.*

But I must turn from each foreign clime,  
From scenes of wonder and delight : for now  
To my own England points the hand of Time,  
Where I a crown of empire for my brow  
Wait from my Consort's hand—or shall I bow  
My head at once to undeserved shame,  
And free uninterrupted course allow  
That all the poisonous breath of evil fame  
That sycophant tongues would level at my  
name ?

O days of ancient chivalry ! when forth  
Leaped from the scabbard many a shining  
sword,  
To vindicate insulted woman's worth ;  
When valour ne'er to brighter honours soared,  
Than when to injured woman it restored  
All pure the lustre Slander loves to stain !  
How are ye fled ! But not by me deplored.  
She who is innocent may well disdain  
By force or chance of arms a righteous cause to  
gain.

Why linger my accusers ? Them I cite  
Before a court extended as the pale  
Of social order that disclaims not right,  
Free as the sky that's traversed by each gale,  
And public as the sun, when from the veil  
Of clouds he issues in the noontide heat.  
Let awful Justice in her righteous scale  
The accused and accusers poise, and mete  
To all their guerdon due from her impartial seat.

I ask no law but such as well is known,  
And well defends the meanest subject's right,  
Adapted to the cottage as the throne,  
And hallowed by Religion's sacred light.  
Am I thing guilt-spotted ?—With the blight  
Of shame o'er-run ?—Then let me meet the  
fate

That well may reach me, even on the site  
Of loftied rank. At once precipitate  
Down let me fall from life, from honor, fame,  
and state.

### Conclusion.—CLXIV. CLXV.

O thou, the father of that blessed one  
That was my only comfort here below—  
And by what name mayest thou be sooner won  
The powers of prejudice to overthrow ?  
By her—and by the venerated snow  
Of the loved head that late in peace was laid—  
And by the rows pronounced long years ago—  
Let not the course of justice be delayed ;  
But let me as I am to England be displayed.

So, 'mid the pomp of that suspicious day,  
When all the glories of the realm around  
Are gathered in unguessed array,  
And thine anointed head is stily crowned ;  
Tho' at thy side I may not then be found,  
While thro' the sky loud acclamations ring,  
And the glad trumpets their triumphant sound  
Up to heaven's gates in bound concord fling—  
I will not less be moved to cry " God save the  
King !"

*Lacon: or many Things in few Words; addressed to those who think.* By the Rev. C. C. Colton, A.M. London, 1820. 8vo. pp. 207.

There are three difficulties in authorship: to write any thing worth the publishing; to find honest men to publish it—and to get sensible men to read it. Literature has now become a game; in which the booksellers are the kings; the critics, the knaves; the public, the pack; and the poor author, the mere table, or *Thing played upon*.

For the last thirty years, the public mind has had such interesting and rapid incidents to witness, and to reflect upon, and must now anticipate some that will be still more momentous, that any thing like dulness or prosing in authorship, will either nauseate, or be refused; the *realities* of life have pampered the public palate with a diet so stimulating, that vapidity has now become as insipid as water to a dram-drinker, or sober sense to a fanatic.

The attempts however of dulness, are constantly repeated, and as constantly fail. For the misfortune is, that the Head of Dulness, *unlike* the tail of the torpedo, loses nothing of her benumbing and lethargising influence, by reiterated discharges; horses may ride over her, and mules and asses may trample upon her, but with an exhausted and a patient perversity, she continues her narcotic operations even to the end. In fact, the Press was never so powerful in quantity, and so weak in quality, as at the present day; if applied to it, the simile of Virgil must be reversed, "*Non trueno et foudibus efficit unbram.*" It is in literature as in finance—much *Paper* and much *Poverty* may co-exist.

Thus does the author break in with his preface, or, as the fancy folks would term it, his *face*, upon the critics; and he then proceeds to speak of his own qualifications in language, which we repeat, as affording a fair sample and character of the work.

It may happen that I myself am now committing the very crime that I think, I am censuring. But while justice to my readers compels me to admit that I write, because I have nothing to do; justice to myself induces me to add, that I will cease to write, the moment I have *nothing to say*. Discretion has been termed the better part of valour, and it is more certain, that diffidence is the better part of knowledge. Where I am ignorant, and know that I am so, I am silent. That Grecian gave a better reason for his taciturnity, than most authors for their loquacity, who observed, "*What was to the purpose I could not say; and what was not to the purpose, I would not say.*" And yet Shakspeare has hinted, that even silence is not always "*commendable*;" since it may be foolish if we are wise, but wise if we are foolish. The Grecian's maxim would indeed be a sweeping clause in literature; it would reduce many a giant to a pigny; many a speech to a sentence; and many a folio to

a primer. As the great fault of our orators is, that they get up to make a speech, rather than to *speak*; so the great error of our authors is, that they sit down to *make* a book, rather than to *write*. To combine profundity with perspicuity, wit with judgment, solidity with vivacity, truth with novelty, and all of them with liberality, who is sufficient for these things? a very serious question; but it is one which authors had much better propose to themselves, *before* publication, than have proposed to them, by their Editors after it.

I have thrown together, in this work, that which is the result of some reading and reflection; if it be but little, I have taken care that the volume which contains it, shall not be large.

I have addressed this volume to those who *think*, and some may accuse me of an ostentatious independence, in presuming to inscribe a book to so small a minority. But a volume addressed to those who *think*, is in fact addressed to all the world; for although the proportion of those who do think, be extremely small, yet every individual flatters himself that he is *one* of the number. In the present rage for all that is marvellous and interesting, when writers of undoubted talent, consider only what will sell, and readers only what will please, it is perhaps a bold experiment to send a volume into the world, whose very faults, (manifest as I fear they are) will cost more pains to detect, than scoldists would feel inclined to bestow, even if they were sure of discovering nothing but beauties. Some also of my conclusions will no doubt be condemned by those who will not take the trouble of looking into the *postulata*; for the soundest argument will produce no more conviction in an *empty* bowl, than the most superficial declamation; as a feather and a guinea fall with equal velocity in a vacuum.

The following pages, such as they are, have cost me some thought to write, and they may possibly cost others some to read them. Like Demosthenes, who talked Greek to the waves, I have continued my task, with the hope of instructing others, with the certainty of improving myself. "*Labor ipse volupitas.*" It is much safer to think what we say, than to say what we think; I have attempted both. This is a work of no party, and my sole wish is, that truth may prevail in the church, and integrity in the state, and that in both the old adage may be verified, that "*the men of principle may be the principal men.*" Knowledge indeed is as necessary as light, and in this coming age most fairly promises to be as common as water, and as free as air. But as it has been wisely ordained, that light should have no colour, water no taste, and air no odour, so knowledge also should be equally pure, and without admixture. If it comes to us through the medium of prejudice, it will be discoloured; through the channels of custom, it will be adulterated; through the guttle walls of the college, or of the cloister, it will *smell of the lamp*.

Most of the maxims and positions advanced in the present volume, are found

on two simple truisms, *that men are the same*; and that the passions are the powerful and disturbing forces, the greater of the less prevalence of which give individuality to character. But we must not only explain clearly, but think deeply, nor can we concede to Buffon that *style alone* is that quality that will immortalize an author. The Essays of Montaigne, and the Analogy of Butler will live for ever, in spite of their *style*. Style is indeed the *eaten* of genius, and as able one too; but as the true gentleman will appear, even in rags, so true genius will shine, even through the coarsest style.

In an age remarkable for good reasoning and bad conduct, for sound rules and corrupt manners, when virtue fills our heads, but vice our hearts;—when those who would *find* persuade us that they are quite sure of heaven, appear to be in no *greater* hurry to go there than other folks, but put on the livery of the best master only to serve the worst;—in an age when modesty herself is more ashamed of detection than delinquency; when independence of principle, consists in having no principle on which to depend; and free-thinking, not in thinking freely, but in being *free from thinking*;—in an age when patriots will hold any thing, except their *tongues*; keep any thing, except their *word*; and lose nothing patiently, except their *character*;—to improve such an age, must be difficult, to instruct it dangerous; and he stands no chance of amending it, who cannot at the same time amuse it.

Such are the principal points which Mr. Colton touches, in his preface; and it may think (we think) be gathered, that his book is not one to be taken up and read through like a novel or history. Indeed the aspect of it is deterring rather than inviting. Five hundred detached maxims, thoughts, and observations, without a narrative to interweave them, are quite appalling to modern readers. We looked at the volume, full of figures (X's, and D's, and C's and L's) in every page, and we laid it down again—we read one remark, found it piquant; another, just and forcible; a third, curious and entertaining: the author had now caught hold of us, and we believe we have since perused every axiom he has written, and many of them several times over. In fact, we discovered that under the auspicious form of pithy pieces of advice, there was a great deal of originality, and the fruits of much reading, much observation, and much reflection; that, together with a perhaps too frequent repetition of antitheses, a little sprinkling of triteness, and a certain quaintness of style, there was terse philosophical remark, useful instruction, and often elevated ideas in elevated language: upon the whole, that *Lacon* was a book to be dipped into at any

time with pleasure and advantage; and though there are some of the principles to which we cannot subscribe, and some of the inferences from which we differ, we must in justice say, that the general cast is liberal, moral, and essentially good. All that it is necessary for us to add to these remarks, in order to afford an idea of Lacon, may be comprised in a few selections; and these we subjoin promiscuously.

*Avarice* hegets more vices than Priam did children, and like Priam *survives* them all. It starves its keeper to surfeit those who wish him dead; and makes him submit to more mortifications to lose heaven, than the martyr undergoes to gain it. Avarice is a passion full of paradox, a madness full of method; for although the miser is the most unmercenary of all beings, yet he serves the worst master more faithfully than some Christians do the best, and will take nothing for it. He falls down and worships the god of this world, but will have neither its pomps, its vanities, nor its pleasures for his trouble. He begins to accumulate treasure as a *mean* to happiness, and by a common but morbid association, he continues to accumulate it as an *end*. He lives poor, to die rich, and is the mere jailor of his house, and the turnkey of his wealth. Impoverished by his gold, he slaves harder to imprison it in his chest, than his brother slave to liberate it from the mine. The avarice of the miser may be termed the grand sepulchre of all his other passions, and he successively deav. But unlike other toads, it is enlarged by *repetition*, and strengthened by *age*. This latter paradox, so peculiar to this passion, must be ascribed to that love of power so inseparable from the human mind. There are three kinds of power—wealth, strength, and talent; but as old age always weakens, and often destroys the two latter, the aged are induced to cling with the greater avidity to the former. And the attachment of the aged to wealth, *must* be a growing and a progressive attachment, since such are not slow in discovering that those same ruthless years which detract so sensibly from the strength of their bodies, and of their minds, serve only to augment and to consolidate the strength of their purse.

*Men* will wrangle for religion; write for it; fight for it; die for it; any thing but—*live for it*.

The wealthy and the noble, when they expend large sums in decorating their houses with the rare and costly efforts of genius, with busts from the chisel of a Canova, and with cartoons from the pencil of a Raphael, are to be commended, if they do not stand still *here*, but go on to bestow some pains and cost, that the master himself be not inferior to the mansion, and that the owner be not the only thing that is little, amidst every thing else that is great. The house may draw visitors, but it is the possessor alone that can detain them. We cross the Alps, and after a short interval we are glad to return;—we go to see Italy, *not the Italians*.

Of modern theorists, Gail and Spurzheim are too ridiculous even to be laughed at; we admire Locke and Hartley for the profundity and ingenuity of their illustrations; and Lavater for his plausibility; but none of them for their solidity. Locke, however, was an exception to that paradox so generally to be observed in theorists, who, like Lord Monboddo, are the most credulous of men with respect to what confirms their theory, but perfect infidels as to any facts that oppose it. Mr. Locke, I believe, had no opinion which he would not most readily have exchanged for truth. A traveller shewed Lavater two portraits—the one of a highwayman, who had been broken upon a wheel, the other was the portrait of Kant, the philosopher; he was desired to distinguish between them. Lavater took up the portrait of the *highwayman*, after attentively considering it for some time, "Here," says he, "we have the true philosopher, here is penetration in the eye, and reflection in the forehead; here is cause, and there is effect; here is combination, there is distinction; synthetic lips! and analytic nose: Then turning to the portrait of the *philosopher*, he exclaims, "The calm thinking villain is so well expressed, and so strongly marked in this countenance, that it needs no comment." This anecdote Kant used to tell with great glee. Dr. Darwin informs us, that the reason why the bosom of a beautiful woman is an object of such peculiar delight, arises from hence: that all our first pleasurable sensations of warmth, sustenance, and repose, are derived from this interesting source. This theory had a fair run, until some one happened to reply, that all who were brought up by hand had derived their first *pleasurable sensations* from a very different source, and yet that not one of all these had ever been known to evince any very rapturous or amatory emotions at the sight of a *wooden-spoon*!!

The following is a noble picture of time:—

Time is the most undefinable yet paradoxical of things; the past is gone, the future is not come, and the present becomes the past, even while we attempt to define it, and like the flash of the lightning, at once exists and expires.—Time is the measurer of all things, but is itself immeasurable, and the grand discoverer of all things, but is itself undiscovered. Like space it is incomprehensible, because it has no limit, and it would be still more so if it had. It is more obscure in its source than the Nile, and in its termination than the Niger; and advances like the slowest tide, but retreats like the swiftest torrent. It gives wings to pleasure, but feet of lead to pain, and lends expectation a curb, but enjoyment a spur. It robs heaviness of her charms, to bestow them on her picture, and builds a monument to merit, but denies it a house; it is the transient and deceitful flatterer of falsehood, but the tried and final friend of truth. Time is the most subtle yet the most insatiable of depredators, and by appearing to take nothing, is permitted to take all, nor can it be satisfied, until it has stolen the world from us, and

us from the world. It constantly flies, yet overcomes all things by flight, and although it is the present ally, it will be the future conqueror of death. Time, the cradle of hope, but the grave of ambition, is the stern corrector of fools, but the salutary counsellor of the wise; bringing all they dread to the one, and all they desire to the other; but like Cassandra, it warns us with a voice that even the sages discredit too long, and the silliest believe too late. Wisdom walks before it, opportunity with it, and repentance behind it; he that has made it his friend, will have little to fear from his enemies, but he that has made it his enemy will have little to hope from his friends.

Our last quotation is made for the sake of mentioning a modern parallel.

Those traitors who know that they have sinned beyond forgiveness, have not the courage to be true to those who, they presume, are perfectly acquainted with the full extent of their treachery. It is conjectured that Cromwell would have proposed terms of reconciliation to Charles the second, could he but have harboured the hope that he would forgive his father's blood; and it was the height of wisdom in Caesar, to *refuse* to be as wise as he might have been, if he had not immediately burnt the cabinet of Pompey, which he took at Pharsalia.

The similar instance to which we allude, happened not long ago in France. M. —, the bosom friend of Louis XVIII., his constant companion in exile, his imitator in dress and appearance, his shadow, and his brother in affection, died abroad after the restoration. His piers were sent home, and some one told the king that all the while he was cherishing this viper, he had been betraying him, and was in fact an agent of Buonaparte. His Majesty rejected the imputation with horror; but, alas for human nature! the chest of papers was opened in the presence of the friends of the deceased, and the very first letter unfolded, too clearly established his guilt. Poor Louis was struck to the heart by this evidence of perfidy where he had so entirely relied; and while his tears bore testimony to the shock which it occasioned, he commanded every document to be instantly committed to the flames. We now bid Mr. Colton farewell. That his book merits to be read by thousands—is our imprimatur.

*An Account of Timbuctoo and Housa, &c.*

By El Hage Abd Salam Shabeeny; with Notes, critical and explanatory. To which is added, Letters descriptive of Travels through West and South Barbary, and across the Mountains of Atlas, &c. &c. By James Grey Jackson. London. 1829. 8vo. pp. 547.

An epitome of Shabeeny's part in this valuable work, was contained in the Literary Gazette, Number 171. Since the date of that publication, the volume now before us has appeared. Sixteen years' residence in the country, has stored the author's mind with a fund of interesting intelligence; and we do not dislike the desultory form in which he has poured it out in this volume. The charm of variety is undoubtedly great; and when it is thrown over matter intrinsically good, he must be a sour critic indeed who can resist being highly pleased with the treat. For such we thank Mr. Jackson, to whom for this week we shall only become debtor for a few miscellaneous extracts from the division of lighter character, entitled "Fragments, Notes, and Anecdotes," and leaving the graver considerations of commerce, civilization, &c. to a future opportunity. This chapter is introduced as follows:

In recording the following anecdotes and fragments, the naked truth is stated, without the embellishments of language, or the labour of rhetoric, which the wiser part of mankind have always approved of as the most instructive way of writing; and all such as are acquainted with books will readily agree with me, that many authors stretch, even to the prejudice of truth, from an affectation of elegance of style.

The following facts, therefore, will form the materials for a history, rather than a history itself.

The study of the language and customs of the Arabs is the best comment upon the Old Testament. The language of the modern Jews is little to be regarded; their dispersion into various nations, having no fixed habitation, being wholly addicted to their own interest, their conformation to the respective customs of the various nations through which they are dispersed; have caused them, in a great measure, to forget their ancient customs and original language, except what is preserved in the Bible and in the exercise of their religion. Whereas the Arabs have continued in the constant possession of their country many centuries, and are so tenacious of their customs and habits, that they are, at this day, the same men they were three thousand years ago. Accordingly, many of their customs, at this day, remind us of what happened among their ancestors in the days of Abraham.

*Timbuctoo coffee.*—Coffee grows spontaneously in the vicinage of Timbuctoo, south of the Nile Elahed. I sent a quantity to Mr. James Willis, formerly Consul for Senegambia: it was of a bitter taste, which is the general character of this grain before it is improved by cultivation.

*Sand Baths.*—The Arabs bury the body erect in sand, up to the chin, as a remedy for several disorders, particularly syphilis.

*Moral Justice.*—The imperial army being

encamped in Temsena, on the confines of Tedla, an Arab chieftain found that a friend of the emperor came into his *hurma*\* at night, and took liberties with his wife. The Arab suspected that he was (*shereef*) a prince, and therefore did not dare to kill him, but preferred a complaint to the emperor. The emperor was vexed to hear of such a gross breach of hospitality, and asked what time he made his visits? "At one hour after midnight," the Arab replied. "Then," said the emperor, "when he comes, do you let me know by giving the watchword to this man, and he will then know what to do; and depend thou on my seeing justice done to thee for the aggression." The marauder came; the Arab repaired to the guard of the imperial tent, and gave the word; the guard apprised the emperor, as he was directed, who personally repaired to the tent of the Arab, and, being convinced of the fact, ran the man through with his lance: this was done without a light. The body was brought before the tent, and it was discovered to be an officer of the imperial guard. The emperor, on seeing that it was not a shereef (a prince) prostrated himself in fervent prayer for a considerable time. The courtiers who were all assembled by this time to witness this extraordinary occurrence, wondered what could induce the emperor to be so fervent in prayer; which his majesty observing, told them, "that he went alone to the tent, thinking that nobody but a shereef would have dared to commit such a breach of hospitality, in so open a manner: therefore he killed him without having a light, lest, on discovering him to be a prince, personal affection might give way to justice; but that when he discovered that it was not a relation, he returned thanks to God Almighty, that, in his determination to have justice administered, he had not killed his own son!"

*Characteristic Trait of Muhamedans.*—One of the emperor's ministers, when an English fleet was cruising off Salee, and just after some impost had been levied on the merchandise already purchased and warehoused by the Christian merchants, suggested the impolicy at that moment, of harsh measures against Europeans: the emperor, in a jocular manner, asked what harm he could suffer from the fleets of Europeans? "They could destroy your imperial majesty's ports," replied the minister. "Then I would build them again for one-half what it would cost them to destroy them. But if they dared to do that, I could retaliate, by sending out my cruisers to take their trading ships, which would so increase the premiums of insurance (for the *knafers*) Indians insure all things on earth, trusting nothing to God!)"

*Customs of the Shellahs of the Southern Atlas, viz. of Idaltit (in Lower Suse.)*—The mountains of Idaltit are inhabited by

\* *Keyna* is the name for an Arab's tent; they are made of goat's hair, and are black.

† The Muhamedans abuse the Christians for their mistrust of Providence, exemplified in their insuring ships, merchandise, &c.

that they would be glad to sue for peace again.

a courageous and powerful people, strict to their honour and word, unlike their neighbours of Elala. They make verbal contracts between themselves, and never go to law, or record their contracts or agreements, trusting implicitly to each other's faith and honour. If a man goes to this country to claim a debt due, he cannot receive it while there, but must first leave the country, and trust to the integrity of the Idaltitee, who will surely pay when convenient, but cannot bear compulsion or restraint. They do not acknowledge any sultan, but have a divan of their own, called *Ejma*, who settle all disputes between man and man. These people cultivate the plains, when there is no khalf in Suse; but when there is, they retire to the fastnesses in their mountains, and defy the arm of power; satisfying themselves with the produce of the mountains.

*Food.*—*Kusnaco* is, flour moistened with water, and granulated with the hand to the size of partridge shot. It is then put into a steamer uncovered, under which fowl, or mutton, and vegetables, such as onions, and turnips, are put to boil: when the steam is seen to pass through the *kusnaco* it is taken off and shook in a bason, to prevent the adhesion of the grains; and then put in the steamer again, and steamed a second time. When it is taken off, some butter, salt, pepper, and saffron, are mixed with it, and it is served up in a large bowl. The top is garnished with the fowl or mutton, and the onions and turnips. When the saffron has made it the colour of straw, it has received the proper quota. This is, when properly cooked, a very palatable and nutritious dish.

*Haasoo* is gruel boiled, and then left over the fire two hours. It is made with barley not ground into flour, but into small particles the size of sparrow-shot. It is a very salubrious food for breakfast, inasmuch that they have a proverb which intimates that physicians need never go to those countries wherein the inhabitants break their fast with *haasoo*.

*El Haasorda* is barley roasted in an earthen pan, then powdered in a mortar, and mixed with cold water, and drank. This is the travelling food of the country—of the Arab, the Moor, the Bereber, the Shellah, and the Negro; and is universally used by travellers in crossing the Sahara: the Akkalis that proceed from Akka and Tatta to Timbuctoo, Housa, and Wangara, are always provided with a sufficient quantity of this simple restorative to the hungry stomach.

*Anecdote of Muley Ismael.*—Muley Ismael compared his subjects to a bag full of rats.—"If you let them rest," said the warrior, "they will gnaw a hole in it: keep them moving, and no evil will happen." So their subjects, if kept continually occupied, the government went on well; but if left quiet, seditions would quickly arise. This sultan was always in the tented-field: he would say, that he should not return to his palace until the tents were rotten. He kept his army incessantly occupied in making plantations of olives, or in building: re-

and rebellion were with him synonymous terms.

**Library at Fas.**—When the present emperor came to the throne, there was a very extensive and valuable library of Arabic manuscripts at Fas, consisting of many thousand volumes. Some of the more intelligent literary Moors are acquainted with events that happened formerly, during the time of the Roman power, which Europeans do not possess. Abdrabman ben Nassar, bashaw of Abda, was perfectly acquainted with Liry and Tacitus, and had read those works from the library at Fas. It is more than probable that the works of those authors, as well as those of many other Romans and Greeks, are to be found translated into the Arabic language, in the hands of private individuals in West and in South Barbary. This library was dispersed at the accession of Muley Soliman, and books commenting on the Koran only were retained; the rest were burned or dispersed among the natives.

**Cairo.**—The city of El Kahira is called by Europeans Cairo. When Kairo was founded, in the 359th year of the Hejra, the planet Mars was in ascension; and it is Mars who conquers the universe: "therefore," said Moaz, (the son of El Mansoor) to his son, "I have given it the name of El Kahira."

**The European merchants at Mogodor escape from decapitation.**—The late emperor, Muley Yezail, proceeded from Mequinas to Morocco, with an army of thirty thousand cavalry, to take the field against the rebellious Abdrabman ben Nassar, bashaw of the province of Abda, acting conjointly with the bashaw of the province of Duquella, who had collected an army of eighty thousand men, of which fifty thousand were horse. The emperor, on his arrival at Morocco, was exasperated against the kabyle of the south; and was informed that the merchants of Mogodor had supplied his rebel subject, Abdrabman, with ammunition. Enraged at this report, which the exasperated state of his mind prompted him to believe, he issued an order to the governor of Mogodor, implicating the greater part of the European merchants of that port of high treason, and ordered their decapitation. This order was brought by one Fenishe, a relation of Tahar Fenishe, who had been, some years before, ambassador from Morocco to the court of St. James's. The governor, however, suspecting that the order had been issued in a moment of irritation, delayed its execution, in the hope that it might be countermanded; or, in the hope that the result of a battle would render it unnecessary to be put in execution.—Soon afterwards, news arrived at Mogodor that the two armies had met, had fought, and the emperor had vanquished his antagonists, who had more than double his force, but was himself dangerously wounded. This induced the governor still further to delay the execution; having now ascertained that the order was obtained by a stratagem of malicious and ill-disposed people. The next day news came that the

emperor suffered extremely from a ball in the upper part of the thigh, which the surgeons could not extract. The emperor, in a fit of frenzy, from pain or passion, took his (*kumya*) dagger, cut open the wound to the ball, and expired soon after. Thus were the merchants of Mogodor saved providentially from an untimely death.

We find some repetitions in Mr. Jackson's work, and some inaccuracies so obvious as not to require being pointed out.

#### BARRY CORNWALL'S NEW POEMS.

Having in our last exhibited the principal poem, Marcian Colonna, to our readers, we this week present a very brief example from the Dramatic Scenes, which follow that tale. The first of these is founded on the death of the Emperor Julian, called the Apostate, and opens thus—

(JULIAN—alone.)

To-morrow?—aye, to-morrow. The bright Sun

Of my life will set in blood. Dark, heavy clouds  
Are rolling round about me, yet my eye  
Can reach into the dim eternity,  
And in its bosom is—my grave. Oh! then,  
Valour and War, farewell! Soldiers and friends,  
Who in tempest of the battle, once,  
With your loves girded me like triple steel,  
I must be gone. Morning and Night farewell!  
And all the beauty of this visible world;  
And thou, fair Air! who music art and perfume,  
Colour and light, and in thy silent arms  
Now nursest with cold dew the sleeping flower,  
And bidd'st the fever'd heart forget its pain,  
Shall I behold thee never again?—Never!  
A dull, protracting, melancholy word,  
That, in an alien language, talks despair.  
'Never'—then Hope is gone and time de-

parted;  
And Happiness that flies and then returns,  
Making its presence precious—all are gone,  
—Is there no armour of the soul wherein  
I may array my thoughts and vanquish Death?  
It may not be: my hour is come—is come:  
And I must tread upon that shadowy strand  
A shadow, a pale solitary thing,  
For ages and for ages, and there be  
A Spirit, filled with human thoughts and pains,  
Langishing for some remote Elysium.  
Great Mars, look down upon me: Am I not  
The son adopted? oh! my patron Mars,  
My father, and my god, I perish here  
For want of succour. Fate and Death, at hand,  
Wait smiling for the dust of Julian;  
And the grave opens, with a sickly smile,  
Its hollow home, inviting me to rest.  
Away—this must not be. Imperial Rome  
Leans on my sword—Who goes?

The second scene commences with a very fine piece of poetical philosophy.

JULIAN (on his couch, wounded); PRISCUS, MAXIMUS.

Max. You're easier now?

Julian. Much easier: many thanks.

—And so you think, good Priscus, that the Soul  
Doth of necessity quit this feeble clay,  
When the poor breath departs—that 'tis not  
hung  
On muscle or nerve, or buried in the blood,

As some will teach. For my part, I believe  
That there is good and evil, and for each  
Due punishment and reward. Shall we not meet  
Our friends hereafter, thank you, Maximus?

Max. I hope so, my dear Lord.

Julian. What think you, Sir?

Priscus. I must believe it. There is in the world

Nothing to fill up the wide heart of man;  
He languishes for something past the grave;  
He hopes—and Hope was never vainly given.

Max. Hope trends but shadowy ground, a  
boast.

Priscus. It is—

Max. A guess,

Julian. And yet, Priscus is right, I think.

And Hope h:z in the soul obscure allies—  
Remorse, for evil acts; the dread of death;  
Anticipative Joy, (tho' that, indeed,  
Is Hope, more certain;) and as, Priscus says,  
That inward languishment of mind, which dreams  
Of some remote and high accomplishment,  
And pictures to our fancies perfect sights,  
Sonnets and delights celestial—(and, above all,  
That feeling of a liminary power,  
Which strikes and circumscribes the soul, and  
speaks

Dimly, but with a voice potential, of  
Wonders beyond the world, ethereal,  
Starry, and pure, and sweet, and never ending.  
I cannot think that the great Mind of man,  
With its accumulated wisdom too,  
Must perish; why, the words he utters lie;  
And is the Spirit which gives birth to things  
Below its own creations?

We merely quote the few last lines;  
the death of Julian, who speaks—

Farewell, I faint: My tongue is withered up.  
It clings against my mouth. Some air—air.  
Ah!

This is death, Priscus. Oh! How like a child  
A Soldier sinks before him. Jove!—(dies.)

Max. He faints.

Priscus. He does indeed, for ever: his last  
breath  
Is mingled with the winds.

The next scene, Amelia Wentworth,  
we like less upon the whole than any  
thing the author has published. It has,  
however, some brilliant passages. A  
death-bed reflection is the only one we  
shall transcribe.

Amel. How slowly and how silently doth Time  
Float on his starry journey. Still he goes,  
And goes, and goes, and doth not pass away.  
He rises with the golden morning, calmly,  
And with the moon at night. Methinks, I see  
him stretching wide abroad his mighty wings,  
Floating for ever o'er the crowds of men,  
Like a huge vulture with its prey beneath.  
Lo! I am here, and Time seems passing on:  
To-morrow I shall be a breathless thing—  
Yet he will still be here; and the blue Hours  
Will laugh as gaily on the busy world,  
As tho' I were alive to welcome them.

The Rape of Proserpine; is a beautiful copy of the pure Greek Tragedy  
but our arrangements for our present  
Number render further extracts in-  
eligible.

#### THE HIMALA MOUNTAINS.

(Account continued from Fraser's Journal.—Ap-  
proach to Gurgutree, one of the sacred sources of

\* El Kahira is the Arabic for the planet Mars, and signifies victorious.

*the Ganges, never before visited by a European.*  
1845.)

July 19.—A misty morning succeeded a night in which drizzling rain had fallen. There were several points to be arranged before we could set off. In the first place, it was agreed to leave all the Mussulmans of the party at the village. The Pandit next represented, that it was not customary to permit any armed person to approach the sacred shrine, nor even to pass beyond the village, and that all persons here put off their shoes, and performed this stage with naked feet.

As by the general voice it was allowed that marauding and plundering were common occurrences in this neighbourhood, I did not deem it proper or safe to go wholly unarmed; but I agreed that only five men should be permitted thus accoutred to attend us, and that I should myself carry my gun. But all these weapons of war were to be put aside before we got within sight of the holy spot, and deposited in a cave near it, under a gourd. I also pledged myself that no use should be made of these instruments, nor any life sacrificed for the purpose of food, either by myself or by any of my people, after leaving the village, until we returned; moreover, that I would not even carry meat of any sort, dead or alive, along with me, but eat only rice and bread. As to the putting off my shoes, they did not even propose it to me, and it could not have been done; but I volunteered to put them off, when entering into the precincts of the temple and holier places, which pleased them greatly. All the Hindus, including the Ghoorkhas, went from the village barefoot.

It was seven o'clock before all these matters were adjusted, and we were fairly in route. The road, for rather more than two cos, lies generally through a wood of large firs, a little above the river bed; the path is good, but there are some very bad spots. We then ascended the projection of a rock, which closes up the view, by a curiously constructed rude set of steps, formed of beams of wood and stones, stuck into the fissures of the rock. From this point the river had run to the village, chiefly in a shingly bed of unequal breadth. But here the rocks close over its stream, and confine it as in a trough: the chasma is very deep, dark, and narrow, and from hence we held a more devious path, over enormous fragments fallen from above, broken pieces of fallen trees, all interlaced together by tangle jungle, to a retired spot beneath some spreading trees, where a cool spring, and the pleasantness of the place, generally induce pilgrims to halt.

The river runs below this at a depth of more than one hundred yards, closely confined between two winding walls of solid rock, in which it has hollowed itself a bed, only sufficient to contain it, hardly broader above than it is below, where it tumbles over a succession of falls for a considerable way. Beyond this the road is difficult, and frequently dangerous, passing along the face of scars, in the beds of torrents, across rocks, and over fragments of trees and rocks, and ending in a very ugly and perilous descent, about six

cos from the village, which leads to Bhyram Ghauter.

This is a very singular and terrible place. The course of the river has continued foaming through its narrow rocky bed, and the hills approach their heads, as though they would meet at a prodigious height above. At this point the Bhagiruttee is divided into two branches: that which preserves the name descends from the eastward, and the other, of a size fully equal, called the Jhannevie, joins it from the north-east. Both these rivers run in chasms, the depth, narrowness, and rugged wildness of which it is impossible to describe: between them is thrust a lofty crag, like a wedge, equal in height and savage aspect to those that on either side tower above the torrents. The extreme precipitousness of all these, and the roughness of their faces, with wood which grows near the river side, obstruct the view, and prevent the eye from comprehending the whole at a glance; but still the distant black cliffs, topped with lofty peaks of snow, are discerned, shutting up the view in either of the three ravines, when the clouds for a moment permit them to appear.

Just at the bottom of the deep and dangerous descent, and immediately above the junction of these two torrents, an old and crazy wooden bridge is thrown across the Bhagiruttee, from one rock to the other, many feet above the stream: and it is not till we reach this point that the extraordinary nature of the place, and particularly of the bed of the river, is fully comprehended: and there we see the stream in a state of dirty foam, twisting violently, and with mighty noise, through the curiously hollowed trough of solid granite, cutting it into the strangest shapes, and leaping in fearful waves over every obstacle. From hence the gigantic features of the mountains may frequently be seen, overhanging the deep black glen; their brown splintered crags hardly differing in colour from the blasted pines which start from their fissures and crevices, or even from the dark foliage of those which yet live.

It is wonderful how much the character of these trees harmonizes with the place, sometimes bare of leaves or husks, shooting up like an arrow from their roots; at others sending a fantastic bough athwart the dell, or stretching forth their gray and dry arms like gigantic skeletons. But no description can give just ideas of this spot, or reach its sublime extravagancies. The attempt even is a mockery.

The bed of the Jhannevie is at least equally savage and picturesque; but I had not equal opportunities of acquaintance with it; the perpendicularity of its rocky sides, and their height above the water, are, perhaps, even greater than those of the Bhagiruttee. This river is said to have its origin in a very lofty mountain, called Rec-Kee-Sour-Stan, situated in the territories of China, and which is fifteen days' journey from hence, in a direction nearly that of its apparent course from hence, viz. north-east. I should incline to think it had a course more from the eastward. Just at the end of the bridge there is an overhanging rock, under

which worship is performed to Bhyram, and a black stone partly painted red is the image of the god; and here prayers and worship alone were not performed, but every one was obliged to bathe and eat bread baked by the Brahmins, as preparatory to the great and effectual ablutions at the holier Gungotree. This occupied a considerable time, as the party was numerous; in the mean time I took a very imperfect sketch of the scene, after which I hurried myself at the proper place (which is the junction of the two streams) while the Brahmins prayed over me. Among the ceremonies performed, he made me hold a tuft of grass while he prayed, which at the conclusion he directed me to throw into the eddy occasioned by the meeting of the two waters. The spot where we bathe is a mere point of shingle, just under the rock which divides the two streams. It is necessary to be somewhat cautious in proceeding into the water, as it is exceedingly deep close to the shore; and about two yards towards the middle the stream becomes so rapid as to leave no chance of recovering a movement that should carry one into it. It is extremely cold, as may be imagined, the whole being fresh snow water. Near the bridge there is a spring tinged with iron.

From hence we ascended the rock, at the foot of which the bridge is situated, by a path more curious, dangerous, and difficult, than any we had yet passed. As the rock is too steep and perpendicular to afford a natural path, the chief part is artificially constructed, in the manner before mentioned, of large beams of wood, driven into the fissures, on which other beams and large stones are placed; thus forming a hanging flight of steps over the fearful gulf below: and as this has suffered somewhat from age and weather, while the facilities for attaching it to the rock are rather scanty, or altogether wanting, it is frequently so far from being sufficient, that it strikes dread into any one not much accustomed to this mode of ascent. Sometimes it is even required to make a leap to reach the next sure footing, with the precipice yawning below; and, at others, with merely the support afforded by a slight projecting ledge, and the help of a bamboo lung from some rock above, to cling to the rock and make a hazardous passage.

One cos from Gungotree, and two cos from Mianee-ke Gadh, we reached a spot called Patangnee, which is noted as the place where the Pandooan, or fire brothers, Bloemising, Arjan, Joodi-shcer, Sahadeo, and Nukeel, remained for twelve years, worshipping Mahadeo, after his retreat to Himnala from Lanka. After that period they left this place, and ascended Soorga-roinnce, a peak of the sacred hill, whence the Ganges flows: there four of the brothers died, and their immortal parts ascended to heaven; but the fifth, Joodi-shcer, without tasting the bitterness of death, or quitting his earthly tenement, was assumed, body and spirit, into the heavenly mansions. The spot which bears the name of Gungotree is concealed by the roughness of the ground, and the masses of fallen rock, so as not to be seen till the traveller comes close upon it.

A gunshot below Gingutree, the Kedar Ganga, a rapid and considerable stream, descends into the Bhagiruttee, at a place called Gourecunda; and this is a holy place, where a second ablution is usually performed before Gingutree can be approached. I could not learn the reason of this sanctity, but I believe there is an allusion in the name to some mythological story. The same name was given to one of the hot springs at Jumnootree. There is no holy place of purification by bathing which has not a sound or well of this name.

The hills which form between them the bed of the river, and which are exceedingly precipitous and close the whole way from Bhairanghattee, here recede a little, and without losing any thing of their savage grandeur, admit somewhat of a less confined view, and more of the light of day. Below Gourecunda, the river falls over a rock of considerable height in its bed, and continues tumbling over a succession of petty cascades or rapids nearly the whole way to Mian-ke-Ga-h. Above the debouché of the Kedar Ganga, the bed widens into a small shingly space, in which the river rapidly rolls, obviously changing its course as the floods direct it. Just at the gorge of this space a bridge has been thrown across, which is formed of two piers, the ulterior ends of the beams resting on a large rock in the centre; and just above the bridge, in a bay formed by a reach of the river in this shingly space, fifteen feet above the stream, is situated the small temple, or *infir*, dedicated to the goddess Gingta, or Bhagiruttee.

In former times no temple made with hands was provided for the worship of the deity, but within these few years, the pious of Umur Sing Tappa, the chief of the Ghiorika conquerors, appropriated a sum of money of about four or five hundred rupees for the erection of the small building which is now placed there; and it lay no means clearly appears whether he has in truth done an act pleasing or disgusting to the goddess.

The temple is situated precisely on the sacred stone on which Bhagiruttee used to worship Mahadeo, and is a small building of a square shape for about twelve feet high, and rounding in, in the usual form of pagodas, to the top. It is quite plain, painted white, with red mouldings, and surmounted with the usual melon-shaped ornaments of these buildings.

The scene in which this holy place is situated is worthy of the mysterious sanctity attributed to it, and the reverence with which it is regarded. We have not here the confined gloominess of Bhram Gattree: the actual dread which cannot but be inspired by the precipices, and torrents, and perils of the place, here gives way to a sensation of awe, imposing but not embarrassing, that might be compared to the dark and dangerous pass to the centre of the ruins of a former world; for, most truly, there is little here that recalls the recollection of that which we seem to have quitted. The bare and peaked cliffs which shoot to the skies, yield not in ruggedness or elevation to any we have seen;

their ruins lie in wild chaotic masses at their feet, and scanty wood imperfectly relieves their nakedness; even the dark pine more rarely roots itself in the deep chasms which time has worn. Thus on all sides is the prospect closed, except in front to the eastward; where, from behind a mass of bare spires, four huge, lofty, snowy peaks arise; these are the peaks of Roodroo-Himala. There could be no finer finishing, no grander close to such a scene.

We approach it through a labyrinth of enormous shapeless masses of granite, which during ages have fallen from the cliffs above that frown over the very temple, and in all probability will some day themselves descend in ruins and crush it. Around the enclosure, and among these masses, for some distance up the mountain, a few fine old pine trees throw a dark shade, and form a magnificent foreground; while the river runs impetuously in its slinging bed, and the stifled but fearful sound of the stones which it rolls along with it, crushing together, mixes with the roar of its waters.

It is easy to write of rocks and wilds, of torrents and precipices; it is easy to tell of the awe such scenes inspire: this style and these descriptions are common and hackneyed. But it is not so simple, to many surely not very possible, to convey an adequate idea of the stern and rugged majesty of some scenes; to paint their lonely desolation, or describe the undefinable sensation of reverence and dread that steals over the mind while contemplating the deathlike ghastly calm that is shed over them; and when at such a moment we remember our homes, our friends, our firesides, and all social intercourse with our fellows, and feel our present solitude, and far distance from all these dear ties, how vain is it to strive at description! Surely such a scene is Gingutree. Nor is it, independent of the nature of the surrounding scenery, a spot which lightly calls forth powerful feelings. We were now in the centre of the stupendous Himala, the loftiest and perhaps most rugged range of mountains in the world. We were at the acknowledged source of that noble river, equally an object of veneration and a source of fertility, plenty, and opulence to Hindostan; and we had now reached the holiest shrine of Hindoo worship which these holy hills contain. These are surely striking considerations, combining with the solemn grandeur of the place, to move the feelings strongly.

The fortuitous circumstance of being the first European that ever penetrated to this spot was no matter of boast, for no great danger had been braved, no extraordinary fatigues undergone; the road is now open to any other who chooses to attempt it, but it was a matter of satisfaction to myself.

(To be continued.)

### INRANITY.

On the Establishments for the reception of

\* On this subject so painfully interesting to

*Lunatics in France, and on the means of ameliorating the fate of those unfortunate persons.—A Memorial presented to his Excellency the Minister of the Interior, by Dr. Esquirol, Physician to the Salpêtrière at Paris.*

The word *hospital* is allied to that of hospitality, a virtue celebrated among the ancients. Hospitals are monuments of beneficence. There is scarcely a town without some establishment of this nature. "I will render my empire so rich, that hospitals shall be unnecessary," said Aurengzebe, when he was asked why he built none. But Montesquieu thinks that he ought, on the contrary, to have said, "I will begin by making my empire rich, and then I will build hospitals."

We are quite ignorant what formerly became of lunatics: probably a great number of them perished; the most dangerous were confined in dungeons; the rest, when they were not burnt as sorcerers, or as possessed by the devil, wandered at liberty about town or country, objects of derision or of pity.\*

It was not till towards the commencement of the 17th century, that patients of this description became, in France, the objects of particular attention. At the persuasive voice of St. Vincent de Paul, establishments were formed to receive these unfortunate men. The lunatics, who had till then roamed about without succour, were collected, and placed in the hospitals, where certain quarters were assigned them, as has been done in our times in the *dépôt de mendicité*. Yet in England, a priory called Bethlehem (afterwards corrupted into Bedlam) which Henry VIII. had given to the city of London a few years before, was assigned for the care of lunatics, as far back as 1553. The number of the patients in this establishment increasing daily, it was rebuilt on a more extensive plan in 1675, at the expense of 16,000*l.* sterling; a large sum for those days.

In 1751 this hospital being quite inadequate, another, called St. Lukes, was erected by voluntary subscription.

A few years before Dr. Jonathan Swift had founded at Dublin the Asylum of St. Patrick, for lunatics and idiots.

In 1657 there were 44 lunatics declared incurable in the *petites maisons* of Paris, who were confined in so many cells. The Parliament had three years before, ordered, "that a place should be established for the confinement of the insane of both sexes, who are at present, or who shall hereafter be; in the said general hospital (*Hôtel Dieu*)."

In several provinces lunatics were confined in the prisons or the convents, mixed with criminals and rogues; hence the name of humanity, it is our intention to submit several papers; and finally, besides noting as we proceed, to draw some conclusions from the curious facts which they will be found to contain.

Ed.

\* Of the truth of this most affecting picture we have no doubt. Gracious Heaven!—poor human nature—to what miseries, degradations, and misfortunes have you been doomed by the ignorance, brutality, and madness of man? Ed.

*Discipline, or Maison de Correction*, which has been given in several places, to hospitals for the insane.

The humane exertions which in 1774 led to the great amelioration in the hospitals, did not extend to those for the insane; their fate remained the same. They were forgotten in their dungeons, like criminals: and it was not till 1787, that Tenon, after having visited the most celebrated establishments of London and England, proposed to remove the insane from the *Hôtel-Dieu*, and place them in an hospital with 200 beds, 80 for the men, and 120 for the women.\*

The following year, that part of the *Salpêtrière* was built which is destined for female lunatics, and Dr. Pinel consented to accept the medical direction of it. He ameliorated the condition of these unhappy persons, by improvements in every part of the establishment: it was there he commenced those labours, which have done him so much honor. He obtained a separate infirmary for those whose madness was combined with another disorder, and who were formerly removed to the infirmary of the prison. He caused eighty of these poor creatures, who had been chained for many years, to be released from their fetters. He cured several by a humane treatment, which was the result of profound reflection, and was till then unknown. The popular faction, taking advantage of the successful labours of this distinguished physician, boasted of them, as a sort of triumph of the fashionable notions of the day.

The same year, Daquin de Chambéry published his "*Traité de la philosophie de la Folie*," a work which gave indications of all the ameliorations which have since been adopted in only some great establishments, and particular parts of civilised countries.

Dr. Esquirol, for many years the associate of Dr. Pinel, at the Salpêtrière, having himself formed at Paris one of the best establishments of this kind, judging that much still remained to be done in France, to ameliorate the instruction of these unfortunate, and desiring to appreciate the influence, which the improvements introduced at Paris in the public and private lunatic establishments, had had in the rest of the kingdom, determined to visit all the cities and examine the institutions destined for malalics of this description. He has drawn up his observations separately for each house, hospital, and prison: he had the plans of several of those establishments sketched and engraved for the purpose of comparing what is done in France with what is observed in other countries, especially in England.

The result of this tour is the subject of the memorial before us; the summary of a

great work which the author intends to publish in the ensuing spring.

"Every one," says this worthy follower of Howard, "may make himself sure of not drawing upon himself the severity of the laws; but who can promise himself that he shall not be struck by a malady, which seizes its victims at all ages of life, in all ranks, in all conditions?"

"Those for whom I speak, are the most interesting members of society, almost always victims of the prejudices, the injustice, and the ingratitude of their fellow-creatures. They are fathers of families, faithful wives, upright merchants, skilful artists, warriors dear to their country, distinguished men of letters; they are persons of ardent, lofty, and sensible minds: and yet these same individuals, who ought to be the objects of peculiar interest, those unfortunate beings who labour under the most dreadful of human afflictions, are treated worse than criminals, and reduced to a condition below that of the brute creation.

"I have seen them naked, or covered with rags, with nothing but straw to protect them from the cold damp of the pavement upon which they were stretched. I have seen them coarsely fed, deprived of air to breathe, of water to quench their thirst, and of the first necessities of life. I have seen them delivered to real jailors, and abandoned to their brutal superintendence. I have seen them in narrow, dirty, infected holes, without air, without light, chained in dens which would be thought too bad to confine wild beasts, which the ostentation of governments maintains at a great expense, in capital cities.

"This is what I have seen almost every where in France; this is the manner in which the insane are treated almost every where in Europe.†

In France, the insane, to the number of five thousand one hundred and fifty three, are distributed in fifty-nine houses. Of this number above two thousand are in the three great establishments at Paris.

In this city, as well as in the north, the women are in general the majority; whereas the contrary is observed in the south and in Spain.

In the whole kingdom there are only eight special establishments for the insane, most of which bear the name of "Royal Houses of Health;" some exclusively destined for one or the other sex, while in the others both men and women are received at the same time. These sufferers are often confounded with epileptic patients; with rogues

\* In addressing the attendants of Manics, it might be a good plan, with the view of enforcing humanity, to keep this condition of our nature constantly before their eyes, by reminding them that they are not exempted from this disease.—*Emolli moris nec sinit esse ferus. Ed.*

† This is often true as to the victims of mental derangement—these afflicting pictures are not long removed from disgracing this country; and much yet remains to be done, in private, as well as at our public establishments in the army and navy, where there is a great want of experience in the treatment of this disease.—*Ed.*

or vagabonds, confined for punishment; and incurable lunatics, who are shut up for life: so that it may be affirmed, that France is hitherto without establishments exclusively appropriated to the cure of mental derangement. It is to accomplish this most important object that Dr. Esquirol proposes to erect a small number, each capable of containing from one hundred to a hundred and fifty lunatics, \* all under the proper medical treat-

\* This opinion as to the number of manics that should be assembled, in any single establishment, is most judicious, as applying to recent cases of this malady; and consequently to those of whom in the excited form of the disease, seventeen and eighteen out of twenty, are curable under judicious and humane treatment. This opinion is delivered on authority that leaves no doubt on our mind as to the susceptibility of cure in the great proportion of cases of this disease. This number, one hundred, should be accommodated in two buildings, with colonnades surrounding them: so that exercise may be taken, protected from the sun, in the open air, at all periods of the year, and under all changes of weather. A building should also be erected for the use of those who are insensible to the calls of nature; as no arrangement can be more improper than associating these poor creatures with the cleanly and highly sentient maniac. The congregating a great number of human beings under the same roof, is as unfriendly to health of body, as to health of mind. It is unfriendly to correct discipline; it is from presenting so many objects of varied disease, in close succession, unfriendly to cleanliness and classification; and it also becomes unfriendly to a minute arrangement of the duties of their attendants, whose good conduct and humanity are of the utmost consequence in curing this disease. It is important to bring every thing connected with the same forms of this malady, before the eye of the medical men at a *coup d'œil*, and to which classification is essential. Bethlem, as a building, appears singularly faulty, in this point of view; as in place of one erection, it should have consisted of several subdivisions, which would have increased the facilities of classification, as well as every other useful arrangement. The patients, in walking about, at this establishment, during the whole diurnal course of the sun, have little protection from his influence; and thus exercise in the open air, during bad weather, is, generally speaking, unattainable without their being wet. The greater part of the ground around this hospital appears to strangers to be most strikingly and most unfeelingly perverted; for, in place of its being appropriated to the employment of the manics, in gardening and exercise, it is almost wholly devoted to show, which is, comparatively speaking, of little use to the insane.

Deranged patients, where nothing forbids it, should be kept much in the open air during the day, as this will have the best effect in promoting sleep, and thereby assisting their cure. The noisy state of maniac establishments during the night, great

\* In the treatment of mental derangement, no case can occur, where it will be necessary to subject the unfortunate maniac to constant confinement in a cell. Whenever this is adopted, there can be no doubt of its being the result either of brutalization, of ignorance, or of the combination of both of these, from which this most unhappy class of men have suffered deeply.—*Ed.*

ment. This would furnish a model for a school of instruction, as well as an object of emulation for other establishments of the kind. In order to be received, the lunatic must not have been under a course of medicine elsewhere, nor his malady be of more than a year's standing; nor must he have any contagious disease, or syphilis. Experience has shewn that almost as many patients are cured in the second year after the first attack of this disease, as in the first, the patients should all be considered as incurable after this period.\*

Though the eight establishments, of which we have just spoken, have faults, and perhaps some radical defects, they are, nevertheless, such as they are, far preferable to the other houses where lunatics are also received, occupying only the oldest buildings, dilapidated, damp, badly contrived, and by no means built to suit their new destination, except some cells or dungeons in which the ungovernable lunatics are confined.

We meet with other general hospitals, where the lunatics, except those who are raving mad, live mixed with the other patients, and even the idiots and the poor wretches said to be incurable. Nay, in some places, they go so far as to crowd them pell-mell with the prisoners in the *quartiers de force*; and these unfortunate victims are almost every where placed on the same regimen as the indigent.

In the thirty-three cities of France, which Dr. Esquirol visited, the insane are received into the general hospitals, where they admit, at the same time, old people, children, the infirm, persons afflicted with the itch, and even prostitutes and criminals.

At the Salpêtrière and the Bicêtre, the ward of the insane is, in some measure, rally arises from a want of attention to this obvious and simple principle. There is no disease that, in its treatment, requires more assiduous attention than mania, and therefore, those labouring under this affliction will derive singular advantages from being daily visited by their medical attendant. The prompt application of a few leeches will often moderate an approaching paroxysm, and be the means of rendering coercion almost unnecessary.—*Ed.*

\* Such principles, if adopted, would be fatal to the restoration of many maniacs, who, under juster views and perseverance, would be cured. No method is so likely to render a disease incurable as considering it so; and this apathy the maniac has too often experienced. We contend, that while the bodily health of the patient continues good, he should never be abandoned as incurable, as under the most complicated misery, human nature seldom abandons itself; hope will prevail in the midst of the most gloomy presentations; and it therefore becomes the duty of friends to adopt this principle towards their severely afflicted relation, who is wholly in their power. If they neglect this, they neglect to fulfil what he, with the consciousness of his state, would have done for himself. Under such circumstances, should he abandon himself? Certainly not. And this consideration ought to weigh with friends who possess the means of carrying it into effect.—*Ed.*

independent of the rest of the building; they have a particular regimen, servants, and a physician.

In those towns where *dépôts de mendicité* had been established, it was proposed to add to them a *quartier de force*, for the raving mad only; some had been already built, in which these are left continually chained in their cells. The other lunatics are destitute of that particular attention which their condition requires; there are even towns where they have not been blushed to place the insane in the prisons.

In general there are few houses of confinement in which we do not find raving lunatics, cruelly chained in dungeons, like criminals. "What a monstrous association!" exclaims the philanthropic Esquirol, with great reason.

## ARTS AND SCIENCES.

The *Sheffield Mercury*, after mentioning Messrs. Parkes' patent invention, for the consumption of their own smoke by furnaces, steam engines, &c. speaks of a similar method devised by Mr. Davies of Dukinfield. "This plan, the Editor says, Messrs. M. Caswood and Son, of Leeds, have applied to the steam engine furnace at their foundry, and with the happiest effect. The emission of the smoke is now scarcely more than from a common fire; and the contrast with the black and dense volumes of vapour which issue from the neighbouring furnaces, is very striking.—Messrs. Rothery and Co. have adapted the same method, at their oil mill, and with equal success. This improvement may be made in any furnace; and the expense will not exceed four or five shillings!—We therefore trust that the method will be universally adopted; and the blessings of a pure atmosphere be thus secured."

## LEARNED SOCIETIES.

### OXFORD, MAY 27.

On Saturday last, in Convocation, the Honorary Degree of M. A. was conferred on Johan Henricus De Sarum, Gentleman Commoner of Exeter College, and son of Christoffel de Sarum, 4th Maha-Modliar (or noble Magistrate) of Colombo, in Ceylon.

Saturday, May 20, the last day of Easter Term, the following Degrees were conferred:—

DOCTOR IN CIVIL LAW.—Rev. Henry Cotton, Christ Church. MASTERS OF ARTS.—Rev. George Porter and Robert Samuel Richards, Worcester College. Rev. George Henry Curtis and George Bryan Pantton, University College. Rev. Thomas Morris, Brasenose College. John Locke Jeane, Pembroke College. BACHELORS OF ARTS. Ralph Doughty, St. Alban Hall. James Dighton, Exeter College. John Stoup Wagstaffe, Lincoln College. Henry Barrett Lennard, Merton College. Horace Monro, Richard Powys, and John Walmsley, University College. Thomas Pearson and Robert Coulthard, Scholars of Queen's College. Peter White Tayler and John Sankey, St.

Edmund Hall. Philip Perring, Lambert Blackwell Larking, Robert Young Keays, and Francis Maude, Brasenose College. George More Moynce and Robert Bidolph Phillips, Trinity College. Henry John Gunning and John Alcock, Balliol College. Hon. Henry Alfred Napier, Christ Church. Robert Lloyd Anwyl Roberts, Jesus College.

The whole number of Degrees in Easter Term was—D. D. Two; D. C. L. Two; B. D. Four; Incorp. B. Med. One; Incorp. M. A. One; M. A. Fifty-one; B. A. Forty-eight; Matriculations, ninety-two.

Wednesday, May 24, the first day of Act Term, the following Degrees were conferred:—

DOCTOR IN DIVINITY.—Rev. John Russell, Grand Compounder. MASTERS OF ARTS.—Carre William Tupper, Scholar of Pembroke College. Rev. William Glinster, Scholar of University College. Rev. William Upjohn and Rev. John Henry Coates Borewell, St. Edmund Hall. William John Gilbert and Henry James Felden, Brasenose College. Francis Lloyd, Student of Christ Church. Rev. William Gibbs Straghu, Christ Church. Rev. William Tommismian Hanbury, New College. Rev. William Hall Hale, Oriel College. Rev. Daniel Jones, Scholar of Jesus College. Rev. William Leigh, Worcester College. BACHELORS OF ARTS.—John Gethin, Esq. John Herbert, Esq. Wadhams College, Grand Compounders. John Percival George Lambie, Esq. Balliol College, Grand Compounder. Edward Colbold, St. Alban Hall. Richard Rothwell, Alexander Begbie, and Thomas Edward Duncumb, Exeter College. Frederick Quarrington, Scholar of Pembroke College. Samuel Turner, Walter Culverly Trevelyan, and George Traherne, University College. Robert Bland Meudham, Philip Gregson Harper, George Nutcombe Oxman, and John Hurt Barber, Wadhams College. Henry Dixon, Brasenose College. Henry Anthony Pye and Roger Bird, Demies of Magdalen College. Hon. Sedley Venables Vernon and James Id Boone, Students of Christ Church. Duncombe and Charles. William Wynyard. MURRAY Jesus College.

### CAMBRIDGE.

After a long investigation, Scholarship, at the university, has been adjudged to Mr. Geo. of Pembroke Hall; and a premium was voted to Mr. John Jowett Stes the knowledge he displayed in the examination. Mr. George Irving Scott, of Trinity Hall, is the fortunate candidate for the Chancellor's gold medal; the subject *Walterio*.

## FINE ARTS.

### BRITISH GALLERY.

#### Biographic Sketches.

"But modesty in me forbids the defacements in men departed, their posterity yet remaining, enjoying the merit of their virtues, and do still live in their honour. And I had rather incur

the censure of abruptness, than standing by eruption, or trampling on the graves of persons at rest, which living we durst not look in the face, nor make our addresses unto them, otherwise than with due regard to their honours, and reverence to their virtues."

*Portrait of Sir Peter Paul Rubens.—Painted by himself. (His Majesty.)*

The union of grandeur and truth, the two greatest attributes of painting, are so happily displayed in this masterly portrait, as to mark the superior feeling that results from the study of the higher walk of art. Among the multitudes who have devoted their lives exclusively to the painting of portraits, a department of the profession which points out the readiest path to employment, not many have acquired more than wealth. Yet to record that superior sentiment which we behold in the portraits by Raffaele, Titian, Rubens, Vandyck, Murillo, Velasquez, and our own great Reynolds, the living resemblance of persons whose superior actions have brought honour to their country, or whose exalted genius has supported the dignity of man, made in the image of his Creator, is an achievement not to be contemned; although some distinguished artists, affecting to decry portraiture as beneath their study, have led the public to declaim on the side of this unmeaning conceit.

The dignity of the pen of the historian is not unworthily employed on the biography of an illustrious mind; nor is the pencil of the historical painter degraded by the delineation of the earthly form which that mind illumined. Why then should a gallery of portraits of the truly great, painted in the noblest style of art, excite less interest than pictures of the memorable deeds of the same beings? For, although their actions embrace a greater field for the imagery of design, each is estimable when contemplated by the eye of philosophy. Posterity might as highly estimate a picture of the hero of Waterloo by the hand of a Titian, as a scene of the field of his glory by that of a Rubens. It must ever be deplored, that there are not more portraits of great personages perpetuated by the pencils of great artists.

Rubens has portrayed himself in a broad-brimmed hat, clothed in a mantle of the same colour, with a narrow laced ruff, and decorated with a chain of gold, one of the many, it may be presumed, which had been presented to him by sovereign princes, but which this "consummate painter, enlightened scholar, and accomplished man of the world," has modestly concealed, leaving *secundum artem*, only a sparkling link of the honourable distinction visible. The countenance is dignified and intelligent, and painted with exquisite purity of colour: the picture is rich and harmonious.

*Portrait of Sir Anthony Vandyck, painted by himself. (His Majesty.)*

This is also a bust, and companion to Rubens; it is painted more in the style of his illustrious master, than that by Rubens himself. He wears a black mantle, without a hat; his hair, mustache, and small tuft at the chin, are of a reddish hue. The countenance is expressive of great capacity, but not

illumined by that grandeur of character radiating from the brow of his prototype—nor is it so highly wrought.

These pictures are from the collection in Carlton House—his majesty having graciously condescended to contribute fifty-nine subjects, nearly one fourth of the whole catalogue. Another instance this of the munificent spirit which prevails in the breast of the king, and is so marked a characteristic of the royal family—that spirit which delights in the pleasure of obliging. Such a precedent from the throne, it is fervently hoped, will operate as it should; for although the artists owe so much to certain distinguished persons, for their considerate zeal, yet there are too many of high rank, who coldly withhold the finest specimens of art from this noble institution, under the plea that they cannot deprive their walls of these expensive decorations, to contribute to a public show. These narrow-minded persons should know, that his majesty courted this inconvenience for the public good, and cheerfully stripped the walls of his private residences for the promotion of this national object!

When application was first made to this illustrious person by certain directors of the British Institution, on the development of their reasons for exhibiting the works of the Old Masters, and a request preferred to know what pictures could be spared, the answer was worthy the then representative of George III. "any that may be chosen—or all."

It may be presumed that King Charles I. when prince Charles, and travelling *incog.* through France on his way to Spain, accompanied by the duke of Buckingham, became acquainted with Rubens; for the duke, who was never separate from his prince, had then an interview with the illustrious painter, who had recently completed his great work of the Luxembourg, the two last pictures for that gallery being executed at Paris.

In 1627, Rubens, whose fame had spread over Europe, arrived in England, being sent hither on a private political mission of no less consequence than the negotiation for a peace between England and Spain. He executed his commission with that address that led to a successful result, and produced for him a great acquisition of fame.

The English king prevailed on Rubens to undertake a series of allegorical pictures, the designs in honor of his father, to ornament the ceiling of that building then recently finished, the Banqueting Room, Whitehall, being part of a magnificent palace begun by James I. whose apotheosis forms the subject painted. Rubens received the honour of knighthood in testimony of his high merits, and was liberally rewarded for this work, which, for grandeur of design, and splendour of effect, is considered to be the finest plaqué in Europe; yet such has been the indifference to works of taste in England, that thousands and tens of thousands have lived and died in London in every age, without

• Cipriani was employed to clean and repair the paintings on the ceiling of the Royal Chapel, Whitehall, in 1778, which work he completed with great success.

having seen this magnificent display of talent.

King Charles had purchased a fine gallery of pictures of Rubens, collected by him in his travels, and which for a time had decorated the walls of his mansion at Antwerp. The negotiation for the purchase was managed by that distinguished patron of the arts, the first duke of Buckingham, before Rubens visited England. The king gave for this addition to the royal galleries ten thousand pounds.

Cologne had the honor of giving birth to this "Prince of Painters," in the year 1570, on the feast of St. Peter and St. Paul, after whom he was named. He died in 1640, and was interred in his own private Chapel in the Church of St. James, at Antwerp.

The reputation of this enlightened king, for his general love of science and particular regard for men of talent, was spread abroad. England had suddenly appeared the seat of arts. Hence every distinguished artist must have felt a desire to become acquainted with its sovereign, whose accomplished mind could even direct the taste of those whom he patronized. His condescension to such excited a generous emulation for his favour. Vandyck naturally bent his thoughts towards the English court, then the most polite among nations. Sir Kenelm Digby had visited this inimitable portrait painter, and doubtless had said enough in honour of his sovereignty to excite Vandyck to seek his protection, for he had been severely treated and sadly mortified by the monks of the Low Countries, who had not to expiate, like the Italians, the crying sin of picture worship.

Nor did they, like the priesthood of Italy, commit the sin of idolatry to those who painted pictures. Vandyck had executed some altar pieces for certain religious communities. The arts were even there subservient to the church; but the churchmen regarded their merits no more than those of the great universities nearer home in later times. It was in vain for Vandyck to reason with his ignorant employers, to expatiate on the principles of taste, or talk of chiaroscuro, of the balance of colour, of red here and blue there, focus of light, and blazing effect. The holy priests would have their legends attired in a costume of their own, taking care, like sage Dutchmen, not to pay a stiver until the contract was completed according to their humour. He turned his back upon his own country, and was adopted by this. The walls of the British Institution, the mansions of the great throughout this favoured isle, proclaim what Flanders lost—what England gained.

The picture of his illustrious patron, King Charles, on the white horse, attended by St. Antoine, which shines a constellation amidst this collection, would alone form a school of art. Never did the purity and brilliancy of colours combine in a fineness than that comprising the countenance of the king, the armour, and the head of the horse. The bold and masterly execution of the other parts, the neutral hues that lead to the principal features, where the utmost power of just finishing is applied, display his consummate skill.

Vandyck visited England in 1629, and sub-

sequently two years afterwards, when he obtained what he so earnestly sought, the kind countenance of the king, whose favour he retained to the day of his death, which happened in 1641. He was cut off in the prime of life; but he went peacefully to the tomb, and knew not of those scenes of horror that the fates were preparing for his honoured master, and for those illustrious men who had hailed him as a brother, rewarded him according to his deserts, and honoured him as a friend.

Vandyck made the best compensation to the country: he loved the English, spent the fortune acquired by their munificence in the liberal encouragement of other arts, to the professors of which his personal kindness was extensive. He painted many of their portraits gratuitously.

Those who are not ignorant of the laborious study necessary to the completion of a highly finished picture, cannot but feel astonished at the fecundity of his pencil. There are few noble families in this country who do not possess some of his works—portraits of their ancestry. Many of his finest pieces were purchased of the commissioners appointed by Cromwell to sell the royal collections, by foreign connoisseurs, and even by agents from crowned heads. Several of his choicest works were sent abroad to the young Duke of Buckingham by a faithful servant, which never found their way back to England; and many were swept away during the reign of terror, with the *beaux* of destruction, by those sanctified scavengers, Praise-God-Barebones, Hugh Peters, and others of "purer eyes" than to behold such abominations as those images of nobility. Yet there are now left to excite our wonder that he could accomplish so much within the short space of ten years, the period of his sojournment here.

The last compliment Vandyck could pay to the natives of England, was expressed in his desire that his dust might mingle with theirs. He was buried in the old cathedral of St. Paul, "with a funeral pomp," says Mr. Bryan, "suited to his extraordinary abilities, and the universal esteem he had acquired by the urbanity of his manners, and the liberality of his heart."

Vandyck had the honour to lead to the altar the beautiful daughter of Lord Goutry. He was knighted at St. James's Palace by Charles I. in the year 1632.

#### ROYAL ACADEMY.

No. 87. *Portraits of Miss Ingham and her Sister.*—T. Phillips, R. A.

In conjunction with the wreath of flowers introduced, the whole of this picture resembles a garland, painted upon the principles of the celebrated Baptist, in which strength and harmony of colouring are united with the most elegant form of composition. The management of this group, upon a light back-ground, is no less skillfully performed.

It is evident that this great painter was blest with the visions of Gainsborough in his last moments. For when expiring, he exclaimed, "We are all going to heaven, and Vandyck is of the party."

than judiciously chosen; and the picture, altogether, exhibits the most pleasing variety.

No. 6. *Portrait of the Rev. Dr. Coplestone, Provost of Oriel College, Oxford, by the same.*

This also is one of Mr. Phillips's happiest productions. The principal, as well as the accessories, is in the best style of portrait composition.

No. 132. *Portraits of Miss E. and Miss F. Baring.*—J. Jackson, R. A.

Parallel lines are not very favourable to the picturesque; yet somehow Mr. Jackson has contrived, by the simplicity and character of this performance, greatly to interest us. There is no sacrifice made by the foil of contrast, or studied preference of attitude, to break the unity of sisterhood. It is a sweet picture, and at least equals any thing of the artist's female portraiture which we have yet seen.

No. 186. *Portrait of Canova.*—The same.

A portrait which conveys most perfectly the individual resemblance of this celebrated sculptor, and is a fine example of skill in the harmony of colouring.

No. 178. *Portrait of Mr. Liston.*—By the same.

An admirable likeness, and well painted.

No. 163. *A Group of the Earl of Mulgrave, General Phipps, Sir George Beaumont, and the Hon. A. Phipps [in title].*—By the same hand.

This is without the finish which should belong to works of its size, and displays neither great talent for arrangement, nor expression in its execution.

Nos. 12. *Mrs. O'Brien*; 24. *Miss Stephens*; 58. 77. *J. Enright and Miss Fairlie*; 105. *A Young Gentleman*; 158. *Bishop of Norwich*; 164. 311. *Lady and Sir T. Monro.*—M. A. Shee, R. A.

We have little to observe of this able artist's performance, beyond our usual remark on his works:—an almost excess of purity in the use of his means. It may be, that time, in acting upon them, will only bring them to the standard assumed by his contemporaries; and it is very possible, that, had we seen the portraits of Vandyck, (more especially his females) in their original state, much of his mellow tones would not have appeared. Be this as it may, it is an estimable quality when compared with the crude and slovenly laze which some parts of our portrait pictures display. No. 105 is one of the most beautiful specimens of Mr. Shee's pencil.

MODEL ACADEMY.—We never enter this room but with a sepulchral feeling.

"The storiature and animated bust!"

the monumental record of the departed are there indeed mingled with the resemblances of the living, and the poetical effusions of the artist's mind; yet still the impression is of the sombre cast. Among the works of imagination, the figure of Eve at the Fountain, by E. H. Baily, A. is eminent for its chaste simplicity, and the beautiful turn and beauty of the attitude. The figure of Victory, executed from a design of the late W. Theed, Esq. R. A. by the same artist, is

conspicuous for its grandeur and majestic form; the expression, however, is that of grief, the wreath is for the hero that is no more.

*A Sleeping Child.*—F. Chantrey, R. A.

This exquisite piece of sculpture is powerfully attractive; the peculiar interest of sleeping infancy, the tenderness and purity of its character, is felt by all; and when to this is added the beauty of innocence at rest, it cannot fail to excite the softest and best emotions of our nature. In the execution of this difficult work of art, Mr. Chantrey has displayed his usual skill, and given in the head of the child the most perfect idea of that character found in the best works of Raphael and Corregio, when they endeavoured to represent the Divinity of the infant Saviour. The lower part of the figure appears to us much inferior to the head; but our principal objection is to those needless emblems, introduced rather to puzzle than to explain. The fly of the valley, if meant to express purity, can add nothing to the character of purity seen in the sleeping child itself. The butterfly feeding upon the snow-drop, if it be such, gives no palpable idea of its meaning, and Mr. Chantrey is the last from whom we should expect these unmeaning accessories. We have no objection to a limited use of allegory; but, in this instance, it rather weakens than strengthens the main representation. Of the busts, it is enough to say they are by the hands of this artist, and that in most of them the individual resemblance is finely given.

*Religious Instruction. A Brass Relievo for St. John's Church, Manchester.*—S. Fearnman, R. A.

There is a solemnity bordering upon severity in this group, or rather in the principal ecclesiastical; nor do we quite understand the personage behind, with something of a circle about the head.

Nos. 1030, 1031, 1036. *Idiota.*—P. Turner, R. A.

The first of these is a capital likeness of the Duke of Kent, of which we have already spoken; the two latter, busts of Lord and Lady Audley. They are both excellent, but that of the lady peculiarly so. The subject is admirably adapted for the sculptor's art; and the beauty of Lady Audley's countenance, as well as the air of dignity about her head, has been expressed with very great ability.

*A Marble Bust of the Bishop of Durham.*—No. 1065, by W. Behnes.

We have scarce ever seen a finer display of skill in giving complete idea of a character at once dignified and humble, than appears in this bust; and we must congratulate the artist upon a performance in which he has evinced talents beyond any former exhibition.

#### ORIGINAL POETRY.

[By Correspondents.]

##### SONNET.

On viewing Queen Mary's Apartments, in the Palace of Holyrood, at Edinburgh.  
Is this the Royal palace, where the Queen—

The Queen of beauty—Caledonia's pride—  
 Reign'd o'er these realms in pomp, as princely  
 bride  
 Enthroned 'midst grandeur, by the nation seen?  
 The apartments these, which often serv'd to  
 screen  
 Her primal charms of art's false glare denied?  
 These, where in privacy want to reside  
 Her loveliness increased their glory shewn?  
 But ah, how changed!—while here we fondly  
 trace  
 Relics of splendour in profusion spread,  
 On every side, th' enchanting spirit's fled,  
 Which every fancied charm gave to this place—  
 Fit emblem of this present transient scene—  
 For earth's proud image is impressed VAIN,  
 K. V.

[We are often favoured with *truly* original poetical compositions, but generally too long for our purpose. The following short specimens, however, may afford our readers some entertainment; and the writers assure us their insertion will much delight them.]

## TO

What anxious, lonely bee was it  
 That sought the fittest, fairest treat,  
 Its cell to sweeten, tireless did fly,  
 Each flow'r to try?

"Twas I!

What beauteous, blushing Rose was that,  
 Tho' flung its fragrance, as a net,  
 Arctus did give th' alluring clue  
 To sweetest dew?

"Twas you!

April 18th.

## LINES ADDRESSED TO MISS B.—

*On making some Handkerchiefs.*

In all you tell—  
 In all you take in hand,  
 What'er it be,  
 You let me see—  
 That you can praise command.  
 What'er you do  
 Is match'd by few—  
 You always do excel!  
 Merit doth lurk  
 In all your work—  
 You always do it well.  
 These lines to you  
 Address'd are true—  
 No flattery lurketh here:  
 And I can tell  
 That you excel,  
 And all your friends revere.

W. B.

## SKETCHES OF SOCIETY.

[To the Editor of the Literary Gazette.]

## THE PRESENT;

*Or, Travels of a Hare after his Decease.*  
 Many of those individuals whose deaths are recorded for the edification of the public, are the cause of much dull reading being sent into the world about their lives. Because the exit of a man attracts attention, it is supposed to be of importance to state, when he was born, who were his parents, and where he went to school. I shall take good care not to fall into this error, by avoiding all mention of my "birth, parentage, and education."

Passing then at once to that period of my travels when I lost my life (it is much to be regretted that few travellers reach that period so soon), I begin by telling you, that the week before last, I had the misfortune to get my neck dislocated by a stick thrown from a rustic's hand, who, from being unconscious of the inconvenience he had occasioned me, went on without offering me the smallest assistance.

A moment afterwards Captain Cockleshell, of the Lumber-troop, (who had just succeeded in wounding a hay-stack which stood within a hundred feet of the place from which a covey of birds had sprung,) came to the spot where I lay, very busily engaged in performing my last convulsions.

The Captain did not mistake me for one of the birds that he had missed. He very soon found that I was defunct; and, being quite satisfied that I should not run away, he, with that presence of mind and composure which distinguishes the true hero in battle, serenely retired twenty paces,—re-loaded his gun, and discharged its contents into my prostrate carcase, which he forthwith carried off in triumph, as an undoubted proof of his shooting prowess.

Arrived at his house in Little East Cheap, I was introduced in form to the Captain's Lady, with a very minute account of the manner in which the redoubted Lumber Trooper thought proper to say that I had come by my death. According to this, it appeared that he had tracked me for more than a mile and a half, and at length perceived me just retiring into a thicket, when he levelled his piece, and shot me dead, at the distance of a hundred and fifty, or a hundred and sixty yards.

For three days every person who came to the house was entertained with this little interesting narrative, and treated with a sight of my person, which placed the truth of the statement beyond all doubt. The lady now considering that I had been sufficiently productive of *celar*, proposed to have me for dinner. I was glad of this, for the weather was so cold, that I felt quite impatient to be dressed.

But the Captain objected. A tame rabbit, twice as big as I happened to be, might be bought for half-a-crown, and would be a better dish, while I was worth more than the money he had named to send as a present. With this feeling he finished by proposing to send me to his cousin Street, at Margate.

"Why should we send it to him?" enquired the lady, "What does he ever send us?"

"Nothing.—Nor would he give us sixpence to save us from starving. I would only send it to mortify him, by letting him know that we are getting up in the world."

This satisfied the lady, who forthwith wrote a very affectionate letter to announce me, and that same night, off I started by the coach for the Isle of Thanet.

My carriage, including the porter's demand on delivering me, cost but two shillings and tenpence. The servant took me in with a smile, but I met with a very different re-

ception from the mistress, when she returned from her morning walk.

"What," said she, "am I and your master to be robbed of two and tenpence for such a thing as this! Why, I could at any time buy a better of the poachers for half the money! A pretty thing, indeed, to—"

A double knock interrupted her eloquence, but only interrupted it to give it additional energy, when a letter from London, carefully put in off the stones, and charged expence, was given into her hands, to tell that I was coming, in order that she might send to the coach-office, and save the expence of portage.

I shall not follow her through her transports, nor detail the many civil things with which she entertained her husband on the subject of his fine London relations; but I must remark, that she behaved very unkindly to me, whom she called "a miserable little starveling, not worth cooking, or even eating, if I could have been sent ready cooked."

After a very short debate, both came to a resolution that I was absolutely good for nothing, and, in consequence of this, they determined on dispatching me to a very particular friend at Canterbury, and I became the subject of two letters. The first, from Mrs. Street to Mrs. Cockleshell ran thus:

"My dear Madam.—Mr. Street and myself beg to return you our best thanks for the beautiful hare which you were so good as to send us. It arrived very opportunely, for it came when we had a large company of fashionable folks to dine with us, and we had been every where trying, but in vain, to procure such a thing for love or money. We are, however, very sorry that you should rob yourself of such a treat, for it was the nicest ever tasted, and must earnestly beg you will not think of conferring on us a similar favour for the time to come, as we are quite distressed from not knowing how to make a suitable return. I remain, my dear Madam, (with best remembrance to the Captain and all the family),

"TIVALLAND STREET.

"To Mrs. Cockleshell, Little East Cheap, London."

The second was as follows:—

"My dear Sir.—As a very small return for the many favours which I and Mrs. Street have received at your hands, we take the liberty of sending you a leveret, which we hope you will do us the favour to accept. We fear it is hardly worth presenting, as it is but a small, though, we trust, a very fine one; but we know your kindness will take the part for the deed. I should have called to return a part of the cash you were so good as to favour me with as a loan in the summer, but that I understood you were a great deal in town, and feared that you would be out of the way. By the end of next month I shall make a point of coming to Canterbury. Hoping it will not be inconvenient to wait till then, I am, my dear Sir, (with best regards from Mrs. S.) very faithfully yours,

"HUMPHRY STREET.

"Charles Longpurse, Esq. Canterbury."

Though I went carriage paid, and the letter post free, Mr. Longpurse did not treat me with all the respect in the world. "What!" he exclaimed, "Here's another sprat! Well, its my own fault if those who sent you catch a herring, that's one comfort."

I now found myself introduced to the society of half a dozen hares, and about as many pheasants and braces of partridges. The footman was told the next day that he might have me (on account of the smallness of my size) to deal with as he pleased. He being quite unfringed with such things, sold me for eighteen-pence to a journeyman apothecary, his friend, who wished to inspire his master with some respect for his connexions; and the apothecary, on receiving the present as from his journeyman's uncle, a great landholder, sent me with all speed to the house of the rector, through whose interest he hoped to be promoted on the first vacancy, to physic the paupers in the parish workhouse.

The person for whom I was now intended was really (as the son of *Galen* knew) very fond of all sorts of game. But he happening to be out when I arrived, and his wife not being at all partial to the trouble of cooking a hare, which he always expected her to superintend herself, I was again sent on my travels, and started by the first Dover coach that passed for the metropolis.

Again in Lordon, a bailiff paid the porter who was entrusted to carry me from the inn, and took me from him at the door of the house to which he had been directed. He had the honesty to return with me, having himself assumed the garb of a porter, and, in this disguise, he easily gained an entrance, touched the gentlemen for whom I was destined on the shoulder, and conducted his prisoner, with little delay, to a sponging-house in Chancery Lane.

The debtor had now to consider of finding bail. No person seemed fitter to be applied to on such an occasion than his friend, Captain Cockleshell, of the Lumber-troup. To prepare him to accede to such a request, he bethought himself he could not do better than to send him a hare. He therefore wrote a letter, dated Hampshire, describing me to have been killed on the day but one preceding that on which he was writing, and by himself, on the manner of his friend, Lord Sharpset; and with this statement, back I went to my old master.

"Look here," said the Captain, (who immediately recognized me), addressing himself to his wife, "the hare has come back again; I can swear to its being the same that I killed last Monday."—"He meant that he had found dying."

"No, sure it can't be!" exclaimed the lady.—"Yes it is."

"And Diddler says he shot it the day before yesterday."

"Indeed!"

"And on the manner of his friend, Lord Sharpset."

"How ridiculous," said the Lady, "do such people make themselves by endeavouring thus to show their consequence."

"It is contemptible," the Lumber-trouper added.—"Then, to tell such bouncing false-

hoods, and unnecessarily; that puzzles me. How can people make up their minds to that."

And both agreed to condemn such conduct as most absurd and improper; though this had not occurred to the Captain when I first fell into his hands. It was now debated whether or not I should be sent any where else; but, from the circumstance of their finding it convenient to close their nostrils when their noses were turned towards me, this, it was thought, would be rather too high a joke. The idea was accordingly abandoned, and I was ordered into the kitchen for the servants, where I am now roasting.

I am, Mr. Editor, truly yours,  
PUSS.

### THE DRAMA.

DRURY LANE.—On Monday, Mr. Keen took his last benefit. We have not, as our readers know, been the unconditional admirers of Mr. Keen; but we have yielded our tribute to his genius when we thought that it was merited. We hope that the new actors, Messrs. Cooper and Vanderhoof, will do something towards filling his place; but to many, at least, they will not compensate for the absence of their favorite.

Mr. Keen played *Jaffier*, in *Venice Preserved*. The house was crowded almost to suffocation, and we saw and heard him little at our ease. He acted parts of it very well, but the character is perhaps not altogether adapted to him: it is a long, dreary, difficult part; and, except in the scene with Renault, and in the night scene on the Rialto, affords little opportunity for any actor to exhibit excellence. Why did not Mr. Keen act *Pierre*, and leave *Jaffier* to Mr. Rae? As it was, Mr. Elliston (Mr. Elliston!) acted *Pierre*. We wish he would leave tragedy alone: it does not become him, nor does he become it. He is a heavy *Pierre*, and has not one atom of dignity. Mr. Keen played in a farce called "*The Admirable Crichton*," and sang (sweetly), and fenced, and mimicked, and danced, and sprained his ankle: he can do better things than these—let him leave them to his inferiors.

COVENT GARDEN.—*Macbeth*.—This Tragedy, which has not been performed at this Theatre for some time, was got up for Mr. Macready's benefit. It is difficult to find an adequate representative of the principal character: the more striking and effective scenes are not easily acted, and the quieter ones have seldom been embodied with any thing like success. A man who has met the weird sisters on their blasted heath, and in whose ears voices teeming with fate and terror have shrieked, must not be portrayed in a common way. He has for ever after to wear about him the sense of that supernatural colloquy, and to bear up against it, and yet to feel the weight of his impending destiny. He toils up the hill of life, like a Sisyphus, without any relaxation from his burden: the stone that is hung round his neck never evades him, but presses the heavier in proportion to his ascent.

John Kemble appeared more like *Macbeth*, after the murder at least, than any one whom we have seen: the marble look which he wore, became the assassin of Banquo and Duncan; and his tones, which seemed at times as though they came from a hollow sepulchre, struck the ear, and chimed in admirably with the deep tragedy of the story. Mr. Keen plays the scene after the murder in a style of the highest excellence; but we confess we do not think *Macbeth*, by any means, one of his happier efforts. Mr. Macready acted the part (on his benefit night) for the first time, and acquitted himself as we expected—indeed better; for we had been accustomed to identify him, rather too exclusively, with characters of mere tenderness or passion, and to give him a limited credit only: he has shewn us that he can fill a more extended circle; and we rejoice in every opportunity that is afforded him of doing justice to himself. His acting in "*Virginian*," is quite masterly; and yet very few persons had before a notion of his power over the gentler feelings. We indeed had seen him in the *Steward*, where he gave evidence of this faculty; and yet his *Virginian* in some measure surprised us.

Mr. Macready's *Macbeth*, then, is a fine piece of acting: we know persons who did not admire the opening scene; but for our parts, we liked the quietness and subdued power which he threw into the earlier parts of the play. The dagger scene was good, but more particularly the latter part of it, where he steals with a noiseless step towards the chamber of his sleeping victim; but the scene after the murder was admirable; and of the banquet scene, he is the only actor that we remember, who has given us a true conception. It has been the custom for *Macbeth* to bully the ghost of his deceased friend Banquo out of the supper-room—to shout out a torrent of words in the voice of a Stentor, and to assume a position of defiance, almost ludicrous. Mr. Macready retreated, instead of advancing: it was the murderer before the avenging spirit, trembling and shuddering at the past and the present—endeavouring to shield his eyes from a vision that almost seared them with horror; his manly nature peeping out a little from the cloud of fear and remorse that enveloped it, but sinking back at last exhausted and dismayed. The concluding act was admirably performed, and the general tone well preserved throughout. There were few glaring lights thrown in to make particular parts prominent; but it was richly coloured altogether, and is no mean addition to the still increasing reputation of Mr. Macready.

MISS MACAULEY.—This lady gave an entertainment on Wednesday, at the Argyle Rooms, commencing at two o'clock, and under the patronage of several ladies of quality. It was well and fashionably attended, and the exertions of Miss M. were rewarded with liberal, but not undeserved, plaudits. The undertaking was to afford a dramatic display of the passions, by recitations; and, in acquitting herself of this difficult task, Miss M. displayed great powers, great energy, and great versatility. Some imitations

of peculiar and national dialects, and the relief of music, rendered the whole a very agreeable, as it was a novel species of amusement. These performances are, we understand, to be repeated every Wednesday; and they certainly merit encouragement, as much from the talent they exhibit, as from the respectable claims of the individual upon the public feeling.

## VARIEITIES.

M. Noel de la Morinière has passed through England and Scotland, on his way to Cape North, whither he is proceeding to make observations connected with natural science, &c.

Madame Catalani, on the 12th of March, at Cremenitz, in Russia, gave a concert in honour of the accession of the Emperor Alexander, in which she sang a Russian Hymn, suited to the occasion.

*Greek City.*—Letters from the south of Russia state, that M. Kaptnest, a German proprietor, has discovered an ancient mole and other unquestionable remains of a Greek town, at a village called Koktabel, situated between Kaffa and Sadack, in the Crimea. M. K. believes them to be the ruins of Theodosia; but our correspondent, who has visited the spot, is hardly persuaded to refer them to so considerable a city.

*Advertisements.*—Among the puzzling productions of this sort, we observed the following in the Morning Post last week. "It is requested that the *Lady* who received in public, on Tuesday evening last, a *Caricature of a Head*, adorned with a coronet, and other ornaments, will return some answer to the paper in which it was enclosed."

This is a very suspicious-looking invitation, and we can readily guess what sort of ornaments the *others* are, but nothing to the barefaced profligacy of the adjointed, which is copied from the Morning Chronicle, and betrays the most public disregard to moral decency which we ever met with in England.

"An unmarried Gentleman of 30, about to make a tour through the South of France and Italy, in his own carriage, would be happy to meet with a Lady of accomplished and superior manners to accompany him, and who may place every confidence in his honour.—Address (post paid) &c."

When time hangs heavy on one's hand, at an inn perhaps, where they take care never to have a book to divert you from eating or drinking, the perusal of the advertisements of the sale paper in the house is often productive of amusement.\* In one column of a paper of Wednesday we were thus entertained with an advertisement for "a gentlemanly house within twenty miles of London;"—another of stags, which "rectify projecting shoulder-blades, remove weakness in the back, and make ladies appear straight without any pernicious steel;" and a third announcing, by a most genuine bull, that the *Favorite and Eclipse*, Margate steam packets, "leave the Tower Stairs for Margate every Tuesday, Thursday, and Saturday mornings at 8 o'clock precisely, and return

from thence every Tuesday, Thursday, and Saturday morning, at the same hour." Such are the powers of steam!

[FROM A CORRESPONDENT.]

*Plagiarism.*—The following is extracted from a rare book, entitled, "Master Tully Tossepote his merry and conceited gosses, hll. letter. an. 4to. no date, conjectured about 1584. It appears that Mr. T. Moore took his song "That duple when first I espied it," almost verbatim from this song. I admire the old author much more than his modern imitator. Its remarkable, that grog, which is commonly supposed to be a liquor of late invention, is noticed in this song. I have derived from the old spelling,

That duple, when first I espied it,  
Spoke of sack and cunary so plain;  
But the bowl of strong waters beaide it  
Disturbed my ideas again!  
Thou art first in the twilight at present!  
Thy cash has run low, my olddog!  
Abandoning claret so pleasant,  
Thou art forced to make merry with grog!  
Yet thy grog is so pleasant to me,  
I own it—I rather would smother  
All care in strong liquors with thee,  
Than in malmsey or sack with another.

*Latin Pun.*—Burke, one evening, in snuffing a candle, was awkward enough to sniff it out. "Ah!" said he, "I fall under the censure of Horace—

Brevi esse laboro obscurus fin.

Eustathius remarks, that the 182d line of the third book of the *Iliad*—

ἵππος ἄρ' ἔστιν, ποσειδῶνι δὲ δῶκεται  
increases ἀνακτοῖς: that is, the first word is of one syllable, and the others successively of two, three, four, and five. Such lines were called by the ancients *Rhopsic*. There is an inverted one in *Paradise Lost*, Book iii, 492;—

Indulgences, dispenses, pardons, bulls.

*The Cart before the Horse.*—A writer has taken the trouble to print a letter, in which he assumes that the *Literary Gazette* must favour publishers, because it enjoys greater facilities for giving an early account of new works, than any other periodical publication; and he also asserts that literary critical independence cannot co-exist with the circumstance of booksellers having priority in a Review. Of course he uses the words candour and liberality, to gloss these very untenable positions. Our answer is simply, that the object of the *Literary Gazette* is to promote literature; and as its circulation is extensive, it is very desirable to authors and publishers to have their books noticed in it promptly; as it is, on our parts, desirable to give our readers the earliest account of deserving novelties. This partial coincidence of views, the obligation being conferred by us, leaves our pages as free from influence as the wind that blows; a fact which we trust we need not state to those who peruse them. As for the property of a review, we are really not aware how it can be carried on without publishers having some interest in it:—Authors are not good businessmen; and, in common we believe with every

estimable and conspicuous work of the kind, the *Literary Gazette* consists of two parties,—the proprietors who share the profits, and the Editor, with his associates, who conducts the work. Had the writer alluded to been really candid, he might have supposed, as is in truth the case, that the former have not the slightest controul over the latter, never have interfered, and never can dictate a single line. Equally regardless of misrepresentation as before, we repeat that we do not think ourselves in fairness entitled to destroy the reputation of books submitted to us before they issue generally to the public. In such cases, if we approve of them, we reject as if they were published; if they are so important as to claim notice, but (in our opinion) not approbation, we content ourselves with merely quoting them; and if they are neither admirable nor likely to attract some popularity, we pass them over for the time. The honest mind that constrains this course into subversivity to others, knows but its own grounds of reasoning. We are very happy that it prefers other writings to ours; and we are sure that any sort of literary culture must improve its character.

We can with a clear conscience assert, that not one line of praise or censure ever appeared in the *Literary Gazette*, from motives of favour or prejudice.

## METEOROLOGICAL JOURNAL.

JUNE, 1820.

Thursday, 8.—Thermometer from 41 to 60.  
Barometer from 30, 13 to 30, 09.

Wind N. W. and W. ½.—Clouds generally passing with frequent sunshine.

Friday, 9.—Thermometer from 50 to 63.  
Barometer from 29, 59 to 29, 90.

Wind W. 1. and 2.—Generally cloudy; a little rain in the evening.

Saturday, 10.—Thermometer from 50 to 58.  
Barometer from 29, 94 to 29, 48.

Wind W. b. S. and W. b. N. 1.—Generally clear, clouds passing, with a few showers.

Rain fallen, .025 of an inch.

Sunday, 11.—Thermometer from 39 to 55.  
Barometer from 29, 74 to 29, 73.

Wind S. W. 2. and 1.—Morning clear, the rest of the day cloudy; rain at times.

Rain fallen, .025 of an inch.

Monday, 12.—Thermometer from 45 to 59.  
Barometer from 29, 67 to 30, 02.

Wind N. b. E. 3. and 1.—Morning cloudy, the rest of the day generally clear.

Rain fallen, .05 of an inch.

Tuesday, 13.—Thermometer from 34 to 63.  
Barometer from 30, 06 to 30, 05.

Wind very variable. Morning clear, the rest of the day generally cloudy, with heavy showers of rain. Much thunder and lightning during the afternoon.

Wednesday, 14.—Thermometer from 38 to 57.  
Barometer from 30, 25 to 30, 19.

Wind N. 1. and N. E. 1.—Generally cloudy. About 6 in the evening, the upper part of a halo was formed round the sun.

Rain fallen, .15 of an inch.

Venus is now becoming a beautiful object for the common telescopes. The eclipses of Jupiter's satellites are too late but for the astronomer, who will naturally look to his ephemeris.

Edinburgh, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

There is a letter of the *Literary Gazette* Office for Phila Notticos.

\* Between two and three thousand weekly, besides a large sale in parts and volumes.

# Miscellaneous Advertisements, (Connected with Literature and the Arts.)

## British Gallery, Pall Mall.

THIS GALLERY, with an Exhibition of PORTRAITS of distinguished Persons in the History and Literature of the United Kingdom, is open daily, from 10 in the Morning until 6 in the Evening.

(By order) JOHN YOUNG, Keeper.  
Admission 1s.—Catalogue 1s.—Descriptive List 2s.

MR. HAYDON'S PICTURE of "Christ's Entry into Jerusalem," is now open for Exhibition at Bullock's Great Room, upstairs to the right, from ten till six.—Admission 1s. Catalogue 6d.  
"Your old Daughter of Zion; behold thy King cometh, sitting on an ass's colt."

MR. GLOVER'S Exhibition of Oil and Water Colour Paintings is now open, at the Great Room, No. 16, Old Bond Street, from nine till dusk. Admission 1s.—Catalogue 6d.

## Fine Arts.

Splendid Engravings and Illustrated Works, just published by Hurst, Robinson and Co. (late Boydell's) 90, Chancery.

THE POACHER DETECTED, engraved by Lepton, after the celebrated Picture by Mr. Kidd, exhibited in 1818. Nineteen inches and three-quarters by twenty-four feet long. Prints 1s. 1s. 6d. 2s. 2s. The VALENTINE, painted and engraved by John Burt. Eleven inches and a half, by sixteen high. Prints 1s. 6d. 1s. 11. 6d.

THE DROWNED FISHERMAN, engraved by James Heath, A. R. A. after a Picture by R. Westall, R. A. Twenty-four inches and a half long, by nineteen and a half. Prints 2s. 2s. 6d. 4s.

THE DEAD SOLDIER, (a Companion to the above), engraved by James Heath, A. R. A. after a picture by William Dooly, Esq. 2s. 2s.

A PORTRAIT of the late BENJAMIN WEST, Esq. F.R.S. A. engraved by Charles Heath, from the Original of W. J. Nettles. Six inches and three-quarters, by twelve inches and a half high. Prints 10s. 6d. 10s. 11s. 6d. The ILLUSTRATIONS of IVANHOE, a Romance, by the author of Waverley, &c. Engraved by Charles Heath, from Drawings by Richard Westall, Esq. R. A. Price, Medium Edition, 10s. Price, Imperial Quarto, 15s. 6d. Poems, on India Paper, Imperial Quarto, 15s. 6d.

DON QUIXOTE DE LA MANCHA. Translated from the Spanish of Miguel de Cervantes Saavedra. Embellished with Twenty-four Engravings by Charles Heath, from Original Drawings by Richard Westall, R. A. In four Volumes Folio and Octavo. Price 3s. 2s.

Impressions of the Engravings are published separately, forming, as a Series of Illustrations, a complete Work; or adapted to the purpose of illustrating any other Edition of Don Quixote. Imperial Quarto 21s. 2s. Price on India Paper, 21s. 12s. 6d.

THE PILGRIM'S PROGRESS, by John Bunyan, with Six Plates, from Original Drawings by Richard Westall, R. A. engraved in the first style by Charles Heath. In one Volume Folio. Price 10s. 6d.

The celebrated engraving of THE DEATH OF LORD CHATHAM in the House of Lords, by F. Bartolozzi, R. A., from the Original of J. S. Copley, R. A. Thirty-two inches long by twenty-five and a half. Prints 3s. 3s. 6d. 4s. 4s. 6d.

Also, from the Original of the same Artist, THE SIEGE and RELIEF of GIBRALTAR, engraved by William Sharp. Thirty-three inches long by twenty-five and a half. Prints 3s. 3s. 6d. 4s. 4s. 6d.

R. R. and Co. are enabled to offer to the Public the two last exquisite Engravings (which have, until this period, been very scarce) at the specified low prices, by having recently purchased the engraved Copperplates, and the whole of the Impressions.

Preparing for immediate publication. ILLUSTRATIONS of the MONASTERY, engraved by Charles Heath, from original Drawings by R. Westall, R. A.

The same Artists are engaged in illustrating the whole of the Novels by "The Author of Waverley."

ILLUSTRATIONS of GUY MANNERING will next appear.

THE Exhibition of MANSIEUR JERRI-CALLET'S GREAT PICTURE, (from the Louvre) 24 feet by 16, representing the surviving Crew of the Madras French Frigate, after remaining Thirteen days on a Raft without Provision, at the moment they discover the vessel that saves them, is now open to the Public, at the Egyptian Bazaar, Piccadilly. Admission 1s.

## To Bookellers and Stationers.

TO be disposed of, one of the most respectable and extensive Concerns in the above business, in a County Town in the West of England. The purchase will amount to about 4000l. Letters, post-paid, addressed W. H. to the care of Mr. Hunt, Paternoster Row, London, will have immediate attention.

## BOOKS PUBLISHED THIS DAY.

Price 6s.  
THE EDINBURGH REVIEW; or, CRITICAL JOURNAL. No. LXVI. Contrasts—A. Life of Curran, by his Son. 2. Spencer's Anecdotes. 3. Restrictions on Foreign Commerce. 4. Busby's History of Music. 5. State and Prospects of Manufacturers. 6. Dispositions of England and America. 7. Sanscrit and Greek; Greek Poetry. 8. Macculloch's Western Islands. 9. Civil List and Retrenchment. 10. Education of the Poor in France. Printed for Archibald Constable and Co. Edinburgh; and Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, all the preceding Numbers.

Handsomely printed, in four Vols. Pro. with a Portrait and other Engravings, price 12s. in boards, a new Edition of

THE MISCELLANEOUS WORKS OF OLIVER GOLDSMITH, M. B. including an ORATION, now first printed from the Original, in Dr. Goldsmith's own handwriting to which is prefixed, some Account of his Life and Writings. Printed for F. & J. Rivington; Cadell and Davies; Longman, Hurst, Rees, Orme, and Brown; J. Cuthell; Scatterd and Letterman; J. Otridge; W. Lowndes; John Richardson; J. M. Richardson; B. Scholey; J. Asper; Baldwin, Cradock, and Joy; Ogle and Co.; Lloyd and Son; G. and W. B. Whittaker; C. Taylor; J. Collingwood; and Simpkin and Marshall; and Falsburn and Anderson. Edinburgh.

Milner's Works, New Editions.  
In Eight large Volumes, pro. price 4s. 12s. in boards, with a Portrait and an Engraving of his Monument, a new and uniform edition of

THE WORKS, complete, of the late Rev. JOSEPH MILNER, A. M. Master of the Grammar School, and afterwards Vicar of the Holy Trinity Church in Kingston-upon-Hull; now first Collected and Edited by the late Rev. ISAAC MILNER, D. D. F. R. S. D. of Carlisle, and President of Queen's College, Cambridge. Printed for T. Cadell and W. Davies, Strand.

(1.) This Edition comprehends the following Works, each of which may also be had separately, viz.

1. THE HISTORY of the CHURCH of CHRIST (continued, on the same Plan, by the Dean of Carlisle), five volumes.

2. PRACTICAL SERMONS; to which is prefixed, an Account of the Life and Character of the Author, by the Dean of Carlisle; two volumes.

3. TRACTS and ESSAYS, Theological and Historical; one volume.

In three large volumes, pro. with thirty-five Illustrations Maps and Engravings, price 12s. 12s. 6d. boards.

HISTORY of the INDIAN ARCHIPELAGO, containing an account of the Manners, Arts, Languages, Religions, Institutions, and Commerce of its Inhabitants. By JOHN CRAWFORD, F. R. S. late British Resident at the Court of the Sultan of Java. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. 20, Chancery Lane, London.

"\* \* \* These Islands compose a population of seventy millions, and he would beg leave to read a passage from a book lately published (Mr. Crawford's History of the Indian Archipelago) a work replete with commercial and political information, showing the facilities for commerce in the Eastern Seas, the great wealth which they offered, and the little trade that was now carried on in them.—Lord Lansdowne's Speech on Foreign Commerce, Dec. 1849.

In a few days, in Two, MARCIAN COLONNA, a Poem, in Three Parts; to which will be added, Dramatic Sketches, and other Poems. By BARRY CORNWALL. Printed for John Warren, Old Bond Street, and C. and J. Oller, Vere Street, Bond Street; of whom may be had, by the same Author, Dramatic Romance, and other Poems, second edition, 7s.; and a Sicilian Story, with Diego de Montilla, and Poems, second edition, 7s.

## Mr. Wordsworth's New Poems.

In Two 12s. boards.  
THE RIVER DUDDON, a Series of Sonnets; VAUDACOUR and JULIA, with other Poems. To which is annexed, a Topographical Description of the Country of the Lakes in the North of England. By WILLIAM WORDSWORTH.

(1.) This Publication, together with Peter Bell the Waggoner, and the Thanksgiving Ode, completes the third and last Volume of the Author's Miscellaneous Poems.

Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same Author, THE EXCURSION, a Poem, in 4to. 2s. 2s.

THE WHITE DOE of RYSLTON, a Poem, in 4to. 1s. 1s.

In 10 Vols. royal 8mo. price 2s. 2s. in bds. a second edition, with Alterations, the whole of the Plays being altered on the same principle, of

THE FAMILY SHAKESPEARE; in which nothing is added to the original Text; but those Words and Expressions are omitted which cannot with Propriety be read aloud in a Family. By THOMAS BOWDLER, Esq. F. R. S. and S. A.

"\* \* \* My great object in this undertaking are to remove from the writings of Shakespeare, some defects which diminish their value, and, at the same time, to present to the public an edition of his plays, which the parent, the guardian, and the instructor of youth may place without fear in the hands of the pupil, and from which the pupil may derive instruction as well as pleasure; may improve his moral principles, while he refines his taste; and without incurring the danger of being hurt with any indelicacy of expression, may learn, in the fate of Macbeth, that even a kingdom is dearly purchased, if virtue be the price of acquisition."—Preface.

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

In three large volumes octavo, price 12s. 11s. 6d. in boards, or in three volumes royal 8vo. price 2s. 2s. in boards, a New Edition being the Fourth, revised by the Author, of

THE HISTORY of ENGLAND, from the Accession of King George the Third, to the Conclusion of Peace in the Year 1783. By JOHN ADOLPHUS, Esq. F. R. S. A. Printed for T. Cadell and W. Davies, Strand; and W. Blackwood, Edinburgh. Of whom may also be had, by the same Author,

THE POLITICAL STATE of the BRITISH EMPIRE; containing a General View of the Domestic and Foreign Possessions of the Crown; the Laws, Commerce, Revenues, Offices, and other Establishments, Civil and Military, in four large volumes 8vo. price 31s. in boards.

## Walker's Pronouncing Dictionary.

In one large volume, 8vo. without the smallest abridgement, price 14s. in boards, a new edition of

A CRITICAL PRONOUNCING DICTIONARY. BY JOHN WALKER, Author of Elements of Education, Rhyming Dictionary, &c. Printed for T. Cadell and W. Davies; Longman, Hurst, Rees, Orme, and Brown; J. Cuthell; Baldwin, Cradock, and Joy; Sherwood, Neely, and Jones; J. Richardson; Simpkin and Marshall; J. Boker; Harvey and Darton; and G. and W. B. Whittaker.

"1st In this Volume the meaning of every word is clearly explained, and the sound of every syllable distinctly shown; and, where words are subject to different pronunciations, the Authorities of our best Pronouncing Dictionaries are fully exhibited, the reasons for each at large displayed, and the preferable pronunciation pointed out.

As above may also be had, New Editions of all Mr. Walker's other Works.

Third edition, in 8 vols. small 8vo. 18s.  
**TALES OF THE HALL.** By the Rev. GEORGE CRABBE. Printed for John Murray, Albemarle Street. Of whom may be had,  
**THE WORKS OF MR. CRABBE,** printed uniformly in 7 vols. small 8vo. 48s.

A new edition in small 8vo. 7s.  
**DON JUAN CANTOS I. and II.** Printed for Thomas Davison, and sold by all Booksellers.

8vo. price 7s. 6d. bds.  
**ELEEN FITZ-ARTHUR; a Metrical Tale.** In two Cantos. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

In 4to. 32. 8s., 8vo. 2L 2s. and 6s. 8vo. 1L 10s.

**TWENTY-ONE PLATES to illustrate LORD BYRON'S WORKS.** Engraved by Charles Heath, from Drawings by R. Westall, R.A., with a Portrait, engraved by Armstrong, from the original Picture, by T. Phillips, R.A. Printed for John Murray, Albemarle Street.

8vo. 18s. 6d.  
**PARLES from L. FONTAINE,** in English Verse; Full of wise and modern Instructions, with Miscellaneous Notes; and a poetical Introduction, addressed to the Rt. Hon. Lord Viscount Sidmouth. "I am a nameless Man, but I am a friend to my Country, and to my Country's friends."—*Irishman.* Printed for John Murray, Albemarle Street.

In a few days,  
**NARRATIVE OF EVENTS ILLUSTRATING** the Vicissitudes and the Cession of Parga. Supported by a Series of Authentic Documents. By UGO BOSCOLLO. Printed for John Murray, Albemarle Street.

*Encyclopædia Edinensis. — Fifth Part of Volume Third, of*

**THE ENCYCLOPÆDIA EDINENSIS; or, Dictionary of Arts, Sciences, and Miscellaneous Literature.** By JAMES MILLAR, M. D. price 4s. Printed for Peter Hill and Co. of Edinburgh; G. and W. B. Whitaker, and George Cowie and Co. London; Reid and Henderson, Glasgow; John Cunningham, and Richard Milliken, Dublin; and sold by all booksellers.

**PETER HILL**, and Co. beg leave to call the attention of the Public to the completion of one half, or three volumes of the *Encyclopædia Edinensis*, which on no consideration will exceed the limits, originally declared, of six volumes. The completion of one half of this work will enable the Public to form a proper estimate of its merits, and the Proprietors earnestly solicit a comparison to be made of the quantity of matter contained in the three volumes now published with that of six volumes of any contemporary work of the same kind; for, in the selection and condensation of what is useful and valuable, the Editor and his Associates, in pursuing the arrangement originally adopted, of bringing together kindred subjects under one head, by which repetition is altogether avoided, have succeeded far beyond their most sanguine expectation. To be had in Parts, 6s. each, or half volumes, 28s. each.

**BIBLIOTHECA RARA et CURIOSA; or a Catalogue of a highly curious and interesting Collection of Books lately formed on the Continent, containing many singular and rare works, on nearly every subject which has occupied the attention of the Learned and Curious; and including a considerable Number of Books not known in this Country.**—Sold by Boswell and Sons, Broad Street, Royal Exchange.—Price 1s. 6d. Catalogues of French, Italian, German, Spanish, Books &c. for 1820.

Next week will be published, in 4 vols. 12mo.  
**TALES OF THE HEART.** By Mrs. OPIE. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same Author.

1. NEW TALES, 4 vols. 12mo. 1L 8s. boards.
2. FATHER AND DAUGHTER, 12mo. 4s. 6d. boards.
3. TALES OF REAL LIFE, in 3 vols. 18s. boards.
4. SIMPLE TALES, 4 vols. 12mo. 1L 1s. boards.
5. TRAMPER; or, Domestic Scenes, 3 vols. 1L 1s.
6. VALENTINE'S EVE, 3 vols. 12mo. 1L 1s.
7. POEMS, Foolscap 8vo. 6s. boards.

Second Edition, revised and extended. Foolscap 8vo. price 1s. boards. and duty 21mo. 8s. boards. with an elegantly engraved Frontispiece and Vignette, designed by Mr. Corbould, and engraved by Mr. James Mitchell, London.

**CRABBE'S POEMS; to which is prefixed, a Memoir of the Author; also Critical Remarks on his Poems,** written expressly for this edition; the whole exhibiting a condensed view of every important particular of his Life and Character that is scattered over his voluminous correspondence, or introduced into the numerous editions of his Poetry. By JOHN NICHOLSON. Second Edition, revised and extended.

"The kindred warmth with which the biographer enters into all the feelings of his author; the animation of his style, kindling not unfrequently into poetical fervour, and the good sense and acuteness that characterise his observations, cannot fail to render his narrative highly acceptable to the admirers of this amiable and eminent poet. The merits of the poetry itself, the present editor has no need to commend; but his reflections on these events, and his manner of narrating them, are his own, and evince no common share of talent and observation. The narrative, which is spirited and well written throughout, concludes with a sketch of the poet's character, very faithfully and ably delineated. But it is in his critical remarks, that the abilities and taste of the editor are chiefly displayed." On this part of his task he enters with all the ardour of a kindred spirit; and while he estimates the characteristic qualities of Cowper's various works, with great acuteness and accuracy of discrimination, he appreciates the efforts, the feelings, the inspirations of the poet, with a truth and fulness of sympathy which a poet only could feel. The whole of his remarks are the Task well deserves the praise of every lover of poetry, and particularly of every young candidate for poetic fame. These remarks are not merely critical. The annotator often catches, as he proceeds, a portion of his author's inspiration, and glows with equal ardour of benevolence, or expands into equal amplitude of thought. *Edinburgh Magazine and Literary Miscellany.* Edited for Oliver and Boyd, Edinburgh; and sold by all the Booksellers.

Beautifully printed in one volume 24mo. and ornamented with an elegantly engraved Frontispiece and Vignette, designed by Mr. H. Corbould, and engraved by Mr. George Corbould, price 5s. in boards.  
**THE POEMS OF OSSIAN.**—In bringing forth this edition of these interesting remains of the early literature of a people who have always been celebrated, the Publishers have been solicitous, not only to combine elegance with cheapness, but also to bring forward every proof of the authenticity of the wild strains of the Celtic Bard. In addition to the Disquisitions of Macpherson and of Blair, they have, expressly and exclusively for this edition, procured from the Rev. Alexander Stewart, a gentleman intimately acquainted with the antiquities of the Highlands, "An Inquiry into the Genuine-ness of the Poems of Ossian." This inquiry extends to nearly 40 closely printed pages; it evinces a complete knowledge of the subject; and must go far towards removing the few remains of scepticism on that celebrated question in Caledonian literature. Printed for Oliver and Boyd, Edinburgh; and sold by all the booksellers.

In one volume 8vo. 8s. boards.  
**THE ELEMENTS OF EUCLID; viz. The First Six Books, with the Elements, and an Abridgement of the Twelfth; in which the errors of the former Editions are corrected, and their obscurities explained; many of the Demonstrations are made shorter and more general, and several useful Propositions added; together with Elements of Plane and Spherical Trigonometry, and a Treatise of Practical Geometry. With an Appendix, containing much important information; by ALEXANDER INGRAM, Mathematician, Leith. Printed for Oliver and Boyd, Edinburgh, and sold by G. and W. B. Whitaker, London.**

In the Press, and speedily will be published,  
**RHYMES ON THE ROAD; by a Travelling Member of the Peco-Curante Society:** extracted from his Journal. By THOMAS BROWN, the Younger, Author of the "Fudge Family," "Twopenny Post Bag," &c. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

Longman and Co.'s Catalogue of Old Books for 1820. — Price 2s. 6d.

**THE FOURTH PART of a GENERAL CATALOGUE OF OLD BOOKS for the Year 1820.** Containing the Classes of History, Antiquities & Languages, on France, Italy, Russia, &c.—Antiquities, History, &c. Miscellaneous, Latin Reprints, Editions of Rare Books, and an Appendix. To be sold at the stated price, by Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

\*A third part completes the Catalogue for the present year, and forms a volume of near 800 pages, comprising books in all languages and branches of literature; for variety, utility, and splendour edition complete. The entire Catalogue is therefore recommended to the attention of such of the Nobility and Gentry, as are extending their Libraries, or forming new ones.

*Crans's Greenland.*  
 Illustrated by plates, 2 vols. 8vo. price 1L 1s. boards. New edition, with considerable Improvements and Additions.

**THE HISTORY OF GREENLAND,** including an Account of the Mission carried on by the United Brethren in that Country, with a Continuation to the present Time. Illustrative Nature, and an Appendix, containing a Sketch of the Situation of the Brethren in Labrador. From the German, by DAVID CRANTZ. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Dr. Johnson declared that very few books had ever affected him so deeply, and that the man who did not refuse the first part was a Philosopher, and he who could not enjoy the second was no Christian.

Foolscap 8vo. price 4s. 6d. boards.  
**HISTORIA SCOTICÆ NOMEN CLATURA** Latino-Vernacula; or, Latino-Vernacula Nomenclature of Scotch History, enriched with many select Phrases from the ancient Monuments of the Scots, and the aboriginal Language of the Gael. A new edition, corrected, retaining the original Dedication and Address to Readers. By CHRISTOPHER IRVIN, Glasgow. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and John Wylie and Co. Glasgow; and W. and C. Tait, Edinburgh.

8vo. price 7s. 6d. boards.  
**A GRAMMAR OF THE GERMAN LANGUAGE** on a new Plan, illustrated by various Tables and Examples, in which the Pronunciation of the German is introduced on the Plan of the most approved English Pronouncing Dictionaries. The whole particularly adapted for private, as well as public tuition. By E. NEST JERHING, Glasgow. Printed for Longman, Hurst, Rees, Orme, and Brown, London; Smith and Son, Glasgow; and Constable and Co. Edinburgh.

In 4to. with plates, 3L 3s. boards.  
**TRAVELS IN VARIOUS OF THE COUNTRIES OF THE EAST;** being a Continuation of Memoirs relating to European and Asiatic Turkey, &c. Edited by ROBERT WALPOLE, M. A. Containing the late Travels of the late Mr. Browne; a Biographical Memoir of him; a Journey from Suez to Sinai; Travels in Syria, Asia Minor, Greece, and the Archipelago; an account of the remarkable Monuments of Antiquity discovered at Sais, in Persia; with Remarks on the Antiquities, Natural History, Manners, Customs, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, also edited by Mr. Walpole, MEMOIRS relating to EUROPEAN and ASIATIC TURKEY, &c. 2d Edit. 4to. with Plates, 3L 3s. bds.

The 13th Edition, 1. cap 8vo. price 5s. boards.  
**THE GUIDE TO DOMESTIC FAHAPINS.** London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane; Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 80, (Exeter Change) Strand, where Communications (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

No. 179.

SATURDAY, JUNE 24, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The History of Greenland; including an Account of the Mission carried on by the United Brethren in that Country. From the German of David Crantz. With a Continuation to the present Time; illustrative Notes, &c. London, 1820. 2vo. 2 vols.*

This is a new translation of the best history which we have of Greenland; and infinitely superior to that of 1767. Judicious curtailments have abridged the prolixity of the German; almost equally judicious additions have brought down his information to our era; and the original text is rendered with spirit, instead of the literal style of the former publication. The subject has, however, occupied so many of our pages within the last two years, and Crantz's facts are so generally known, that we shall abstain from any thing like an analysis, and merely produce two or three extracts, to exemplify the manner in which the work has been performed. The first relates to the ancient superstitions of the natives.

Of the end of the world, and the resurrection of the dead, they have scarcely any idea. Some of them, however, affirm that souls linger near the graves of the bodies which they animated, for five days. The latter then rise again, and pursue the same course of life in another world, which they were accustomed to in this. They therefore always by the hunting implements of a deceased person near his grave. This childish opinion is, however, ridiculed by more observant Greenlanders, who perceive that the deceased and his weapons remain unmoved, and go into corruption together. The following idea seems to bear more evident marks of a tradition relative to the resurrection, and is the more remarkable, as it involves the belief in a superior Being. They say, that after the death of the whole human race, the solid mass of the earth will be shattered into small fragments, which will be cleared by a mighty deluge from the blood of the dead: a tempest will then unite the purified particles, and give them a more beautiful form. The new world will not be a barren wilderness of barren rocks, but a plain clothed with everlasting verdure, and covered with a superfluity of animals; for they believe that all the present animal creation will be revived. As for the men, *Piknema*, i. e. He that is above, shall

breathe upon them: but of this personage they can give no farther account.

Besides the soul of man, the Greenlanders speak of other greater and lesser spirits, which bear some affinity to the gods and demi-gods of the ancients. Two are pre-eminent, a good and a bad divinity. The good is called *Torgarsuk*. He is the oracle of the Angekoks, on whose account they undertake so many journeys to his happy subterranean regions, in order to confer with him about diseases, and their cure, fishing, and the changes of the weather. Their accounts of his person differ very much. According to some he is of small stature. Some affirm that he resembles an immense white bear; others a giant with one arm; while others again contend that he is no bigger than a man's finger. He is, however, allowed by all to be immortal.

The other great but mischievous spirit, is a female without a name. Whether she is *Torgarsuk's* wife or his mother, it is not agreed. The natives of the north believe, that she is the daughter of the mighty Angekok, who tore Disko island from the continent near Baal's River, and towed it an hundred miles farther north. This northern Proserpine lives under the ocean, in a large house, in which she enthralled all the sea monsters by the efficacy of her spells. Sea fowls swim about in the tub of train oil under her lamp. The portals of her palace are guarded by rampant seals, which are exceedingly vicious. Yet their place is often supplied by a large dog, which never sleeps longer than a second at a time, and can consequently rarely be surprised. When there is a scarcity of seals and fishes, an Angekok must undertake a journey to her alone for a handsome reward. His *Torgark*, or familiar spirit, who has previously given him all proper instructions, conducts him in the first place under the earth or sea. He then passes through the kingdom of souls, who spend a life of jollity and ease. Their progress is soon after intercepted by a frightful vanity, over which a narrow wheel is suspended, and whirls round with wonderful rapidity. When he has been fortunate in getting over, the *Torgark* leads him by the hand upon a rope, stretched across the chasm, and through the entry of seals, into the palace of the fury. As soon as she espies her unwelcome guests, she trembles and foams with rage, and hastens to set on fire the wing of a sea-fowl, for the stench of this would enable her to take the suffocated Angekok and his *Torgark* captives. But these heroes seize her before she can effect the fatal fumigation, pull her down by the hair, and strip her of her filthy amulets, which by their occult powers enslave the inhabitants of the ocean. The en-

chantment being dissolved, the captive creatures directly ascend to the surface of the sea, and the successful champion has no difficulties whatever on his journey back. They do not however think, that she is so malicious as to aim at making mankind eternally miserable, and therefore do not describe her dwelling as a hell, but a place abounding in the necessities of life; yet no one desires to be near her. On the contrary, they greatly venerate *Torgarsuk*; and though they do not hold him to be the Author of the Universe, they wish after death to go to him and share in his affluence.

A Greenland, previous to assuming the office of *Angekok*, or diviner, must procure one of the spirits of the elements for his *Torgark* or familiar. Marvellous tales, framed to support the belief of a real intercourse with spirits, are related of the manner in which this illapse takes place. The aspirant must retire for a time into a desert, cut off from the society of every human being, and spend his solitude in profound meditation, or in invoking *Torgarsuk* to send him a *Torgark*. This separation from mankind, his fasting and emaciation of body, together with the severe exercises of his mind, throw the imaginative faculty into disorder; and various figures of men, beasts, and monsters, swim before his disturbed brain. He readily supposes these to be real spiritual existences, since he thinks of nothing else, and this throws his body into violent convulsions, which he labours to cherish and augment. Some who are destined to the art from infancy, are distinguished by a particular dress, and instructed by celebrated masters, find little difficulty in the initiation. Several however give out that they sit down on a large stone, invoke *Torgarsuk*, and tell him their desire. On his appearance the aspirant shrieks out and dies, and lies dead for three whole days, at the end of which time he comes to life, and receives a *Torgark*, who, on his desire, insists into him all power and knowledge, and conducts him on his journey to heaven and hell.

This expedition can be made only in the end of the year. The way is shortest in winter, when the nights are long and dark, and the rainbow, which is their first heaven, presents itself in the greatest proximity to the earth. The Angekok begins the ceremony with drumming, and whirls himself round with frightful contortions; till his frame is exhausted, and his spirits worked up to the proper pitch of enthusiasm. He is then led to the entry of the house, one of his pupils ties his head between his legs, and his hands behind his back; all the lamps are extinguished, and the windows closed. No one must witness his interview with the spirit, nor move a finger while it is

going on, lest the spirit should be disturbed, or rather, lest the fraud should be detected. After beginning a song, in which all join, he groans, and puffs, and foams with great perturbation, denouncing his familiar, who is frequently very slow to come. If the Torgak absolutely refuses to make his appearance, the soul of the wizard sets out to fetch him. After a short absence he returns with a loud laugh of joy, accompanied, as a sensible European, who had several times been present, assured me, with a rustling resembling the noise of birds flying over the roof, and then swooping down into the house. If, however, the Torgak comes voluntarily, he remains without at the entrance of the avenue; and there the Angekok consults him on any subject, respecting which the Greenlanders wish for information. Two different voices are distinctly heard, the one on the outside of the house the other within. The answer is always dark and ambiguous. The hearers marvel it amongst themselves, and if they are not unanimous in their explanation, they beg the Torgak to give the Angekok a clearer response. A strange Torgak sometimes comes, whom neither the Angekok nor the auditors can understand; so that the answer requires as much labour to develop it as those of the Delphic oracle, and leaves sufficient room for the sorcerer to exculpate himself, however the prediction turns out.

But if his commission extends further, he soars aloft with his Torgak on a long string, up to the realm of souls, where he holds a short conference with the *Angekok Paglik*, the Fat or Famous Sage, and learns the fate of a sick patient, or even brings him back a new soul; or else he wings his way downwards to the Goddess of Hell, and liberates the animals detained by enchantment. But he soon returns, and having found means to disengage himself from his fetters, begins to howl and drum most hideously. He then relates all that he has seen and heard, though pausing for breath, like one quite jaded with his excursion. Afterwards he strikes up a song, and going round the assembled circle, gives each his touch or benediction. The lamps are now lighted, and the Angekok is seen with a pale bewildered look, and in a state of such exhaustion that he can scarcely articulate.

It is not every probationer that succeeds in this art, and one who has drummed ten times in vain for his Torgak must resign his office. But the successful conjuror may, after a certain period, assume the dignity of *Angekok Paglik*. The candidate must be in a dark house unlighted, and after he has intimated his wishes by singing and drumming, if he is thought worthy by Torgarsuk, though few attain to this high honour, a white bear comes and drags him away by the toe into the sea. There he is devoured by his bear and a walrus, who, however, soon vomit him up again into his own dark chamber, and his spirit re-ascends from the earth, to animate the body. And now the mighty sorcerer is complete.

We now take from the more original part of the work, the contrast exhibited

in the fruits of the labours of the missionaries; among whose later transactions, we are informed,—

In November 1816, an adult heathen was baptized at *New Herrahut*, and as an interval of sixteen years had elapsed since the last transaction of the kind, it was attended with a more solemn impression on all the spectators. In the same place, the missionary, Henry Mentzel, was suddenly called home to his eternal rest, October 31st, 1816. He had spent thirty-three years of his life in the active service of the Greenland mission.

All the recent communications of our missionaries concur in stating, that the winters have of late increased in severity and duration, while the summers have become colder and more stormy, and the supplies of drift-wood less and less abundant. The intercourse between the different settlements met with unusual obstruction, from the gathering of ice in all the inlets, and round the islands of the coast, which formed an impenetrable barrier for a great part of the year, and confined their excursions to very narrow limits. A marked difference was, however, observed between the climates of *New Herrahut* and *Lichtenau*, that of the latter being warm in comparison.

In this place, the number of widows and orphans, destitute of every means of support, became so considerable, that the missionaries found it necessary to solicit the benevolent assistance of their friends at home, in favour of their suffering Greenlanders. A supply of tobacco, which is the principal medium of trade in that country, was earnestly requested. In a letter of 1816, the missionary Kleinschmidt thus describes some affecting circumstances of the distressed situation of his flock.

"Our poor Greenlanders had to endure a severe famine in spring, in consequence of the severity of the winter. It was a heavy time with us, as they directed their eyes to us in all distress, and we could not help them as we wished. The little children especially excited our pity, as they were less able to bear hunger than others, and besieged our house every day, begging for food. I bought 500 cod-fish, besides a quantity of herrings, and distributed them chiefly among the children. Many of our people were obliged to eat part of their tent-skins, for want of other sustenance. When our store was quite exhausted, with what feelings did we gaze on the famishing crowd which surrounded us, unable as we were to procure food for so many in this wilderness! But now the Lord's help appeared speedy and complete beyond our expectation. He heard our groaning, and it seemed as though food rained from Heaven. The cold abated, and an uncommon number of seals came to the shore, so that some were daily caught, and carried home."

We have the satisfaction to add, that in consequence of an appeal made by Mr. Montgomery, to the British public, donations, amounting to upwards of 1200, in money, and several valuable parcels of needles, knives, iron hooks, &c., have been received. The money, converted into tobacco, was

last year already transmitted, with the rest of the articles, for the relief of the widows and orphans of the three settlements, who felt and expressed the deepest gratitude for this seasonable supply.

The letters of last year, which arrived unusually early, contained an account of a melancholy accident at *Kingek*; a large number of Greenlanders having been seized with a violent and fatal illness, in consequence of their eating of the putrid brains of a walrus, no less than thirty-two persons were carried off by the sickness which ensued, in a very short time. The Brethren had the pleasure to perceive that the greater part were able to rejoice in the prospect of their dissolution, and that those who had fallen into deviations, turned in their last hours, as true penitents, to the Saviour of sinners. The friends and neighbours of the deceased could not be otherwise than deeply affected by this awful occurrence.

In Labrador, we are told—

An unfavourable circumstance for the new mission, was the neighbourhood of *Areerok*, whose heathen inhabitants too frequently allowed their believing countrymen to join them in practices of the grossest superstition; making them promise to return to their former pagan habits, which, however, they were to conceal from the observation of the missionaries; and when their enticements proved unavailing, their chief, Kapik, threatened to kill the refractory by his Torgak.

The same temptations and the same propensity to mingle again with their pagan countrymen, in those forbidden diversions, which, however innocent in themselves, were, from their accompaniments, uniformly found to debase and brutalize their minds, existed in a greater or smaller degree, amongst the inhabitants of the two elder settlements. A *kache*, or pleasure-house, which, to the grief of the missionaries, was erected in 1777, by the savages, near *Nain*, and resorted to by visitors from *Okkak*, has been described by the Brethren. It was built entirely of snow, sixteen feet high and by seventy square. The entrance was by a round porch, which communicated with the main body of the house by a long arcade, terminated at the further end by a heart-shaped aperture, about eighteen inches broad and two feet in height. For greater solidity, the wall near the entrance was congealed into ice by water poured upon it. Near the entry was a pillar of ice supporting the lamp, and additional light was let in through a transparent plate of ice in the side of the building. A string hung from the middle of the roof, by which a small bone was suspended, with four L-les driven through it. Round this, all the women were collected, behind whom stood the men and boys, each having a long stick, shod with iron. The string was now set a-swinging, and the men, all together, thrust their sticks over the heads of their wives at the bone, till one of them succeeded in striking a hole. A loud acclamation ensued: the men sat down on a snow seat, and the victor, after going two of

three times round the house singing, was kissed by all the men and boys; he then suddenly made his exit through the avenue, and, on his return, the game was renewed.

A singular story, which circulated at *Nain* in 1773, and gained credit with the Esquimaux, may be mentioned as an instance of that deeply-rooted inclination for the marvellous and supernatural which rendered it so difficult, even for the Christian converts, to wean themselves from their attachment to former superstitious notions and observances. It was reported that the men in the north had at length killed *Inukpak*, with his wife and children. This was a murderer of such monstrous size, that, while he stood in the valley of *Nain*, he might have rested his hand on the summit of the adjacent mountain. His dress was the white skin of the *neenerluk*, an amphibious bear, that hunted and devoured the seals, each of whose ears was large enough for the covering of a capacious tent. This beast did not scruple to eat human flesh, when he came on shore, where some affirmed they had seen him, and were vexed when their testimony was doubted. Indeed the Brethren in *Okkak* thought they saw such a sea-monster one evening, in the August of 1786, which rose up to the height of a huge ice-berg, in the mouth of the bay, showed its white colour, and then plunged down again, leaving a whirlpool of foam. The Esquimaux, without hesitation, pronounced it to be the *neenerluk*; but as the description is so vague, we may justly call in question whether they were not deceived by some tumbling ice-berg.

In conclusion, we may notice that there are yet no more than three missions in Labrador, namely, Hopedale, *Nain*, and *Okkak*.

#### *Laura's Dream; or the Moonlanders.*

This poem was printed about three years ago, but for private reasons, we understand, withdrawn from circulation. As it possesses considerable merit, we have compounded the following article from a copy, very little mutilated, in our possession.

Laura, a native of Italy, young and beautiful, having dreamed in the delirium of a fever, that she had visited the moon, gives her mother an account of that world and its inhabitants. The most novel of her discoveries is, that in the moon the natives are all born old, and with the infirmities of old age, but grow rapidly young till they attain their highest state of perfection. This reversal of the order of our human nature contributes largely to their happiness; and, of course, they have no death to open for them the gates to a future state of existence. The male population are gifted with wings, and, most strange to say, the females, who have them not, do not envy their flights and liberty.

The natural history of the moon is beautifully described in the following, from which

it will appear, as indeed it does from the whole of Laura's dream, to be very different from Pope's picture in the Rape of the Lock.

Where the soft had reluctant blows,  
The fruit mature already glows,  
And all in thornless beauty shine,—  
Fit increase for a hand divine.  
Nor bosom'd worm, nor dark decay,  
Steal their unskill'd darts away;  
For when the hours of bloom are past,  
No hateful change arrives at last:  
But as the sweet aroma dies,  
In clouds of incense all arise,  
And mingle with congenial skies,  
Evaporate in perfumed air,  
Nor leave one sad remembrance there.  
The wither'd leaves that dim our path,  
Memento of celestial wrath,  
Ne'er sully that delicious clime;  
Pure world,—unconscious of a crime.

Aurelio, the moonland lover of the earthly maid, leads her to a thick and apparently impenetrable enclosure, and the story thus proceeds.

Fearful—yet happy to obey,  
The flow'ry altitudes gave way;  
The branches at his touch withdraw,  
Obedient to that monstrous law  
Within our growmer world, alone,  
Is in the lov'd *Mimosa* shown;  
And slumbers in that happier land,  
Till waken'd by the high command  
Of one whom strong volition fires —  
Then all impediment retire;  
And, pierc'd by th' Intellectual ray,  
Submissive elements obey.

Freed from the blossom'd fence we stand,  
While closing fast on either hand  
Branches, that easy passage gave,  
United like the liquid wave.

A solemn band, within, I found  
Collected near an earthy mound;  
Their looks of expectation check'd  
By holy awe and deep respect.  
'Twas the first clay I here had seen  
Without its robe of tender green,  
Elastic moss, or blossoms gay—  
'Twas dark—damp—naked—gloomy clay—  
And rose in sad similitude  
To the last grave I weeping viewed.  
But all unhallowed and unblest  
With that Interminable rest  
Our lone—chill—narrow mansion knows;  
For undulating motions rose,  
As if some victim suffer'd there  
The last convulsions of despair.  
The quivering clay now heav'd again.  
I rivet there mine eager eyes,  
And felt a dreadful hope arise  
That this enigma of the mind  
Its last solution here may find.  
Though expectation only wait  
Some dark impending stroke of fate;  
Heaven's—fate—shivers—fall away  
The frail dark tement of clay  
But who has slept within its breast?  
Who dares disturb that Sabbath rest?

An aged,—helpless wretch I viewed,  
Sad victim of decrepitude,  
Wrapt in pale films of cobweb form,  
The work I deem of earthly worms,  
He seem'd decay'd, and bent by age.  
Yet nought was there that mark'd the age—  
His trembling hand could scarce arise  
From crumbling earth to guard his eyes:  
Rayless those eyes.—His thin gray hair  
Left all his wither'd temples bare—

And on his native dust he lay,  
As cold as that maternal clay.

The lovely forms who watched around,  
As if their brightest hopes were crown'd  
With fond affection bending down,  
A beauteous rainbow circle shone;  
Their eyes of joy, and lips of love,  
Grateful delight and ardour prove.

The radiant shapes, who plumage wear,  
Around him fan the blessed air;  
The graceful forms, by flowers deuced  
Along the azure skies to glide,  
A couch of plant branches brought  
With leaves, and moss, and flowers inwrought,  
And bore him to a green recess  
With soft maternal tenderness.

This is the birth of a moon-babe, and so fond are his parents of him, that—

Was ne'er received with purer joy  
A lovely—gay—heroic boy;  
His father's pride, his mother's dream,  
His blooming sister's daily theme;  
His aged parent's only son  
Redeem'd from fields of glory won.

His nursing is worthy of his birth, for the time it occupies; and we may here, *en passant*, mention that time is measured in the moon by days which are of the length of 2½ of ours, so that their year consists of but 12 days and as many nights. We pass by the sweet music, and the melody of birds which add to the enchantments of Moonland, and even the circumstance of these birds having the ability to wing their flights to purer spheres. The conclusion of the vision is all we can give. It seems that when the male is perfect his wings grow, and a companion of the other sex mete for him is raised from the grave. Laura sees a couple thus beatified ascend.

A lovely pair,—above the rest  
Scem'd by celestial vision blest.  
On him, resplendent wings arise,  
Pre-eminent in form and size;  
Triumphantly with tender pride  
He gaz'd on her,—who grac'd his side.  
She—wingless—sensitive—and mild,  
With pure and grateful fondness smil'd.

They reach the airy summit now,  
And scarcely touch the mountain's brow,  
When kneeling,—with æthereal grace,  
Devotion beaming o'er her face—  
Eyes—that in love and rapture swim,  
Implopingly are raised to him.  
His looks are fix'd on Heaven alone,  
Yet does he not her prayer disown;  
With pious air his hand he laid  
In benediction on her head—  
From her fair shoulders instant rise  
Plumes—beaming with celestial dyes.

One farewell look each casts below,  
Then with unreluctant and slow  
Ascend—to purer spheres they go.  
I hear their quivering plumage raise  
The mingled hymn of joy and praise—  
Now melting in the distant ray,  
They disappear—it fades away;  
Their lovely forms are seen no more,  
And that ethereal strain is o'er.  
Towards the blue vault all eyes are turn'd,  
All hearts with holy rapture burn'd,  
And high enthusiastic hope  
Of fairer worlds and wider scope.

Unfortunately for our heroine and world's

woman, Aurelio's time also arrives. His wings shoot—the

... glittering plume spread  
A wider circuit round his head,  
Amid their many colored dyes,  
I saw two snowy plumes arise.  
Oh! thou pale emblem of despair,  
Why shine so exquisitely fair?

Aurelio saw its whiteness gleam  
Reflected from the glassy stream,  
And felt that from her bed of clay  
His sister spirit on that day  
Was fated to claim such depth of love  
As Moonlanders alone can prove.

There by the liberal hand of Heaven  
Is hied prophetic impulse given;  
Led by this strong, unerring power,  
Joyful he seeks the hallowed bowser.

The crumbling clay—I saw it heave,  
Saw the form forin her precincts leave;  
To aged sorceress thus might crawl  
An prophecy a nation's fall.

Caducity and dire decay,  
Seemed to have marked her for their prey;  
She,—with sunk eye and panting breath,  
Appeared to wait the stroke of death.

I looked with eyes of sense alone,  
And deemed Aurelio still my own.  
Was this a rill to be feared,  
Whose dull deformity appeared  
Like a terrible lesson given  
To mark the power of angry Heaven?

While those seducing hopes arise,  
Joy sparkles in Aurelio's eyes.  
For through that hideous veil of clay  
He saw the soul's translucent ray;  
He saw the angelic mind alone,  
Where innocence and sweetness shone;  
He knew how soon the slancing hours  
Would bring their all improving powers,  
Adding to softness, love, and truth,  
Bright beauty—and immortal youth.

This of course terminated the mixed  
amour, and poor Laura awakes out of her  
delirium. The fancy, and poetical beauty  
of the work, however, merited a better fate  
than to have the press made its grave; and  
we are happy to give it this partial resur-  
rection.

#### CHELTENHAM WATERS.

*A Letter to a Professor of Medicine, &c.  
respecting the Nature and Properties  
of the Mineral Waters at Cheltenham.*  
By Adam Neale, M. D. &c. &c.  
London, pp. 40.

When the censors of Antigonus, we read  
in ancient history, observed that a number of  
valetudinarians crowded to a medicinal spring  
at Olespsum which cured them of their dis-  
orders, they imposed a tax upon every one  
who used the waters; but so prodigious  
were the effects of taxation in those days,  
that the spring immediately disappeared.  
Modern fountains are infinitely more stub-  
born: the heavy loads of taxation which they  
and their visitors bear are almost incredible;  
and we may observe, that though the purses  
of the latter are, in consequence, frequently  
dried up, no such miracle happens to the  
wells, which, on the contrary, seem to mul-  
tiply and spout with greater abundance, the

more the impositions connected with them  
are laid on.

In the pamphlet before us, Dr. Neale pro-  
duces some arguments against the indiscrimi-  
nate use of mineral waters, so very cogent,  
that we are inclined to think they will op-  
erate in the same manner as the tax at Olesp-  
sum, and cause a few of these springs to dis-  
appear. In sober sadness, it is both an ex-  
traordinary and lamentable thing, that they  
should have grown to the pitch of fashion at  
which they now are;—gushing out every  
where, and applied to with avidity for every  
ailment,—without analysis to ascertain their  
qualities,—without information whether they  
are salubrious or dangerous for any particu-  
lar complaint, and generally, without pre-  
ference, on account of fitness, if it so hap-  
pen that they are convenient for resort, for  
company, amusement, cards, intrigue, or  
dissipation. "I am very ill," says an in-  
valid, "and intend going to drink the waters,  
at Bath, or Cheltenham, or Buxton, or Har-  
rowgate, or Clifton, or somewhere else,"—  
just as if it were no matter whether he swal-  
lowed sulphur, or iron, or magnesia, or salt,  
or soda, or lime, carbon or hydrogen, acid  
or alkali;—and just as if it were no matter  
whether he was afflicted with gout or dropsy,  
consumption or rheumatism, itch or asthma,  
plethora or atrophy. To draw attention to  
such imprudences, the author has written  
this able little essay; and it will not be one  
of its least beneficial effects, if it destroys  
the reputation of a good many quack nos-  
trums of the kind against which it is directed.

Before, however, going to the point at  
issue, we shall pave the way by quoting the  
short account of Cheltenham, from one of  
the most compact and useful publications of  
its class with which we are acquainted.—  
Speaking of Cheltenham, it says—

"The spring, or spa, as it is called by  
way of distinction, was first noticed to pos-  
sess medical properties in the year 1716.  
The discovery appears to have arisen from  
accident. The effects produced by this  
spring have proved an increasing source of  
wealth to the town; and its visitors have  
been so numerous, that it was feared the  
waters would be insufficient to supply the  
demand; which would certainly have been  
the case, but for the discovery of some new  
springs equally congenial to health as the  
former. The amusements of Cheltenham  
are similar to those of most other places of  
public resort.

"The Well Walk is an elegant gravelled  
promenade, about 600 feet in length, and  
20 feet in breadth, bordered on each side by  
a quickest hedge. The spa, or long room,  
was erected in 1775, for the accommodation  
of persons taking the waters. It is about  
60 feet long and 20 broad. The Montpel-  
lier waters are procured at a large and elegant  
pump-room, lately erected by Mr.  
Thompson. During the season, a harper  
attends in the morning at this room.

"The other wells at Cheltenham are Sher-  
borne, King's, Orchard, and Essex Wells,

• Leigh's New Picture of England and Wales,  
London, 1820.

besides which there are several chalybeate  
springs. The summer is recommended as  
the fittest time for drinking the waters, which  
should be taken early in the morning. The sea-  
son is from May to the end of November.  
The theatre is a spacious and commodious  
building in Caubray Mead. The Assembly  
Rooms are situated in the principal street,  
and in the ground floor of the same building  
auctions take place every day in the height  
of the season. The principal charitable in-  
stitutions are the Free-school, the School of  
Industry, and the Hospital. There are hot  
baths, numerous boarding-houses, several  
circulating libraries, and many excellent  
hotels."

Crowded theatres, assembly rooms, auc-  
tions, hotels for the delicate, debilitated,  
and sick! But *see* are not doctors, and there-  
fore leave off hinting at prescriptions, to  
quote Dr. Neale. He says that, reflecting  
on the abuse of watering places in respect to  
real invalids, and "applying myself to con-  
sider the effects of purgative mineral waters  
in certain cases, I have thought it might be  
useful to the public to call their attention to  
a point, whereon much of the safety or dan-  
ger attending their use may occasionally  
hinge: being satisfied myself that those wa-  
ters which contain an excessive quantity of sea  
salt cannot be used with advantage, I would  
say hardly with safety, by a particular class  
of debilitated invalids. The presence or ab-  
sence of iron has seemed to be hitherto the  
criterion upon which medical men have fixed  
their reasoning, as to judging of the stimulat-  
ing powers of mineral waters; but I am now  
well assured that they have been in error,  
and that, as in the mineral waters of Chel-  
tenham, for instance, the giving of six-tenths  
of a grain of iron daily, or even more, cannot  
be half so important as the taking, or not  
taking, one dram or more of common sea  
salt, on a fasting stomach, in a pint of water,  
for weeks together. In cases of incipient  
schirrus, it has been well proved and estab-  
lished that iron is beneficial: whereas the  
application of sea salt, to the irritable yellow  
coats of the stomach and small intestines,  
will, we know, aggravate the complaint. For  
this reason, I have judged it of some impor-  
tance to call the attention of my medical  
brethren to the comparative analysis of the  
two principal spa waters of Cheltenham;  
and I will add, that if the object is to pour  
brine into the circulation, let us rather send  
our patients to the sea shore, than to an in-  
land mineral water;—but if the intention be  
to stimulate the peristaltic motion of the in-  
testines, let that particular water be advised  
which contains the greatest proportion of al-  
kaline sulphates, and the smallest of murate  
of soda; and for that reason rather let our  
patients drink the original spa water of Chel-  
tenham than that of Harrowgate, because  
the first contains the smallest quantity, and  
the latter the largest quantity of sea salt,  
known to exist in any mineral water in this  
island.

"Another point, to which I would call  
public notice, is the custom which has crept  
in of late, of transferring mineral waters to  
cisterns, instead of drawing them fresh from

the wells, and delivering them in their natural state. Surely, if we expect any benefit to be derived from the gases which they contain, we must relinquish all hopes of retaining them, after having been so treated; and I, for one, beg to enter this my public protest against racking off mineral waters into cisterns, to suit the sole convenience of their proprietors. If, however, the impregnation, or non-impregnation, of gases be a matter of indifference, then be it understood that we ought not to advise our patients to undertake long and expensive journeys to mineral springs, since we can furnish them with dilute solutions of neutral salts, as Sancho Panza has it, 'dry shod, and in our own country.'

"One word more. In looking into Brande's Chemistry, in the table of the analyses of mineral waters, I observe that he has admitted only three of the mineral waters of Cheltenham, namely, the Sulphur Spring, the pure Saline, and the Chalybeate; and, as he omits all notice of the others, I shall be glad to know if the public are to conclude, that he disbelieves in the existence of the other three. Certain it is also, that he takes no notice of that spring which was analyzed by Dr. Fothergill, which is, in my mind, of more value and moment than all the rest; and I should be glad to know why he has passed that in total silence. I shall just add, that I have the authority of one of the proprietors here to assure my readers, that the soil around Cheltenham only produces three mineral waters."

The author now proceeds to account for the failure of the waters in many recent cases, which he mainly attributes to the fashionable run upon the new wells in preference to the old spa, from which they widely differ, and to which they are far inferior. He tells us—

"The original spa contains, then, in one pint of water, sixty-nine and three-fourths grains of salts or solid contents, while No. 1 of the Montpellier spa contains seventy-four grains. But we will place them in parallel columns, for the sake of more accurate comparison.

Original Spa Water.		Montpellier Spa.	
One Pint.		No. 1.	
	Grains.		Grains.
Sulphate of Soda	60,0	Sulph. of Soda	2,7
Sulphate of Magnesia		Sulph. of Magnesia	8,0
Iron		Soda and Iron Carbonates	1,5
Muriate of Soda	6	Muriate of Soda	41,3
Sulphate of Lime	5,0	Sulphate of Lime	2,5
Carbon. & Muriate of Magnesia	3,1		
	69,3		74,0
Gaseous Contents.		Gaseous Contents.	
Cubic Inches.		Cubic Inches.	
Carbonic Acid	3,7	Carbonic Acid	2,5
Sulphuretted Hydrogen	1,8		
	5,5		

"From the above tables, then, you will

observe, that the Montpellier spring differs most materially from the original well. The quantity of aperient salts, or alkaline sulphates, which it holds being not one half of what is kept in solution by the old spa, while the proportion of muriate of soda, or common sea salt, is *forty times greater!* But the muriate of soda does not act on the bowels. To produce the same effect, therefore, it is necessary to take at least double the quantity of the water of the Montpellier spring; while in doing so the drinker must, of necessity, at the same time, swallow *eighty times as much common salt!* Therefore, the stimulating or heating quality of these two springs may be stated as nearly eighty to one; while it should not be forgotten that the stomach must be twice as much distended, before the aperient effect can be produced by the new spa water."

An analysis of all the other Montpellier springs, shows that, except No. 5, they contain a redundancy of sea salt. The author then contends, that the muriate of soda in excess is dangerous to the patients usually sent to Cheltenham, namely, "either people who have resided a long time in warm climates, and whose livers and chylotropic viscera have been injured by the influence of fevers and tropical heats; or such as have never travelled out of Great Britain, but whose abdominal organs have suffered from excessive stimulation, from various causes." Common sense would lead us to acquiesce in this conclusion; for it is assuredly most improper, when the stomach and intestines are weakened, and possessed of a highly accumulated sensibility, to allow the use of mineral waters containing the sulphate of soda. In such cases the original spa, (if correctly stated in the analysis) should undoubtedly be taken. We do not, however, agree so entirely with the author, when he states, that 95 persons out of 100 take the pure saline No. 4; and adds, "Seeing that this water contains neither gas nor iron, shall we not be warranted in drawing this inference, that all these people might have been equally benefited by drinking a solution of Glauber and Epsom salts at home, provided they had confidence and patience enough to persevere steadily in such a course for a fortnight or three weeks, and rise every morning and walk for an hour or two before breakfast?"

Now surely leaving home, exercise, change of air, and losing sight of business, are nearly 99-100ths of the causes of the celebrity of our watering places; and it would be as advantageous for the people of Cheltenham, Leamington, and Gloucester, to go to Scotland, as for the people north of the Tweed to visit England in search of health.

The correspondence of Dr. N. to his friend is a satirical exposition of the mode by which mineral springs may be made productive to their proprietors. The management which the doctor recommends his friend to imitate from the English, is thus described.

"Know then, my good friend, that your first business must be to procure a few tons of Glauber and Epsom salts from the nearest manufactory, where they will cost you at the rate of about fourteen pounds sterling per

ton; which accomplished, you must next endeavour to procure a constant supply of the pure element from some rapid torrent or deep well—be it mineral water or not—for that is of little moment; you must then fill a few quart bottles with your spa waters and salt them to your taste, as Mrs. Glasse would say, but of various strengths remember; and having duly sealed them up, send them to the chemist of the greatest repute in your part of the world to be analyzed. These bottles you had better number one, two, three, four, five, and six, *ad libitum*; but, I should suppose, you need hardly extend it to the Pythagorean number. Your analysis having been returned, duly signed, sealed, and delivered, you must next look out for some complaisant Editor of a Monthly Journal, Philosophical, Literary, or Medical, to insert these Analytical Essays, with some enticing preface; as, for instance,

"We congratulate the public on the great discovery lately made on the banks of Mr. Macl—e, of a rich variety of Mineral Waters, whereby those who repair to the fountains of Benibere, may henceforth be accommodated with all sorts of waters, saline, aperient, chalybeate, or sulphureous, according to their several fancies and necessities." "A spacious pump room, of the form and dimensions of a Greek temple, must next be built; beneath the flooring of which you must excavate several tanks, which are to be filled every night, by means of leaden pipes, laid under ground all the way from your well or fountain head, where you brew the mineral waters. And, lastly, to prevent the prying curiosity of your visitors, you must not neglect to build a sort of pigeon house, or Martello tower, over your fountain head, large enough to contain a stout forcing pump, and a large trough for your Glauber and Epsom salts, a few barrels of which you can store there for use upon all occasions. This Martello tower you must place at some distance in the rear, and let a lawn, or hedge, or paling, interpose; clap a cannon on the top of it, to repel invaders; or, if you are afraid of using powder and shot against the king's lieges, thrust it well at night, to conceal its importance, and stick upon it a board, painted to this effect, 'Take notice, that this is *no thoroughfare*, but a private road only, to *Hoanahall farm*; and whoever trespasses on this ground shall be prosecuted according to law.'

"All around your pump room you must lay out plantations and walks, with shady trees and flowering shrubs, and, having procured a band of pipers and fiddlers with bass drums, &c. to titillate the auditory nerves of your visitors, while your waters are stirring up their great and small intestines, you may throw open the doors of your pump room to all hypochondriacs and true believers, who will assuredly flock by hundreds and tens of hundreds, to the new spa of Benibere, to seek the Goddess of Health, a statue of whom, for the sake of classical allusion, you had better place over your pump room, with a Latin motto beneath, from one of the old poets, as for instance,—" *Utilis alio fluit utrisque cymene*;" or, in plain English, I

hope this will be as good for your bowels, as it will be to my purse."

The Doctor assures his friend, that he must accumulate a magnificent fortune if he follows this advice;—but as that is no business of ours, we have only to add, that under a jocose style, there is much worthy of consideration in this pamphlet, which the drinkers of spa waters will do well to study.

We are of opinion, with Dr. Neale, that the waters containing the muriate of soda have often done much mischief. And his character and abilities as a physician induce us to believe, that the practices of careless adulteration of these waters are in existence; and he therefore merits the thanks of invalids, and of society, by their exposure.

*A View of the Agriculture, Manufactures, Statistics, and State of Society, of Germany, and parts of Holland and France. Taken during a Journey through those Countries in 1819.* By William Jacob, Esq. F. R. S. London, 1820. Quarto, pp. 434.

A sound, practical, and useful work, was to be expected from a traveller of Mr. Jacob's known abilities: nor will this volume disappoint these expectations. The author's remarks on the countries through which he passed, afford equal evidence of his assiduity and capacity; and, especially on subjects connected with agriculture, we conceive that the information he has produced will be eminently beneficial, both to ourselves and to the continent. On manufactures the statements are not so minute; on statistics they are not so original; and on society they are not so novel; but even on these topics, they are valuable, accurate, and acute; so that, taken altogether, readers will meet with a very interesting account of much that is worthy to be known of Holland, Westphalia, Hanover, Brunswick, Prussia, Saxony, and several of the minor German provinces.

A very sensible and intelligent English gentleman, unwarped by party prejudices, and telling us plain facts rather than building up vain theories, is an exceedingly agreeable, as well as an exceedingly instructive travelling companion; and we have seldom arrived at the end of a quarto, going over ground not new nor unknown to us, with a feeling of less fatigue than on this occasion.

A regular analysis of a work so copious would far exceed our limits, and would indeed be a waste of labour; for those most concerned in the topics discussed will not be content with an abridgement, and the general reader will be better pleased with examples of

an amusing and important nature. To gratify such, we proceed to offer a few extracts, and beg to refer our agricultural friends particularly to the publication itself.

While in Holland, Mr. Jacob notices the precision of the natives in a way which offers a good example for our imitation.

"The Dutch (he says) are as punctual as they are industrious and parsimonious. The diligences and treckschuys start at the time appointed, during the striking of the clock. If you are told that the hour is seven, you may be sure to be away before the fourth of the seven strokes has sounded. The precision at which the hour of arrival is fixed, is such that you may depend upon it within a very few minutes; and the same reliance may be placed on the period of finishing the journey, whether it be made by water or by land."

Another peculiarity deserves consideration, at a period when discussions on the Roman Catholic religion are about to take place in Parliament. At Utrecht, the author states—"There are twenty-four churches in this city, which belong to the Catholics, Calvinists, Lutherans, Anabaptists, Mennonites, and Moravians. The inhabitants, according to an annual census, are now about 34,000; the catholics a little exceed in number the whole of the protestant sects; but they are for the most part of the lower orders of the people. I heard here, as I had done in the other cities, that the catholics are generally preferred as domestic servants, both by the different sects of protestants, and those of their own faith. The reason assigned for this, is, that if the catholics purloin any thing, when they go to confession, the priest will insist on their making restitution, before he will administer absolution; and the knowledge of this is thought to act as a restraint on the disposition to pilfer."

Near Deutchem, the last city in Holland on the Anholt frontier, we have the following anecdotes.

"Whilst my post-horses were taking their bait of bread at a small wirthshouse, by the road side, I walked on a considerable distance; where in a barn, were two men and a woman employed in threshing and cleaning buck-wheat. The flail they used appeared to me of a peculiar clumsy construction; and after some slight conversation, I examined the implement, and made a few strokes with it on the haulm, to try its effect. The woman immediately ran to me, took a wisp of straw, and wiped both my shoes, then threw her arms round and kissed my cheeks, and cried, "a forfeit." The paying a forfeit for meddling with implements, was not new; but the shoe cleaning and kissing puzzled me, though I have since heard that the former part of the ceremony is still practised on such an occasion, in some parts of Kent. I was, however, too gallant, not to give a trifling present, with the assurance that it was only the mark of grateful feeling for the salute; a compliment which flattered the slatternly female, and produced laughter in the countenances of her

clownish associates. I was invited into their house, where I rested till the carriage came up. It was a catholic family, and some of the pictures upon religious subjects, exhibited genuine Dutch drollery. One piece represented the seven sacraments of their church. Under the head of confession, a priest was represented sitting in the box with his ear close to the listening hole, at which a beautiful female figure in a kneeling posture was whispering. The devil was standing behind her, with a chain in his hand that encircled her waist, and appeared to be exerting all his strength to draw her from confession, or perhaps from the penance the priest was enjoining. Another part represented baptism, where the priest was plunging a naked boy into a font filled with water; and the Holy Ghost was descending in a beam of light, whose termination rested on the breast of the child."

We have so recently had our attention occupied with Westphalia, and Hanover, that we shall pass over these divisions in Mr. Jacob's book; but the subjoined extract seems fairly called for, as a poise to the last but one which precedes it.

"Part of the time I spent in Osnabrück, I passed with a venerable clergyman, the president of the Lutheran consistory. He complained that the catholics had of late been very successful in making converts, especially among the poorer class of his hearers. Knowing that the catholic bishop of this city, as well as of Munster, had been praised for their liberality by our English Bible Society, of which my revered friend was a member, I turned the conversation towards the prelate, of whom he spoke in very high terms. He told me, however, that when any of the catholics asked a bible from their bishop, he would say to them, "The Old Testament is a difficult book—you cannot understand it—it will be of no use to you—here is a New Testament—that you may understand, and it will be quite sufficient for you."

The state of Brunswick has been greatly improved, its public debt lightened, and its resources increased, during that period of its sovereign's minority which has elapsed; and it is gratifying to learn, that it promises to be in a still higher condition by the time the prince, so interesting to the British people, attains the age for assuming the ruling power. His people are warmly inclined towards Britain. The author says—

"At almost every house I entered, I was pleased to see the pictures of their late Duke, of the Duke of Wellington, and of Blücher; and many articles of their furniture were adorned with gilded busts of the same heroes."

Throughout the other provinces of Germany, Mr. Jacob found the warmest friendship for the English generally prevalent; and a strong feeling of gratitude, the result of the subscription from this country, which was judiciously appropriated, and did much to relieve the miseries entailed by a ferocious war.

When in Prussia, Mr. J. visited the celebrated agriculturist, Von Thüner; and gives a very excellent account of his farm and sys-

tem (the model for farming in these dominions) from which we shall next week quote some portion; preferring, for this Number, the shorter account of the Saxon princess, who is probably destined to make no slight figure in the affairs of a country, now the object of much speculation.

"The young Queen of Spain is said, by those who have been as intimate with her as court etiquette would allow, to possess most unbounded ambition, and to have such a commanding spirit as to have obtained, at her early age, almost the sole power over the Royal Family. When her elder sister was deposed in marriage by an Austrian Archduke, she declared she would never marry but to a kingly throne. When the ambassador of Spain, the object of whose mission was known, was first introduced to the family, the elder sister, who was attached to the prince she has since married, in order to avoid the honour of Ferdinand's hand, disguised, by her mode of dress, a person not unpleasing. The younger, Josepha, did not need much persuasion to induce her to accept the proffered crown, nor did she practise any leniency when the formal proposal was made.

"She is said to be an extremely pious, or what some call a ligotted, catholic, observing all the injunctions of that church with most scrupulous exactness. She is distinguished by an unvarying sincerity in all her expressions, by the most rigid adherence to truth, and the punctual observation of all her engagements. She had studied the Spanish language, and at an early period of her engagement with Ferdinand, had begun to correspond with him. It was suggested that her letters had better be corrected by some person who was an adept in that tongue; but she repelled the suggestion with great scorn, declaring that it would be practising a deception on the King, which she would never use.

"After the formal marriage, she appeared much flattered by the Spanish minister addressing her on his knee; though it is said, when he first placed himself in that posture before her, she was alarmed by the apprehension that he was about to communicate some disastrous intelligence from Spain.

The picture of Ferdinand, superbly set with diamonds, was presented to her, with which she was much pleased, as he was certainly a fine looking man. It was afterwards known, and by some person communicated to her, that the picture was painted for, and presented to his first wife; that after her death, the same present was sent to Brazil for his late Queen; and now for the third time, presented to the Saxon Princess as the resemblance of one, who must have passed a longer period than she has lived, since it was painted for him. Whatever chagrin the discovery might have occasioned, the prospect of a crown seemed to have healed the wound and allayed the feeling.

"The conditions to which this young princess was called to submit, in conformity to the etiquette of the Spanish court, were such as would have been deemed harsh by most persons, but are said to have been easily acquiesced in when they were appen-

dages to a throne; and were not objected to, because they were known before the formal proposals were made. The principal conditions are, that she is to visit a theatre but twice in a year, and then accompanied by the King;—that if she wishes to ride out, or to walk even in the garden, she must give twelve hours' notice in writing of her intentions; and that no attendants from her own country must accompany her to Madrid, but must leave her at the first town after her passing the Spanish frontiers. This last condition has been literally complied with, and her Saxon attendants have all returned to Dresden."

We cannot omit an anecdote of Goethe, which the author picked up at Jena.

"A minor poet had addressed some verses to one of the reigning family, which contained some most exaggerated compliments. In criticising the production, the old poet remarked, that "there was too much sugar in the composition; that princes were pleased at sugar-plums being given to them, but did not like being pelted with sugar-loaves."

The following remarkable natural phenomenon is mentioned, as occurring in Saxony. "The quantity of vermin of the mouse tribe, has increased of late to a degree almost incredible. The local magistrates give rewards for their destruction. In the year 1818, more than 200,000 field mice were brought to them for the premiums. In the Rathskammer of the city of Gotha, between the ninth of May and the ninth of September, 1817, the number for which the rewards were paid, reached to 89,565. The regularity with which the accounts are kept in these local treasuries leave no room to doubt of the authenticity of this fact, which is both novel and extraordinary."

(To be concluded in our next.)

#### LACON.

The following quotations from *Lacon* were obliged to be omitted in our last Number, from want of room: we now insert them in justice to the author.

A man who knows the world, will not only make the most of every thing he does know, but of many things he does not know; and will gain more credit by his adroit mode of hiding his ignorance, than the pedant by his awkward attempt to exhibit his erudition. In Scotland, the "*jus et norma loquendi*" has made it the fashion to pronounce the law term *curator* *curator*. Lord Mansfield gravely corrected a certain Scotch barrister when in Court, reprehending what appeared to English usage a false quantity, by repeating—*curator*, Sir, if you please. The barrister immediately replied, I am happy to be corrected by so great an orator as your Lordship.

*Commentating* *lore* makes a mighty parade, and builds a lofty pile of erudition, raised up like the pyramids, only to enshrine some mouldering mummy of antiquity, utterly unworthy of so laborious and costly a mode of preservation. With very few exceptions, commentators would have been much better employed in cultivating some sense for themselves, than in attempting to explain the

nonsense of others. How can they hope to make us understand a Plato or an Aristotle, in cases wherein it is quite evident that neither of these philosophers understood themselves. The Head of a certain College at Oxford was asked by a stranger, what was the motto of the arms of that university? He told him that it was "*Dominus illuminatio mea*." But he also candidly informed the stranger, that in his private opinion, a motto more appropriate might be found in these words—"Aristoteles *mea* *teuer*."

Examinations are formidable even to the best prepared, for the greatest fool may ask more than the wisest man can answer.

It is better to have recourse to a quack, if he can cure our disorder, although he cannot explain it, than to a physician, if he can explain our disease, but cannot cure it. In a certain consultation of physicians in this kingdom, they all differed about the nature of an intermittent, and all of them were ready to debite the disorder. The patient was a king; at length an empiric, who had been called in, thus interposed: Gentlemen, you all seem to differ about the nature of an intermittent, permit me to explain it; an intermittent, gentlemen, is a disorder which I can cure, and which you cannot.

*Histrionic talent* is not so rare a gift as some imagine, it is both over-rated and over-paid. That the requisites for a first rate actor, demand a combination not easily to be found, is an erroneous assumption, ascribable, perhaps, to the following causes: The market for this kind of talent must always be *understocked*, because very few of those who are really qualified to gain theatrical fame, will condescend to start for it. To succeed, the candidate must be a gentleman by nature, and a scholar by education; there are many who can justly boast of this union, but out of that many, how few are there that would seek or desire theatrical celebrity. The metropolitan theatre, therefore, can only be recruited from the best samples which the provincial theatres will afford, and this is a market, abundant as to quantity, but extremely deficient as to quality. Johnson told Garrick that he and his profession were mutually indebted to each other: "your profession," said the doctor, has made you rich, and you have made your profession respectable." Such men as Smith, Garrick, Kemble, and Young, might do honour to any profession, and would, perhaps, have succeeded in any; but their attempting success in this department is much more extraordinary than their attaining it; for, in general, those who possess the necessary qualifications for an actor, also feel that they deserve to be something better, and this feeling dictates a more respectable arena. Neither is the title to talent bestowed by the suffrages of a metropolitan audience, always unequivocal. Such an audience is, indeed, a tribunal from which an actor has no appeal; but there are many causes which conspire to warp and to bias its judgment; and it often happens that it is more difficult to please a country audience, than a London one. In a country theatre, there is nothing to bribe our decisions; the principal actor is

## THE HIMALA MOUNTAINS.

(Account concluded from Fraser's Journal.)

The extracts in our last Number left the traveller at Gungtree, the centre of the Himala steeps, and the sacred source of the Bhagirute Ganges: his narrative thus continues:—

This mountain, which is considered to be the loftiest and greatest of the snowy range in this quarter, and probably yields to none in the whole Himalaya, obtains the name of Roodroo Himala, and is held to be the throne or residence of Mahadeo himself. It is also indiscriminately called Panch Purbut, from its five peaks; and Sooneroo Purbut, which is not to be confounded with the mountain so called near Bunderpouch; and sometimes the general appellation of Kylas is given, which literally signifies any snowy hill, but is applied to this mountain by way of preeminence. It has five principal peaks, called Roodroo Himala, Burrungpooree, Bissonpooree, Oodguree Kanta, and Soorga Roince. These form a sort of semi-circular hollow of very considerable extent, filled with eternal snow, from the gradual dissolution of the lower parts of which the principal part of the stream is generated; probably there may be smaller hollows beyond the point to the right above Gungtree, which also supply a portion.

The breadth of the mountainous region may probably occupy a space of from sixty to eighty miles at most.

The old popular idea that the Ganges issued from a rock like a cow's mouth (Gae Monk), did not fail to occur to me. This idea is extremely prevalent, and it is difficult to account in a satisfactory manner for its universality, for it is not authorized by the shasters; and the numbers of pilgrims and devotees who have reached the place of Gungtree (it might be presumed) would have served to give sufficient publicity to the true state of the case.

It may be amusing to relate the fabulous origin of this mountain, of the range, and of the two rivers as given by the Brahmins. Whether it be the same as is assigned in the shasters I have not the means of ascertaining. It was, however, attributed to them.

The common tale of the usurpation of the empire of Lanka, by Rawaen the son of Maha Deo, who rebelled against his father, is well known; as also are the adventures of Rama and Lutchman, driven from their father Maha Deo's presence, by the trick of one of his wives; the history of this pair, and of Sita the wife of Rama; their meeting with the Hoonooobams in the Anrita gardens in Lanka; the rape of Sita by Rawaen, tyrant and usurper of Lanka; the conquest of that place, and recovery of Sita, with the union of the three brothers in favour with their god and father, Maha Deo. When Maha Deo retired from Lanka, disgusted at the rebellion of his son Rawaen, and, as it is said, forced him to fly, he formed Kylas, or the Himala range, for his retreat; and Sooneroo Purbut, or Roodroo Himala, with its five peaks, rugged and inaccessible as it is,

for his own dwelling, that none should find him out. Both Bhagirutee and Alaknanda are there said to have sprung from the head of Maha Deo. Twelve holy Brahmins, denominated the Twelve Reekhee, left Lanka in search of Maha Deo, and penetrated to Bhyramghattee, where the J. hamevie meets the Bhagirutee, but could not find him. Eleven of them in despair went to Cashmere, but the twelfth, named Jum-Reekhee, remained at Bhyramghattee, sitting on a huge rock in the course of the stream of the Bhagirutee, which, instead of flowing on as usual, was absorbed into the belly of the Reekhee and lost, while the J. hamevie flowed on. The goddess of the stream (Bhagirutee) herself was at Gungtree worshipping Maha Deo, and making her prostrations on the stone on which now the temple is founded. When she felt that the course of the stream was stopped, she went in wrath to Bhyramghattee, clove the Jum Reekhee in two, and gave a free passage to the river. One half of the Reekhee she flung to the westward, and it became the mountain of Bunderpouch. From his thigh sprung the Jumna, and from his skull arose the hot springs mentioned when treating of Jumnotree. Thus far the extravagancies of the shasters; and still they show the large rock which the Reekhee sat upon, and which was divided in two by the same fatal cut. It is a very large block of granite, which appears to have fallen from the cliff, above the point of union between the two rivers, and is curiously split in two.

Towards evening, (Mr. F. says) I bathed in the holy spot where the goddess used to stand. The water, just freed from the ice, was piercing cold; and it required no small effort of piety to stay long enough in it for the Brahmin to say the necessary prayers over the pilgrim, which are much in the same form as at Bhyram-Ghattee: I held also a small tuft of grass in the hand, which, on the prayer ceasing, is thrown into the stream. Afterwards, with bare feet, we entered the temple, where worship was performed, a little bell ringing all the time. The necessary presents were then made, and all parties fully satisfied.

The outside of the temple has already been described. Within there are three images: one, I think, is that of Kali; and the elevated stone shelf on which they were placed was wet and soiled with the offerings made: there was a peculiar smell, but I know not whence it proceeded. The place, as is usual, was lighted by a small lamp: no daylight had admittance. Just below the temple, on the river side, grew three poplar trees and a few small larches; above there are the remains of a fine old silver fir tree, which overshadows some of the caves and sheds. The whole people also bathed, and contributed something to the priesthood: and it was a matter of serious importance, as well as of great joy to every one, that we had thus happily reached a place of such supereminent sanctity: such, indeed, that the act of bathing here is supposed to cleanse from every sin heretofore committed, and the difficulty of which is so great, that few,

happily supported, and must depend solely on himself. In a London theatre, the blaze of light and beauty, the splendour of the scenery, the skill of the orchestra, are all seductive attractions, acting as *arant* conifers for the performer, and predisposing us to be pleased. Add to this, that the extended magnificence of a metropolitan stage defends the actor from that microscopic scrutiny to which he must submit in the country. We should also remember, that at times it requires more courage to praise than to censure, and the metropolitan actor will always have this advantage over the provincial, if we are pleased, our taste is flattered in the one instead, but suspected in the other.

Lutrigues of state, like games of whist, require a partner, and in both, success is the joint effect of chance and of skill; but the former, differ from the latter, in one particular—the knaves rule the kings. Count Stackelberg was sent on a particular embassy by Catherine of Russia, into Poland; on the same occasion, Thurgut was dispatched by the Emperor of Germany. Both these ambassadors were strangers to each other. When the morning appointed for an audience arrived, Thurgut was ushered into a magnificent saloon, where, seeing a dignified looking man seated and attended by several Polish noblemen, who were standing most respectfully before him, the German ambassador (Thurgut) concluded it was the king, and addressed him as such, with the accustomed formalities. This dignified looking character turned out to be Stackelberg, who received the unexpected homage with pride and silence. Soon after the king entered the presence chamber, and Thurgut, perceiving his mistake, retired, much mortified and ashamed. In the evening, it so happened, that both these ambassadors were playing cards at the same table with his majesty. The German envoy threw down a card, saying, "The king of clubs!" "A mistake!" said the monarch. "It is the knave!" "Pardon me, Sire," exclaimed Thurgut, casting a significant glance at Stackelberg, "this is the second time to-day, I have mistaken a knave for a king!!!" Stackelberg, though very prompt at repartee, bit his lips, and was silent.

Levity is often less foolish, and gravity less wise, than each of them appears.

Afflictions sent by providence, melt the constancy of the male-minded, but confirm the obliquity of the vile. The same furnace that hardens clay, liquifies gold; and in the strong manifestations of divine power Pharaoh found his punishment, but David his pardon.

It proceeds rather from revenge than malice, when we hear a man affirm, that all the world are knaves. For before a man draws this conclusion of the world, the world has usually anticipated him, and concluded all this of him who makes the observation. Steh man may be compared to Brothers the prophet, who, on being asked by a friend how he came to be clapped up into Bedlam, replied, I and the world happened to have a slight difference of opinion; the world said I was mad, and I said the world was mad; I was outvoted, and here I am.

except professional devotees, ever attempt reaching the holy place.

It is customary that those who have lost their father and mother, or either of these, shall be shaved at this spot; and it was curious to observe the whimsical changes produced by the operation, which numbers underwent. It appears also, that one chief ordinance was the going frequently round the holy temple; and we particularly observed that those who were noted as the greatest rogues were most forward in this pious exercise; one man in particular, who had been a notorious thief, was unwearied in his perseverance.

Descending from these holy heights, we shall not further extend this paper than by adding a few notices of natural history. In the woady regions many animals abound; but the following are the most remarkable:—

Deer are numerous, and of various kinds. The most curious and worthy of attention is, perhaps, the musk-deer. It is an animal by no means common in any situation, but keeps entirely to the most inaccessible and remote heights, among rocks and forests that defy the foot of man. They cannot endure heat, and several young ones which were presented to us invariably perished, after being exposed for a few days to the warmth of a lower region. The figure of the musk-deer is somewhat singular. It attains the size of a fallow doe, or small buck, and its body and legs are completely those of a deer. The head, however, bears some resemblance to that of a dog; the eye is black and full, but not so large as that of a deer usually is; and the sharp snout and wrinkled countenance gives it a considerable resemblance to a pig's head, which is rendered more remarkable by the two tusks that project from the upper jaw, and hang, pointing downward, considerably over the lower; and their colour is dark brown. It is commonly known that the musk is contained in a liquid state in a small bag near the navel of the animal. When it is caught, this bag is taken just as it is found, and cut from the beast while yet alive. A small hollow reed is inserted into it that the musk may not suffer, as it would be apt to do, from want of air; and the whole is tied around with a sinew of the animal. In this state, when it has dried, which it does in the shape of small brown grains, it is sold together with the skin for about twice its weight in silver. It is said that the animal must be caught alive in order to obtain its musk. Should it be shot, the drug (it is affirmed) is absorbed into the body, and consequently not only lost, but the animal is rendered uneatable. The great value of the animal makes the animal an object of great request. Whenever, therefore, it is understood that a musk-deer has been seen on any particular hill, the whole country is turned out, to hunt him down. This alone would tend to create scarcity of the animal; and if it is as rare in the hills to the south eastward, and on the opposite side of the Himala range, as it is in that portion between the Sulej and Alacnada, there is little danger that the

market will ever be overstocked by the genuine musk.

This scarcity, however, and the high price of musk, as may readily be supposed, give rise to many modes of adulterating it to increase the quantity. The common way is by injecting a portion of the blood of the animal into the bag of musk, while both are warm, and they then unite. Great caution is therefore necessary in making the purchases, and, indeed, none but very experienced persons can ever detect the fraud. Musk-pails are generally sent to the rajah, or chief man of a district, either as nuzzars, or at a certain valuation, as a portion of tribute. Some fall into the hands of the Bunyas, from the low country, who take this article, as well as opium, iron, and other commodities, in payment for their goods, such as cloth, sugar, and other manufactured articles, and these persons sell it at a great profit in the plains. It is highly prized as a medicine as well as a perfume. It is also smoked by the luxurious debauchees in hookahs, in which way it acts as a strong stimulant; but only men of great wealth can afford this fascinating drug. It also invariably forms a part of the offering presented from men of rank to their superiors, as a nuzzar, or to their equals, as a usual token of regard. The name by which the animal is known in the hills is *estoree*, and the drug also obtains that appellation. A common sort of deer, which we frequently saw browsing among the heights, and bounding from rock to rock, is called by the natives *gerul*. It attains the size of a reebuck; the colour is dark brown, the belly much lighter; the horns branch into several divisions, like that of the roebuck, are rough at the lower parts, and very sharp at the points, and they run from six inches to a foot in length. Its activity is very remarkable.

We frequently saw the horns of an animal, a mixed species of deer, that were singular in their form and appearance. They grew near each other at the base, curving very much backward, and receding from each other gradually. The exterior curved side is divided from the root to the point by raised articulations, two or three inches distant from each other; and when they are of a middling size they are at least three feet long. The animal to which they belong is described by the natives as resembling the goat in appearance as well as the deer, but more particularly the former. That it is of considerable size may be inferred from its horns; and the skins, several of which we afterwards procured, confirmed this inference. Its colour is a dark gray, approaching to brown; the hair of its skin is very thick, soft, and elastic, but by no means fine: each hair has the appearance of a spongy hollow tube. They form very comfortable and warm beds to lie on, and are used for this purpose.

It is probable that we shall return to this volume for a description of the people, especially of the Ghoorkas; but at present we must abridge, to make room for other novelties.

## ORIGINAL CORRESPONDENCE.

To the Editor of the Literary Gazette.

Sir,

Is Debre's Peerage the most accurate record we have of the present state of the nobility of the kingdom? If it be, the peerage, I must say, is most miserably recorded. I have just been looking over his list of the Irish peers (in the eleventh edition *considerably improved*, printed in 1817), and I do not think I overstep the modesty of calculation, when I assert that it contains at least as many errors as there are articles. It would take a little too much room to prove this assertion at length; but I shall give a couple of examples, selected almost at random.

Vol. 2. p. 989. We are informed that Thomas, 27th baron Howth, married in 1750, Isabella, the Earl of Kingston's sister, who died in 1794: and that his second son, Thomas, was born in 1795. This, I think, an important fact in midwifery. But let, that pass. This son Thomas is at present bishop of Cork and Ross; and if the above date of his birth be correct, he must have made good use of his time. A bishop and doctor of divinity long before twenty, he may almost rival the most striking examples of precocity or nepotism: but when we find (p. 990) that he has 8 children, one married in 1805, consequently when her father was only ten years of age, and another (a clergyman too) in 1816, in his father's 21st year, we must confess that miracles have not yet ceased. Again we are told (p. 990), that Lord Howth's eldest daughter, Isabella, was married in 1773 to Lord Sidney, who died in 1744 without issue, which last circumstance I do not much wonder at, as he did not think proper to marry until 29 years after his death. Her mother I confess, as we have seen already, had a son a year after her decease: this however being I imagine a rare case, ought not to be drawn into a precedent. But this family seems to have a fancy for marriage after death, as we find (p. 990) the next daughter, Elizabeth, married in 1806, to Sir P. A. Irving, although the same grave authority informs us she died in 1792. This is a very authentic history; and I can assure your readers it would not be hard to find other tales as astonishing.

Let us turn to Lord Clarina. There we learn (p. 1267) that Nathaniel Williams, the 2d Lord, was born in 1796, married Penelope, daughter of M. R. Nertropp Esq., had a daughter in 1797, and a son, (the present Lord Clarina) in 1798, beside other children, and died a Lieutenant General in 1810, aged of course 14 years. This is rapid promotion, and beats the old story of the Captain crying for his pap. Besides, he thinks fit to inform us that Penelope, Baroness Clarina, died in 1815. This I am happy to contradict; her ladyship is still in the precincts of this world, and if health, good humour, and good looks, give any reason to expect a long life, I know nobody more likely to bid fair for it.

Is not this scandalous carelessness? I have taken two cases; but I could increase the list a hundred fold with ease. It certainly

istreating the purchasers very cavalierly, and I hope that the editors will take a little more pains with the next edition.

I am Sir, Yours, &c.  
June 1, 1820. P. P. P.

## ARTS AND SCIENCES.

### SHIPS' CARGOES.

*Mayence, 16th May.*

*New Invention.*—It has often been a subject of complaint, that there was no method that could be wholly depended upon for ascertaining the amount of the cargo which a vessel is able to contain, and also to discover the exact weight of the cargo. Mr. Jacob Reitmayer, a mechanist of this city, has succeeded in remedying this defect, by means of a new invention, a model of which has been presented to the central committee for regulating the navigation of the Rhine, now sitting here. This machine resembles in its principles the platform used on land for weighing waggons, &c. It is built in the water, at a place where the depth is always the same, whither the ships, when empty, are brought, and you may tell with the greatest accuracy, by means of a scale (or scales) at the sides of the machine, how high and broad the vessel is, and what is its weight in the water when empty. As the scale is calculated upon hydraulic principles, from decimeter to decimeter, according to the make of the ship in its cubic contents, and according to the buoyant power of the water, nothing more is necessary than to place the vessel, when loaded, in the machine, which will immediately shew the weight of the vessel and cargo, from which the weight of the vessel when unloaded is to be deducted.

*Measurement of the Meridian in Germany.*—In a former number of the Literary Gazette, we inserted a letter from the celebrated astronomer, Dr. Olbers, of Bremen, respecting the operations carrying on by order of the king of Denmark, for measuring an arc of the meridian, in Denmark and Holstein. We now learn that his Majesty the King of Great Britain and Hanover, ever ready to promote the interest of science, has consented that these operations should be continued through the kingdom of Hanover. For the purpose of accurately examining and describing the vegetable productions of the kingdom of Hanover, his Majesty has been pleased to approve of the appointment of a Physiographer for that purpose, and of the nomination of Dr. G. F. W. Meyer to the office, with the title of Counsellor of Economy (*Oekonomie-Rath*.)

The Danish General Post Office has given orders that a meridian line shall be drawn in all the towns of Denmark, for the purpose of accurately ascertaining the hour of the day.

## LEARNED SOCIETIES.

OXFORD, JUNE 17.

In the Convocation holden in the Theatre on Wednesday, the Honorary Degree of

D. C. L. was conferred on the following noblemen and gentlemen:—

Lord Aspley, Lieutenant General Lord Hill, Sir William Grant, Sir Jacob Astley, Bart. General Sir Anthony Farrington, Bart. Major-General Sir George Murray, Lieutenant-Colonel Sir H. Hardinge, Sir Thomas Lawrence, G. Watson Taylor, Esq., J. Ingram Lockhart, Esq., C. O. Bowles, Esq., Charles Peers, Esq., R. Southey Esq., and Joshua Watson, Esq.

And the Honorary Degree of M. A. on Rowland Hill, Esq.

After the above gentlemen were presented to their degrees, an ode, in honour of the King's accession, written by the Rev. J. Josias Conybeare, Professor of Poetry, and set to Music by Dr. Crotch, Professor of Music, was performed.

On the conclusion of the ode, the Crevean Oration was delivered by the Rev. Mr. Crowe, the Public Orator; after which the Prize Compositions were recited in the following order:—

*Latin Essay.*—"Queniam fuerit Concilii Amphitryonici constitutio, et quam vim in tuendis Græciæ libertatibus, et in Populorum moribus formandis haberit."—J. Shergold Boone, B. A. Student of Christ Church.

*Latin Verse.*—"Newtoni Systema."—W. Ralph Churton, of Queen's College, on Mr. Mitchell's foundation.

*English Essay.*—"On the influence of the Drama."—Alexander Macdonnell, M.A. Student of Christ Church.

SIR ROGER NEWDIGATH'S PRIZE.

*English Verse.*—"The Temple of Diana at Ephesus."—William Ewart, Commoner of Christ Church.

CAMBRIDGE, JUNE 16.

Sir William Browne's three gold medals for the present year were on Saturday last adjudged as follows:—For the Greek Ode and Latin Ode, to Mr. Henry Nelson Colebridge, Scholar of King's College; and for the Epigrams, to Mr. Richard Okes, Scholar of the same society.—Subjects,

FOR THE GREEK ODE.—*Μνησέωρε.*

FOR THE LATIN ODE.—*Ad Georgium Quartum, Augustissimum Principem, Secpta Paterna accipiemus.*

FOR THE GREEK EPIGRAM.—*Inscriptio, In Venum Aque ex iis ciceribus Terræ Arte eductum.*

FOR THE LATIN EPIGRAM.—*Impræni disquirite.*

*The Roxburgh Club.*—This curious Society observed its anniversary on Saturday last, and the oldest style of books was gloriously combined with the newest style of feasting. Several reprints of rare works were presented, and among other interesting matters, the following inscription for a monumental tablet in Westminster Abbey was submitted to the approbation of the club.

To the Memory  
of WILLIAM CAXTON,  
who first introduced into Great Britain  
the Art of Printing;  
and who, A. D. 1477, or earlier,  
exercised that art  
in the Abbey of Westminster.  
This Tablet,

in remembrance of one  
to whom  
the Literature of this Country  
is so largely indebted,  
was raised  
Anno Domini MDCCCX.  
by the Roxburgh Club.  
Earl Spencer, K. G. President.

The French Academy has nominated, in the room of the late Comte Volney, the Marquis de Pastoret, member of the Academy of Inscriptions and Belles Lettres. The Marquis had 18 votes out of 35. M. Derrigny, the next candidate had, 9; M. Delieu 3 and M. de Wailly, 1.

## FINE ARTS.

### ROYAL ACADEMY.

(Conclusion.)

As we began our remarks on the present Exhibition at Somerset House by a general survey, so must we end them by a similar notice. We are well aware, that from situation or accidental circumstances, many works that we have omitted to mention are as much entitled to regard as some which we have particularized: but the field covered by 1072 subjects, is too extensive for minutely detailed examination. There are, however, a few pictures to which we owe a parting glance.

No. 439. 545. *Two Vices in Gloucestershire.*—G. Samuel.

These are sweet transcripts from nature, and remind us forcibly of Beattie's fine lines, by placing before our eyes "the pomp of groves and garniture of fields," the refreshing semblance of the translucent *Arvon* and *Seren*, and all those lovely features of landscape on which the eye reposes with so much delight. No. 240. *The Thames near Battersea.*—J. Wilson.

This artist has grown upon us wonderfully within a very short period. Of his powers, except as a scene painter, we knew nothing till within a year or two; and now we have one of the cleverest views in the exhibition from his easel, combining the truth and finish of the Flemish with the effect of the English style.

No. 11. *The Travelling Ticket.*—F. Kidd.

Another artist of rising merit, who deserves favourable notice, for fulfilling our anxiety on his first appearance. We recommend to him to select subjects of familiar interest—next to portrait, the most profitable branch of art, at the present era.

No. 10. *An Approach to a Greek Town.*—453. *Landscape Composition.*—Joseph Gandy, A.

Magnificent ideas of this eminent architectural draughtsman. We should imagine his portfolio to be a very dangerous subject for a man of fortune; for we never experience the building mania so strong as when contemplating his designs.

No. 72. *The Garden of Fyz Ali Khan, at Ghazpore.*—T. Daniell, R. A.

As usual, Mr. Daniell transports us to the

Orient, and we become familiar with the scenery of the Ganges. It is pleasing to enjoy it thus, without the sultry sensations which mar the delights even of the sacred stream, amidst such parterres as these.

No. 73. *The Margins of Huntly, in the Highland Garb.*—H. Raeburn, R. A.

This dress, no doubt, alters the appearance of the noble Margujs considerably—so much so, indeed, that the likeness does not strike us as possessing Mr. Raeburn's wonted felicity and force. The toning down of the flesh hues in the countenance, to be in unison with the cold green and blue of the tartan, gives it a raw effect. We could wish a sun-beam thrown over the whole.

No. 95. *View of Conynsburgh Cliff, and part of the scenery in Inverness.*—R. Dugley.

A small picturesque little scene, which interests us from its identifying the description of the northern minstrel.

No. 96. *Evening View.*—C. Bayley, II. This is a very pretty amateur landscape.

113. *Study of a Sheep from Nature.*—C. Cranmer.

Excellently done.

No. 154. *The Birth of Venus.*—H. Howard, R. A.

We do not find that Mr. Howard has here departed from his usual manner. Though a beautiful work, we have seen from his hand what has pleased us more.

No. 192. *Portrait of the Chancellor of the Exchequer.*—G. F. Joseph, A.

A good likeness of Mr. Vansittart, and doing credit, as a painting, to the artist's pencil. The right honourable gentleman looks better satisfied than when the budget is under debate; and surrounded as he is by Mr. C. Bagot (by Owen) General Dumourier, (by T. Foster) Canova, Drunken Barnaby, (a clever thing by Etty) and Chalon's gay Figaro, it is quite gratifying to see how much more cheerful he seems than when beset by the Grenelles, Ricardos, Malcherles, and other teasing dogs, who appear to be more concerned for the state of the funds than for the state of the country.

207. *The Duke of Gloucester.*—G. Beechey.

A whole length, by the son of Sir W. Beechey. It is rather foppish and ball-room-like, but gives upon the whole a courtly proof of the artist's descent.

No. 267. *Study from Nature in the Coliseum.*—H. Irvine.

If all Mr. Irvine's studies are thus directed, and thus executed, we will venture to assure him no mean rank in his profession.

No. 297. *Portrait of a Gentleman.*—A. J. Oliver, A.

There is generally an appearance of truth about Mr. Oliver's portraits, which makes us believe they are good likenesses. Such is the present, which is also a well disposed and well-toned head.

No. 330. *Dr. Sangrado Practising Physic, from Gil Blas.*—F. P. Stephano.

Full of character, humorous, and well treated; whether considered with reference to mind or to mechanism. Mr. S. is always amusing, frequently a very able painter

No. 332. *Vicount Duncan;* 33. *Alexander Oswald, Esq.;* 340. *F. Jeffrey, Esq.*—A. Geddes.

These portraits are in a good style, and do much honour to the artist. That of Mr. Oswald is particularly clever. The distinguished individual, whose likeness is preserved in the last number, will also bear a critical review; but it seems to belong to a person of greater size than to one whose mind is much larger than his body.

No. 344. *The Green Grovers.* 618. *The Gypsy.*—J. Graham.

We merely specify these as two of several promising productions, by a young artist, whose first works we very recently mentioned in a laudatory manner.

No. 349. *A Landscape and Figures.* 425. *The Cobbler's Bird in Danger.*—S. Woodin, Jun.

Another young artist, whom we have before noticed with praise. He has studied the Dutch masters to advantage, and produces very neat pictures.

No. 377. *The Thistle and the As, from Esop.*—E. Landseer.

Mr. Landseer has, we flatter ourselves, taken the hint from the Literary Gazette in selecting Esop for subjects suited to his peculiar and distinguished talent. Were he to paint no more than this picture it would do him credit; but we look to the same source for many more performances of high character in their class.

No. 406. *Pointers, by the same,* are admirable.

No. 384. *Entrance to Portsmouth Harbour.*—C. M. Ponell.

A very able and interesting landscape. We are not familiar with Mr. Powell's works, but, from this specimen, we are sure that they need only be seen to attract regard.

No. 398. *Una, &c.*—J. Severn.

The picture which won the R. A. gold medal last year—it needs no other encomium.

No. 455. 458. *Piony Roses.*—Mrs. Pope.

Very pretty flower pieces.

No. 673. *The Larder.* 592. *A Cottage Scene.*—W. M. Craig.

Mr. Craig ought certainly to be appointed painter in ordinary to the Lord Mayor and city companies; or, what an artist to adorn the Alannah des Gourmands! His soul seems inspired by his body—we have seen nothing but stuffing from his pencil for these two years. Perhaps it is his health that is drunk at Mr. Coke's sheep-fests, "feeding in all its branches." The picture is, nevertheless, a good representation of a good larder.

No. 593. *Mrs. S. Cookson, Newcastle.*—E. Hastings.

A portrait not well seen where it is placed, but seen enough to recommend the artist to partial observation.

No. 600. *Portrait.*—S. Lane.

We may repeat the same remark on this clever portrait; but Mr. Lane is more fortunate in having others better exhibited.

610. *Portrait of Sir J. Boyd, and other Miniatures.*—J. Steele.

Carefully finished, and displaying much taste. The colours are well chosen, and

the general effects powerful, as well as pleasing.

649. *Ac. Miniatures.*—A. Robertson.

Mr. Robertson's abilities are too generally known to require further notice, than that he has not fallen off this year.

826. 853. *Enamels.*—C. Moss.

These barely sustain Mr. Moss's reputation; for, though exceedingly well done, he had taught us to expect something still more remarkable.

918. *Public Buildings.*—S. Smirke.

A very grand piece of design.

936. *Præceptive elevation of a Design for a national Triumphal Building.*—R. Reid.

Also a striking ornament to the library.

In the scripture room, Hero and Leander, by Westmacott; Jacob wrestling, by Gott, (which obtained the prize medal); 1033. Bust, by Milligan; and among the paintings above, some by R. Hills, Hobday, G. Manton, Mrs. Carpenter, H. B. Chalon, Christmas, Lonsdale, Drummond, &c. &c. deserve more particular notice than we can allot to them.\* All that we have to add is, the hope that the exhibition of 1821 may far excel that of 1820.

#### MR. GRATTAN'S BUST.

The death of Mr. Grattan, and the general feelings of admiration for his memory, which will probably induce many persons to preserve his likeness, would have reminded us of the fine bust of that patriotic individual, exhibited some years since at the Royal Academy, by Mr. Turnerelli, had it not been more particularly recalled to our minds, by a letter from Mr. H. Grattan to the artist, which we have seen in the daily Newspapers. This letter from the son pronounces the resemblance to his father to be, as we certainly thought it at the time, perfect; and with such a living model in existence, we really think it is carrying competition in the arts too far to set up, (as we observe is doing) rival busts, taken from the face, previously wasted by sickness, and disfigured by the dread touch of death. The original production to which we have alluded, is a very spirited work: the air is classical and characteristic, and the lineaments true to nature. Well acquainted with the features of Mr. Grattan, we will say, that no performance of sculpture ever excelled this for fidelity; and we are the more disposed to recommend it to public attention at this period, because we are the friends of the arts, and consequently of liberal and vigorous emulation; but in proportion as we would cherish this elevating principle, we disapprove of that sort of interference which would deprive merit of its reward and step in between the labours of talent and its harvest.

We observe an engraving of Mr. Grattan in the print-shops, which is, if we

\* We cannot tell our Correspondent, T. R.—gh, whether Rolinda Sharpley be an assumed or real name. The picture, (the Market) to which it is attached in the exhibition, appeared to us to be a remarkable labour for a female hand, and we noticed it in our review accordingly. We observe other pictures, and both a town and country address, in the catalogue.

mistake not, from Mr. Pope's small likeness. It is younger in appearance than we remember Mr. G.; but the attitude is very like, and the general air and resemblance striking.

*Bilsah.*—Among our advices from the interior of India, we have a letter from the Camp at Bilsah, of the 1st of March, which furnishes us with the following information: "Near our Camp, says the writer, there is a great curiosity, which was found out by accident, after we had been here some time. It is a large solid dome, enclosed by a most extraordinary stone fence, with four gateways, which are carved in the most beautiful manner you can imagine. It must be very ancient indeed, as no artist of the present age could execute such sculpture. The gates are supported by four figures, which are infinitely done, heading seemingly under the weight of their loads, and their countenances expressing pain. These statues support numerous other figures of naked women, and slaves of all kinds, such as Roman cars drawn by horses with men on them, elephants, &c. An immense concourse of people are represented going in procession to an exact model of the temple, or whatever it has been meant for. The natives say nothing of its origin or use, except that it was built by the devil. They assert likewise that there was a spring, in which if any person bathed they were turned into stone—which accounts for the numerous figures of men and women. The figures are superior to any thing I have elsewhere seen in India. Bilsah is a large town, and has an extensive stone fort adjoining. Near the town is another curiosity, which we often go to see. Some Brahmins have taken advantage of the bend of a small river to erect a temple, with a ghaut running into the water. By constantly throwing otth and other food from the steps; they have collected an amazing number of the largest fish I ever saw. They are so tame as to come close to you, so much so that you might take them out; and if you throw in food, the water is darkened by them. They are held sacred, and never molested."

Not to overcharge this Number with articles on the Fine Arts, we are induced to postpone the continuation of "The British Gallery—Portraits" till our next.

## ORIGINAL POETRY.

[By Correspondents.]

EPICGRAM.

By a Gentleman passing from Haydon's Picture of Christ's Entry into JERUSALEM, exhibiting in the Egyptian Hall, to Mons. JERRECAULT'S Raft of the Midway, in the room below.

Down Bullock's stair, a wit who punned and laugh'd,

From Haydon's picture went to see the Raft:  
Quoth he, "It is a desperate way on foot to go,  
Oft from Jerusalem to Jericho."

TO NATHAN DRAKE, M.D.

On reading the first paper in his "Winter Nights."  
With witching eloquence and truth,  
Hast thou describ'd the dear delights

Accessible to age, and youth,  
In frowning winter's stormiest nights.  
While turning o'er thy first essay,  
My heart so warmly feels its spell,  
It cannot for an hour delay  
The thanks which thou hast won so well.  
Such pictures,—whether they describe  
In truth's own simple eloquence,  
The froths of a youthful tribe,  
Happy in early innocence;—  
In whose bright eyes the vivid gleam  
Of *Hemé's* lov'd fire-side glances;  
While the more mild and chasten'd beam  
From older ones—their mirth enhances—  
Or whether they portray, the charm  
Which erst o'er Cowper's spirit stole;  
When evening's pensive, soothing calm  
Sheds its own stillness o'er the soul;—

Such pictures do not merely pass  
Before the eye,—and fade in air;  
Like summer-showers on new-mown grass,  
They call back living freshness there.  
Aye! e'en to lonely hearts, which feel  
That such things were, and now are not,  
Not poignant, only, their appeal,  
But fraught with bliss, yet unforgot.  
Yes, bliss!—for joys so calm, and pure,  
Leave blessings with the heart they bless'd;  
And still unchangeably endure,  
E'en when not actually possess'd.  
For thee, my friend! If wish of mine,  
A hard obscure, could call down bliss;  
Could I implore for thee, or thine,  
A more delightful boon than this?  
Thou—thou that my mother's green old age,  
May be her child's, or children's too;  
And that each charm that decks thy page,  
Thy own fire-side may prove its true.

BERNARD BARTON.

Woodbridge, Suffolk.

Address of G.H. to the last Lamp of Grafton's Alley  
in the city of York.

The last lamp of the alley  
Is burning alone!  
All its brilliant companions  
Are shivered and gone.  
No lamp of her kindred,  
No burner is nigh,  
To rival her glimmer,  
Or light to supply.  
I'll not leave thee, thou lone one!  
To vanish in smoke;  
As the bright ones are shattered,  
Thou too shalt be broke:  
Thus kindly I scatter  
Thy globe o'er the street;  
Where the watch in his rambles  
Thy fragments shall meet.  
Then home will I stagger,  
As well as I may;  
By the light of my nose sure  
I'll find out the way.  
When thy blaze is extinguished,  
Thy brilliancy gone,  
Oh! my weak shall illumine  
The alley alone.

A SONG.

Translated literally and literally from the  
"Telinga," a dialect used in India, of  
which I subjoin the original song, as nearly  
as it can be expressed in English letters.

The Hopeless Lover.

1. O lovely maid, thy words I held  
As truth, till to despair compelled;

Soon as thy fairy form I viewed  
The infant god my heart subdued.

2. In blazing day as faunts the flow'r  
I sink and wither in his power;  
My dream of ecstasy is o'er,  
Thy faithless heart is mine no more.  
3. If thee, alas, I should remind—  
No more, no more, my frantic mind!  
Can it be so? Could she deceive?  
In vain I love, in vain I grieve.

The Original in English Letters.

1. Chéduana gándi nēe palakō  
2. Sātyamāntu mudim dīlāché  
3. Hec sūndaramya mēnoo ganēo  
4. Chika, hōjērani bīdha Kēno  
5. Poo tē ādama srūki tapamūdi  
6. Shīyaku rēmanī bilvalāmpīamū  
7. Mūndati brēti yamm zāniye  
8. Moodhamatē, nīnoo? dātsavats unt!

This language is, for its sweetness and harmony, called the Italian of India; and, when properly pronounced, has a good claim to that name. C. P. B.

## BIOGRAPHY.

SIR JOSEPH BANKS.—This distinguished person died on Monday, the 19th, at his house, Spring Grove, near Houslow. He was a Member of the Privy Council, a Baronet, a Grand Cross of the Bath, President of the Royal Society, and member of most of the principal scientific and literary institutions in the world. Sir Joseph had attained the patriarchal age of eighty; during the far greater portion of which long life, he devoted himself and a liberal fortune to the advancement of useful philosophy, and of the sciences best calculated to promote the welfare of mankind, and adorn civilized society. His residence in Soho Square was the rendezvous of the learned and ingenious of every class and country. Botany, natural history, mechanics, new discoveries, and inventions in all the arts, were there investigated and improved by the collision of intellect; and we may confidently state, that there was not in the universe a place of resort where so much general instruction could be gathered, where so much original information was brought forward, and where so many accomplished minds and so great a variety and extent of talent were immediately directed to necessary inquiry and elucidation. In this point of view, the loss of Sir Joseph Banks is not only a loss to his own country, but to that globe which he had encircled. His library and collections of rare objects in many branches of science, are of unparalleled value for a private individual; and, indeed, few crowned heads possess treasures of this description so curious and rich.

## SKETCHES OF SOCIETY.

AN EXQUISITE'S LIFE IN THE COUNTRY.

The solitude of a country life is fitted only for the saint, the sage, or the philosopher. To any other man it loses its charms, when he cannot enjoy them in company with friends and fellow men. To see a fine prospect, an enchanting wood, a limpid river, a delightful waterfall, without being able to

say to some one, "What a lovely scene!" coarsens the heart of man. Society is as necessary for the country as the town; but the man who transports town habits and pleasures into the bosom of nature, loses the fountain and the grove, the verdant lawn, and the delicious retirement which country scenery and a country life present.

"To meet the sun upon the upland lawn," to watch his majestic rising from the gilded east, to contemplate the rosy-fingered morning, opening the day upon man, to view the prismatic colours reflected in the drops of dew, to brush that dew with early foot from the shrub and floweret in our healthful walk, to behold the glories of the setting sun, or the silvery moon-beam playing on the surface of the quiescent lake, to admire the expanded rose-bud, and to watch the progress of nature in its spring, are amongst the loveliest and sublimest enjoyments, and are unknown in the busy haunts of vicious and populous cities. The country, retirement, health, order, sobriety, and morality, can alone furnish them.

There are fashionable, however, who expect to make nature subservient to their habits and caprice, every where, and in every thing; and who, not content with bringing summer in January, into their painted and gilded saloons, by rare shrubs, flowers, plants, and the expensive contents of their conservatories, added to the forced fruits and other articles of ruinous luxury with which their boards abound, madly expect to transmit town enjoyments, and dissipation, into the country, in order to lead the same unvaried course of voluptuousness and riot all the year round. In contradistinction to what we hear of "*rus in urbe*," it is with them *urbs in rurem*; and not satisfied with turning day into night, and night into day, in town, they convert summer into winter, by passing it in London, or at some watering place, where they only go as an adjournment of the London spring, and then travel down to the country, to view leafless trees, fields clad in snow, and to be either confined to the house, or to have bad weather for a short time for form's sake.

Wekled to the London system of rising in the evening, rising at dusk, and dressing by taper light, they carry the same unnatural and unwholesome arrangements to scenes which would have furnished a retreat full of charms, if visited in the spring, or in the summer. For them the feathered choir chants in vain: for them the flower expands not; all is haze, fog, and darkness, unless perchance the rising sun blushes at their orgies, or reminds them that the day has opened ere they retire to a feverish bed.

There are rakes and debauchees who unblushingly tell you that they only wish to see their family mansion in order to collect their rents; and that to behold their woods turned into cash, their corn and hay at the market, instead of in their fields, is their sole delight; that their tenants are only the tributaries to their pleasures, and their flocks food for their table; and that they care neither for family pedigree, nor family estate, except as they can make them conducive to their consequence and luxuries.

There is a depravity in all this which absolutely denaturalizes the heart; but, as this is the object we have at present in view, let us peruse the life of a certain nobleman at his family castle, surrounded by majestic woods, lakes, and forests peopled for his use; a numerous and faithful tenantry, and the most romantic scenery which the eye can possibly view.

Engaged in London until July, and at Brighton until December, he gets down to this ancient edifice, the pride of his ancestors, about the first week in January, and leaves it in March, just as the days are lengthening, and increasing the ennui which the contemplation of rural objects occasions him.

Surrounded by foreign cooks, confectioners, and fiddlers, he travels all night, and arrives at day-break. His effeminate form sinks for a few hours on down; and he rises in the afternoon. The breakfast table is covered with delicacies, and with the provocatives necessary to excite a sated appetite. Gamblers and demi-reps, dandies and adventurers, compose his numerous party. "The weather is odious," says he: "what a bore the country!" He comes there only for fashion's sake, and in order to raise his rents. His spirits are low; brandy alone can save him from the blue devils; he awallows the liquid fire. The billiard table occupies five hours, his toilette takes two more.

The second dinner bell has rung; it is past eight, and he descends to his banquetting room. All here is pomp and pageantry: nothing is rational. Foreign wines and cookery compose the fare. Excess reigns over every thing. Intemperance plies the frequent cup, and vocal and instrumental music breathe their most voluptuous sounds.

Now comes the hour of gambling. His woods, his lands, his moveables, are all hazarded again and again: ten times in the night, they are lost and won. A castle totters on a single card: the comfort of his tenantry depends on one throw: agitation and ill humour ebb and flow: avarice and ruin stare each other in the face. The game is over. He has lost only two or three thousand: and the grinding of a few farmers will rub off his score. He goes to bed. Conscience has nothing to do with him: for these are only considered as the peccadilloes of fashion.

Occasionally he sallies forth in the evening with a legion of liveried attendants. The woods are surrounded; the birds are circumvented; the cover is beaten. Armed with a double-barrelled gun, and followed by menials, who take from him even the trouble of loading his piece, he and his party fire a thousand shots and spread death and desolation around them. This is called glorious sport, a noble day, rare country amusement! and the great man returns as proud as ever Alexander was after his greatest victory. Brandy recruits the fatigues of this memorable morning, and the tongue of flattery tickles the nobleman's ear, and elevates him in his own esteem.

At dressing time he gives audience to the steward, who is ordered to pay his gaming and intriguing debts, by the sale of timber, mortgage, anticipation, or annuities.

Such is the exquisite country life! Such the delights in which he indulges, in the midst of family estates and picturesque scenery to which he is as blind, as he is to his own vices and failings.

What a pity that a habitation and scenes like these should be bestowed on such a possessor! The very detail is offensive to reason and feeling; but its colouring is not too high, nor is it a solitary example. Let our self-exiled, our ruined, our ruining nobility and rich men, look to themselves and this picture. How many will behold their own likeness, thus slightly sketched as it is, by the hand of

THE HERMIT IN THE COUNTRY.

## THE DRAMA.

### DRURY LANE.

*David Rizzio.*—This opera is founded on the story of the celebrated Rizzio, the favourite of Mary, Queen of Scots. There have been many conflicting opinions respecting the conduct of the beautiful Mary, both as respects Rizzio and Elizabeth; it is scarcely worth while to increase the number of disputants, were our columns (which they are not) extensive enough for the debate. For our own parts, we sat down contented with our doubts, the other evening, in Drury-Lane Theatre; and instead of saying, "I resolve me of this ambiguity," we looked forward with a pleasant anticipation to the elevation of the green curtain, which was to disclose to our eyes the mysteries and merits of the 'Serious Opera of David Rizzio.' The author of this opera is said to be a Colonel Hamilton. We have a great respect for the army and navy—we venerate the names of Waterloo and Trafalgar, and of Wellington and Nelson;—but our heroes shine, we suspect, more in the field than in the cabinet (we do not allude by any means to the two great names last mentioned); and the gallant Colonel who is said to have achieved 'David Rizzio,' has certainly not helped to overturn our conjectures on this point.

We consider the opera of 'David Rizzio,' to be on the whole tolerably indifferent. The author, in his preface, says in extenuation, that, "In every historical subject, *operatically treated*, some liberties are requisite." It is not, however, to the liberties taken with history, that we so much object in this opera, but it is to the execution. As a literary work, it is entitled to very scanty praise; nor can its merits, with reference to plot or situation, claim much more. It never, according to our apprehension, rises above mediocrity, while it certainly now and then falls below it. It is really a great evil that so much trash should in general be tolerated in our national operas. The public is too apt to require but little from such a work; the composer, instead of the author, is cited before the periodical tribunals; and the consequence is, that no writer of an opera now thinks it worth his while to take much trouble in the literary part of the production. The composing of music to the songs, however, is considered important, and paid

and expence are bestowed upon it. Thus it happens that some of our finest airs are adapted to words which have scarcely a pretence to common sense—frequently, indeed, they have none: the music, however, carries down the nonsense from year to year; foreign nations become acquainted with it; and our claims to distinction as musicians are seldom granted, but at the expense of our literary taste. We do not mean this in particular reference to the present opera, for the modern airs are not altogether calculated to waft Colonel Hamilton's poetry, (we must be civil) down the "tide of time."

The following is a brief account of the plot of the opera.—

Earl Ruthven is enamoured of Lady Mary Livingston, principal Lady of the Bedchamber to the Queen, but fails in his attempt to gain her hand, she being strongly attached to Rizzio, and upon the point of marriage with him. The disappointed Ruthven then encourages an assassin to murder Rizzio; but not succeeding in this attempt, he persuades Darnley that the Queen is secretly attached to the Italian musician. An endeavour to dispatch the supposed favourite in a hunting party failing, Ruthven and other courtiers attack him at a banquet given by his Royal Mistress, in celebration of his marriage with Lady Mary, and, burying him in to an adjoining chamber, destroy him with their swords. While this act is perpetrating, Darnley learns, too late, that Rizzio has just been united to the Queen's chief attendant; and at once discovers that his Sovereign and wife is wholly innocent of the malignant charge insinuated against her by Ruthven.

Braham performed Rizzio, in his usual style. Mr. Hamblin was Darnley, and Mr. Rae Earl Ruthven; Mrs. West Queen Mary, and Miss Carew the Lady of the Bedchamber. We rather like the Lady of the Bedchamber, but not immoderately; and we are quite indifferent to the other three. Mr. Braham, indeed, does not affect the actor, but contents himself with the full exercise of his astonishing vocal powers: Mr. Rae mouths and half eats his words; Mr. Hamblin is quite calm and exemplary in a passion; while Mrs. West is too much given to tear it to tatters. We are sorry for this, because we once had hopes of her; we have now none; she, we confess, is too common place and didactic for us. There are also a few Highlanders in the piece, against whose Scotch we must protest. Some of the music is old Scotch music, and good: the rest of it is modern, and is as free from spirit and originality as could be wished. Many airs, however, which are reported Scotch, and which have now become thoroughly naturalized, are, it is supposed, of Italian origin. Rizzio was an accomplished musician from Tuscany, and his music being admired in Scotland, it is not unlikely that the natives of the north retained whatever he introduced amongst them. Independent of this, the national instrument, (we are on tender ground) is not adapted to many of the most beautiful airs; and, indeed, Urliani, when he was in Scotland, detected several very old Italian airs amongst those which

had long been considered national there. Among other valuable sentences, Rizzio, if we may believe our notes, utters the following—he is speaking of Italy—"Oh! for a muse of fire to burst her chain, and kindle ancient flame, and rouse to glory." This seems naturally the precursor of something extraordinary; and, accordingly, we then hear a bravura adapted to the following song.

Rouse ancient spirit of the land,  
Whose eagle built on freedom's tree;  
Where conquering (war bore command,  
And Cato died for liberty.  
Rouse, Italians, rouse! redeem the story  
Of ancient worth, of laurel'd glory.  
Rouse from thy dream to virtue's fires,  
From Syren song, whom graces crown;  
Strike bolder chords than love requires,  
Deep diapasons of renown.

Now this is really, we must say it, very, very bad; and unluckily there are others quite as indifferent, for we have not selected this invidiously. We went, in truth, with a predisposition to be pleased, and were exceedingly disappointed.

#### VARIETIES.

*Longevity.*—The Italian Journals mention the following instance of longevity. A soldier named John Chioschi, a native of Vienna, died on the 21st of May, in the Invalid Barracks at the Island of Murano, near Venice, at the age of 118. For the space of 41 years he served as a private, in the armies of several of the European powers, in Hungary, the Crimea, Italy, and also in Bohemia during the seven years' war. He then entered the army of the Venetian republic, in the service of which he continued 23 years. He was remarkable for sobriety and temperance; and was scarcely ever known to suffer from illness. His father also attained a very advanced age, and his uncle lived to be a hundred years old.

*Canora* was at Venice on the 8th ultimo, on his way to Possagno, his native place, to expedite the building of the Temple which is to perpetuate the glory of this little village of Treviso, in having given birth to so distinguished an Artist.

*Silver mine in North America.*—The discovery of a rich vein of silver ore, near Zanesville, by workmen who were digging to find a salt spring, proves to have been the ingenious contrivance of a party of swindlers, who melted a small quantity of dollars, and buried them in this place, with the hope of inducing credulous persons to purchase shares in their new discovered silver-mine. They had so far succeeded, it seems, that the shares had risen from 10 dollars to 100 before the cheat was detected!

It is stated by a foreign writer, that the Monks of Mount St. Bernard seldom attain the age of 35 years: the cold and damp generally destroy them between the ages of 20 and 30. A subscription has been set on foot on the continent, to erect a building for these humane beings, less injurious to health than that which they now inhabit.

*Voluntary death by Fasting.*—A remarkable proof of the extravagancy of fu-

maticism, and of the misery which it will induce human nature to endure, was given last July and August, by a *Bania* in Gujerat, of the Vohra caste. At their annual fast of Pujooosin, this man expressed his determination to abstain from food till he died. He had previously fasted from the 26th July to the 25th August, from which date he took a small quantity of food during four days, and then commenced his total abstinence. In this resolution he persevered till the 3d of October, when he died; having thus fasted 66 days, deducting the four in August. A small portion of hot water daily, was the only thing that passed his lips. At the end he was, as may be imagined, extremely emaciated, but his senses remained perfect to the last moment of his existence. He consequently became a Saint among the Jains.

On the 11th of May, M<sup>rs</sup>. Catalani arrived at Riga, and was then shortly expected at St. Petersburg.

#### METEOROLOGICAL JOURNAL.

JUNE, 1820.

Thursday, 15.—Thermometer from 44 to 57.  
Barometer from 30.01 to 30.13.  
Wind N. W. and N. E. 1.—Generally cloudy till the evening, when it became clear.  
Rain fallen .375 of an inch.  
Friday, 16.—Thermometer from 39 to 58.  
Barometer from 30.13 to 30.18.  
Wind N. W. 1. and S. W. 2.—Clouds generally overspread, with sunshine at times.  
Saturday, 17.—Thermometer from 47 to 67.  
Barometer from 30.12 to 30.16.  
Wind W. and N. W. 2.—Clouds generally passing; sunshine at times.  
Rain fallen .0125 of an inch.  
Sunday, 18.—Thermometer from 46 to 67.

Rain fallen .073 of an inch.  
Wednesday, 21.—Thermometer from 49 to 66.  
Barometer from 30.06 to 30.12.  
Wind N. W. and W. 2.—Morning clear: light clouds overspread the rest of the day.  
Rain fallen .175 of an inch.  
Edinburgh, Middlesex. JOHN ADAMS.

63 This Number of the Literary Gazette terminates the first half-year's publication for 1820. The two Quarterly Parts may, consequently, be had next week, at our office, or at any Bookseller's in Town or Country. An index of the contents will immediately be published.

The continuation of the interesting subject "Identity," comprising matter preface to Esquirol's *Memorial*, in our next Number.

ERRATUM, p. 389, col. 2.—The last ten words in this col. belonging to the text, are accidentally put after the note  $\dagger$ , instead of concluding the paragraph, ending with "Nothing to God."

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

### BOOKS PUBLISHED THIS DAY.

Price 6s.

THE EDINBURGH REVIEW; or, CRITICAL JOURNAL. No. LXXVI. Contr. — I. Life of Curran, by his Son. 2. Spencer's Anecdotes. 3. Description of the Foreign Commerce. 4. Burby's History of Music. 5. State and Prospects of Manufactures. 6. Dispositions of England and America. 7. Senatus and Greece; Greek Poetry. 8. Macculloch's Western Islands. 9. Civil List and Retrenchment. 10. Education of the Poor in France. Printed for Archibald Constable and Co. Edinburgh; and Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, all the preceding Numbers.

### Encyclopædia Edinensis.—Part Fifth of Volume

Third, of THE ENCYCLOPÆDIA EDINENSIS; or, Dictionary of Arts, Sciences, and Miscellaneous Literature. By JAMES MILLAR, M. D. price 10s. Printed for R. and C. G. Edinburgh; G. and W. B. Whitaker, and George Cowie and Co. London; Reid and Henderson, Glasgow; John Cumming, and Richard Milliken, Dublin; and sold by all booksellers.

PETER HILL and Co. beg leave to call the Attention of the Public to the completion of one half, or three volumes of the Encyclopædia Edinensis, which on no consideration will exceed the limits, originally declared, of six volumes. The completion of one half of this work will enable the Public to form a proper estimate of its merits, and the Proprietors earnestly solicit a comparison to be made of the quantity of matter contained in the three volumes now published with that of six volumes of any contemporary work of the same kind; for, in the selection and condensation of what is useful and valuable, the Editor and his Associates, in pursuing the arrangement originally adopted, of bringing together kindred subjects under one head, by which repetition is altogether avoided, have succeeded far beyond their most sanguine expectation. To be had in Parts, Rs. each, or half volumes, 20s. each.

Second Edition, revised and extended. Foolscap 8vo. price 8s. boards; and demy 2mo. 8s. boards; with an elegantly engraved Frontispiece and Vignette, designed by Mr. Corbould, and engraved by Mr. James Mitchell, London.

COWPER'S POEMS; to which is prefixed, a Memoir of the Author; also Critical Remarks on his Poems, written expressly for this edition; the whole exhibiting a condensed view of every important particular of his Life and Character that is scattered over his voluminous correspondence, or introduced into the numerous editions of his Poetry. By JOHN MEDLEY. B. MID. Second Edition, Revised and extended.

"The kindred warmth with which the biographer enters into all the feelings of his author; the animation of his style, kindling not unfrequently into poetical fervour, and the good sense and acuteness that characterise his observations, cannot fail to render his narrative highly acceptable to the admirer of this amiable and eminent poet. The events of the poet's life, his present editor relates as he found them; but his reflections on these events, and his manner of narrating them, are his own, and elicit no common share of talent and observation. The narrative, which is spirited and well written throughout, concludes with a sketch of the poet's character, very faithfully and ably delineated. But it is in his critical remarks, that the abilities and taste of the editor are chiefly displayed. On this part of his task he enters with all the ardour of a kindred spirit; and while he estimates the characteristic qualities of Cowper's various works, with great acuteness and accuracy of discrimination, he appreciates the efforts, the feelings, the inspirations of the poet, with a truth and fulness of sympathy which a poet only could feel. The whole of his remarks are judiciously and judiciously delivered in the language of poetry, and particularly of every young candidate for poetic fame. Those remarks are not merely critical. The annotator often catches, as he proceeds, a portion of his author's inspiration, and glows with equal ardour of benevolence, or expands into equal amplitude of thought."—Edinburgh Magazine and Literary Miscellany. Printed for Oliver and Boyd, Edinburgh; and sold by all the Booksellers.

### New French Spelling Book.—Price 2s. bound.

A NEW METHODICAL SPELLING-BOOK of the FRENCH TONGUE, in which Theory and Practice are united, and the Lessons classified according to Dr. Mavor's Method. By G. GRON, author of the new Theoretical and Practical Grammar of the French Tongue, &c. &c. London: Printed for G. and W. B. Whitaker; Longman, Hurst, Rees, Orme, and Brown; Baldwin, Cradock, and Joy; and A. B. Dulau and Co.

Mrs. Holland's New Tales.

In 4 vols. 12mo. price 11s. 6d. TALES OF THE PRIORY. By Mrs. HOLLAND. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

In 2 vols. 8vo. price 34s. 6d. with a portrait of Mr. Tooke. LUCIAN OF SAMOSATA, from the Greek. With the Comments and Illustrations of WIELAND and others. By WILLIAM TOOKE, F.R.S. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"For my own part, says the pious and learned Dr. Mayne, I know not of those writings we owe more our Christianity, where the true God has succeeded a multitude of false, whether to the grave confutations of Clemens Alexandrinus, Ambrosius, Justin Martyr, St. Augustine, Lactantius, &c. or the facile wit of Lucian, which sentiment is quoted and approved by Dryden."

In 2 vols. 12mo. price 12s. boards. THE BOTANIST'S COMPANION; or, an Introduction to the Knowledge of Practical Botany, and the Uses of Plants, either growing wild in Great Britain, or cultivated for the purposes of Agriculture, Medicine, Rural Economy, or the Arts, on a new Plan. By WILLIAM SALISBURY. Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row; and the Author, Botanic Garden, St. James Street. Of whom may be had, by the same Author.

HINTS TO PROPRIETORS OF ORCHARDS, and to Growers of Fruit in general, comprising Observations on the present State of the Apple Trees, in the Elder Countries. Also the Natural History of the Aphs Lanata or American Blight, and other Insects destructive to Fruit Trees, &c. 6d.

In 6vo. illustrated by plates, price 12s. boards.

AN ACCOUNT of the various MODES of SHOEHING HORSES, employed by different Nations. More particularly a Comparison between the English and French Methods. With Observations on the Diseases of the Feet, connected with Shoeing. By JOSEPH GOODWIN, Esq. Veterinary Surgeon to his Majesty, and Member of the Royal College of Surgeons. Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row; and J. Porter, Pall Mall.

### Library of Classical English Poetry.

In one large Volume of 812 Pages Medium 8vo. price 12s. extra boards.

SELECT WORKS OF THE BRITISH POETS, WITH BIOGRAPHICAL AND CRITICAL PREFACES. By Dr. AIKIN. The object of this Work, which is entirely new, is to comprise, within a single volume, a Chronological Series of our Classical Poets, from Ben Jonson to Beattie, without mutilation or abridgement, with Biographical and Critical Notices of their authors. The contents of this volume are so comprehensive, that few Poets, it is believed, are omitted, except such as are of secondary merit, or unsuited to the pursuit of youth. The Work, within these bounds, may be termed a "Library of Classical English Poetry," and may safely be recommended to the heads of Schools in general, and to the Libraries of Young Persons. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

A new Edition of Dr. Aikin's ANNALS of the REIGN of GEORGE the THIRD, brought down to the Majesty's Decree, in 2 vols. price 11s. 6d. is just published.

### Longman and Co's Catalogues of Old Books for 1820.

In one large volume of near 800 pages. Price 8s. boards.

A CATALOGUE of OLD BOOKS in the Ancient and Modern Languages, and various Classes of Literature, for the Year 1820; comprising an extensive Collection of Rare and Useful Articles. To be sold at the prices affixed to each, by Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

### Travels in Africa.

In 8vo. with two Maps, price 14s.

AN ACCOUNT OF TIMBUCTOO and HOUSSA, Territories in the Interior of Africa. By R. L. HAGE ADAM, a HAUSER, a Native of Morocco, who personally visited and resided as a Merchant in those interesting Countries. With NOTES, Critical and Explanatory. To which are added, Letters, descriptive of various JOURNEYS through West and South Barbary, and across the Mountains of Atlas. By JAMES GREY JACKSON, Esq. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

In 4to, 3s. 2s., 1s. 2s., and 1s. 1s.

**TWENTY-ONE PLATES** to illustrate LORD BYRON'S WORKS. Engraved by Charles Heath, from Drawings by R. Westall, R. A. With a Portrait, engraved by Armstrong, from the original Picture, by T. Phillips, R.A. Printed for John Murray, Albemarle Street.

The next Number, to be published July 15th, will contain Portugal's Travels round Constantinople, illustrated with superb engravings.

And, in an early Number will be introduced, Cailland's recent Travels in Egypt, with many plates.

\* The last Number contained the first part of Prince Maximilian's Travels in Brazil, with many plates.

Printed for Sir Richard Phillips and Co. Bride Court, Bridge Street; and sold by all booksellers. Of whom may be had, Vol. 1 and 2, half-bound, at 20s. each.

Summer Excursions.

Price 15s. bound, an improved Edition, corrected to the present Time, with an entire new Series of Engravings by Greig, mostly from original Drawings.

**THE GUIDE TO ALL THE WATERING AND SEA-BATHING PLACES FOR 1820;** containing full and accurate Descriptions of each Place and of the Curiosities and striking Objects in the Environs, and forming an agreeable and useful Companion during a Residence at any of the Places, or during a Summer Tour in quest of Health or Pleasure. By the EDITOR OF THE PICTURE OF LONDON. Printed for Longman, Hurst, Rees, Orme, and Brown, and to be had of the Librarians and Booksellers at the places described.

In the press, and in a few days will be published.

**JULIA ALPINDA, the CAPTIVE OF STAMBOUL, and other Poems.** By J. H. WIFFEN, Author of "Aonian Hymns." Printed for John Warren, 19, Old Broad Street.

In two handsome volumes, octavo, with a volume of Plates in quarto, price 3s. 6s. in boards.

**A DESCRIPTION OF THE WESTERN ISLANDS OF SCOTLAND,** including the ISLE of MAN; comprising an account of their Geological structure, with remarks on their Agriculture, Scenery, and Antiquities. By JOHN MCCULLOCH, M. D. &c. &c. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. 20, Cheap-side, London.

"We have had frequent occasion to speak of Dr. McCulloch in terms of high commendation in our Reviews of the Transactions of the Geological Society. It is very seldom that we find a person with such high qualifications for a scientific traveller; for, besides a strong natural understanding, he possesses a variety of accomplishments that is very rarely found combined in the same individual. He is one of the few men of power, the mind and high cultivation who have hitherto directed their attention to Geology. The author has not been unamiable of the various subjects of general interest which present themselves to an intelligent traveller, in the very remarkable countries which he describes. There are dispersed throughout both volumes much valuable information, and many very interesting remarks upon the habits and condition of the people of the island, the state of population, the agriculture and fisheries, the antiquities, superstitions, and peculiar customs."—*Edinburgh Review*, No. 65, May, 1820.

Price 8s. embellished with an Ancient Druid.

**THE WELSH NON-CONFORMIST MEMOIR, or Cambro-British Biography,** containing Sketches of the Founders of the Protestant Dissenting Interest in Wales; with an Essay on Druidism. Also an Appendix, including the author's last Review of the Christian Religion. By the Rev. WILLIAM RICHARDS, LL. D. Edited with Notes and Illustrations, by JOHN EVANS, LL. D. Sold by Sherwood and Co. Paternoster Row; W. Biche, No. 9, Chancery Lane; and D. Barton, High Holborn.

In 8vo. price 14s.

**SPENCE'S ANECDOTES.** With an Appendix of Original Letters by Pope, Homer, Horace, Walpole, &c. now first printed from the Original Papers, with Notes, and a Life of the Author. By SAMUEL WELLES RINGER. Printed for W. H. Carpenter, Lower Brook Street; and A. Constable and Co. Edinburgh.

\* A few Copies are remaining of the large paper, beautifully printed in imperial 4to. for the purpose of illustration, price 12s. 6d.

Third Edition. 3 vols. 8vo. boards, price 3s.

**THE ROYAL MILITARY CALENDAR;** or Army Service and Commission Book: containing, according to seniority, the Services and progress of Promotion of the Generals, Lieut.-Generals, Major-Generals, Colonels, and Majors of the Army; with details of the principal military events of the last Century. Sold by Mr. Egerton, Whitehall; Longman and Co.; and all other Booksellers.

8vo. price 7s. 6d.

## REVIEW OF NEW BOOKS.

*A System of Education for the Infant King of Rome, and other French Princes of the Blood, drawn up by the Imperial Council of State, with the approbation and under the personal superintendence of the Emperor Napoleon.* London, 1820. 8vo. pp. 161.

This book will be published on Monday. It is a curious, very curious production, and to our mind furnishes a more accurate (reflected) picture of Buonaparte than half the essays that have been written upon his character. In 1812, at the height of his prosperity, looking on the past only to inflame his soul with the conviction that he could for the future controul fate itself, surrounded by the basest sycophancy, and drunk with power, this little treatise devised for the education of his son, opens to the observant and philosophical eye the inmost movings of inordinate vanity, great talent, miserable egotism, uncommon sagacity, strange folly, sound speculation, and blasphemous pride. We think it will be decided, that the charlatan is far more prominent than the sage; but upon the whole, the views are inconsistent with neither virtue nor justice. Whoever wrote the preface is even less profound than he who inspired the text: but a few extracts will best exhibit both. The preface says that by Napoleon—

"A code of laws was drawn up with consummate ability; a national education introduced; and every thing, civil, military, and religious, was made to centre in himself. He saw the kings of Europe invoking his protection, and meekly cringing at his feet. He became intoxicated with success, and, reading to feel like other men, thought his dynasty established beyond the reach of fortune. He forgot, that opinion was power, and became impatient of control, till, by substituting his own caprice in place of the public will, he was left without a friend in the hour of danger, and his fall was as rapid as his rise."

Now really, to speak of a consummate code of laws under a despot, who forced all the objects of legislation, civil, military, and religious, to centre in himself, is to use a direct contradiction in terms; and the loose mode of talking of the Kings of Europe, and of the fallen Emperor being left without a

friend, shows that the writer is not in the habit of weighing his words as he ought to do. We pass on however to the master-spirit; for, however impiously adulatory the language of the essay is, it is impossible to mistake the Emperor, in the matter.

The opening affords a fair specimen of the blasphemous pride of Buonaparte—

"In the empire exercised by God over kings the principles ought to be found, which shall regulate the education of the princes of the blood of Napoleon, formed at once to obey and to command. It is necessary they should yield obedience to him as to God, since it is God who conducts him."

This coupling himself with the Almighty, was no uncommon practice of the Corsican. We remember his fierce answer to the Russian officer who observed, on his threats to destroy the country in his invasion, Man proposes, but God disposes.—"I tell thee—that it is I who propose, and I who dispose:" and the two following quotations are in the same style—

"But when every day of a prince's education is spent between a double line of men of honour and feeling; every one of whom, in his different capacity, inspires him with prudence or courage, dignity or gratefulness, and all of them with energy and goodness: when, kneeling daily before God, and before the statue of the Emperor, he gives vent to his gratitude, respect, and love—"

"From sixteen to eighteen every thing begins to unfold itself; every thing ferments in the young pupil, the mind, the heart, and the senses; whence arises a sort of insupportable inclination, that renders him hard to be taught. But God and the Emperor will calm this stormy period, if he have been taught from infancy to bow at their names."

"What a resource in the education of our princes we have in two altars, and two majesties, that form the soul of it! a divine majesty, and a human majesty, invisible and visible at the same time, rewarding and punishing in time and in eternity.—To what a pitch will you raise nature, what will you not obtain from it, when you have such lofty means?"

"We shall long have but one book, the Commentaries of Napoleon; not such, as if he would deign to write them himself, but such as fame has presented them to the admiration of mankind: and we shall learn it by heart, never to quit it."

"God and the Emperor will be the inexhaustible subject of our compositions: it is from these sources we shall derive the talent of writing things worthy of being read, till we acquire the power of doing things worthy of being written."

The miserable inflation of this poor creature of dust, is, after all, but a proof of the

weakness of human nature. On such a height as that to which he had risen, it was no wonder his head became dizzy, and his brain turned. His arrogance, it may readily be conceived, is on a par with his impiety. He declares—

"Under the influence of great conceptions every thing becomes great. 'Thou desirest to make use of my arm!' said a philosopher to Fate: 'Take it.—Thou desirest my son? there he is.'—The philosopher knew, that Fate would either lead or compel him; and is it not equally manifest, that Napoleon compels whatever opposes him, and leads whatever submits to his will?"

The last period is characteristic of the man, the first an instance of that slippery philosophy of which his career furnished so many displays, both by himself and his partizans. We annex another.

"If tuition be but an intelligent and gradual cultivation of the faculties of the mind, a kind of intellectual aliment, that unfolds while it adorns it; observe, that of three faculties, which constitute the mind, the memory is the first that acts; the imagination follows; and then reason, weak indeed when the heart glows with animation, and destitute of any real strength but when the heart is silent."

What a conjuror; to make memory the first acting quality of the mind! According to this classification, we must remember before we perceive.

Again! "Man presses on man, kings upon kings. Every one oppresses or is oppressed; and such is the force of oppression in this world, that he, who is reduced to defend himself against it, is reduced to the condition of a prey, whose lot it is to be devoured."

We believe that this proposition is as false as the consequence drawn from it is unintelligible. Of the fatuity of rulers we have often heard; but never met with more servile adulation than these passages.—

"Yes, power alone can create power: the mind of Napoleon alone is capable of reproducing itself in his descendants. Who would dare to attempt a work so sacred and lofty, were he not sustained by his hand?"

"But Napoleon is the Jupiter, who equally disposes of a blade of grass, and the most solemn award of justice, each in its due time."

"It is the mind of the pupil therefore, to which he will henceforward attend, with that instinctive love of youth, and for the blood of Napoleon, that cannot be feigned, that cannot be imitated, and the absence of which nothing can supply."

"But here how much reason have we to be satisfied! Men are of different races, and the eagle does not generate the dove: it is

to the blood of heroes our cares are devoted: born in the lap of glory, they have all its charm, and will have all its lustre."

One would suppose from these, that Buonaparte was *stavis edite regibus*, rather than that, at least as far as descent was concerned, the simile of a great eastern preceptor might be applied to him. "Were you," says this more ancient instructor "to set the egg of a raven, whose nature it is to be gloomy as clouds, under the peashen of the Garden of Eden; and, during the period of her sitting upon that egg, were you to feed her with the pulp of the fig of paradise, and give her drink from the fountain of that blissful region: nay, were the angel Gabriel to inspire her with the spirit of life, still that egg of a raven could produce but a raven, and that labour of the peashen would come to a fruitless conclusion."

We must, however, do the author the justice to cite some of his better parts, which, as well as his worse parts, serve to depict the extraordinary man in his real colours. This is his opinion of foreign languages (but we would not have our readers, except they are breeding up their children for kings, which we hope, for the sake of parents and offspring, they are not,) assent to the imperial reasoning—

"The languages! exclaim the many: but who has more ineptitude in business than the polyglot, whose instinct is chained down to words? The facility of acquiring languages, which so many fools admire, is at bottom nothing more, than a *brevet of ignorance and incapacity.*"

Of political maxims the following deserve remark.

"Man, a creature with a thousand weaknesses, is never more strong than when he entreats and implores. His strength lies in his goodness, his sympathy. This it is that cements the social union; that invents, improves, and adorns it. Bad men unite only for purposes of injury and destruction. The noise they make deceives as to their number, and renders their tumult and vehemence effective: but the continued progress of the social principle shows, how much it is the guide and master of us all.

"He who is supreme is sufficiently beneficent, sufficiently good, when he is just. Goodness tends to relax every thing; and clemency itself is too often injustice. Justice includes every thing."

"And in education we highly commend the following.

"I am aware of all the delicate requisite in such a course of instruction at so tender an age, and all the skill it demands; but the streamlet, that forms the source of a river, needs only a bend in the ground, to determine its inclination and course. Form the bent, persevere like time, and you will excavate the channel, which is here nothing more than habit.

"Give a body to your lessons, that they may present an image to the mind. The reasoning vanishes, the image remains, and

may be recalled when necessary. But would you have the impression last through life, call in the object itself to your assistance: give lessons on the sphere on some lofty station, lessons on the art of gunnery in a park of artillery, lessons on tactics in a camp; time may weaken, but will never efface them."

The teacher presumes that all nature will help him in his task, and in his supposititious cases, (when the pupil is between sixteen and eighteen years of age) has the following entertaining lessons.

"Sometimes I lose him in the woods; and he spends the night in darkness, choking with thirst, and famished with hunger. Another time it is in the subterranean caverns under the Observatory, that I lead him astray, and carry his terrors so far, that his hair stands erect on his head. It is to be remembered, however, that chance, which seems to have produced the whole, acts entirely under my direction.

"Pretending to be tired of the uniformity of our way of life, I propose to him one day, by way of varying it, to give ourselves up for some time to Providence: crossing the fields on foot without provision; avoiding bridges and seeking fords, or swimming across the rivers. He consents, and we set out.

"The first day we find no place to lodge, consequently no bed. The next, we are without bread. The day after, we are insulted; and it is with difficulty we repel the attack, and obtain justice. The day following a child is drowning, and we have to save him; and presently some danger is to be braved. On the fifth day we arrive weary and fatigued; not without having given proofs of courage, acquired some valuable knowledge, and conferred some benefits. Our labour therefore has not been in vain.

"The justice of peace, who from the first had examined us strictly, but civilly; and to whom, at our departure, I disclosed who we were, unknown to the prince; turns out to be a distinguished man of letters. He had formed his opinion of us in the contest; and, being a man averse to hidden treasures, thinks proper to consign to the newspapers a spirited and amusing account of our adventures.

"The newspaper arrives. I give it to the prince to read by way of exercise. On a sudden he stops, blushes, and puts the paper into my hands. I read it to myself, and, after having read it to myself, say to him: 'Prince, this is the first blast of the trumpet of Fame. It is yours; attend to it. Keep the paper, we will talk of it some other time.'

"A week passes away without my speaking of it to him; but not without his reading over again in secret the article in which he is so honourably mentioned.

"Every one about him however serves him with more eagerness, and with increased respect. Every one's countenance sparkles with joy, charmed as they are with his courage and humanity. Persons come from Paris and from the villages to see him: children kiss their hands to him for having saved the life of a child: the most delicate praises

are bestowed on him in the newspapers, yet with a circumspection that enhances their value. He tastes in silence the delight of being beloved and esteemed by the public; and, when this shower of praises and blessings is a little moderated, I come in my turn to talk with him.

"Ravished myself with his conduct, and the success of my cares, I avow him with an air of tenderness." "Well, Prince! what says your heart?" "Ah, Sir, what delight! It is pleasure of all kinds at once. How much am I indebted to you, for making me acquainted with them! How happy am I, that it will some day be in my power—Ah! If ever—" He turns his face aside, to conceal his emotion. I clasp him in my arms, and press him to my bosom—"Ah, Prince! I am the first of those you would make happy."

"But nothing in this world is without alloy. Too much incense intoxicates his brain. I perceive the germs of self-sufficiency budding: I find him among his companions priding himself on the success of his excursion; and complain of it to him, as alarmed at it. He defends himself: I do not press him much on the subject, but, by way of reply, I give him an account of the voyage of Christopher Columbus to discover the new world to read. He devours it, and returns it to me, ashamed of his own vanity."

He afterwards takes him to Brent.

"On our arrival, and scarcely having had time to rest ourselves, I take him by night on board a vessel dressed out with flag. She stands out to sea, till nothing but the sky and the ocean can be seen: but the light is deferred till he awakes, till the rising of the sun.

"We have agreed during our voyage, to say little, and hear much; to listen in silence to all, that a world so new can say to us. Every thing, in fact, has a tongue, for him who can understand it: it is to listen, therefore (if I may be allowed the expression), that we are prepared. In reality, how different are the impressions made by a grove, animated with the song of birds, from those made by a sea agitated by the waves, and ploughed by the lightning!

"The prince awakes long before day. From the deck he admires the vault of Heaven, spangled with stars. He finds himself in a land with which he is familiar, and feels the joy of one, who meets with countrymen of his own on a foreign shore. I lead him to the binnacle, where he sees the compass; though I defer making any reflections upon this subject, that I may not waste his power by entering into any detail, but leave them in all their ardour to the contemplation of the rising sun. I assist his youth by a slight repeat; and in an animated discourse, confined however to generals, on the industry of man, who by the help of the stars and winds has formed a junction between different climates and different hemispheres, we spend our time, awaiting the break of day.

"It appears,—and we take our station on the poop.

"The vessel sails before the wind, with a breeze that displays all its flags and stream-

\* Firdausi, the Persian poet, quoted in the *Annals of Oriental Literature*, Part I.

ers, and thus exhibits an enchanting sight.

"Meanwhile the East reddens; the sun rises, and envelops us in its rays. What sight can be more enchanting, than this vessel cutting the waves while adorned with all the colours of the rainbow? what more pleasing than the breeze, that fans us while it mingles those colours?"

"That we may be the better enabled to enjoy the scene, the vessel is hoisted out, the boat is hoisted out, and we get into it, enveloped in the smoke of her guns, that salute us. Her sails are filled again; she is a fish, a bird, the sovereign of the seas, the miracle of art. She stops her course, and we return on board."

"The prince is fired with ardour: he wants to see every thing, and does not know where to begin. I calm him, quoting *ramos compece fuentes*. I teach him, that the captain of a ship on board her is a king: that she owe him the same honour and respect as the meanest of his crew, whose Jupiter he is: and thus, after having rendered the captain, the officers, and the crew, what is due to each, we are saluted with acclamations and extolled to the skies.—'Prince,' I say to him, 'you see, that a tooth for a tooth, and an eye for an eye, is the law of nature.'

"After this, there is nothing they can do to entertain us, that is omitted. We are shown every thing methodically, and in order: every thing is explained to us with careful slowness, and so much perspicuity, that the prince's mind conceives every thing, seizes every thing, and is so struck, that I am persuaded he will forget very little of what he has seen and heard."

"But it is the manners and habits of the some that we feel so much pleasure in observing: these men, stretched in their hammocks, when it is not their watch upon deck, and so alert when employed in any duty; the manners of the hold, so different from those of the gun-deck and the tops; the activity on the quarter-deck and fore-castle, and between decks; those men springing from rope to rope, like birds from branch to branch; and those *agiles*, called topmen, tossed day and night by the rolling and pitching of the ship, and exposed to all the winds that blow."

"After a week spent in examining the machine, the rest of our time is employed in observing the manner of working it on all possible occasions, heaving the log, pricking the course on the chart, and taking observations with the quadrant."

"Meantime we have one entertainment after another, during the course of our study. All the practices common on shipboard are shown to us, even to the ceremonies used on crossing the line: the serving out of provision; clearing the decks for battle; manning the tops, fore-castle and quarter-deck; casting loose the guns; and stationing the men. We fish in all ways, and with all kinds of implements. We drink, smoke, and mess with the officers. The prince keeps his watch as a midshipman. At length after a fortnight's cruise we return to the road."

"Here we spend a couple of days in sur-

veying the coast, seeing how they take soundings, how they cast anchor, and how they moor. At length our departure is fixed; we make our presents; and put off to shouts of 'Long live the Emperor!'"

Thus between good rules and very fanciful theories, just remarks, and wild dreams, some common sense, and a great deal of impracticable folly, does Napoleon plan the education of his son, to accomplish him, oh short-sighted humanity! for that throne which he was never to bequeath to him. But we have moralized enough, and have only to repeat that this is an extremely curious book, and one worthy of general attention, as developing one of the most extraordinary characters that ever made nations wonder.

*Ricciarda, Tragedia di Ugo Foscolo.*  
Londra, 1820. 8o. pp. 101.

The publication of an original Italian drama of standard purity in the English capital, is an event which could hardly be allowed to pass unnoticed by a Literary Journal. But even were we regardless of the novelty of the circumstance, the high name of its author would demand our attention. The reputation of Foscolo is not confined to any country. He is known throughout Europe as an eminent scholar in all the branches of Greek, Latin, and Italian literature; and we felt assured, before we perused it, that this work would be of such a description as not to diminish his celebrity. Nor have we been disappointed: every verse of it maintains his character; and nothing of the fame which has been twenty years in gathering, from productions in prose and verse, is lost by Ricciarda. The force of the author's eloquence, his fitting and neat expressions, his imagination, and his commanding style, need no notice for those acquainted with his writings; but it is a justice which we owe him in regard to the general public, to say, that he has in these points here excelled himself. A residence for some years in a foreign country, has had no effect in robbing his Italian of its fluency and beauty. But "the play's the thing"—and the following is the plot.

Tancredi, prince of Salerno, has by a first marriage, a son of the name of Guelfo, and by another woman whom he afterwards marries a second son called Averardo. Guelfo is a crusader, and passes many years fighting for the cross in Palestine: while absent his step-mother persuades Tancredi to divide his estate equally between the two brothers, though the eldest deems the youngest a bastard and usurper of his rights. Guelfo returns home, and accordingly takes possession of the whole principality, Averardo having served in Germany from his youth, so that the brothers have never seen each other. Averardo advances with a military force, and lays siege to Salerno: the most implacable hatred ensues, and Guelfo's enmity is of the most ferocious character. Guido, the son of Averardo, sent on a mission to Salerno, falls in love with Ricciarda, the daughter of his uncle. Hopes are entertained that the marriage of the cousins may bring about a reconciliation; but Guelfo declares that he will

rather kill his child than consent to this union. Guido, dreading these violent threats, conceals himself in the palace to protect his beloved; and the action proceeds to the 5th act, when Guelfo discovers him, and in his frenzy resolves to slay Ricciarda. In the 3d scene he attempts to execute this fatal purpose with a dagger; but his daughter prays him to spare his soul the crime of murder, and begging the weapon to stab herself, she thus addresses the Almighty,

—O Re del cielo!

Il verso io stessa, onde a te innanzi il padre  
Del mio sangue non giurò.

Guelfo continues in an impious strain of fierce despair; and these lines are a beautiful specimen of poetry and of elevation of fancy.

In Dio tu fidi!

Io Dio che solo a vendicarmi regna?  
Già della lingua sua notte infernale,  
Mentre ancor alla luce appressi occhi,  
M'ha ravvolto e atterrito. Orrendamente  
Rugge intorno alla trista anima mia  
Tenebroso tra i fulmini. Il suo nome  
Non proferisco io mai, ch'è non risponda:  
"Alla vendetta io veglio"—e la vendetta  
Nel mio petto mortale indi riarde.  
Poiché perdonò ci nega....—Ah! ma t'osola  
Per vendicarmi io svenarò?—O mia figlia!  
Se tu innocente sei, te l'iddio, te muta  
Insanguinata ombra al sepolcro mio  
Manderà a aspettarci insino al giorno  
Che sorgero dalla polve e dall'ossa....  
Nè mostrerai tu a me—tu co' tuoi guardi,  
Solo rifugio all'incerta mia vita,  
Già mi perdoni—ma io ti vedro in viso  
Le angosce ond'io da sì gran tempo ho spenta  
La tua fiata bellezza.—Il fumo e il sangue  
Usciran dalla piaga, e l'iddio stando  
Su quel sen la sua spada. "Empio, contempla;  
"Tu padre hai morta l'innocente figlia!"  
A terra, a terra, fatal daga—O figlia—  
Trammi a morir—io più viveri—non deggio.

The next scene is a churchyard with Ricciarda at the tomb of her mother, to which she frequently resorts to pray. Guelfo's dagger has been dropped on the ground in a preceding scene with Ricciarda, and Guelfo recognizes it. This inflames his suspicions that she will marry Guido rather than the Duke of Brittany, for whom he has destined her, and he adjures her to swear on her mother's sepulchre, that she will obey his injunction. She will only consent to promise not to wed Guido, and the furious father stabs her and then himself.

We have been sparing of quotation, because our Italian readers will probably be induced by our description of it to refer to the drama itself, and we are unwilling to occupy room with what is not intelligible to all. We do not know whether the tragedy is founded on history, but have a faint recollection that it is not entirely invented. As for the language, it is in general, we may say, above criticism. Only one error in style strikes us, which is not uncommon with writers who have not had the felicity to be born in Tuscany. The 6th line, in page 8, runs thus.

Sconterà allor d'avermi amato e salvo.

Now salvo cannot be a participle of the verb salvare—it should be salvato. Salvo instead of salvato, as Spoglio *pro* Spogliato,

is what the Tuscans would denominate a Lombardian; and in so admirable a composition as Ricciarda has the same effect as a gallicism would have in one of our finest poems.

As the author is also, we observe from an advertisement, about to appear before the public on the subject of Parga, it may not be thought out of place to conclude this notice with a brief biographical sketch of him, as we have received it from a friend.

Mr. Ugo (Hugh) Foscolo is a native of Zante, formerly one of the three islands of Greece, belonging to the Republic of Venice, and now one of the Seven Islands, under our protection: in the Romæik, or modern Greek, his name is spelt *Fioscolos*. His family belongs to one of the inferior orders of the Venetian nobility, of which there are several degrees.

As far as situation and literature have made him known to the world, an independent mind and a classical pen have been his distinctions. He was professor of eloquence in the university of Pavia; but his principles not being congenial to the new order of things in Lombardy, he relinquished that office. His *I. Sepolcri*, a small production in blank verse, in which some of the most eminent modern poets of Italy are celebrated, has met with great admiration; but his most famous work is the "Ultime Lettere di Jacopo Ortis," which appeared about twenty years ago, and has been well known in this country for sixteen of that period. We have understood that the whole of this wild and passionate story is true, except the tragical catastrophe. The force and feeling of this Italian Werter, raised the author at once to an elevated rank in letters.

Its merits are unquestionably of the foremost order; though its style raised a host of critics in Italy, as is always the case with any remarkable work, in a country where most of the prose writers are mere gossipers. These could not admire a composition in which nearly every phrase is an epigram; for the genius of our modern Heliconists is not very dissimilar to that of their Greek ancestors. Alfieri furnishes another instance in point: he was determined to introduce a new style, and he has silenced his opponents in thirty-five years.

Foscolo's grand folio edition (at Milan 1808) of Montecuculi, with a copious commentary and notes, displays him in another light: we have heard well of this performance, but never saw it.

Taken altogether, he is perhaps one of the most accomplished scholars of the present day, and with some foreign peculiarities about him, we believe his reputation among the polite and learned in England is such as to leave him no cause to dislike what appears to be his adopted country.

*Journal of a Tour in the Levant.* By William Turner, Esq. London, 1820, 8vo. 3 vols.

The author describes this production, in his preface, to be "a plain book,

neither embellished by fancy, nor illustrated by learning;" and, as far as we can judge from the first volume, which is all we have yet had time to examine with sufficient care, he has in these words truly stated its character. Indeed we have met with little to arrest attention in his Grecian tour; and if the subsequent volumes, devoted to Syria, Egypt, &c., are not infinitely more interesting than the first, we must reluctantly declare, that the publication is a great waste of literary labour in the writer, and hardly worth the pains of perusal by readers acquainted with recent works respecting Greece, especially with Walpole, Dodswell, or Holland. Fancy and learning, the two qualities the possession of which Mr. Turner modestly but justly disclaims, are it seems to us (one or other of them at least, if not both,) absolutely indispensable to any traveller who undertakes to present us with an account of his observations on the beaten track of a journey through Albania and the Morea. The routes and places visited are almost as well known as the roads to Bath and York, and the appearance of these cities; and it is not a mere gossiping statement of modes of conveyance, and different stages, of the personal conveniences or inconveniences of sleeping well or being tormented by vermin, or such ordinary tattle, that will now be received as even an entertaining view of Greek manners and customs. Mr. Turner goes but a little way beyond this; his itinerary is devoid of novelty, his inquiry into classical subjects almost barren, and his diplomatic business possessed of no extraordinary attractions. The latter, however, affords him a few opportunities of meeting persons whose stations throw considerable importance over their actions; and from his accounts of these we shall make our extracts, leaving untouched the less momentous matters, with which the author rather loads his page. For example—At Yoannina,

As I felt myself fagged, and not very well, I was glad to stay within doors the rest of to-day, and amuse myself with Douce's Notes on Shakspeare, and the Pursuits of Literature, which I found in Mr. F.'s library. The same indisposition confined me to the house the following day.

I died this day at the invitation of my two military friends with the mess of the 35th, nor was I conscious of having committed any excess. The next morning, Sunday, I felt severe head-ach and giddiness, and in a week my indisposition increased into a fever, which in four days after arrived at

its crisis. For three days I was perfectly delirious, and as I was afterwards informed, in the most imminent danger, so much so, that my dissolution was hourly expected. I was very happy all the while, for I imagined myself Lord Wellington, and when the bandage was put over the blister on my back, I fancied that they were investing me with the Order of the Bath, as a reward for my valour. On one day when I was fighting most heroically the battle of Salamanca, (for after recovery I clearly retained the remembrance of my thoughts during my delirium,) I rose from bed, (as I was subsequently told) and drew my sword on the soldier, (from the hospital) who attended me, who wrested it from my hand, and removed it from the room, together with my pistols and razors.

And numerous facts of the same order. The following is not quite so bad.

I was much amused this evening at supper, by the opinion my host Papathopolo involuntarily betrayed of English porter, of which I had a bottle with me. He drank off the glass I gave him, as I thought, with gratification, and in returning me the glass, asked me quite seriously, "What complaint it was good for?" taking it for medicine.

The most prominent of the individuals to whom we have alluded is Ali Pasha, the renowned governor of Yoannina, whose rupture with his master, the grand Sultan, is likely to be productive of remarkable consequences to Greece. Mr. T. mentioning the sort of independence enjoyed by Ali, observes, that,

Against him the Sultan will probably undertake no measures; for, besides that his payments are lavish, and his government politic, and for Turkey even liberal, he is an old man, and at his death, the province will immediately fall under the direct control of the Porte, as his sons by no means inherit his talents.

We see at present, however, that this opinion is likely to be falsified\*; and in that event it is worth while to look at Ali's position. The author, while visiting him at Argircastro (not far from his capital,) thus writes.

I walked over the unfinished fortifications this morning; they must, I should think, be

\* The accounts from Constantiople of the 16th of May, represent the only other important Pasha, viz. the Pasha of Egypt, as engaged with all his force against the Arabs and the Libyan Mamluks in Nubia. Thus the Porte may be at liberty to proceed against Ali at present, free from any apprehensions of a diversion in this quarter; and the Pasha of Bagdat is not powerful enough, even if so disposed, to excite much uneasiness. Lybia, we have recent accounts, has been shut up from travellers, not by the war, but by the plague, which now prevails in that country. The further prosecution of the excavations, &c. about the famous temple of Jupiter Ammon, must consequently be postponed. Ed.

impenetrable: The height \* of their situation which no cannon can bear on, and the amazing strength of the works, must defy any attack but that of stratagem. As this town is nearly the centre of his dominions, he is strengthening it to keep his subjects in awe. Nearly every house might be made a strong outwork, as they are almost all situated on different rises of the mountain, owing to the frequent contests between the different Albanian families. At nine in the evening, the Vizir sent for me. I went immediately, and found him in the same room as before, lighted by lamps and two large silver candlesticks containing candles of brown wax. It was hung round with arms which I had not observed before. There were with him, besides the party of yesterday, another secretary, and a dervise at the other end of the room on his knees. He was attended by two Albanian boys, dressed in the red cloak of the country with the small cap, and their hair flowing behind. He was sitting at the window looking at some of Congreve's rockets, which were firing from the fort. The effect of the rockets over the mountains, which for a moment they lighted up brilliantly, was most superb. The moon shone bright, and some of his music was playing under the window, which had a wild and pleasing effect. One of the rockets fell into the town, at which he was much alarmed, sending out to hear if it had done any harm, and seemed much pleased that it had not.

Of Ali and his forces, it is further stated—

He is an old man, marked with the two most disgusting vices an old man can be disgraced by, debauchery and cruelty. Of the former, the most excusable, as it is sanctioned by his religion, he is a severe censurer in others. To the latter, he is addicted by disposition as well as induced by policy. His soldiers, whose regiments are dressed alike (another important mark of civilization, unknown in the other parts of Turkey, and, indeed, they are learning the European exercise) are uncommonly fine men, and formed for activity and strength, but in the event of his being attacked by the Sultan, of which, when I was with him, he was in daily dread, he could not, I was told, rely on the fidelity of more than forty thousand of them. Being aware of this, he is employing European engineers to build impregnable fortresses on some of his highest mountains. His sons are by no means possessed either of his vigour of mind or his turn for business. His troops are for the most part dressed thus: their hair is close shaved before, and flowing behind. On the top of the head they wear a small red cap, with a purple tuft at top, and the Albanian vest of a dark colour, thickly and lavishly embroidered with red silk, fringed at the borders. So far is common to almost all the Albanian Greeks: they have under that a close waistcoat, generally of the same description: at their waist

is a leathern girdle, loaded with a brace of pistols, a ramrod, and dagger: across their back is slung from the shoulder their long gun, and a scimitar by their side: loose trowsers to the knee, stockings the same as the coat, and shoes of leather and twined cord, complete their establishment. Their arms are more or less splendid, according to the purse of the wearer; and, as handsome arms are the passion of the inhabitants of Turkey, they are generally very superbly ornamented with silver.

Of the people of Zante, Mr. Turner draws a very horrid character.

The population of the island is about 37,000. The government under the Venetians was most corrupt, nor was it better when a republic, as the nobles were constantly intriguing against each other, and agreed only in tyrannizing over the people. Hereditary quarrels are carried among them to a dreadful pitch; and while there, I saw a man hang for assisting a father to murder his son. I suppose one might defy the whole world to produce such instances of villany as are acted in the Seven Islands. The most revolting and unnatural crimes are common, and were almost entirely overlooked by the Venetian and Septinsular Governments, to whom indeed the selling of impunity or pardon was a common source of enolument. A Zantiote nobleman, not long ago, on his death-bed, pistoled his own brother: another, administered a slow poison to the only son of a rival, as the most bitter vengeance he could take on the father. The poor boy survived, but is to this day a wretched object from its effect. In short, it would be equally impossible and needless to enumerate their crimes. There are only two classes, the very rich, and the very poor: the former are constantly intriguing to remove from office, or to murder each other: and the latter are such submissive retainers to them, from fear or bribery, as to be always the ready instruments of their vengeance.

In Cephalonia an officer of the Corsican rangers is mentioned, whose personal history is singular.

He was by birth a Corsican, and was some years ago engaged in military service in Italy; at Naples, through which city he was passing to escape from the French armies then invading that country, he was mistaken by the populace for Prince Leopold, (their apparent to the throne) to whom he bore a strong resemblance in person, and in spite of all his protestations of the truth, was forcibly invested with the command of the city. After resigning by this singular chance for a fortnight, and ineffectually attempting to exclude the enemy, he attempted to escape to Sicily, but was taken by a Corsair of Barbary, where he was kept a prisoner for eight months. On effecting his liberation by paying ransom, he went to Palermo, where he was publicly thanked by the king and prince for the part he had acted at Naples, and invested with a commanderie of the order of Saint Ferdinand. But

the king had then no means of rewarding him, and Signor Corbiera found himself constrained to enter for present subsistence into the regiment of Corsican Rangers, in which he was, when I saw him, a lieutenant.

Marathon furnishes no observations superior to these....

At the bottom of the mountain, we had to our left the Cave of Pan, (who, by his part in the battle of Marathon, gave his name to *panic* fear,) which is a small natural excavation in the rock, and being now nearly choked up, and containing nothing to be seen, I spared myself the classick uncomforableness of crawling down it on all fours.

As Pausanias relates that martial clamours are frequently heard on the plain at night, I asked the Papa whether he had ever witnessed them. He told me that "on the first of May (o. s.) this year, he had heard a very loud neighing of horses at night on the plain close to the spot where, he was told, a great battle had once been fought, and as very few horses were kept in the neighbourhood, he could not but attribute it to supernatural causes. That three years ago a shepherd from a neighbouring village tending his flock on the same spot had been so alarmed by hearing there loud shouts of men and neighing of horses, that he left his sheep in the night and ran back to his village; and that eighteen years ago thirty-six Turks who lived in the village (of Vranna) had been so frightened by seeing a little man on horseback galloping along the impracticable mountain (behind, and more distant from the plain, as well as higher, than, Vranna) near the small church, that they left the village, and never could be persuaded to return. He had no doubt, he added, that this was the apparition of St. George, to whom the church was dedicated." After questioning him about these curious legends of superstition, in which he seemed to place implicit confidence, we lay down, and being pretty well tired with our day's exertions, slept soundly till morning.

From Athens we can only import two feeble epigrams, finding no other novelty in the author's lucubrations; and with these we conclude a review, the meagreness of which we cannot help.

The passion of English travellers for inscribing their names on the ruins of Athens, has been happily ridiculed by an English officer, in the following Epigram, which is still current in the city:

Fair Albion smiling sees her son depart,  
To trace the birth and nursery of art;  
Noble his object, glorious is his aim,  
He comes to Athens, and he writes—his Name!

This Epigram was answered by Lord Byron, as follows:

This modest bard, like many a bard unknown,  
Rhymes on our names, but wisely hides his own:  
But yet, whoever he be, to say no worse,  
His Name would sound much better than his verse.

There are a good many pretty plates and neat maps to recommend this Tour, which certainly needs them, for so far

\* Its height is equalled, not commanded, by a neighbouring mountain which he has begun to level. Labour costs him almost nothing, for cruelty is nothing to him.

as we can judge, it is by no means in itself a *Tour de force*. In short, an elegant turn of mind, and those feelings towards his subject which a liberal education must impart, appear to be the author's chief qualifications for the task he has undertaken.

*A Voyage to Africa, with some account of the Manners and Customs of the Dahomian People.* By John M'Leod, M. D. London, 1820. 12mo. pp. 162.

This seems to be a sportive little book, by the author of the Narrative of the Voyage of the *Alceste*\*. Dalzel's History of Dahomy, Murray's Voyages, Robertson's useful "Notes on Africa," (of which we intend very shortly to render an account), and several other publications relative to that Continent, had entirely superseded the call for this new work on the ground of any information it could furnish; and, indeed, its facetious author does not pretend to offer any; but in (we presume) an ironical advertisement, pretends with droll gravity to state his facts and personal adventures, with a view to promote the civilization of Africa!! The origin of such a performance we could fancy to be, that a merry gentleman, who had been on the coast of Africa sixteen or seventeen years ago, having read Bowdich's wonderful travels in Ashantee, should say, "Egad! I was in Dahomy myself once, and could also tell many marvellous stories about what I saw and did there: instead of a ponderous three guinea quarto, I will shew you what can be done with a five and sixpenny duodecimo.—Devil take the hindmost; here goes!"—and away Dr. M'Leod scampers, curvetting in a manner that leaves us much in doubt whether he is laughing at his readers or not. The style belongs to a class which has lately become rather too fashionable—but, to be sure, the writers are fashionable folks—the mere slip-slop of gay conversation among the pseudo literati of the book-shops, such as Mr. Rose or Count Stendhal exemplify in their Italian lucubrations, Mr. Turner (though more slightly) in his *Levantine*, and the Literary Gazette in so designating this manner of easy familiarity and teatable slang. For example, take the following from our author's Dahomian sketches.

A good mode of astonishing a tiger (*astonishing a tyger!*) was practised with success during my stay here. A loaded

\* See Literary Gazette, Nos. 42 and 43, Nov. 8 and 15, 1817.

musket was firmly affixed in a horizontal position, about the height of his head, to a couple of stakes driven into the ground; and the piece being cocked, a string from the trigger, first leading a little towards the butt and then turning through a small ring forwards, was attached to a shoulder of mutton stuck on the muzzle of the musket, the act of dragging off which drew the trigger, and the piece, loaded with two balls, discharged itself into the plunderer's mouth, killing him on the spot.

Mr. Robertson, in his notes on Africa, mentions a very ancient, but ingenious and natural mode, by which the natives obtain possession of the young cubs. "The men in their excursions," he says, "often find the dens of the leopard, and invariably bring away the young. Should the dam miss them, in time to overtake them, they throw one of the cubs down, which arrests her progress, as she carries it back to the den, and sometimes returns in pursuit of the remainder; but more frequently remains with the one she has secured. Joe Hornet, (he says) one of the traders at Cavalla, brought me two of these cubs, and offered them as a very valuable present; very justly observing that 'there was much trouble and fear in stealing *Tigres's* sons; and that it was only for good friends that people would run the risk of obtaining them.'"

From a production such as we have described this to be, we need not occupy many of our columns; a few miscellanies will suffice to show how our good-humoured traveller, anno 1803, acquires his memory of African recollections. In Dahomy—

The ground, to the greatest depth yet examined, is a strong red-coloured loam; and, strange to say, not only are rocks unknown, but there is not even a pebble of the size of a walnut to be found in the whole country.

On such a soil, and under the influence of a tropical sun, it is not wonderful that vegetation should appear in its richest and most luxuriant form. Many of the trees are of such gigantic bulk that canoes (which they use on their lakes only) capable of containing with ease, from seventy to an hundred men\*, have been formed from their trunks, and their immense height, added to the great spread of their branches, has a very noble appearance. The sugar cane when it is raised here, grows vigorously to an uncommon size. The yams, corn, and callavances, which they plant in alternate rows, give a very delightful aspect to their fields.

Dahomy produces, in great perfection, all the immense variety of fine fruits found within the torrid zone, with some peculiar to itself, and among others one of a most singular quality:—It is not unlike a ripe coffee-berry, and does not at first appear to have a superior degree of sweetness, but it leaves in the mouth so much of that impression, that

\* Canoes are mentioned by unquestionable authority, which navigate the rivers farther to the eastward, of much greater dimensions than even these, and mounting a gun in the prow.

a glass of vinegar tastes like sweet wine, and the sourlest lemon like a ripe orange: sugar is quite an unnecessary article in tea or coffee; in fact, the most nauseous drug seems sweet to whoever chews this fruit; and its effect is not worn away until after several meals. It is generally called the miraculous berry, but Mr. Dalzel has applied to it the term *Cerasus Oxyglycus*.

Whoever eats this berry in the morning, must be content at least for that day, to forego the natural flavour of every kind of food, whether animal or vegetable, for all will be alike saccharine to the palate; and the most ridiculous effect is often produced by playing tricks upon those who are not aware of its peculiar property. Mr. Dalzel (who had been Governor at Whydah, and ultimately Governor in Chief of the Company's service), attempted to carry the shrub which produces this fruit to the West Indies, but it died on the passage. He likewise endeavoured to preserve the berries, but in every mode of preparation they lost their extraordinary quality.

The government of Dahomy is in the fullest sense of the word, despotism.

It is a monarchy the most unlimited and uncontrolled on the face of the earth: there being no law but the king's will, who may chop off as many heads as he pleases, whenever he is "I the vein;" and dispose of his subjects' property as he thinks fit without being accountable to any human tribunal for his conduct. He has from three to four thousand wives, a proportion of whom, trained to arms, under female officers, constitute his body guards. As may naturally be supposed, but a few of these wives engage his particular attention.

The successor to the throne, is not announced during the king's lifetime, but the moment his decease is known; this proclamation is made with all possible despatch by the proper officers, for all is murder, anarchy, and confusion in the palace, until it takes place; the wives of the late king not only breaking the furniture and ornaments, but killing each other in order to have the honour of attending their husband to the grave.

The choice usually falls on the eldest son of the late sovereign's greatest favourite, provided there exists no particular reason for setting him aside. An instance of this sort occurred however at the demise of the late king Wlienohew, where the elder son's right of primogeniture was disallowed, because one of his toes from some accident overlapped the other; and his next brother, the present king, who, with respect to form, is certainly "a marvellous proper man," was elected in his stead.

There seem to be no rank or privileges annexed to any branches of the royal family; the king in his own person absorbing the undivided respect of the people. Those of his relatives whom his majesty may deign to patronize, will, of course, be more noticed by their fellow slaves; but all are alike the slaves of the king.

A person whose father had been so well supplied with wives, must naturally have an extensive connexion in the way of half-bro-

thers and sisters; and it might not, perhaps, be convenient to allow all to participate in the royal rank.

His palace at Abomey, is walled round, and consists, according to the reports of Messrs. Dalzell, Norris, and Alison, who had frequent opportunities of visiting its interior, of numerous courts connected with each other, occupying in the whole a space fall as large as St. James's Park.

The first minister is called the *Tumegan*, and he is the only man in the country whose head the king cannot cut off at pleasure. By some ancient regulation, he who attains this rank has that very essential part of his person secured to him, perhaps that he may honestly speak his mind to the king without fear of consequences. The second, or *Mahor*, is the master of the ceremonies, whose office it is to receive and introduce all strangers, whether black or white, and also to take care of them during their stay at court, and to see them well fed and lodged, with all their attendants. The third officer in the state is the *Yakouah* of Whydah; and the fourth is the *Jagou* or master of the horse, who is likewise the chief executioner, and has the duty of superintending the numerous decapitations which in various ways occur. The *Agoue* is the commander in chief of the army, and has under him divers subordinate general officers.

There are entertained about the court a number of king's messengers, called *Half-heads*, because one side of their heads is always shaved, whilst the hair on the other is allowed to grow to its full length. They are men who have distinguished themselves in battle, and wear as the badge of their office, strings of the teeth of those enemies they have actually killed with their own hands, slung round their necks, like the collar of an order.

These extraordinary looking couriers when sent on any mission, are never permitted to walk, but run at full speed, and are relieved at certain distances on the road, by relays of others, who push on in the same manner on receiving their orders, which they transfer from one to the other with the greatest exactness.

(To be concluded in our next.)

*Lamia, and other Poems.* By John Kents.

Having received a copy of Mr Keats's new volume of poetry, which is on the eve of publication, too late in the week for a regular review, we merely present by way of novelty, the following specimens from the minor productions.

*Ode to a Nightingale.*

1.

My heart aches, and a drowsy numbness pains  
My sense, as though of hemlock I had drunk,  
Or emptied some dull opiate to the drains  
One minute past, and Lethe-wards had sunk:  
'Tis not through envy of thy happy lot,  
But being too happy in thine happiness,—  
That thou, light-winged Dryad of the trees,  
In some melodious plot  
Of beechen green, and shadows numberless,  
Singest of summer in full-throated ease.

2.

O, for a draught of vintage! that hath been  
Cool'd a long age in the deep-delved earth,  
Tasting of Flora and the country green,  
Dance, and Provençal song, and sunburnt  
mirth!

O for a beaker full of the warm South,  
Full of the true, the blushful Hippocrene,  
With beaded bubbles winking at the brim,  
And purple-stained mouth;  
That I might drink, and leave the world un-  
seen,

And with thee fade away into the forest dim:

3.

Fade far away, dissolve, and quite forget

What thou among the leaves hast never known,  
The weariness, the fever, and the fret  
Here, where men sit and hear each other groan;  
Where palsy shakes a few, sad, last gray hairs,  
Where youth grows pale, and spectre-thin, and  
dies;

Where but to think is to be full of sorrow  
And leaden-eyed despairs,  
Where Beauty cannot keep her lustrous eyes,  
Or new love pine at them beyond to-morrow.

4.

Away! away! for I will fly to thee,  
Not chartered by Bacchus and his pards,  
But on the viewless wings of Poesy;

Though the dull brain perplexes and retards:  
Already with thee! tender is the night,  
And haply the Queen-Moon is on her throne,  
Cluster'd around by all her starry Fays;

But here there is no light,  
Save what from heaven is with the breezes  
blown,  
Through verdurous glooms and winding mossy  
ways.

5.

I cannot see what flowers are at my feet,  
Nor what soft incense hangs upon the boughs,  
But, in embalm'd darkness, guess each sweet  
Wherewith the seasonable month endows  
The grass, the thicket, and the fruit-tree wild;  
White hawthorn, and the pastoral eglantine;  
Fast fading violets cover'd up in leaves;  
And mid-may's eldest child,  
The coming musk-rose, full of dewy wine,  
The murmurous haunt of flies on summer  
eves.

6.

Darkest I listen; and, for many a time  
I have been half in love with enfeebled Death,  
Call'd him soft names in many a mused rhyme,  
To take into the air my quiet breath;  
Now more than ever seems it rich to die,  
To seize upon the midnight with no pain,  
While thou art pouring forth thy soul  
abroad

In such an ecstasy!  
Still wouldst thou sing, and I have ears in  
vain—  
To thy high requiem become a sod.

7.

Thou wast not born for death, immortal Bird!  
No hungry generations tread thee down;  
The voice I hear this passing night was heard  
In ancient days by emperor and clown:  
Perhaps the self-same song that found a path  
Through the old heart of Ruth, when, sick  
for home,

She stood in tears amid the alien corn;  
The same that oft-times has  
Charm'd to mangle casements, opening on the  
foam  
Of perilous seas, in faery lands forlorn.

Of piteous seas, in faery lands forlorn.

8.

Forlorn! the very word is like a bell

To toll me back from thee to my soul self!

Adieu! the fancy cannot cheat so well

As she is fam'd to do, deceiving elf.

Adieu! adieu! thy plaintive anthem fades

Past the far meadows, over the still stream,

Up the hill-side; and now 'tis buried deep

In the next valley-glades:

Was it a vision, or a waking dream?

Fled is that music!—Do I wake or sleep?

*Lines on the Mermaid Tavern.*

Souls of Poets dead and gone,

What Elysium have ye known,

Happy field or mossy cavern,

Choicer than the Mermaid Tavern?

Have ye tipped drink more fine

Than nine host's Canary wine?

Or are fruits of Paradise

Sweeter than those dainty pices

Of venison? O generous food!

Drest as though bold Robin Hood

Would, with his maid Marian,

Sap and bowse from host and can.

I have heard that on a day

Mine host's sign-board flew away,

Nobody knew whither, till

An astrologer's old quill

To a sheepskin gave the story,

Said he saw you in your glory,

Underneath a new old sign

Sipping beverage divine,

And pledging with contented smack

The Mermaid in the Zodiac.

Souls of Poets dead and gone,

What Elysium have ye known,

Happy field or mossy cavern,

Choicer than the Mermaid Tavern?

*To Autumn.*

Season of mists and mellow fruitfulness;

Close bosom-friend of the maturing sun;

Conspiring with him how to load and bless

With fruit the vines that round the thatch-eves

run;

To bend with apples the moss'd cottage-trees,

And fill all fruit with ripeness to the core;

To swell the gourd, and plump the hazel

shells

With a sweet kernel; to set budding more,

And still more, later flowers for the bees,

Until they think warm days will never cease,

For Summer has o'er-brimm'd their clam-

my cells.

Who hath not seen thee oft amid thy store?

Sometimes whoever scans abroad may find

Thee sitting careless on a granary floor,

Thy hair soft-lifted by the winnowing wind;

Or on a half-reap'd furrow sound asleep,

Drows'd with the fume of poppies, while thy

hook

Sparcs the next swath and all its twined

flowers:

And sometimes like a glaucous thou dost keep

Steady thy laden head across a brook;

Or by a cyder-press, with patient look,

Thou watchest the last oozings hours by

hours.

Where are the songs of Spring? Ay, where are

they?

Think not of them, thou hast thy music too,—

While barred clouds bloom the soft-dying day,

And touch the stubble-plains with rosy hue;

Then in a wailful choir the small gnats mourn

Among the rivet sallows, borne aloft

Or sinking as the light wind lives or dies;

And full-grown lambs bond wheat from lilly  
bony;  
Hedge-crik, ketsing; and now with treble soft  
The red-bell'd whistle, from a garden croft;  
And gathering swallows twitter in the skies.

*Mr. Jacob's View of the Agriculture, Statistics, &c. of Germany, &c.*

(Continued from our last.)

We stated that the author had visited the farm of the celebrated agriculturist Von Thier, and promised to extract his most valuable and curious remarks on the system there pursued: they follow, and even our most able farmers will, we think, gather some useful information from this Prussian exemplar.

"A plant for the food of sheep for one part of the year was quite new to me; and is so, I believe, to most of our English agriculturists. It is grown to a great extent on the storable fields. I know not the English name, but it is the *Spergula arvensis* of Linnaeus. The seed is sown in the stubbles immediately after harvest, and in six weeks it furnishes food for sheep which they prefer to every other, and which is found extremely nutritious. It is an oily plant, the seed small, about six or seven pounds is sown [are sown] on an acre. What is raised for seed is sown in May, and is fit to be gathered in August. I afterwards saw the same plant growing on most of the lands, both in Prussia and in Saxony, where large flocks of sheep are kept. It is said to be very productive on all sandy soils; I think it worth trying the experiment, and have provided some of the seed for that purpose.

"The favourite article of cultivation with Von Thier is potatoes, on which he sets a peculiarly high value. His mode is simple and easy. They are planted in rows after the plough, at the rate of sixteen bushels to the acre. When the plants are up, they are earthed with a double-breasted plough, first, parallel to the rows in which they are planted, and then with the same plough the furrows are crossed, thus leaving the potatoes in small square patches. When at maturity, the soil is turned up with a three-pronged fork, and all the roots carefully collected by women and children. The stalks are far more abundant than those of our potatoes, and yield, I should think, from what I saw, as four to one. This haulm is carefully thrned, dried, and collected into stacks, and is used as litter for the horses and cows instead of straw, which is here converted into fuel by cutting it small.

"Like all his countrymen, Von Thier prefers German small potatoes to our large ones; they are less mealy, and have a different flavour. His preference, if his facts are correct, of which I have no doubt, is certainly supported by better reasons than I have heard from any other person in this country. He contended, that the nutritive quality of the potato depends on the quantity of starch that it contains; that, upon analysis, the smaller kind of potatoes that are here cultivated, contains a far greater proportion of starch than any that grow to

a larger size; that, beyond a certain size, which, by giving the roots sufficient room, they will naturally attain, the increase is only water, and can scarcely be termed nutritious.

"This decisive judgment, founded on chemical analysis, extends itself to the comparison between turnips and potatoes."

"The average produce of his potatoes, in a series of years, has been three hundred bushels to the acre; this he compared with what I stated to be the average weight of an acre of turnips on good land, as well cultivated as his is, in England; and which I stated below the truth, at twenty tons, because I wished not to be suspected of exaggeration to support an hypothesis. He contended, that his average growth of three hundred bushels, or five tons of potatoes, contained more nutrient than twenty tons of turnips, because the proportion of starch in potatoes to that in turnips, was much more than four to one. I did not urge the quantity of muck in the turnip, because I wished to learn his views rather than to suggest my own."

"A brewery and distillery are the necessary accompaniments of every large farming establishment in Germany. The result of many experiments in the latter, proved that the same quantity of alcohol is produced from one hundred bushels of potatoes as from twenty-four bushels of wheat, or thirty-three of barley. As the products of grain, or of potatoes, are relatively greater, the distillery is regulated by that proportion. The different inventions for economy in the use of fuel, cheap as it is, both in the brewery and the distillery, though highly useful to the pupils of the establishment, presented to me nothing of novelty in either their principle or their application.

"During the existence of the foolish continental system, the scarcity of sugar gave rise to many experiments here, which, though beneficial at the time, have ceased to be longer useful. Von Thier found, after many trials, that the most profitable vegetable from which sugar could be made, was the common garden turnip, (of which species I did not ascertain,) and that whilst sugar was sold at a six-dollar the pound, it was very profitable to extract it from that root. The samples of sugar made during that period from different roots, the processes, and their results, are carefully preserved in the museum, but would now be tedious to describe. They are certainly equal in strength of sweetness, and those refined, in colour and hardness, to any produced from the sugar-cane of the tropics.

"An important object of this establishment has been the improvement of the breed of sheep, which, as far as regards the fineness of the wool, has admirably succeeded. By various crosses from select Merinos, by sedulously excluding from the flock every ewe that had coarse wool, and, still more, by keeping them in a warm house during the winter, Von Thier has brought the wool of his sheep to great fineness, far greater than any that is clipped in Spain; but the improvement of the carcass has been

neglected, so that his, like all other German mittens, is very indifferent. In England, where the flesh is of much more value than the fleece, the Merino breeding has not been attended with beneficial results. The fleeces of the Moegelin flock (the name of Von Thier's farm) average about three pounds and a half each; they have been sold to English traders, who came to the spot at one period to purchase them, as high as eight shillings and six-pence per pound, whilst the whole flesh could not be sold for more than ten or twelve shillings. This statement will readily account for the fact, that though Merino sheep are very beneficial in Prussia and Saxony, they have been found unprofitable with us.

"Von Thier, with the assistance of the professors of the institution over which he presides, has arranged the various kinds of wool on cards, and discriminated with geometrical exactness, the fineness of that produced from different races of sheep. The finest are some specimens from Saxony, his own are the next. The fine Spanish wool from Leon is inferior to his, in the proportion of eleven to sixteen. The wool from Botany Bay, of which he had specimens, is inferior to the Spanish. He had arranged, by a similar mode, the relative fineness of the wools produced on the different parts of the body of the sheep, so as to bring under the eye, at one view, the comparative value of the different parts of the fleeces; and he had, also, ascertained the proportionate weight of those different parts. The application of optics and geometry by which the scales that accompany the specimens are constructed, is such, as to leave no doubts on any mind, of the accuracy of the results. The scales, indeed, show only the fineness, and not the length of the fibre; which is, I believe, of considerable importance in the process of spinning. The celebrity of the Moegelin sheep is so widely diffused, that the ewes and rams are sold at enormous prices to the agriculturists in East Prussia, Poland, and as far as Russia."

Of Berlin, Mr. Jacob tells us nothing new. Leaving that city for Königsberg, he says—

"The land on this side the city is equally sandy and poor, as on that by which I had entered; but, after seven or eight miles, it improved, and, as I passed through the small town of Blomberg, which contains about four hundred and fifty inhabitants, both the land and the cultivation of it were visibly better. I here first remarked that in the garden of each house, there was a large field-oven of a circular form, constructed of mud and sand. The dimensions of these are suited for baking the large loaves of rye-bread, which form equally the food of the horses and their riders. As I proceeded towards the Oder, I found these field-ovens universal; but have not remarked them either before or since in any other part of the country through which I travelled."

The statistical observations on Prussia are very judicious; in a summary we learn that this kingdom has increased in population within 130 years, from 14 millions to 10,536,571 souls! At present, there are 26 cities of

more than 1000 inhabitants;—136, of between 3500 and 10,000;—194, of between 3000 and 3500;—407, of between 1000 and 3000;—258, below 1000;—and 7,640,739 in villages and farms, to be added to 2,895,832 in the above enumeration. The religious division gives 6,054,379 Lutherans, 4,023,513 Roman Catholics, 300,101 Reformed, 127,315 Jews, 15,333 Mennonites; and 4000 Moravians, Hussites, Socinians, and other limited sects. The whole surface of Prussia is estimated at 74,108,800 British statute acres, or nearly 7 acres for every human being.

Saxony, on the other hand, has greatly declined. Its five circles now contain but 1,32,077 inhabitants, upon an extent of 4,21,680 English acres. The population is manufacturing in a very large proportion. The public income is about one million sterling, and the public debt amounts to 4 millions, but it is in the course of regular reduction.

Hesse Cassel consists of ten provinces and 598,320 population, whereof 340,000 are of the reformed sect. 150,000 Lutherans, 90,000 Roman Catholics, 8,500 Jews, and the rest Mennonites and other sectarians.

Hesse Darmstadt, also by the latest census, contains 620,630 souls, on an extent of 3,617 miles on both sides of the Rhine. Of these, 396,000 are Lutherans, 140,000 Roman Catholics, 98,000 Reformed, 15,000 Jews, and about 1,000 Mennonites.

Mr. Jacob notices the useful purposes to which lithography, or stone printing, is applied in various parts of Germany, and at Wirmar we have the following—

"I was shewn a gluing-nib, if not a useful, plan of making globes. The wooden globe is covered with plaster of Paris, and then varnished. The maps are engraved in the inner side of two half copper globes which exactly fit that covered with the plaster of Paris. The ink is applied to the inner part of these copper half globes, and, when fitted to them, communicates the impression to the plaster of Paris. By this process there are no joinings in the map, as occur in our common globes. The globes, when finished, have certainly a beautiful appearance; but I much doubt if there be any advantage so considerable as to cause the general adoption of this plan of making them.

"From this institution, there issues a very valuable periodical geographical work, called the *Ephemérides*, which contains notices of all new facts in geography, and criticisms on such new books or maps as are produced. Translations from the English and French popular works are executed on the premises, and pass through the press, as well as many books originally compiled or composed in this city."

We must now close our report of this practically valuable book, which we do with a quotation respecting the condition of France.

"I was much impressed (says Mr. Jacob) during the whole journey from Mentz to Paris, a distance of nearly four hundred miles, with the great inferiority of the appearance of France, and of what had been

incorporated with France, to any part of Germany that I had lately passed through. The land is certainly as good, perhaps generally better, but the cultivation of it was by no means superior. The towns and cities in France are, perhaps, on a par with those of Germany, or nearly so; but, in Germany, none of them had been without recent improvements, and all showed some new buildings, and many old ones repaired and modernized. In France, every thing looked old; no houses seem to have been built since the commencement of the Revolution, and those dilapidated and needing repairs, do not seem to have received them. It was not so much, however, in the towns, as in the villages, that the inferiority of France struck me most forcibly. In every village in Germany, a neat church, ornamented commonly with an elegant tower, is to be seen; a decent house for the pastor, and one better for the bailiff, is universal in the villages where no nobleman resides; and where there is one, the houses of the peasantry appear to have copied some portion of neatness from those of their superiors. The houses of the peasants there, are superior to the cottages of our English labourers, and very far better than those of the French farmers. The churches in those French villages which I passed through, are miserable hovels, and the dwellings of the inhabitants are all alike dilapidated and filthy.

"They have no superiors to improve them by their examples, and the tax-gatherers that collect for the government, reside in the neighbouring towns. The want of a gentry is evident in France, and of course in the villages, much more than in the towns and cities. I remarked too the little intercourse which the roads in France exhibited. In three hundred miles, I met but three gentlemen's carriages, and either two or three diligences. Water-conveyance may diminish the number of waggons, but I met a greater number of waggons loaded with goods, between Nannburg and Weimar, a distance of twenty-four miles, than I saw between Saarlütke and Meaux, a distance of three hundred. The dress of the rural inhabitants is very miserable, and very much inferior to what I observed in any part of Germany. In every part of Germany, I remarked on the poor soils many plantations, very extensive, and recently formed. In some instances, these extended over thousands of acres, but after entering France, I saw nothing recently planted. The woods appeared to be as ancient as the period when Julius Cæsar described them. At each town in France I inquired for the journals, but at Metz only could I procure the sight of one; except indeed at Meaux, where by accident I got one three or four days old, which I was assured was the latest in the city, though it is only thirty-five miles from Paris. The ignorance of the country people, and the little interest felt by the inhabitants of the provincial cities in public affairs, is very different from the state of Germany, where, as all can read, and as journals are very plentiful and cheap, no one is so completely ignorant, as most appeared to be in France.

"If I were to judge of the whole kingdom, by what I observed between Germany and the capital of France, within that city, and on my rapid journey from thence to Calais, I should conclude that Paris was every thing, and France nothing, in the estimation of the government that now rules, or in that of any that have ruled the country for the last thirty years; I should be disposed to think that France rears soldiers, provides food, and pays taxes, and that Paris directs those resources to such objects as the prevailing factions in the capital deem most suitable to their purposes."

The truth and sound sense of these remarks are on a par with the rest of the author's observations—which merit throughout, the general character we have given them, of discrimination, intelligence, utility, and honest candour.

## FINE ARTS.

### BRITISH INSTITUTION.

*Recollections, &c. suggested by the present interesting Exhibition of Portraits.*

It would be difficult to say at what period England was without humours and wits; for by looking into the obsolete records of the olden times, enough may be discovered to infer that this country was never lacking in such merry wights, whose buoyant spirit of jibe and jest, no domestic tyranny nor public calamity could sink. The soldier took his humour to the tent—the friar played with it in his confessional—the physician wrapped it up with his similes, and the lawyer charged for it in his brief. Every active faculty of the human mind, when curbed by discretion, tends to the public good; and England owes no small debt to the sarcastic spirit which prevailed in every age; for doubtless, this begot the love of liberty.

The tyrant barn, who stood not in awe of heaven nor the sword, dreaded the scourge of satire. The haughty priest, the persecutor and the hypocrite, the coward and the fop, all trembled at the tribunal of wit. But then, no hissing satirist assailed the virtuous and the wise, nor did the wit descend to fill the scorners' chair, and write in "ink pot malice," against religion, honour, decency, and obedience to the laws.

The age at length arrived when, alas! a too prolific crop of wit grew up, and choked the wholesome flower, discretion. Then commenced the era of civil war—the memorable epoch of England's inconsistency,—when Bellona walked arm in arm with Momus to the camp, to scare good humour from the field! Then the murderous cannon's mouth was seen inscribed with holy texts of Scripture, and the fatal ink that signed the death warrant of the sovereign lingered in the pen to mark a joke†. Then hymning

• Cromwell had his cannon inscribed, "Lord open thou our lips, and our mouths shall shew forth thy praise!"

† When Cromwell had signed the death-warrant of his sovereign, on giving the pen to the

Christian soldiers smoked and tipped at the altar-table of Christ; and as one half the mad people became "righteous over much," the other laughed piously to scorn. Whilst Round-head and Cuckold, Cavalier and Cuckold-maker, called names with malignant felicity, the "Lord of misrule" had got possession of the sceptre, and wit and war laid poor England waste.

*Portrait of King Charles II.—Painted by Wissing.—His MAJESTY.*

Weariness of the government of Cromwell and his saints, the people of England, recovered from their political phrenzy, hailed the restoration of their lawful sovereign with merry hearts. Never did nation experience so sudden and so happy a change. Almost the whole community at once metamorphosed from weeping, wallowing, self-denying hypocrites—heavily sick of so long a mimicry, threw off the mask, and frankly proclaimed him their "merry king."

Charles had too many faults to make a good governor; and adversity, that ancient school of wisdom, to which he was early sent, and where he long remained a disciple, turned him out with no good reputation. Those who knew him best foretold the use he was likely to make of kingly power.

The Duke of Ormond, in a letter to Sir Edward Hyde, two years before the restoration, says, speaking of this prince, "But I fear his immoderate delight in empty, effeminate, and vulgar conversation, is become an irresistible part of his nature; and will never suffer him to animate his own designs, and others actions, with that spirit which is requisite for his quality, and much more to his fortune." Yet he adds, "God bless him, and fit him for his work."

The zeal which he showed in the cause of his royal father, whilst he was only a boy, gave promise of more virtue than his manhood realized. When the persecuted king was imprisoned in Carisbrook Castle, but a short time before the last scene of his tragic reign, the young prince Charles ventured from the French shore, in a small squadron of armed ships, with some loyal confederates, to make a dash for his release. The failure of this gallant enterprise, prompted by filial affection, makes the heart sorrow, even at this distant period, when the martyr and his murderers, and their generations, have passed away.

The day on which Charles II. returned to London, was remarkably fine—not a cloud was seen in the heavens. The fronts of the houses were hung with tapestry, as he passed through the city; and the public conduits ran with wine. Among the pageants which the city companies had prepared for his cavalcade, was one curiously contrived upon a moving platform, that represented the wood of Boscombe, with the king in the royal oak.

His not being discovered in this retreat by the vigilance of his enemies, after the fatal battle of Worcester, was owing to a curious circumstance, which his friends might next regret to add his signature, he drew the ink across his mouth. In return for this joke, he followed Cromwell, and threw a sofa cushion after him, as he descended the stair-case.

be excused for ascribing to the intervention of a special providence. Certain fugitive cavaliers had taken refuge in this wood, of which the soldiers of Cromwell had notice. There they hoped to find the king. A troop of dragoons were beating the wood, and searching each tree; that which held the King and Colonel Careless, had thick and spreading branches—the troops were close by, when at mid day an owl, scared by their noise, suddenly flew from the sanctuary of a neighbouring tree. At once the whole troop, fond of fun in the midst of serious business, like their doughty captain, "Not," set up a loud hallo, and losing scent of the royal game, one and all set off full gallop, helter skelter, after the owl, which held them fairly out of the wood.

Charles was a joker, even in the extremity of danger, when flying from Boscombe; for on his arrival at another sanctuary, after crossing a deep mill-dam, on an old mare, under cover of a dark and stormy night, Will Pendrill wading before on foot, he said, "I followed my leader by the crackling of his horny buckskin breeches." Will was a woodman. The mare blundered every step, and the king was weak, worn out with watching and anxiety. "Will, thou hast mounted me on a sorry beast," said he. "She was the best I could procure," answered the honest boor. "Besides, your Majesty, she is not used to bear the weight of three kingdoms upon her back."

The famous mathematician, Isaac Barrow, had been a staunch cavalier: he was one, who, at the return of his king, fancied himself neglected. The king, however, subsequently showed that he had not willfully disregarded his former services, nor was he unmindful of his great merits; for when he was made master of Trinity College, Cambridge, by the king, his Majesty said, "I have given that dignity to the best scholar in the kingdom." He said on another occasion, that "Dr. Barrow exhausted every subject which he treated." It is likely that this excellent divine had his eye to the excesses of the court, when he preached that memorable sermon "Against foolish talking and jesting." The following lines were written by the Doctor under an impression of being neglected.

*Te magis optavit reditum, Carolus, nemo,  
Et temore semel to redire minus.*

There was a certain debonaire in Charles's manners, which, added to a humane heart, charmed away or softened the feelings of just indignation of many good men, who regarded the dignity of the crown or the welfare of the public. But nothing could shake the inflexible constancy with which the Lord Chancellor Clarendon maintained his opinions against the dissolute manners of the court. The king's mistresses (naturally enough) hated this virtuous minister. The affability of the king, in spite of his libertinism, won his subjects' hearts. The more correct Duke of York, they could not endure. Yet he fell into the fashion of the times, and had his "mistresses." Charles's were all beauties; James's were, comparatively, homely dames. The witty king proclaimed

the cause at court—his brother was sadly priest-ridden. "They are forced upon the Duke of York," said he, "by way of mortification—given to him in penance."

Once the gay monarch demanded of Dr. Sillingfleet, who was a preacher to the court, "why he read his sermons before him, when his discourses were delivered from the pulpit extempore in other places?" The doctor answered, "Overawed by so many great and noble personages, and in the presence of his sovereign, he dared not to trust his powers." "And now," said the divine, "will your Majesty permit me to ask a question?" "Certainly," said the condescending king. "Why then does your Majesty read your speeches, when it may be presumed you can have no such reason?" "Why truly," said the king, "I have asked my subjects so often for money, that I am ashamed to look them in the face."

Little idea can be formed in the present day, of the magnificent spectacle of public processions in former times. That which accompanied the entrée of Charles II. was seven hours in passing. "I stood in the Strand and beheld it," says Evelyn, "and blessed God." The same author relates, "The eagerness of men, women, and children to see his Majesty and kiss his hands, was so great, that he had scarce leisure to enter for some days, coming as they did from all parts of the nation; and the king being quite as willing to give them that satisfaction, would have none kept out."

The following curious account of his subscription wardrobe, at his disguising in the wood of Boscombe, is given in an old tract. "Richard (Pendrill) was no sooner come in, but Esquire Gifford called for him and bid him make haste, and bring with him his best clothes, which were a jump and breeches of green coarse cloth, and a doe-skin leather doublet; the hat was borrowed of Humphry Pendrill, the miller, being an old grey one, that turned up its brims; the coarse noggin shirt was had of one Edward Martin, George Pendrill's band, and William Creswell's shoes;" these he put "nimble on." "Then Richard came with a pair of shears, and rounded the king's hair, which my Lord Wilnot having cut before with a knife, had untowardly notched; and the king was pleased to take notice of Richard's good barbering. And now his Majesty was a-la-mode the woodman." A good subject this for the inimitable pencil of Wilkie.

Charles displayed princely intrepidity and nobleness of soul at the conflagration of London. He was there night and day encouraging the inhabitants to exertion, who too long looked on the raging element, completely bewildered. "Midst the dreadful confusion of the scene, he exposed himself to the popular phrenzy, which sought vengeance on the foreigners and recusants, equally sufferers in the general calamity, who, in that age of infatuation, were charged with firing the houses. He rescued great numbers with his own hand, and bravely, with the assistance of his guard, risked his life in affording them protection—but for this magnanimity, hundreds of innocent men

and women would have perished by the fury of the raging multitude.

The disgraceful record, which Pope alludes to, on the "monument," was obliterated (fairly enough) by the Roman Catholics under the base reign of James II.

"Where London's column, towering to the skies,

Like a tall bully lifts its head and lies."

The last scene of the "strange eventful" drama of Charles's reign is finely told by the pen of Evelyn, who justly observes—

"Never had king more glorious opportunities to have made himself, his people, and all Europe happy, and prevented innumerable mischiefs, had not his too easy nature resigned him to be managed by crafty men, and some abandoned and profane wretches who corrupted his otherwise sufficient parts."

"I can never forget," says this good man, in a subsequent reflection, "the inexpressible luxury and prophaneeness, gaming and all dissoluteness, and as it were, total forgetfulness of God (it being Sunday evening) which this day so might I was witness of; the king sitting and toying with his concubines, Portsmouth, Cleaveland, and Mazarine, &c. a French boy singing love-songs, in that glorious gallery, whilst about twenty of the greatest courtiers and other dissolute persons were at *Beauze*, round a large table, a bank of at least 2000 in gold before them, upon which two gentlemen who were with me, made reflexions with astonishment. Six days after was all in the dust!"

#### BAFT OF THE MEDUSA.

[Mr. Jerricault's Picture, at the Egyptian Hall.]

We stated, on our first view of it, the impression made on us by this very clever performance; and have now the satisfaction of knowing that our most favourable opinions have been amply confirmed by the judgments both of artists and amateurs. Our further remarks, therefore, will add little to the fame or advantage of Mr. Jerricault. But, as more frequent views of the awful scene have increased our admiration of the power of art and the ability of the artist, we shall endeavour to point out some of the striking qualities by which the mind is thus strongly excited.

The details in picture, however excellent their character, are lost if not exhibited under the judicious arrangement of composition, aided by the effect of light and colour; and that which the ardent imagination of the artist or the poet takes in at a glance, must by the painter, become the subject of great consideration, and be subjected to certain rules and principles, yet so couched as to appear the spontaneous effort of some powerful impulse.

In this tremendous picture of human sufferings, the bold hand of the artist has laid bare the details of the horrid facts, with the severity of M. Angelo and the gloom of Caravaggio: the flesh indeed might be more strongly reflected; but the whole of the colouring is so well suited to the subject, and is in most instances so just, that we

scarcely know if its tone can be called a bluish so entirely as at first sight it appears.

But it is over the varied details of form, the most correct anatomical markings of the figure, and all the agitated emotions of hope and fear, that Mr. Jerricault has impressed the magic of an effect that was to give value to the whole. The light brought into the piece and thrown upon the upturned faces of a centre groupe, powerfully assists in arresting the attention. This seems to break on them from the reflection of a highly illuminated cloud above their heads, and is contrasted by much surrounding gloom, and this again by the bright rays of the morning. Perhaps it is so natural; that is, could not happen to be so distributed in the full light of day; but there are great authorities for such departure from truth, in this respect.

The powerful element of the mighty waters is very happily depicted by the hand of the artist; and, taken altogether, his work is, as we before observed, one of the finest specimens of the French school, ever brought into this country. It cannot therefore fail to stimulate the exertions of British talents, to a further display of those powers, which have already so happily and so honourably distinguished our artists and arts. To Mr. Bullock, we think, great praise is due for procuring us such opportunities for examination and comparison of the two national schools: if he continues to bring over *chef d'œuvre* of French painters, he will do as good a thing as could be done to advance British art. Emulation is a noble teacher.

MINIATURES.—We may notice (not having room in this Number for the long advertisement which announces it), that Mr. Webb's unique collection of Miniatures, which have been for sometime at the Egyptian Hall, come to the hammer immediately. We mentioned formerly that these were some of the finest specimens of this branch of art among these performances.

#### ORIGINAL POETRY.

##### EPICURUM,

On seeing so many doors and windows open during the hot weather.

Of the old times so good let others bubble,  
I value not their silly talk a l—ne;  
When yet was England e'er so hospitable  
As now, when every one keeps open house.  
Ut Ut.

##### [By Correspondents.]

##### THE WARRIOR'S FUNERAL.

Suggested by the song "Merrily went we," in the *Monastery*.

Dolefully mourn ye!—the night raven screams,  
And the moon will soon sink, as the morning gleams.

Dolefully mourn ye!—for this is the hour,  
When the Kelpy is dancing in dingle bower:  
And while he skips to the scream of the owl,  
He's no friend to the rosary, credo, or cowl:  
Come brothers, come, to the work of death,  
And pray for the spirit that slumbers beneath  
Dolefully mourn ye!—the night raven screams,  
And the mountain shadows grow faint in the streams;

Dolefully mourn ye!—for this is a night,  
Whence blessed to mortals is morning's light—  
The elfin wons in the valleys, and hark!  
Beneath the deep ravine the ban dogs bark;  
Let the palmers pray, and the pilgrims weep,  
For the warrior below sleeps the dreamless sleep.

Lay his corpse beneath the oak,  
Which ne'er was scathed by woodman's stroke;  
Lay him down—with his spear in its rest,  
His hauberk, hauberk, mail, and crest.  
Wrap his martial cloak for a shroud,  
While the moon-beam sleeps beneath a cloud;  
Place on the mortal remains—the sod—  
Peace to his ashes!—Rest him God!  
His brothers, hence—"tis matin time,  
The cotter is up—hark he chaunts to the chime,  
Of the lofty-tinkling—matin bell—  
Which float in the breeze over mountain and dell.

Rest thee—rest thee—Warrior brave!  
There's one above—who has power to save.  
When the vesper bell of the abbey shall toll,  
The monks of St. Francis shall pray for thy soul.  
Chorus. J. D. COLLARD.

##### TO THE NIGHTINGALE.

Cecilia, of the feathery tribe,  
Bird of the cool and shady solitude;  
When in a pleasing melancholy mood  
You woo the beauties of Endymion's bride;  
Sending such thrilling music thro' the air,  
On ev'ry brilliant cadence dwelling;  
Now softly dying, and now loudly swelling  
On the rapt ear, who woud not listen there?  
To-night, from out thy verdant leafy bower  
O! sing once more, thy sweetest magic lay  
To one condemn'd in foreign climes to stray,  
Who seeks thee in his latest evening's hour.  
Pour out thy song, and my glaucous eye  
Dissolves in tears, with thy rich melody.

##### EXTRACT FROM "POEMS OF THE AFFREHEN- SION."

[See Wordsworth's "My heart leaps up." &c.]

My heart leaps up when I behold  
A bailiff in the street:  
'Twas so since from one first I ran;  
'Twas so ev'n in the Isle of Man:  
'Twill be as soon in Newgate hold,  
Or in the Fleet!  
A trap is hateful to a man!  
And my whole course of life shall be  
Bent against them in just antipathy!

##### FROM TASSO.

Chinam gli abitator dell'ombre eterne  
Il rancio suco della tartarea tromba;  
Tremam le spaziose sue cavernae,  
E l' aer cieco a quel rombomba;  
Nè sì stridendo mai dalle superne  
Regioni del cielo il folgor piomba,  
Nè sì scossa giannam trema la terra,  
Quando i vapori in sea gravida serra.

##### ATTENTED.

The dread Tartarian trumpet hoarse resounding,  
The dwellers of eternal night assembling;  
Rebellious to that roar the air surrounding,  
Hell through its black and spacious caverns  
trembles;  
The bolt that comes from heav'n's high regions  
bounding.

But faintly that infernal peal resembles;  
And weaker is the earthquake's voice of thunder  
When the pent vapours rise and rend, the  
earth in sunder.

## IMPROVPTU.

To ——— on her Marriage with Mr. W. H. ———  
 When ladies they wed,  
 It ever is said,  
 That their freedom away they have thrown;  
 But you're not done so,  
 For we very well know  
 You will have a Will of your own.

## OUR YOUTHFUL DAYS.

Yes! those are hours of gay delight,  
 When hope is calm as the morning rays,  
 Oh, ne'er is shed such brilliant light  
 As sparkles o'er our youthful days!  
 'Tis then, before our hearts are cloy'd,  
 And ere we feel that hope betrays,  
 'Tis then that on her light wing buoy'd,  
 Oh nought transcends our youthful days!

CONRAD.

## SONNET.

Sweet Spring, thou com'st, but ah! my pleasant  
 hours  
 And happy days with thee come not again.

Drummond.

Now through the air the western breezes play,  
 And peeping buds put forth their callow heads;  
 The earth seems happy, and the new-born day  
 Exulting smiles o'er all the hills and meads.  
 \* That motest flower, attendant on the spring,  
 In many a hidden vale and silent wood,  
 In lonely hands greets him that's wandering,  
 And pleasantly relieves his thoughtful mood;  
 ! lone and pensive, bent by fortune low,  
 In this sweet season only live to weep.

rose.

And happy am I, if my stubborn woe  
 Yield a short respite in the arms of sleep—  
 But, then, I wake, and to my aching sight  
 The morning comes, to me a gloomier night.

## SKETCHES OF SOCIETY.

THE HERMIT IN THE COUNTRY. No. 4.  
LEAVING HOME.

I had just completed my eighteenth year, when I received orders to join my regiment for the first time. The sash and gorget, the maiden sword, scarlet cloth and gold lace, had all their weight and attractions for me. I contemplated the empire which I should have over hearts, and the preference, which I had so often felt mortified at wanting, at a hall, or in a country circle; I expected to live with the best fellows in the world, to see a great variety of scenes, to be ever amused, ever changing quarters,—to dance as it were through life, to the tune of the merry life and drum, and to leave care and gloomy reflection always a day's march behind me; but above all, I longed to see the world, to be free, to be an uncontrolled agent,—in a word, to be my own master.

I had gone through the classics with some degree of attention, was a pretty good dancer, could play a little on the flute, rode boldly, had read history, was a fair shot, and considered myself, upon the whole, a decent sort of fellow, particularly as the maid servants called me handsome, and the

\* The primrose.

village surgeon's daughter had eyed me with some degree of interest.

I had now been looking for myself in the gazette for six weeks; and not a little proud was I to see myself in print, for the first time. My next impatience was to be ordered to head-quarters; and, when the order came, I was in the highest possible spirits. The night before I set out on my journey, I scarcely slept a wink. Young Phœton, when importuning his father for the reins of that chariot which was fatal to his existence, was not more anxious than I was, on this occasion; nor, when he asked that sire to grant his boon, as a pledge of the love which he bore to his mother—"Pignora da Genitor, etc." could he seek it in a more eager tone than I inquired "if tomorrow was the day on which I was to set out?"

And yet I tenderly loved my parents. I was an only child, their prop and stay: I could not love them more than they deserved. The whole village too shared my affections: I felt the relative ties of humanity and good will; of brotherhood and connexion with all my neighbours,—domestics and all. I had even a tenderish feeling for the fire-side animals of the paternal roof,—the poor old pointer, the dowager spaniel, Duchess, the invalid cat, and my mother's pet-bull-finch. Yes, I had rather not have had to feel the "good bye to ye." The shooting poney, I recommended to Robert's care; and my squire,—poor Trusty! accompanied me through many a varied and uneven path. Night came, and her mantle sat uneasily on me. I felt almost a woman's weakness as I sank upon that mother's breast, where I drew my first love, mingled with the stream of life; but I tried to be the soldier; and, after one dewy kiss, I resolved not to see her in the morning. My father was to accompany me a part of the road; and the thought of this was a relief to me.

As I drew on my regimental boots, the only article of military uniform which I wore on my journey, I felt an elevation of mind, and seemed as if I were already fit to command a company. But my satisfaction was not without alloy: I had the *Ducale Dumont* to quit; I had the village to look on, perhaps for the last time; I had to shake hands with the poor servants, some of whom had borne my helpless infant form in their arms. This was trying. I whistled a march; but it was more like a dirge; I tried a country dance: it was out of tune.

I sent the cook to knock at my father's door, an hour earlier than agreed on; for time now seemed loaded with a weight of care; and I was resolved, albeit I was proud of my appearance, not to be seen by my kind neighbours. I therefore gave keepkeys to all the servants, and wrote a letter for the surgeon's daughter.

My dear father appeared: it was a great ease to my state of mind. I shook him heartily by the hand, tried to look gay, and brushed over the threshold of the door. The old nurse insisted upon kissing me: she was aged and ugly, but a good woman, and somehow she had a right to this embrace. I

gave it her heartily, looking, however, jealously around: nobody saw me but the captain, else should I have blushed. "The Captain to kiss an ugly old woman! be for shame."

We were now at the end of the village. I dreaded the sight of my mother at the window; so I never looked back until out of view of the house. I was now to take a last look at this rustic assemblage of homes. They danced tremulously in a tear, in my eye, but I cleared up with such a hoarse and monotonous *hem* that the echo of the church-yard, which returned it to me, terrified me with the sound.—All this time my father and I had not exchanged a word; he looked thoughtful, and as if he had had a sleepless night.

The morning was beautiful, and I never saw my native scene in such glowing colours before. There seemed to be a peculiar grace in the antique belfry of the church; and the stiff sepulchral yews were gilded with the sun-beam. Obituary sculpture might have caused me some serious reflection. But my mind dwelt not on the past; nor were any doubts and fears as to the future, unfolded to my view.—How many a departed bliss now leaves but its monumental memento in my heart! how many prospects have vanished like the days of my ancestors! how many a brave comrade in arms now lies in his narrow bed, and upon his earthy pillow!—but let us return to my father.

"We had better dismount and walk a little," said he to me, in a kind affectionate tone. "The weather is beautifully fine; we have a long day before us; and I can return in the cool of the evening. I should like to have as much of your company as I can; and you will not always have your old father for your companion." We alighted accordingly, and gave our horses to the servant who had charge of my luggage. I was to proceed in the mail from the first stage.

We now turned off the high road, and skirted a beautiful wood, crossed some adjacent fields, and pursued the course of the river, by the foot-path for some miles.—My father folded his arm in mine with a peculiar degree of friendship, familiarity, and tenderness; and I never hung on the discourse of any one with so much attention, either before or since. He evidently tried to amuse my mind, and to cheat the way and beguile the time by his conversation; and he succeeded to a charm. We saw the vertical sun ere we thought morning midway gone; and his declining ray surprised us ere we thought it two hours later.

"Let us dine together, my dear boy," said he, with so much of the good fellow in his air and accent, that I regretted that he was not more my own age, and going to join the army with me. I assented with delight. "There is scarcely any night," said he, "now; and I must ride home the harder for it."

Thrice had he essayed to part with me, before this proposal: I saw the motion pass in his mind; but his heart failed him; his steps hung on mine, and his affection's lin-

gered with me, and were loth to part. He looked at his watch on alighting from his pony, as much as to say, "a short walk, and then." Next, when fatigued, he sat down on a bank, and seemed determined to shake hands, and to bid adieu;—but he could not. He then remounted, and proposed riding on to dinner, in the cool of the evening. My heart placed all these debts of gratitude to his account.

He had another object, however, in this confidential walk; in this protracted journey together. He wished to give me a great deal of good advice, and that advice was offered and delivered to me more like a brother and a comrade, a companion and a friend, than a parent, and one set in authority over me,—more like the man prone to error and failing like myself, than one to whom age and experience had bestowed so decided a superiority.

On how many useful subjects did he give me his cool and unpresuming counsel! How fraught with honour, sentiment, and delicacy were his paternal admonitions! In how many instances of life have his precepts and warnings, upheld and prevented me from evil! How often has a retrospect of that happy hour been a benefit to me in my passage through life!

We parted, precipitately at last; for the mail-coach-horn relieved us from those achings of the bosom which a first separation from those who are dear to us naturally produces.

That parent, alas! is now no more! I have been the support of his sad relief; but I have no longer that brotherly father to hang upon my arm, to pledge me in the convivial cup, to interest himself in every circumstance concerning my welfare in this chequered scene of life, nor to recur to, for advice, in difficulty or distress.

Often have I, in different climates and novel situations, in distant and in doubtful circumstance, pondered upon this opening scene of life, with a melancholy sensibility, which has mingled sweets and bitterness so intimately together, that not to have been sad, would have been double wretchedness, since sadly sweet was the very essence of reflection.

Even at the moment that I am writing these lines, it seems as if my father's shade hovered near me—as if I were wrapt and covered all over in affection's mantle. Farewell, dear scenes! I shall never behold ye more! yet must memory itself perish, ere ye fade from the heart of

THE HERMIT IN THE COUNTRY

## THE DRAMA.

**KING'S THEATRE.**—On Thursday week a very promising young singer made her debut, at this Theatre. Her name is Corri, a younger sister of the lady of that name, who is so accomplished an ornament to our list of native artists. The Debutante has a very fine voice, and will, we are confident, become a great favourite with the public.

On Tuesday last, a Madame Montano, from Florence, appeared as the heroine in

Agnes. We were prevented from attending, but learn that she executed Paer's music delightfully.

**DRURY LANE.**—A great night was expected here on Wednesday, when her Majesty had bespoke the play of *Wild Oats*. Other counsels, however, prevailed over those which had engaged for this public appearance; and the Queen, by changing her mind and not going, set both actors and politicians to speculation upon this first proof of indecision of character! Speed the Plough was played, and *Wild Oats* reserved for her Majesty. On Thursday, the Provoked Husband was performed; but that had nothing to do with the business of the preceding evening.

**ENGLISH OPERA-HOUSE, STRAND.**—On Thursday this theatre opened, with a company composed, for the greater part, of faces already familiar to the public, and promising a very agreeable season. *Bartley* is still manager. His American perignations have rather assisted his good looks: he was received with the applause of old friendship. The house is, in its decorations, as it was; but that feature of theatres, which has of late years assumed such prominence, the Saloon, has had the happiness of much embellishment, alteration, and fresh water. Whatever other blooms may be destined for its ornament, Covent Garden has been stripped of its innocent flowers and refreshing shrubs. The hall is handsome, and the theatre cool. This is much. The performances were, with the exception of "The Promissory Note," old; and that one was new only to this country, for it is taken from the French. It is light and lively. *Miss Carver*, *Miss Kelly*, *Miss Strevenson*, *Miss Love*, and *Mrs. Chatterly*, sustain the wit, beauty, and song, all the sycophancy on the female side; *French*, *Wilkinson*, *Chatterly*, &c. do the honours on the other side. *Harley* should be among the number, but he is plundering somewhere in the provinces; he must return, for his humour cannot be dispensed with. The house opens at an auspicious time; and the Summer Theatres are likely, for once, to have the whole harvest of the year.

**MR. MATHEWS from HOME.**—On Saturday last, Mr. Mathews concluded his entertainments for the season, and delivered an address in which he, with good reason, prided himself on the success which had attended his efforts, and alluded to the extraordinary circumstance of one man having amused so many, such numerous, and respectable audiences. This is indeed a great achievement; but its reward not greater than its merits. For ourselves, we may say, that we have repeatedly witnessed these pieces, and always come away impressed with wonder at the display of that peculiar talent with which this individual is so richly endowed. By peculiar, we do not mean single talent; for there is almost boundless variety in Mr. Mathews' imitations, and his natural gifts taken altogether, form, in our opinion, quite a phenomenon. We have never seen, and what is more, we have never read of any thing of the kind, equal to his performance; and

it is probable that we never shall behold another example of such curious, marvellous excellence. We pronounce this criticism the more decidedly because, with all the popularity of these exhibitions, we have frequently heard it alleged, that they were too long, that the jests were stale, and such other tiddlings of thoughtlessness; and we could wish the public, entirely, when it can enjoy so rare a treat, to reflect upon the multitude of qualities and attainments that must be combined in a human being, before that being can accomplish what Mr. Mathews does. We have only to add, in order that our testimony may have the greater weight in these suspicious times, that we speak thus of a performer to whom we never spoke in our lives; and of whom it is as a contributor to public pleasure alone, that we think it just to speak so highly.

**DUBLIN THEATRE.**—Mr. Harris has opened the New Theatre at the Rotunda, Dublin. The first performances were the *Belle Strategem* and the *Spoiled Child*. An Irish joker expresses a hope that all will go on squarely in the Rotunda, and praises the beginning as a *Beau Strategem* of Mr. H. who must not end as a *Spoiled Child*.

**FOREIGN THEATRICALS.**—At the close of the Brussels Theatre, M. Bernart, the manager, delivered a long address, including a review of the last dramatic season, and the budget for the ensuing year. The address contained the following passage:—"The number of dramatic works of every description produced last year at this theatre, amounts to two hundred and forty-four. Of these, twenty-eight were pieces never before represented at Brussels, and forty-six were revivals. At least forty additional pieces would have been produced but for the enlargement occasioned by the erection of a new theatre, the want of decorations, and the indisposition of several of the performers. When the number of pieces represented in the four great cities of France is compared with the above, it is singular to find that the majority is on our side, and that the united novelties of the four principal theatres of France, scarcely equal in number those produced at Brussels."

## VARIETIES.

Dr. Wollaston has been appointed President of the Royal Society, *pro tempore*. This very able chemist, as far as report goes, has not the very ample fortune which the station permanently requires; and it would be injurious to generous habits to impose an expense of too heavy a nature upon a liberal spirit.

**DR. MANSELL.**—The Bishop of Bristol died on Tuesday morning at Cambridge. He was a distinguished member of the church, and eminent for his literary qualifications.

**Education.**—The new measure for the education of the lower classes in England and Wales will not, it is understood, proceed farther this session than the first reading of the bill. We trust it will receive all the consideration its great importance merits; and not be made a shuttlecock for the battledores of the Edinburgh and Quarterly Reviews, as the question of Charitable Institutions was.

with little of clarity between the parties, little in the views of the originators of the question, and little in the hearts of its opposers.

*The Bear, a Bull.*—Between the New Street and the Haymarket, in Piccadilly, are two taverns; the one with the figure of a white bear, as large as life, for a sign, and the other with a black bear of nearly the same size; but the whim of the thing is, that over the *Black Bear* is inscribed in large letters, "THE SPREAD EAGLE."

A broker in Knightsbridge, wishing to recommend his goods, has ticketed with the lowest prices a number of beds, which he designates *par excellence* "WATERLOO BEDS." This is at least a poetical idea; for Waterloo, in its way, was like the great bed at Ware, a great bed of honour; and these at Knightsbridge, so near the quarters of the guards, may be "honour's truckle beds."

"Original Washing done here," is an inscription at a London laundry:—what is it?

*Curious Occurrence.*—An elephant which has been for some weeks exhibited at Geneva, where it was remarkable for docility and intelligence, lately began to evince symptoms of obstinacy which alarmed his keepers. A few days after, he was removed from his habitation at Geneva, to be conveyed for exhibition, to Lausanne. He marched off with every mark of impatience and rebellion, and soon became so refractory that it was found impossible to control him. He wounded his conductor severely, and escaped from him, and returned to Geneva. He passed through the streets, spreading the utmost alarm among the inhabitants; he stopped before the houses of all the brandy merchants, and threatened to break open their doors. With considerable difficulty, he was conveyed to the Dutch Bastion, where he was confined. The proprietor of the animal, fearing lest some dreadful mischief might occur, gave orders for shooting him. A piece of cannon was accordingly brought out, and the first discharge laid him dead. Some time back, the owner refused to sell this elephant for twenty-five thousand francs.

The French scientific expedition in the *Uranie* frigate, under Captain Freycinet, which has been several times mentioned in the *Literary Gazette*, touched at Sydney, New South Wales, in December last.

*A New Island*—off Cape Horn, in lat. 51° long. 65°, has been discovered by ship William, on a voyage to Valparaiso. This vessel explored the coast for 200 miles. The Captain went on shore, and found the island covered with snow and uninhabited. Seals and whales abounded on the coast: it has been christened *New Shetland*.

The King has presented a gold medal and chain to Sir Thomas Lawrence, as President of the Royal Academy, to be worn by him in that capacity. The medal bears a portrait of the King, and is inscribed, "from His Majesty King George IV, to the President of the Royal Academy."

The Composer Paer, has been nominated a Chevalier of the Legion of Honour, by the King of France; and R. Leferre, the painter, and Dr. Beauchêne, author of *Maximes et Pensées*, members.

Sir Joseph Banks, we hear, has left his library to the British Museum.

We read in the French Journals, and are gratified to read it, a liberal acknowledgement of the manner in which the artists of that country (Mr. Isabeau, Mr. Jerricault, &c.) and their works, have been received in London. Such is the species of intercourse that ought ever to exist among the lovers of literature and the polite arts, of all nations.

*London*—An eminent medical gentleman, Mr. Clinac, asserted some years ago, that London was the healthiest place in the world; a distinguished geologist has now discovered that this city stands on the only spot in the island not liable to earthquake.

M. Galin, a musical professor, has lately introduced in Paris a new instrument for teaching music, called the *Mclophaste*. M. Galin's ingenious method consists in making his pupils sing from a staff, without either clefs or notes, according to the movements of a portable rod. The *Mclophaste* is now almost universally substituted for books of solfeggi, which were formerly considered indispensable.

The *Affiches de Poitiers* contained the following whimsical triple acrostick, forming a couplet in honor of M. Fabry Garat, who passed through Poitiers on the 24th of May.

G out,	G érie, et	G rands talens
A crump	A gent les tr	A ces;
R iche acro	R du, tend	R es accents,
A nobilissim	A ns nos r	A ngs
T es graces,	T es graces,	T es graces.

This literary *tour de force* is the production of Count Joubert de Classe.

## LITERARY NOTICES.

Professor Afzelius, of Upsal, is about to publish *Memoirs* of the celebrated Linnæus, written by himself, the manuscript of which was some time ago found in the university of Upsal. The work will, we hear, be translated into French, German, and English. Lord Strangford has undertaken the English translation.

*Antar* has been translated into French from Mr. Hamilton's translation of the Arabian.

The Princess (Alexandrine) of Canino, has, we observe, added herself to the list of literati, in the Buonaparte family. An *Epic Poem*, entitled *Batilde, Reine des Francs*, and dedicated to Cardinal Sommaglia, has been published at Rome by this lady.

Among the political essays to which the Spanish Revolution has given rise, is one very quaintly entitled "Spain happy in the life of the constitution, and death of the Inquisition."

*Contents of the Journal des Savans for May.*

Art. I. Roth, Remarks on the Writings of M. C. Fronto (in German).—Reviewed by M. de Vanderbourg.

II. S. de Sacy, Arabic Translation of the Testament of Louis XVI.—M. Chezy.

JH. Bonnard, Appercu geognostique des Terrains.—M. Tessier.

IV. Boissonnade, Notice Eugénien Nar-

ratio Amatoria et Constantini Mammis Fragments.—M. Lefronne.

V. Kosegarten, The Life of Amrou ben Keithoum, and the Moallaka of that author, in Arabic and Latin; with Notes, &c.—M. S. de Sacy.

VI. Karamsin's History of Russia, Vol. 3, to 4 (French translation).—M. Daumen.

VII. Le Palais de Scurus, ou Description d'une Maison Romaine.—M. Quatremer de Quincy.

VIII. Rochemigne: Le Parnasse Occident, ou Choix des Poesies originales des Troubadours, tirées des MSS. nationaux.—M. Raynaud.

IX. Poliorétique des Anciens, ou de l'Attaque et de la Defense des Places avant l'invention de la Poudre.—M. Lefronne.

## METEOROLOGICAL JOURNAL.

JUNE, 1820.

Thursday, 22—Thermometer from 40 to 70. Barometer from 30, 22 to 30, 26.

Wind S. W.  $\frac{1}{2}$  and 1. Clouds generally over-pend, with a little annahie. About 11 in the evening, it became clear.

Friday, 23—Thermometer from 46 to 77. Barometer, stationary at 30, 33.

Wind S. W.  $\frac{1}{2}$ .—Generally clear. A fog early in the morning.

Saturday, 24—Thermometer from 46 to 82. Barometer from 30, 39 to 30, 45.

Wind W. b. S. and S. b. E.  $\frac{1}{2}$ .—Clear. A thick fog till 7 o'clock in the morning.

Sunday, 25—Thermometer from 50 to 86. Barometer from 30, 52 to 30, 55.

Wind S. b. W. and N. E.  $\frac{1}{2}$ .—Clear.

Monday, 26—Thermometer from 57 to 88. Barometer from 30, 59 to 30, 55.

Wind N. E.  $\frac{1}{2}$  and E.  $\frac{1}{2}$ .—Clear. The wind very changeable during the day.

Tuesday, 27—Thermometer from 53 to 87. Barometer from 30, 57 to 30, 53.

Wind N. E.  $\frac{1}{2}$  and E.  $\frac{1}{2}$ .—Clear.

Wednesday, 28—Thermometer from 55 to 88. Barometer from 30, 49 to 30, 45.

Wind S. W. N. W. and N. b. E.  $\frac{1}{2}$ .—Generally clear: about 10 in the evening, a fine meteor was observed to fall in the West, from about the altitude of 45 to 20 degrees; its size was twice as large as Jupiter.

Lat. 51. 57. 32. N.

Lon. 3. 51. W.

Edmonton, Middlesex. JOHN ADAMS.

\* This is one degree higher than last summer, when it was 87 degrees on the 7th of August.

## TO CORRESPONDENTS.

To X. We are always happy to receive the contributions of literary friends; and the only condition we lay upon them is, that they must submit to the Editor's judgment in respect to their fit for a publication, the plan of which is strictly laid down.

\* We are reluctantly compelled to postpone our second article on *Immortality* till our next.

Erratum.—P. 413, col. 1, l. 40, for *rare* read *rure*. Even so, our friend the *Hermite's* phrase is not quite classical; but he is now a Country gentleman, and may be excused for a slip in his Latin, which escaped the Editor, and was not committed by the Printer's Devil.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

*British Gallery, Pall Mall.*

**THIS GALLERY**, with an Exhibition of PORTRAITS of distinguished Persons in the History and Literature of the United Kingdom, is open daily, from 10 in the Morning until 6 in the Evening.

Villis de Henningby in Agro Lancastriensi Rectores; Regis Societatis Londinensis; Societatis Linnaeae; et Societatis Philosophicæ Cantabrigiæ Socii.

Quocumque fructus, quos ipsa volentis rursus Aponteletur sine carpi. Price 7*l*. 6*l*. 6*l*.  
Editio Tertia. Cantabrigiæ: Typis ac sumptibus Academicis excudebat J. Smith; revident apud J. Delington et Filios, Cantabrigiæ; apud G. W. R. Whittaker; Longman et Co.; et Gul. Wood, Londini.

### Poetical Works of Sir Walter Scott, Bart.

**THE POETICAL WORKS of SIR WALTER SCOTT**, Bart. now first collected. 12 volumes. folio and quarto, with a Portrait of the author, engraved by C. Heath. 3*l*. 1*l*. 2s. boards.  
**MISCELLANEOUS POEMS**. By SIR WALTER SCOTT, Bart. 8vo. 1*l*. 6s. 6d.

**SIR THISTLE**, a metrical Romance of the thirteenth Century. By Thomas de Brecheleside, called the Blythe. Edited from the Auchinleck MS. by SIR WALTER SCOTT, Bart. Fourth Edit. 8vo. 1*l*. 6s. 6d.  
**THE MINSTRELY of the SCOTTISH BORDER**. Consisting of Historical and Romantic Ballads, founded on Local Traditions; with an Introduction and Notes. Fifth edit. 2 vols. 8vo. 1*l*. 1*l*. 6s. 6d.

**THE LAY of the LAST MINSTREL**. Thirteenth edit. 8vo. 1*l*. 6s. 6d.

**BALLADS and LYRICAL PIECES**. Fifth edit. 8vo. 7*l*. 6s. 6d.

**MARMION**, a Tale of Fionnida Field. Ninth edit. 8vo. 1*l*. 6s. 6d.

**THE LADY of the LAKE**, a Poem. Eleventh edit. 8vo. 1*l*. 6s. 6d.

**ROBBERY**, a Poem. Sixth edit. 8vo. 1*l*. 6s. 6d.

**THE VISION of DON RODERICK**.—THE FIELD of WATERLOO.—and other Poems. 8vo. 1*l*. 6s. 6d.

**THE LORD of the ISLES**, a Poem. 8th edit. 8vo. 1*l*. 6s. 6d.

Printed for Longman, Hurst, Rees, Orme, and Brown, London; and Archibald Constable and Co. Edinburgh.

8vo. price 4s.

**CASES of a SERIOUS MORBID AFFECTION**, principally incident to Females after Delivery, Abortion, &c. and arising from Uterine Hemorrhage, undue Venemction, Menorrhagia, protracted Lactation, Diarrhoea, Aphia, Constipation, Scybala, or other Causes of Exhaustion and Irritation. By MARRIAGE HALL, M. D. F. R. S. E. &c. The Morbid Affection in question constitutes a great proportion among purpuræ cases, and a great majority among the fatal ones; and of these fatal cases, many are rendered so by a mistaken use of the lancet. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Also, by the same author, a second edition, with considerable Additions.

On the MIMOSE, or a Descriptive, Diagnostic, and Prognostic, on Disorders of the General Health in their simple and complicated Forms, contrasted with some acute and insidious Diseases; being an attempt to propaagate the Views of Dr. Hamilton and Mr. Abernethy.

### Library of Classical English Poetry.

To one large Volume of 812 Pages Medium 8vo. price 1*l*. 10s. extra boards.

**SELECT WORKS of the BRITISH POETS**, with BIOGRAPHICAL and CRITICAL PREFACES. By Dr. AINSLIE. The object of this Work, which is entirely new, is to compile within a single volume, a Chronological Series of our Classical Poets, from Ben Jonson to Keats, without omission or abridgement, with Biographical and Critical Notices of their authors. The contents of this volume are so comprehensive, that few Poets, it is believed, are omitted, except such as are of secondary merit, or unsuited to the present of youth. The Work, within these bounds, may be termed a "Library of Classical English Poetry," and may safely be recommended to the heads of Schools in general, and to the Libraries of Young Persons. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

A new Edition of Dr. AINSLIE'S ANNALS of the REIGN of GEORGE the THIRD, brought down to his Majesty's Decease, in 8 vols. price 1*l*. 8s. is just published.

### Travels in Africa.

In 8vo. with two Maps, price 1*l*. 10s.

**AN ACCOUNT of TIMBUCTOO and HOU-SA**, Territories in the Interior of Africa. By M. RAGE and SALUM SHABEENIE, a Native of Morocco, who personally visited and resided as a Merchant in those interesting Countries. With NOTES, Critical and Explanatory. To which are added, Letters, descriptive of various JOURNEYS through West and South Barbary, and across the Mountains of Atlas. By JAMES GREG JACKSON, Esq. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

### Southerly's Life of Wesley.—2d edition.

In 2 vols. 8vo. with portraits, 1*l*. 8s. boards.  
**THE LIFE of WESLEY; and the RISE and PROGRESS of METHODISM**, by RICHARD SOUTHEY, Esq. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author, Poetical Works, 14 vols. folio and 8vo. 1*l*. 10s. 6d. boards. History of Brazil, 8 vols. 4to. 7*l*. 1*l*. 2s. boards, with a Map.

In 2 vols. 4to. price 5*l*. 5s. with a portrait of Mr. Tooke.  
**LUCIAN of SAMOSATA**, from the Greek. With the Comments and Illustrations of WILHELM and others. By WILLIAM TOOKE, F. R. S. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

For my own part, says the pious and learned Dr. Mayne, I know not to whose writings we owe more our Christianity, where the true God has succeeded in a world of false, whether to the grave confessions of Clement Alexandrinus, Ambrosius, Justin Martyr, St. Augustine, Lactantius, &c. or the facious words of Lucian, which sentiment is quoted and approved by Dryden.

8vo. price 7*l*. 6s. 6d.

**ELLEN FITZ-ARTHUR**, a Metrical Tale. In five Cantos. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

### Crooper's Surgery, a New Volume.

Vol. 2. (which completes the Work) with several Plates, price 1*l*. 10s.

**THE FIRST LINES of the PRACTICE of SURGERY**: designed as an Introduction for Students, and a concise Book of Reference for Practitioners. By SAMUEL COOPER, late Surgeon to the Forces; Member of the College of Surgeons; of the Medical and Chirurgical Society, &c. Printed for Longman, Hurst, Rees, Orme, and Brown; Higginly and Sons; Baldwin, Cradock, and Joy; J. Cullow; J. Cox and Son; T. and G. Underwood; G. and W. B. Whittaker; Anderson and Chase; Burgess and Will; Hurst, Robinson, and Co. London; Sterling and Stodd; A. Black; Fairbairn and Anderson; and P. Brown, Edinburgh. Of whom may be had, the 4th edit. of Vol. 1. price 1*l*. 10s. also by the same author.

**A DICTIONARY of PRACTICAL SURGERY**, comprehending all the most interesting improvements up to the present period. Third Edition, enlarged, price 1*l*. 4s.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and News-men throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 181.

SATURDAY, JULY 8, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### THE PERSONAL CHARACTERS OF SOVEREIGNS.

*Letters from Mrs. Delany, (widow of Dr. Patrick Delany,) to Mrs. Frances Hamilton, from the year 1779 to the year 1789; comprising many unpublished and interesting Anecdotes of their late Majesties and the Royal Family. London, 1820. Crown 8vo, pp. 106.*

The anecdotes are too few to justify the title page; and this sketch of royal privacy is altogether very slight: but as the former are authentic, and the latter is spirited and correct, they would at any period deserve the notice of a people sensitively alive to every recorded syllable touching the sovereigns who for more than half a century have sat upon the throne of these realms. At the present day they possess an augmented interest, and force upon the mind considerations of the deepest importance.

The universal impression, that "Windsor's royal towers" were the abode of domestic felicity, is proved by these Letters to have been a just opinion. They show us a King and Queen living in the bosom of their family, the pattern of conjugal and parental virtue; surrounded by subjects whom they had made their friends, and in whose intercourse the breathsome pomp of royalty was dismissed to make room for the kindly delights of the human affections; their hours of relaxation from the cares of empire and the fatigues of state, given to amusements either of elegant or elevating kinds, and all the most innocent; superintending the education of their children; turning from exercise and the chase to the fine arts and literature, and from these to the sublime music of Handel; and finally, never forgetting the God under whom Princes reign, but paying Him due adoration and the fervent homage of christian hearts every day, in public and in private. What a picture is here! well-look upon it with regret, inspired by the melancholy contrast of what is now presented to a nation's gaze.

We cannot but remember such things were, and were most dear to us. We cannot but remember that the virtues of the crown formed the key and corner stones of that grand structure which was Britain's bulwark against the fierce assaults of overwhelming revolution; her defence, from whose strong sides rolled back, impotent, the tumultuous tides of political anarchy and moral subversion. And to what did we owe this protection—*et præsidium et dulces deus?*—To the simplicity of soul and manners, the firm integrity and spotless life of

George the Third; and to the pure propriety which guided every action of his worthy consort. The influence of example descends in a flood from the throne-fountain, and covers the land. Never yet had dissolute prince a sober people; never yet had religious king a profligate kingdom.

That the conduct of the court concerns the welfare and happiness of the population, needs no argument: how much it affects the dearest interests of the entire mass, and of every individual who enters into its composition, can hardly be sufficiently estimated. There is not a pauper in the workhouse, nor a beggar in the street, to whom it is not a matter of consequence.

Can we help, then, being sorely affected by the deplorable circumstances of the passing era? When we reflect upon the stainless fame of a Charlotte, must we not feel with aggravated force the arraigned reputation of a Caroline? When we recall to mind the perfect regard of a preceiling queen to all the duties of her high station, must we not deplore with added sorrow the mournful deviations of our present queen? The fatal consequences are yet in the womb of time; but we will fearlessly, because patriotically, declare, that whatever has been the nature of her Majesty's doings abroad, the course she has in several instances adopted in England, is derogatory to the crown, and dangerous to the country. These are no partisan sentiments:—in common with every well-wisher to Britain, we perceive with disgust, that no sense of what is owing to the peace and happiness of 15 millions of men, comes in to temper the fury of personal passions. The gratification of these bids exclaim with the Misanthrope—

• • • Piety, and Fear,  
Religion to the Gods, Peace, Justice, Truth,  
Domestic awe, night-rest, and neighbour-love,  
Instruction, manners, mysteries, and trades,  
Degrees, observances, customs, and laws,  
Decline to your confounding contraries.  
And yet confusion live—

Queen Charlotte was a foreigner; her conversation and habits were shaped in Germany; her mind was trained and her manners moulded in the same school with her successor; and she committed no indecorous follies that sought this justification; she was prone to no grossnesses that needed this excuse; she was guilty of no licentiousness that used this apology;—she was a model of decent propriety in every relation in which she stood—as the king's wife, the mother of

• We are not speaking of politics, but of morals; not of crime, but of propriety of conduct. Christianity is an essential quality, not a virtue, in a Queen of England: her duty is to be a pattern of good manners, as much as of unquestionable virtue; of decorous, as much as of pious life.

royal progeny, the queen, the domestic amuse of him who bore the weight of empire, the private friend, the sincere christian. Circumstances may alter the form of our duties, but cannot change their nature: and to bring this comparison home, we put the supposition that any possible occurrences could have arisen which would have caused our late monarch to act as our present has done. We believe the response from every living being must be—It would have been impossible! To the memory of that Good Queen be the gratitude of England rendered in full measure: we mix no politics with our views, when we ascribe to her personal character much of the blessings which have sweetened and ennobled social life in our times.

Nor had she suffered, or fancied she suffered wrong, and entertained the malignant wish for revenge, were there grounds for that vile recrimination, the threat of which shakes and troubles us now. The private life of the Man was the counterpart of the public life of the Monarch. Vice was unknown: to either; and calumny and faction (for what is there in humanity that can avoid the one, or in royalty that can escape the other) whispered but of little weaknesses and of unintended error. The baseness of a Pindar, and the virulence of a Junius, could do no more. Would it were so still! But it is not. The throne is not surrounded by such men as formerly; there is not that respect for popular opinion which is alike congenial to the power of the king and the tranquillity of the subject; glimpses have been caught of a court eminent for neither morality nor religion; and consistently with the principles which we maintain, we assert that such cannot be the case without infecting and injuring the community. God forbid that we should set ourselves up as the rigid censurers of frailties, to which we are all liable, or of offences of which we are all too guilty; but in pursuing the reflections to which this publication and the events of this very day give rise, it would be cowardice and injustice were we to refrain from expressing these sentiments.

But we will not extend them to a more wearisome length; the train being suggested, every intelligent reader may follow the sequel, as our extracts from Delany's Letters direct. We only premise that this lady lived first with the Dukes of Portland, and on her death was invited by their Majesties to reside near them in Windsor, where she had constant opportunities of observing their interior economy and private conduct. The preface justly remarks—

"At a moment like this, when the recent loss of our beloved monarch has excited interest towards every circumstance illustrative of his private life and character.

it is thought that these letters, unaffectedly displaying the domestic happiness that reigned at Windsor Castle, and recording many traits which do honour to the head and the heart of the Sovereign, and of his Consort, would not prove uninteresting to the public. Who, indeed, would not rejoice that 'true happiness,' characterised by a great author, as, 'arising from the enjoyment of one's self, and from the friendship and conversation of a few select companions,' should have so eminently existed, where least likely to be found; in the centre of a Court, on the very throne of the greatest and most powerful empire of Europe.

"Many of the anecdotes will, perhaps, be thought by some readers too trivial and unimportant for public notice: did they concern private individuals the objection would be readily admitted; but the most trifling circumstance acquires dignity and interest, when it refers to departed worth and greatness; and the mind dwells with more satisfaction upon the recollection of George the Third, as the exemplary character in every social relation of life, than it does upon the splendour of his regal state."

Before copying the account of an evening at Windsor, we insert the Queen's letter of invitation to the author of these letters, who thus states the circumstance to her friend.

"On Saturday, the 3d of this month, one of the Queen's messengers came and brought me the following letter from her majesty, written with her own hand:—

"My dear Mrs. Delany will be glad to hear that I am charged by the King to summon her to her new abode at Windsor for Tuesday next, where she will find all the most essential parts of the house ready, excepting some little trifles, which it will be better for Mrs. Delany to direct herself in person, or by her little deputy, Miss Port I need not, I hope, add, that I shall be extremely glad and happy to see so amiable an inhabitant in this our sweet retreat; and wish, very sincerely, that my dear Mrs. Delany may enjoy every blessing amongst us that her merits deserve. That we may long enjoy her amiable company, Amen! These are the true sentiments of

"My dear Mrs. Delany's

"Very affectionate Queen,

"CHARLOTTE.

"Queen's Lodge, Windsor, Sept. 3, 1785.

"P. S. I must also beg that Mrs. Delany will choose her own time of coming, as will best suit her own convenience."

"I received the Queen's letter at dinner, and was obliged to answer it instantly, with my own hand, without seeing a letter I wrote. I thank God I had strength enough to obey the gracious summons on the day appointed. I arrived here about eight o'clock in the evening, and found his Majesty in the house ready to receive me. I threw myself at his feet, indeed unable to utter a word; he raised and saluted me, and said he meant not to stay longer than to desire I would order every thing that could make the house comfortable and agreeable to me, and then retired.

"Truly, I found nothing wanting, as it is

as pleasant and commodious as I could wish it to be, with a very pretty garden, which joins to that of the Queen's Lodge. The next morning her Majesty sent one of her ladies to know how I had rested, and how I was in health, and whether her coming would not be troublesome? You may be sure I accepted the honour, and she came about two o'clock. I was lame, and could not go down, as I ought to have done, to the door; but her Majesty came up stairs, and I received her on my knees. Our meeting was mutually affecting; she well knew the value of what I had lost, and it was some time after we were seated (for she always makes me sit down) before we could either of us speak. It is impossible for me to do justice to her great condescension and tenderness, which were almost equal to what I had lost. She repeated, in the strongest terms, her wish, and the King's, that I should be as easy and as happy as they could possibly make me; that they waived all ceremony, and desired to come to me like friends. The Queen delivered me a paper from the King, which contained the first quarter of 3000. per annum, which his Majesty allows me out of his Privy Purse. Their Majesties have drank tea with me five times, and the Princesses three. They generally stay two hours, or longer. In short, I have either seen or heard from them every day. I have not yet been at the Queen's Lodge, though they have expressed an impatience for me to come."

A subsequent letter says—

"The daily marks of royal favour (which, indeed, should rather be termed *friendly*), cannot be arranged in a sheet of paper; they are bestowed most graciously, and received most gratefully, and with such consideration as to banish that awe, which otherwise would be painful to me; and my sensations, when I am in their company, are, respect, admiration, and affection. I have been several evenings at the Queen's Lodge, with no other company but their own most lovely family. They sit round a large table, on which are books, work, pencils, and paper. The Queen has the goodness to make me sit down next to her: and delights me with her conversation, which is informing, elegant, and pleasing, beyond description, whilst the younger part of the family are drawing and working, &c. &c. the beautiful babe, Princess Amelia, bearing her part in the entertainment; sometimes in one of her sisters' laps; sometimes playing with the King on the carpet; which, altogether, exhibits such a delightful scene, as would require an Addison's pen, or a Vandryke's pencil, to do justice to. In the next room is the band of music, who play from eight o'clock till ten. The King generally directs them what pieces of music to play, chiefly Handel's."

The following amiable traits prove at once the desert of the author (in her 86th year) and the goodness of her royal patrons.

"My own health is very tolerable, though subject to attacks of faintness and nervous disorders, that sometimes, I fear, may alarm my friends: I would fain lessen my anxiety, and leave them to think calmly of that hour,

which, I thank God, appears to me without terror: the deprivation of the friends we have loved best, and the falling off of many for whom we have a great regard, casts such a melancholy gloom as to make one long for eternity; humbly beseeching the Almighty to make me fit for the change: but there are times, I assure you, when that gloom is dispelled, and my heart is relieved and warmed by the very kind attentions of my friends of all degrees; and my greatest distress is, that I feel such an overpowering gratitude as cannot be expressed.

"It is impossible for me to enumerate the daily instances I receive from my royal friends; who seem unwearied in the pursuit of making me as happy as they can. I am sure you must be very sensible how thankful I am to Providence for the late wonderful escape of his Majesty from the stroke of assassination; indeed, the horror that there was a possibility that such an attempt would be made, shocked me so much at first, that I could hardly enjoy the blessing of such a preservation. The King would not suffer any body to inform the Queen of that event, till he could show himself in person to her. He returned to Windsor as soon as the Council was over. When his Majesty entered the Queen's dressing room, he found her with the two eldest Princesses; and entering in an animated manner, said, 'Here I am, safe and well!' The Queen suspected from this saying, that some accident had happened, on which he informed her of the whole affair. The Queen stood struck and motionless for some time, till the Princesses burst into tears, in which she immediately found relief by joining with them. J-y soon succeeded this agitation of mind, on the assurance that the person was insane that had the boldness to make the attack, which took off all aggravating suspicion; and it has been the means of showing the whole kingdom, that the King has the hearts of his subjects. I must tell you a particular gracious attention to me on the occasion: Their Majesties sent immediately to my house to give orders I should not be told of it till the next morning, for fear the agitation should give me a bad night. Dowager Lady Spencer was in the house with me, and went with me to early prayers, next morning at eight o'clock; and after chapel was over she accompanied herself from me, and had a long conference with the King and Queen, as they stopped to speak to her on our coming out of chapel. When we returned to breakfast, I taxed her with her having robbed me of an opportunity of hearing what their Majesties said to her, by standing at such a distance. She told me, it was secret; but she had now their permission to tell me what it was, and then informed me of the whole affair.

"I was commanded in the evening to attend them at the Lodge, where I spent the evening; the happiness of being with them not a little increased by seeing the fulsome of joy that appeared in every countenance."

"One little anecdote of the Queen struck me, as a stronger instance of her real tender feeling towards our dear old friend, than all her bounties or honours. As soon as the

Duchess of Portland died, Mrs. Delany got into a chaise to go to her own house; the Duke followed her, begging to know what she would accept of, that belonged to his mother; Mrs. Delany recollected a bird that the Duchess always fed and kept in her own room, desired to have it, and felt towards it, as you must suppose. In a few days she got a bad fever, and the bird died; but for some hours she was too ill even to recollect her bird. The Queen had one of the same sort which she valued extremely (a weaver bird); she took it with her own hands, and while Mrs. Delany slept, had the cage brought, and put her own bird into it, charging every one not to let it go so near Mrs. Delany, as that she could perceive the change, till she was enough recovered to hear the loss of her first favourite. This requires no comment, as it speaks strongly for itself."

At a royal visit to Balstrode, Mrs. D. tells us—

"I kept my distance till she called me to ask some questions about the mosaic paper work; and as I stood before her Majesty, the King sat a chair behind me. I turned with some confusion and hesitation, on receiving so great an honour, when the Queen said, 'Mrs. Delany, sit down, sit down: it is not every lady that has a chair brought her by a king,' so I obeyed. Amongst many gracious things, the Queen asked me why I was not with the Duchess when she came; for I might be sure she would ask for me? I was flattered, though I knew to whom I was obliged for the distinction (and doubly flattered by that). I acknowledged it in as few words as possible, and said I was particularly happy at that time to pay my duty to her Majesty, as it gave me an opportunity of seeing so many of the Royal Family, which age and obscurity had deprived me of. 'Oh but,' says her Majesty 'you have not seen all my children yet; upon which the King came up and asked what we were talking about? which was repeated, and the King replied to the Queen, 'you may put Mrs. Delany into the way of doing that, by naming a day for her to drink tea at Windsor Castle.' The Duchess of Portland was consulted, and the next day fixed upon, as the Duchess had appointed the end of the week for going to Weymouth.—

"We went at the hour appointed, seven o'clock, and were received in the lower private apartment at the Castle: went through a large room with great bay windows, where were all the Princesses and youngest Princes, with their attendant ladies and gentlemen. We passed on to the bedchamber, where the Queen stood in the middle of the room, with Lady Weymouth and Lady Charlotte Finch. (The King and the eldest Prince had walked out.) When the Queen took her seat, and the ladies their places, she ordered a chair to be set for me opposite to where she sat, and asked me if I felt any wind from the door or window?—It was indeed a sultry day.

"At eight the King, &c. came into the room, with so much cheerfulness and good humour, that it was impossible to feel any painful restriction. It was the hour of the King and Queen, and eleven of the Princes

and Princesses' walking on the terrace. They apologised for going, but said the crowd expected them; but they left Lady Weymouth and the Bishop of Lichfield to entertain us in their absence: we sat in the bay-window, well pleased with our companions, and the brilliant show on the terrace, on which we looked; the band of music playing all the time under the window.—When they returned we were summoned into the next room to tea, and the Royals began a ball, and danced two country dances, to the music of French horns, bassoons, and hautboys, which were the same that played on the terrace. The King came up to the Prince of Wales and said he was sure, when he considered how great an effort it must be to play that kind of music so long a time together, that he would not continue their dancing there, but that the Queen and the rest of the company were going to the Queen's house, and they should renew their dancing there, and have proper music.

"I can say no more:—I cannot describe the gay, the polished appearance of the Queen's house, furnished with English manufacture."

The annexed is interesting.

"On Thursday, the 9th of May, I received a note from Lady Weymouth, to tell me the Queen invited me to her Majesty's house; to come at seven o'clock with the Duchess Dowager of Portland, to hear Mrs. Siddons read 'The Provoked Husband.' You may believe I obeyed the royal summons, and was much entertained. It was very desirable to me, as I had no other opportunity of hearing or seeing Mrs. Siddons; and she fully answered my expectations: her person and manner perfectly agreeable. We were received in the great drawing-room by the King and Queen, their five daughters, and Prince Edward. Besides the Royal Family, there were only the Duchess Dowager of Portland, her daughter Lady Weymouth, and her beautiful grand daughter Lady Aylesford; Lord and Lady Harcourt, Lady Charlotte Finch, Duke of Montague, and the Gentlemen attendant on the King. There were two rows of chairs for the company, the length of the room.

"Their Majesties sat in the middle of the first row, with the Princesses on each hand, which filled it. The rest of the ladies were seated in the row behind them, and as there was a space between that and the wall, the lords and gentlemen that were admitted stood there. Mrs. Siddons read standing, and had a desk with candles before her: she behaved with great propriety, and read two acts of the Provoked Husband, which was abridged, by leaving out Sir Francis and Lady Wronghead's parts, &c.: but she introduced John Moody's account of the journey, and read it admirably. The part of Lord and Lady Townly's reconciliation she worked up finely, and made it very affecting. She also read Queen Katharine's last speech in King Henry VIII. She was allowed three pauses, to go into the next room and refresh herself, for half an hour each time. After she was dismissed, their Majesties detained the company some time, to talk over what had passed,

ed, which was not the least agreeable part of the entertainment."

We need not multiply the account of these beautiful and rational scenes, and shall only add, that we have been exceedingly affected by reading them under the existing circumstances of the royal house and country.

*Advice to Julia; A Letter in Rhyme.*  
London, 1820. 12mo. pp. 236.

This poem is a clever and lively production, glancing at a number of the fashionable pursuits of the day...and night. The writer is reported to be a gentleman of the name of Luttrell; and, as far as such book-worms as we are, may presume to guess, is one familiar with the circles which are or were called the *ton*. It is true, that in ascribing this praise, we must confess to the conjectural nature of the data whereon we form our opinion; for no reasonable readers can expect, (omniscient as the *He* of periodical criticism is) that any one of our corps can by possibility be conversant with the high mysteries of Almanacs and the Argyle Rooms, or the low mysteries of the Hells and Palais Royal. Were the subject of Dionysia or Phallia, Luper-calia or Paphia, our classics might help us out; but here we find terms above our comprehension; and the history of things, which, for aught we can tell, real as they seem, may be but poetical fictions. We have endeavoured, through all our books of reference, to discover the precise meaning of the most obscure passages; but having no Dictionary of Luxuries, can only surmise, that "Sal-mi," "Bechamel," "fodu," &c. &c. mean something very superb, like red champagne, perfumed hock, the comet vintage, and such gear, as we have heard enough of to give us some notion what they are. As well as we can understand, we shall digest the advice to Julia for the use of our readers.

The vehicle for the verse is rather of a loose character, for Julia is a naughty person, and the author brings the whole range of gay life under her review, under the plea of telling her not to debar his friend and her slave, Charles, from his wonted sports, which he accordingly describes to her. A more moral frame-work might have been chosen; but there is "no offence 't the world" in the manner in which the matter is treated, beyond what is objectionable in itself. The suggestion is from the 8th ode, of the 1st book of Horace.

—Sylbarin cur properes amando  
Perdere?

and the writer says in his first note;—

"To this Ode, consisting of only sixteen lines, the author of these rhymes is indebted

for the first conception of what he has endeavoured to execute. It occurred to him that, by filling up such an outline on a wider canvass, it might be possible to exhibit a picture, if imperfect not unfaithful, of modern habits and manners, and of the amusements and lighter occupations of the higher classes of society in England. The shortness of the Ode has tempted him to imitate it. Classical readers may not perhaps be displeased at meeting with occasional allusions to a favourite author, while to others they will be, at the worst, indifferent, and may, as such, be passed over without injury to the Poem."

We consider them as very pleasing ornaments to the poem, which has the fault of being rather too long for a *Jeu d'esprit*, and as good reliefs to the repetitions which this fault involves. Charles, the modern Achilles in the toils of his Deidamia, has been—

The glass of fashion and the mould of form,  
The observed of all observers—  
in a word, the Prince of Dandies. The picture of a fop is excellently drawn; we copy the most characteristic traits:—

How much at home was Charles in all  
The talk *aforsaid*—nicknamed *small*;  
Seldom embarrassed, never slow,  
His wits always "touch and go;"  
From grave to gay he ran with ease,  
Secure alike in both to please,  
Chanced he to falter? A grimace  
Was ready in the proper place;  
Or a chased snuff-box, with its gems  
And gold, to mask his *ad's* and *am's*,  
Was offered round, and duly rapped,  
Till a fust topic could be tapped.  
What if his envious rivals swore  
"Twas jargon all, and he a bore?"  
The surly sentence was outcried,  
His jokes retailed, his jargon quoted;  
And while he sneered or quizzed or flouted,  
The world, half angry, was diverted.

Charles was a master, a professor  
Of this great art—a *first-rate dress*.  
Oft have I traced him through the town,  
Mowing whole ranks of beauty down,  
Armed at all points, from head to foot,  
From rim of hat to tip of boot.  
*About so loose, below so braced,*  
In chest embraced, and in waist  
Just like an hour-glass, or a wasp,  
So tightened, he could scarcely gasp,  
Cold was the nymph who did not dote  
Upon him, in his new-built coat;  
Whose heart could parry the attacks  
Of his voluminous *coatcases*—  
Trowsers so called from those barbarians  
Nursed in the *Steppes*—the *Crim Tartarians*,  
Who, when they scour a country, under  
Those ample folds conceal their plunder.  
How strange their destiny has been!  
Promoted, since the year *fifty*,  
In honour of these fierce allies,  
To grace our British legs and thighs,  
Fashion's a tide which nothing stems;  
So the *Don* mingles with the *Thames*.

No more his well-brushed hair is sleek  
With *oil de miel*, or *huile antique*.  
The golden key no more unlocks,  
By *Brabant's* aid, his rose-wood box;  
And with the treasures there displayed,  
Dazzles the wondering chambermaid;

As, on her broom reclined, she pauses,  
Orling the silver cups and vases,  
Whence steams a mingled soft perfume,  
New to her nostrils, through the room.

No more with buckram or with wool  
His overloaded bosom's full;  
One glance from you is quite enough  
To "cleanse it of that perilous stuff."  
Loosed by the spell of your endearments,  
His tortured ribs have burst their cerements,  
And, like delinquents freed from jail,  
His waist is fairly out on bail.  
Julia, you've moved its *habitus corpus*;  
But when the man is grown a porpus,  
Long, long before the season's ended,  
You'll wish it had still been *surpended*.

There is one *exquisite* touch—  
"Have you, my friend," I've heard him say,  
"Been lucky in your turns" to-day?—†

The following view of a well known riddle in the Park is very humorous.

Where ancient gentlemen come forth,  
Screened from the breezes of the north,  
To bask 'em in the province won  
From Winter by the southern sun:  
When birds on leafless branches sing,  
And the last days of April bring  
A lame apology from Spring.  
There, on their easy saddles pumping  
Fresh air into their lungs by bumping,  
Under the lee of wood and wall  
They nod and totter to their fall;  
Their only business to contrive  
The ways and means to keep alive.  
And, if permitted by the fates,  
Remember long their sons' estates;  
Which, in compassion to the Jews,  
The fates *aforsaid* often refuse.

The effects of Peace are placed in a ludicrous light.

Too warm, my friend, your anger waxes;  
Consider, pray, the war and taxes.  
First 'twas Napoleon and the French,  
Now 'tis The Peace.—We must retrench.  
War was a bitter scourge and curse;  
Yet peace is, somehow, ten times worse.  
Peace, or (as more than one division  
Has gravely voted it) *Transition*,  
As Commerce droops and times grow harder,  
Shuts here a cellar, there a larder;  
By slow, yet sure degrees, disables  
Parks, gardens, eating-rooms, and stables;  
Nor yet in her career relents,  
But moves down whole establishments.  
The poor, the middling, shoot a pitch  
More and more humble;—even the rich  
From whose fal' acres milk and honey  
Keep flowing in the shape of money,  
I've seen economy produce  
If not a reason, an excuse.  
Their rates are high, their rents decrease,  
Their corn's a drug;—'tis all the Peace!  
This Jude like Peace! Say, who will father her,  
Unless she's sworn to the tax-gatherer?

The satire upon lotteries is not less deserving of praise, for its talent and object.  
Play has been always a temptation  
In every climate, age, and nation.  
Our neighbours scorn to live without it;  
But then they never cast about it;

† That is, the *turns* of his cravat, a matter of sufficient importance to occupy several dandy hours daily, unless lucky.

† A question actually put by a great master *en fait de Cravates* to one of his most promising pupils.

Nor vow their indignation rises  
In thinking of our blanks and prizes;  
Nor read us lectures, nor condemn  
In us, the faults we share with them;  
While we, so moral and demure,  
So overnice, so overpure,  
Who, with uplifted eyes and hands,  
Deplore the sins of foreign lands,  
And thus reluctantly make war  
On *Craps*, *Roulette*, and *Rouge-et-noir*,  
Deem it humane, and just, and wise,  
To raise a tax on *Lotteries*!  
"Cards! how atrocious!—die! how wicked!"  
But go, my friend, and buy a ticket.—  
French gamblers all are malefactors;  
Ours only innocent contractors,  
Who puff, 'tis true, but, like the quacks,  
In puffing pay *another* tax.  
Morals are quite a treasure, when you  
Don't touch a greater—the *Revenue*!  
Frauds will exist, in vain we stamp 'em;  
But for their instruments—we stamp 'em.  
Since roguery cannot be kept under,  
'Tis fitter man-like to share the plunder,  
And thus, extracting good from evil,  
Compound with God, and cheat the Devil.  
Such thy mor-tality, Vansittart,  
Thou, who the pupil of great Pitt art!

O! that there might, in England, be  
A duty on hypocricy!  
A tax on humbug, an excise  
On solemn plausibilities!  
No income-tax, if these were granted,  
Ned be endured, or could be wanted;  
Say—Van, with an o'erflowing chest,  
Might soon abolish all the rest!

There is an amusing coup d'œil thrown over the autumn in London, from which we select one of the touches.

No longer from the footman's thumb  
And finger, pearls of thunder come,  
Closed are the doors, the knockers dumb.  
No cards, in broad cast sown about,  
Alarm us with a red-hot rout;  
Nor, in a rainy blustering night,  
(The London-Coach-makers' delight)  
Comes on the startled ear, from far,  
The hubbub of domestic war  
In yonder Square, where half the town  
Are taking up, and setting down,  
In breathless haste, amid the din  
Of drunken coachmen cutting in.  
Hushed is the sound of swearing, lashing,  
Of tangled wheels together clashing,  
Of glasses shivering, pannels crashing,  
As thus they try their rival forces  
In whips, and carriages, and horses.  
What though their mistresses should fret,  
Be frightened, trampled on, or wet?  
How, but by prancing in the mud,  
Can pampered cattle show their blood?  
Honor's at stake—and what is comfort,  
Safety, or health, or any sum fort?  
The bills, 'tis true, to those up stairs,  
Are somewhat *Amus*, for repairs;  
But rucroes, coachmen: Such disasters  
Are not your business, but your masters'.

Driven into the country, we find our Exquisite, among other rustic enjoyments, indulging in Leicestershire hunting, with the Melton club. Being roused to the sports it a bad morning is excellent.

No more the punctual groom shall shake  
His master till they both awake  
To listen to the wind and rain  
At us loud slattering on the pane.

And envy those who stretch and yawn,  
Careless of bleak December's dawn;  
And doze, perchance, some idle inventing,  
To shirk this famous day for scenting.  
To get the inexorable groom,  
And his d-d candle from the room;  
While gusts more strong, and showers more  
thick,

Give him strange thoughts of shamming sick:  
Till, mindful of his former fate,  
He combats drowsiness with shame;  
Till (resolution gathering strength,  
And slumber from his limbs at length  
Loosening the chains which bind the lazy)  
He votes the morning only bad;  
"Screws," with a steady hand and face,  
His "courage to the sticking place."  
And, ere the half-hour's chimes are counted,  
Is fairly up, equipped, and mounted.

Experience in this pleasure is gained, and  
we find it thus described.

Warned by the knowing ones to keep  
Aloof from every useless loop,  
(Since oft, in their unruly bounds,  
Horses *throw off*, as well as hounds)  
To copy those whose practised eye  
Turns to the well-known gap hard-by,  
He learns, in rising at a gate,  
The value of the hint too late,  
For, awkward where he should be limber,  
Just as 'tis cleared, he *touches timber*;  
Falls, and before he can recover him;  
Aghast, sees half the field ride over him;  
A perfect judge, though bruised to jelly,  
Of every horse's girth and belly.  
Thrice he his suppliant arms extends  
In vain to all his dearest friends;  
And lies, perchance, where Fate has spilled him,  
Till they have runned the fox and killed him.

The author supposes that the emancipated  
lover may become a senator, and tells us  
what his duties will then be.

And now, with no design to quit,  
I'll tell you what this *business* is.  
This mute, inglorious toil and pain  
That wears the body, not the brain—  
Much more in many cases,—here  
Much less is meant than meets the ear.  
Just listen, and you'll find a knack 'tis  
Soon mastered by a little practice.

To calculate, with due precision,  
The moment of the next division;  
The art in proper time to cough;  
The mysteries of pairing off;  
When to be mute, and when to cheer  
A modest member with a "Hear,"  
The secret, ere debates begin,  
Of whipping out—and whipping in  
From Bellamy's with checked digestion,  
Just as the Speaker puts the question;  
Such, Julia, are the hard conditions  
Imposed on sucking politicians!

But Charles must sacrifice his ease  
Sometimes, to heavier tasks than these.  
Perchance, to settle who shall sit, he  
Is tethered to some dull committee,  
Where learned lawyers, having wrangled  
For months, leave matters more entangled.  
Joy to the candidates who pay  
From ebbing purses, day by day,  
Hundreds for every fresh objection  
Which leads them to a *void election*!  
Or, at the opening of the session,  
(Usual courage with discretion)  
Must strive his faltering tongue to teach  
The echo of a royal speech,

In which the mover and the seconder  
Too oft, alas! though clever reckon'd, err;  
Or, when he meditates some for jaunt,  
Is taken captive by the Seignior,  
From whose firm grasp no custodie  
E'er yet escaped—without a fight;  
Or posts, from some far distant hall  
Up, through ten counties, to a *Call*;  
Or hurrying down at four (how pleasant!)  
Sees, if diamary, not forty present,  
Yet lingers, till, to end his doubt,  
The punctual Speaker counts them out;  
Or, fumbling at the door, is shocked,  
To find it mercifully locked;  
Or, when the weather warner waxes,  
Must help Vansittart through the taxes,  
And, threatening those who heary think 'em  
With the laid ghost of that on Income,  
Cry, "question!" when the strongest side  
To conquer—has but to divide.

What, though thy floor, St. Stephen, yield  
To gifted minds a glorious field;  
Though rich the prize of those who aim  
Within thy walls at power and fame,  
And, through the struggles of debate,  
Rite, or aspire to rule the state;  
Yet who in mere routine would waste  
One grain of knowledge, sense, or taste!  
Who, through a tedious session, bears  
To slumber in the tainted air  
Of crowded benches, glad to make  
His dinner on a tough beef-steak;  
Or (summoned by a Treasury-note)  
Night after night to sit and vote,  
A mere machine, with no dominion  
Over his seat or his opinion;  
Only to frank an ounce, and see  
On all his letters' backs M. P.!

Who would, as day begins to peep,  
(The horse half hungry, half asleep)  
With many a yawn and inward curse,  
Hear a *bad speech*—or make a *worse*?  
Who from his party, like a rat, run,  
To honour some capricious patron,  
Or trimming father, whom his son dreads;  
When he might take the *Chiltern Hundreds*,  
And in a trice resign his seat?  
But that the terror of the Fleet,  
Or King's Bench prison, from whose bourn  
'Tis not so easy to return,  
Urges the slave, with puzzled will,  
To bear a heavier bondage still.

These examples will enable the public to  
form a just opinion of the honours of Julia's  
adviser. There are a few slight slips, which  
we will not stop to point; and a good many  
sharp clenches, which we can hardly exhibit  
in a connected shape, without encumbering  
them with too much explanation. Two or  
three may, however, be cited. Driven by a  
shower from the Park—

Fiercer and fiercer blows the gust,  
Barthened at once with rain and dust:  
Breathless they scud, some helter skelter  
To carriages, and some for shelter;  
Lisping to coachmen drunk or dumb  
In *members*—while no numbers come.  
Nor sheds are hear—nor open shops  
Protect them from the "big round drops."  
Their saracens spoiled, their stockings splashed,  
Their muslins prematurely washed;  
Some in their clinging clothes so lank,  
Others so bounding, all so blank,  
Enraged, resigned, in tears, or frowning,  
Look as if just escaped from drowning;  
While anxious thoughts pursue them home,  
Whence their next Sunday's dress must come.

### The Serpentine—

Well may the coyest of the Nine  
Be proud to sing the Serpentine;  
For never breeze has swept, nor beam  
Shed light upon a luckier stream.  
A brook, that from a scanty source  
Hard by, just struggles in its course,  
Scarce has it reached, slow trickling thence,  
The bounds of royal influence,  
When (mark the favor and protection  
That flows from interest and connexion!)  
'Tis bidden a nobler form to take,  
To spread and widen to a lake,  
And with a strange meandering name,  
Like Cromwell—to be damned to fame.

### The cheeks of beauty—

Where York and Lancaster combine  
Their roses in those cheeks of thine.

Upon the whole, this poem is a very pleas-  
ing piece of easy reading, and deserves to be,  
we imagine, a favourite with those addicted  
to that species of study.

*The Natural History of Ants*; by M. P.  
Huber, &c. Translated from the French,  
with Additional Notes, J. R. Johnson,  
M. D. F. R. S. &c. London, 1820.  
12mo. pp. 398.

Huber on Ants is sufficiently celebra-  
ted in its original language, to render  
all descriptive comment unnecessary.  
A translation was every way desirable,  
and Dr. Johnson has shown himself  
perfectly competent to perform that  
task in the ablest manner. Having so  
premised, we have little to do beyond  
making a summary of his very interest-  
ing work (which we thank him for not  
having made a book of), and laying be-  
fore our readers such extracts as display  
the most extraordinary traits of these  
wonderful insects.

Natural history is perhaps the most amus-  
ing of studies, though not so useful as  
botany or chemistry. It is curious to observe,  
however, on the score of utility, that the  
more minute parts of creation are of in-  
finitely greater importance than the superior  
creatures in the scale of animal life. A  
knowledge of entomology is calculated to  
elicit more for the benefit of man, than an  
acquaintance with the habits of the larger  
brutes: the bee, the silk-worm, the coch-  
ineal insect, the Spanish fly, &c. &c. are far  
more essential to our purposes than the lion,  
the elephant, the rhinoceros, or the bear;  
even the sheep and the cow, only compare  
with these insects, as cloisters and virtual-  
lers; and the horse is merely physical force,  
subjected to the direction of the higher ani-  
mal man.

If we consider further, how very limited  
our research has yet been into the micro-  
graphic world, we may, without being thought  
too speculative, lose ourselves in the idea  
of the immensity of stores that remain to be  
discovered in the merest particles of animat-  
ed nature: there is nothing too much to be  
imagined on the subject. But our business  
is rather to disclose the remarkable circum-

stances ascertained by the ingenious M. Huber, than to indulge in theorizing; and we therefore proceed to his History of Ants, which we have found so entertaining, that we have no doubt it will furnish more than one interesting paper for the Literary Gazette.

The first chapter treats of the architecture of ants, of which the species mentioned in this volume are the Herculean (*Formica herculeana*, Linn.), the Ethiopian (*F. Nigra*), the Fuliginous (*F. Fuliginosa*), the Brown (*F. Brunnea*), the Yellow (*F. flava*), the Fallow, 2 kinds (*F. Rufa*), the Red (*F. Rubra*), the Turf (*F. Cespitum*), the Dark Ash-coloured (*F. Fusca*), the Mining (*F. Cunicularia*), the Rufescent (*F. Rufescens*), and the Sanguine (*F. Sanguinea*). The various habits of these wonderful insects are amply described; and were we not assured by ocular examination, of the truth of many of the particulars, we could hardly extend our belief to the prodigies related by the author; but we have witnessed so much that we can credit all. To return to the architecture; we find that their habitations, their cities, are not the least curious of their performances. Mr. Huber details the formation of a domicile by the fallow ants, and adds—

"Our little insects, now in safety in their nest, retire gradually to the interior before the last passages are closed, one or two only remain without, or concealed behind the doors on guard, whilst the rest either take their repose, or engage in different occupations in the most perfect security.

"I was impatient to know what took place in the morning upon these ant-hills, and therefore visited them at an early hour. I found them in the same state in which I had left them the preceding evening. A few ants were wandering about on the surface of the nest, some others issued from time to time from under the margin of the little roofs formed at the entrance of the galleries; others afterwards came forth who began removing the wooden bars that blocked the entrance, in which they readily succeeded. This labour occupied them several hours. The passages were at length free, and the materials with which they had been closed scattered here and there over the ant-hill.

"Every day, morning and evening, during the fine weather, I was a witness to similar proceedings. On days of rain, the doors of all the ant-hills remain closed. When the sky is cloudy in the morning, or rain is indicated, the ants, who seem to be aware of it, open but in part their several avenues, and immediately close them when the rain commences. It would appear from this they are not insensible of the motive for which they form these temporary closures.

"To have an idea how the straw or stubble roof is formed, let us take a view of the ant-hill at its origin, when it is simply a cavity in the earth. Some of its future inhabitants are seen wandering about in search of materials fit for the exterior work, with which, though rather irregularly, they cover up the entrance; whilst others are employed in mixing the earth, thrown up in hollowing the interior, with fragments of wood and

leaves, which are every moment brought in by their fellow-assistants; and this gives a certain consistence to the edifice, which increases in size daily. Our little architects leave here and there cavities, where they intend constructing the galleries which are to lead to the exterior; and as they remove in the morning the barriers placed at the entrance of their nest the preceding evening, the passages are kept entire during the whole time of its construction. We soon observe it to become convex; but we should be greatly deceived did we consider it solid. This roof is destined to include many apartments or stories. Having observed the motions of these little masons through a pane of glass which I adjusted against one of their habitations, I am enabled to speak with some degree of certainty upon the manner in which they are constructed."

"I never found, even after long and violent rains, the interior of the nest wetted more than a quarter of an inch from the surface, provided it had not been previously out of repair, or deserted by its inhabitants."

"The ants are extremely well sheltered in their chambers, the largest of which is placed nearly in the centre of the building; it is much loftier than the rest, and traversed only by the beams that support the ceiling: it is in this spot that all the galleries terminate, and this forms, for the most part, their usual residence."

"Those ants who lay the foundation of a wall, a chamber, or gallery, from working separately, occasion now and then a want of coincidence in the parts of the same or different objects. Such examples are of no unfrequent occurrence, but they by no means embarrass them. What follows proves that the workman, on discovering his error, knew how to rectify it.

"A wall had been erected with the view of sustaining a vaulted ceiling, still incomplete, that had been projected from the wall of the opposite chamber. The workman who began constructing it, had given it too little elevation to meet the opposite partition upon which it was rest. Had it been continued on the original plan, it must infallibly have met the wall at about one-half of its height, and this it was necessary to avoid. This state of things very forcibly claimed my attention; when one of the ants, arriving at the place, and visiting the works, appeared to be struck by the difficulty which presented itself; but this it as soon obliterated, by taking down the ceiling and raising the wall upon which it reposed. It then, in my presence, constructed a new ceiling with the fragments of the former one.

"When the ants commence any undertaking, one would suppose that they worked after some preconceived idea, which indeed, would seem verified by the execution. Thus, should any ant discover upon the nest, two stalks of plants, which lie cross-ways, a disposition favourable to the construction of a lodge; or some little beams that may be useful in forming its angles and sides, it examines the several parts with attention, then distributes with much sagacity and address parcels of earth, in the spaces, and

along the stems, taking from every quarter materials adapted to its object, sometimes, not caring to destroy the work that others had commenced; so much are its motions regulated by the idea it has conceived, and upon which it acts, with little attention to all else around it. It goes and returns, until the plan is sufficiently understood by its companions."

"From these observations, and a thousand similar, I am convinced that each ant acts independently of its companions. The first who conceives a plan of easy execution, immediately gives the sketch of it; others have only to continue what this has begun, judging, from an inspection of the first labours, in what they ought to engage. They can all lay down plans, and continue to polish or retouch their work as occasion requires. The water furnishes the cement they require, and the sun and air harden the materials of which their edifice is composed. They have no other chisel than their teeth, no other compass than their antennae, and no other trowel than their fore-feet, of which they make use in an admirable manner, to affix and consolidate the moistened earth."

"We have thus some idea of that masonry which erects the abodes familiar to every eye, though the execution may not be familiar to many minds. The second chapter contains an account of the eggs, larvae and pupae; and here other marvels are unfolded. In the ants nest are males whose sole business is to perpetuate the species and die; females who are waited upon like peacocks in their own right, who neither till nor spin, but are served by neutrals, labourers, who tend their innumerable eggs, nourish and unfold the larvae, and in short, do all the duties of mothers, nurses, and menials. The author derived means to observe their internal economy; and he says—

"Let us now open the shutter which conceals from us the interior of the ant-hill, and let us see what is passing there.

"Here, the pupae are heaped up by hundreds in their spacious lodges; there, the larvae are collected together, and guarded by workers. In one place, we observe an assemblage of eggs, in another place, some of the workers seem occupied in following an ant of a larger size than the rest;—this is the mother, or at least one of the females, for there are always several in each ant-hill:—she lays as she walks, and the guardians, by whom she is surrounded, take up her eggs, or seize them at the very moment of her laying them; they collect them together, and carry them in little heaps in their mouths". On looking a little closer, we find that they turn them continually with their tongues; it even appears, they pass them one after the other between their teeth, and thus keep them

• The eggs of ants are so remarkably minute, that there would seem an absolute necessity of their being held together by some glutinous matter, otherwise, it would render the removal of such small bodies in the mandibles of ants almost impossible; the mandibles being so constituted as not to be brought into that close contact necessary for this operation.—T.

constantly moistened. Such is the first *aperçu* which my glazed apparatus offered.

"Having directed my close attention to these eggs, I remarked they were of different sizes, shades, and forms. The smallest were white, opaque, and cylindrical; the largest, transparent, and slightly arched at both ends; those of a middle size were semi-transparent. In holding them up to the light, I observed a sort of white oblong cloud; in some, a transparent point might be remarked at the superior extremity; in others, a clear zone above and underneath the little cloud. The largest presented a single opaque and whitish point in their interior. There were some whose whole body was so remarkably clear as to allow of my observing very distinctly the rings. In fixing my attention more closely upon the latter, I observed the egg open, and the larva appear in its place."

"I have been enabled to observe, through the glasses of my artificial ant-hill, the great care taken of these little worms, which bear also the name of Larvæ. They were generally guarded by a body of ants, who, raised upon their feet, with their abdomen brought between these members, were prepared to cast their venom upon all intruders, whilst here and there, other workers were engaged in clearing the passages, by removing the materials which were out of place; a great number of their companions taking at the same time their repose, and appearing to be fast asleep; but a busy scene occurred at the moment of transporting their little ones to enjoy the warmth of the sun. When the sun's rays fell upon the exterior portion of the nest, the ants, who were then on the surface, descended with great rapidity to the bottom of the ant-hill, struck with their antennæ the other ants, ran one after the other, and jostled their companions, who mounted at the moment under the bell glass, and redescended with the same speed, putting in their turn the whole colony in motion, so that we could observe a swarm of workers, filling up all the passages; but what proved still more their intention by these movements, was, the violence with which the workers sometimes seized, with their mandibles, those who did not appear to understand them, dragging them forth to the top of the ant-hill, and immediately leaving them, to go and seek those still remaining with the young."

"As soon as the ants had intimation of the appearance of the sun, they occupied themselves with the larvæ and pupæ; they carried them with all expedition above the ant-hill, where they left them exposed to the influence of the heat. Their ardour suffered no relaxation; the female larvæ (which are heavier, and much larger than those of the other cast) were carried, with some difficulty, through the narrow passages, leading from the interior to the exterior of the ant-hill, and placed in the sun, by the side of those of the workers and males. After remaining there a quarter of an hour, the ants again took them up, and sheltered them from the direct rays of the sun, by placing them in chambers, situated under a layer of straw, which did not entirely intercept the heat.

"The workers, after having fulfilled the duties imposed upon them in regard to the larvæ, did not forget themselves; they sought, in their turn, to stretch themselves in the sun, lay upon each other in heaps, and seemed to enjoy some repose, but it was of no long duration. I observed a great number constantly employed on the surface of the ant-hill, and others engaged in carrying back the larvæ, in proportion as the sun declined. The moment of nourishing them being at length arrived, each ant approached a larva, and offered it food. "The larvæ of ants," observes M. Latreille, "resemble, when they quit the egg, little white worms, destitute of feet, thick, short, and in form almost conical; their body is composed of twelve rings: the anterior part is slender and curved. We remark at the head two little horny pieces or hooks, too distant from each other to be regarded as true teeth; under these hooks we observe four little points or cilia, two on each side, and a *manelon*, or tubercular process, almost cylindrical, soft, and retractile, by which the larva receives its food."

(To be continued.)

Peter Faultless to his Brother Simon ;  
*Tales of Night, in Rhyme; and other Poems.* By the Author of Night.  
Edinburgh and London, 1820. 12mo.  
pp. 226.

We are sorry to have to notice this publication; but having in our Number 107 (6th February, 1819,) admitted a review of the preceding work by the same writer, which would recommend any of his subsequent productions, we feel bound to enter our caveat against that consequence. Mr. Elliott, the reputed author, has far forgot himself in his new volume; and ten times the ability which he displays in his attack upon the Reviewers in the Monthly Review, and in parts of his graver poems, would fail to procure him pardon for the filth and obscenity which he has thrown into what he calls comic stories. To us these appear indeed to deserve the name of 'Tales of Night,' for they ought never to have seen the light of Day. It is really surprising that any man of common sense, or moral feeling, could be guilty of an offence against decency so exceedingly gross, (and withal so destitute of wit or humour, to colour its depravity,) as is committed, for instance, in the poem, 'Matrimonial Magic.' It is fit for the Brothel only, and must exclude the book from every place where virtue is valued and pollution feared. We have done our duty to ourselves and the public in thus expressing our sentiments; and will not encumber our page with those quotations from some of the other poems, which we should

have adopted had they not been intermingled with such nasty trash and low abomination as to fill us with disgust, and render all parody disreputable.

M'LEOD'S ACCOUNT OF DAHOMY, &c.  
(Continued.)

At their annual festivals a number of human victims, mostly prisoners of war, are immolated among the sports of the occasion.

Their bodies are either thrown out into the fields to be devoured by vultures and wild beasts, or hung by the heels in a mutilated state, upon the surrounding trees, a practice exceedingly offensive in so hot a climate. The heads are piled up in a heap, for the time, and afterwards disposed of in decorating the walls of the royal *simbomies*, or places, some of which are two miles in circumference, and often require a renewal and repair of these ornaments.

Adahoonza, in 1785, after a successful attack upon Badagry, having a great number of victims to sacrifice, ordered their heads to be applied to this purpose. Mr. Abson, in his account, says, "the person to whom the management of this business had been committed, having neglected to make a proper calculation of his materials, had proceeded too far with his work, when he found that there would not be a sufficient number of skulls to adorn the whole palace; he, therefore, requested permission to begin the work anew, that he might, by placing them farther apart, complete the design in a regular manner. But the king would by no means give his consent to this proposal, observing, 'that he would soon add a sufficient number of *Badagry heads* to render the plan perfectly uniform,' and learning that a hundred and twenty-seven were required to complete this extraordinary embellishment, he ordered that number of the captives to be brought forth and slaughtered in cold blood."

Messrs. Norris and Abson, who had frequent opportunity of visiting the bed-chamber of *Bossu Ahadee*, found the passage leading to it paved with human skulls. They were those of his more distinguished adversaries captured at different times, and placed in that situation, "that he might nightly enjoy the savage gratification of trampling on the heads of his enemies." The top of the little wall which surrounded this detached apartment, was adorned likewise with their jaw-bones. Whatever may have been the frailties of Ahadee and his successors, it would seem from all this that the dread of ghost and hobgoblins formed no part of their characters.

So much for Dahomy: we finish with a story of a still more extraordinary character, which, being vouched on this respectable authority of Dr. M., whose veracity, however jocular he may be, we have not the slightest doubt must be received as an instance of one of those coincidences in human affairs, which may, with little credulity, be re-

garded as miraculous. The author is speaking of Lieutenant Price, and he says—

It may, perhaps, be a pardonable digression here to notice how this officer, on one occasion, made a considerable sum of prize-money in a very miraculous sort of manner.

Whilst cruising off Cape Tibourou, in the Island of St. Domingo, in the Sparrow cutter, commanded by Lieutenant Wylie, they chased and came up with an American brig, whose cargo, added to other circumstances, excited such suspicion of her being enemy's property, that they thought proper to send her in to Port Royal for examination.

The American, captain, however, swore so positively, through thick and thin, to the truth of the papers which he produced, that the Admiralty-court was induced to act him at liberty, when he instantly commenced a prosecution for damage against Lieutenant Wylie for having detained him.

In this state of the affair, the present Lieutenant Fitton of the navy, (then a midshipman commanding a small tender,) arrived in Port Royal, and went on board the Sparrow to visit Wylie, whom he found exceedingly low-spirited at the idea of the ruinous damages which would be awarded against him, on account of the *Yankee*.

Fitton, on hearing the name of the captain and brig, and the nature of the cargo, desired his friend to be under no apprehension, for she was yet a good prize.

He then explained, that, cruising in his tender, near the spot where the Sparrow had chased the vessel in question, and much about the same time, they had caught a large shark, and were surprised on hearing the man employed in cutting it open, sing out, "Stand by to receive your letters, my boys, for here's the post-man come on board," handing out at the same moment a bundle of papers from its maw. These were but little injured by the digestive powers of the animal, and Fitton retained them.

They now appeared to be the real papers of the American, which he had thrown overboard when pressed in the chase, and which had been swallowed by this shark. They proved, beyond a doubt, that the cargo was French.

The two gentlemen proceeded instantly up to Kingston with this new and decisive evidence, but all further investigation was rendered unnecessary, for the captain of the brig was so thunderstruck on hearing the circumstance (naturally considering it as a visitation from heaven for his perjuries), that he immediately absconded, and the vessel, after all, was condemned to the Sparrow, giving Wylie three thousand, and my friend, fifteen hundred pounds, for their respective shares.

Mr. Fitton sent up the jaw-bones of this shark to the Admiralty-court at Jamaica (where they now remain), with his compliments, observing that he considered them a very proper collar for all neutrals to wear through in future.

But this tell-tale shark had not yet done

with the poor Americans, who never lost any opportunity of turning an honest penny, by carrying on the trade of our enemies. Captain Otway was at that period serving in the West Indies, in the Trent frigate, and happened to be present at the discussion of this affair of the shark. Being about to sail on a cruise, Mr. Waterhouse, the prize agent, desired him, if he met with a certain American brig, (which he described), and could find out the captain's name to be Pearl Darkey, a name he was not likely to forget, to send him in, for, by the same papers, it appeared that he was deeply concerned in these transactions.

The Trent sailed, and, among others, fell in with a brig of a description similar to that which Mr. Waterhouse had given; and the moment the master of her stepped on the quarter-deck of the frigate, with his papers in his hand, Captain Otway, at a venture addressed him, "Mr. Pearl Darkey, how do you do—I am glad to see you,—the very man I have been looking for." Jonathan started and turned pale, on hearing his real name thus familiarly mentioned, (for it was actually Darkey himself), and Captain Otway added, by way of helping him out of his dilemma, "I am in possession of your whole history and connexion,—I know every thing about you, and am now going to send you into Port Royal for judgment." The man, in his dismay and confusion, naturally concluded that their schemes had been betrayed by some who were in the secret, and did not even attempt to defend himself under his fictitious character. The *ruse* of confidently addressing him at once as Pearl Darkey, threw him off his guard, and deprived him of every subterfuge. She was accordingly sent in and condemned a good prize to the Trent, after the fullest proof of her being loaded with the property of the enemy. In the whole of these transactions this Anti-American shark was a solitary, but very convincing evidence.

After so curious a tale, we should be worse than critical sharks were we not to take leave of Dr. M. in amity. His book is certainly a fair half-hour's amusement and *pro tanto* we recommend it; but as for "promoting the civilization of Africa, &c. &c." heaven bless our seven senses (as poor Turligood says) if we can see the least chance of it.

#### TURNER'S TRAVELS IN THE LEVANT.

We find little reason, on further acquaintance, to alter our first opinion of this work. The latter two thirds of the second volume applies to more interesting ground than what precedes; but still we have a superabundance of trivial matter, and it is with difficulty that we get to the end of 600 pages. Having done so, however, we avail ourselves of the labour to lay a few of the most striking passages before our readers. The tour embraces Rhodes, Cyprus, Barout, Mount Lebanon, Sidon, Tyre, Acre, Nazareth, the Sea of Galilee, Samaria, Jerusalem,

Jaffa, Damiatta, Cairo, Mount Sinai and Alexandria.

"At Sherif," (Lebanon), the traveller says, "We were received by the archbishop, who yesterday was not at home. He spoke Italian tolerably, having visited Rome eight years ago. He drew me by force into a theological dispute, and at the end of every sentence assured me, with inflexible severity, that I should most infallibly be damned 'if I did not immediately turn catholic, which he earnestly exhorted me to do, and even proposed that I should begin on the spot by making to him a confession of my sins."

"In Acre," he states, "I met with no molestation, except now and then some children laughing at me, and bawling out '*Frankhe cuckoo*.' On asking what this meant, I was told that some Germans, some time ago, brought watches to sell here, which repeated the hours by the figure and voice of a cuckoo, and this name is on that account given to all Franks. It is certainly much more decent than the usual Turkish expression of anger or contempt. In the fields round Acre are many snakes and vipers. A young labourer cutting corn last year, was bit by a viper, and in spite of all the assistance his friends could procure him, he died in a few hours in this *khan*: and at five or six years ago the Pasha had a son eight months old, who had been left sleeping alone in his cradle, and was found dead with an immense snake coiled upon his breast asleep, which had not bitten him, but either suffocated him with its weight, or chilled him with its cold."

Of the Jews in the Holy Land we have the following account:—

"There are fewer now than there were 130 years ago; that 74 years ago, when the Jews were driven from Spain, many came to the Levant (indeed, most of those here, and at Constantinople, still speak Spanish); but their numbers have been dreadfully thinned by the plague, of which 3000 died only last year in the Holy Land. That the only new comers now, and lately, are old men, who come to die, mostly at the age of sixty, or more, leaving their worldly affairs in the hands of relations, who send them two or three piastres a day for sustenance; and that most of these come from the Levant, from Barbary, and from Russia."

It was Easter, the period of the grand resort of pilgrims, that Mr. Turner was at Jerusalem; and his description of the ceremonies and of the bathing in the Jordan, is by far the most interesting thing in his book. We select as much of it as our limits permit.

"I issued," he says, "at twelve, to witness the most extraordinary scene I have ever beheld during the twenty-two years of

"He always ended every denunciation by, 'Mi arsal, Signore, lo son Vescovo; e il mio dovere di dirgli così.' This was the Syrian Archbishop of Jerusalem, who has lately been in England. When I called on him in London, we recognized each other immediately. On my asking him how it happened he was not in Jerusalem during the Easter of 1815, he said that the Priest I had seen there was the Syrian Bishop, but that he was the Archbishop."

my life—the holy fire, as it is called, struck by the Greek and Armenian bishops within the tomb of our Saviour, and believed by the ignorant and credulous crowd to descend annually from heaven. 'This pious fraud,' says Gibbon, chap. lviii., 'was first devised in the nineteenth century.'

"We entered the church of the Holy Sepulchre with difficulty, our janizary carrying before us a whip of several leathern thongs, which he used most liberally, though not unnecessarily, to make way for us. The church was filled with pilgrims and spectators, of whom there were not fewer than 7,000. The Aga was at the door, vainly attempting to keep order, with between forty and fifty soldiers, all using, unmercifully, whips of the description I have mentioned. (After the paying pilgrims and inhabitants of the city have entered, the procurator of the Greek and Armenian convents compound for a small sum with the Aga, for the admission of the poor pilgrims who cannot afford to pay entrance money, of whom there are this year, not less than 500. The Aga was seated under a green pavilion, which he formally puts up on the Friday, and retains till the Sunday. He remains about the Sepulchre all the day of Friday, and the whole of Saturday, day and night.) Within the church (I give that name to the collective building) were held bazaars of bread, fruit, vegetables, beads, crucifixes, &c.; and I saw many pilgrims biggling and swearing at each other for a para, within fifty feet of the tomb of Christ. The janizary made way for me by force, through the multitude, to the gallery of the Roman Catholic monks, but no care could prevent many Turkish boys and servants from crowding in with us; these are mostly children of the Cadi, Mufi, &c. of the city; and under pretence of being their attendants, numbers introduce themselves, whom the monks do not like to turn out for fear of offending the authorities. In spite, however, of the crowd that filled the gallery, I succeeded in getting a very good place, from which I was forced to drive back several Turkish soldiers, who attempted to drive me out of it; and one fellow among the rest, who had the insolence to hold up his stick at me.

"What a scene was before me! The Greek and Armenian galleries overlooking the dome were filled with female pilgrims of those nations enthusiastically looking towards the Sepulchre, and crossing themselves. Below me, the whole church, and particularly the circular apartment containing the dome, was absolutely crammed with pilgrims, men and women, hallooing, shouting, singing, and violently struggling to be near the Sepulchre, while the Turkish soldiers were driving them back with their whips. One man I saw in the contention, had his right ear literally torn off. The place immediately near the windows, whence the fire is given, was occupied by the richest pilgrims, who, for this precedence, pay to the Greeks and Turks 200 and 300 sequins. One old woman sitting on the door of the Greek church, had kept that place (a Roman Catholic monk who was shut in told me) since yesterday

morning at ten without moving, and had paid two dollars to get it. A ring was kept as well as the tumult would allow, by the crowd round the Sepulchre, round which, pilgrims (sometimes a single one, sometimes four, sometimes six, together in a circle) were carried on others' shoulders, singing religious songs in Arabic and Greek; while at other times, a party of ten or twelve ran rioting round it, knocking down every one that stood in their way, and shouting as loud as they were able. The Greek and Armenian bishops were shut up in the Sepulchre at ten o'clock with a single Turk, who is well paid to declare that he sees the fire descend miraculously, or at least to keep silence. Before they enter, the Sepulchre is publicly inspected, and all the lamps extinguished; but the Turk, I was informed, has been heard to declare that they carry a dint and steel with them. I was inclined to think that the fire was phosporic, as the priests declare that it will not burn a person; but on seeing it, I found it was common fire, and that the fable of its not burning is only believed by enthusiasts. At two o'clock the governor entered, preceded by soldiers, who were forced to use the utmost violence to make way for him, and followed by his secretaries and servants. He took his place in the Frank gallery, where a handsome divan was prepared for him, and where he was attended by the Roman Catholic procurator and his dragomans. (If the fire be much delayed, he becomes impatient, and generally gives a sign, on which it immediately appears.) At five minutes past two, there was a Greek procession round the Sepulchre; I counted thirty-seven priests, besides the bishop and monks, and nuns. The bishop was dressed in a gilt mantle, with long crape over his bonnet, and carried a crossier in his hand. Of the priests, some wore green, some yellow, and some dark-coloured robes, richly embroidered with gold; and the monks and nuns were all clothed in deep black. All wore, except, of course, the women who had long veils, the common cap of the Greek priests. They walked, singing loudly, three times round the tomb, preceded by six banners, representing the nativity, passion, and crucifixion of our Saviour. As the time approached for the kindling of the fire, the crowd became more tumultuous, and rolled in a wave towards the window, whence no efforts of the Turks, and of the happy ones who had secured a place there, exerted in curses, blows, kicks, &c. could drive them. At length, at twenty minutes past two, the fire was given from the window, and was received with a tremendous and universal shout through the whole church. On its first appearance, the torch was seized by a boy near the window, who rubbed it against his face, head, and neck, with such vehemence as to extinguish it; for which he was well beaten by those near him. Eight different times was the fire given from the window, and as every pilgrim carried candles in his hand (in bunches, some of four, some of six, some of eight, some of twelve and some a single one, according to their purse) in ten minutes the whole church was in a flame,

and in five more, nearly every candle was extinguished. But what enthusiasm! The men rubbed them against their heads and faces, their caps and handkerchiefs; and the women uncovered their breasts, directing the flame along their heads, necks, and faces, and all crossing themselves during this operation, with the utmost devotion and velocity. The candles, when a little of them is burnt, are carried home, and ever afterwards preserved as sacred. Messengers with lanterns, stand ready at the door, who immediately carry the fire to the Greek convents of Bethlehem, of the Cross (at Sallah), and of Saint Saba, near the Dead Sea. Immediately after giving out the fire, the Greek bishop, coming out of the Sepulchre, was carried by the crowd to the Greek church, immediately opposite to the door, holding in each hand torches of the fire, from which the pilgrims scramble to light their candles. After this, the Turks guard the tomb, and the pilgrims who enter for the next three days pay, the first ones from 80 to 100, and the later from 10 to 20 piastres. When the candles were extinguished, the smoke for the first ten minutes hid every thing from sight; but as the top of the dome is only an open lattice without glass, this soon cleared away. The greater part of the pilgrims then left the circular apartment in which stands the tomb, to make room for a procession of Armenian, Syrian, and Coptic priests, who walked together in the order in which I have written them.

We shall add but two other quotations. At Cairo, the author says—

"After writing all the morning I dined chez Mr. Bogos with Sheikh Ibrahim, who, in the evening, introduced me at the house of Mr. Aslin, the French Consul here; he lives in the French quarter, which was once exclusively occupied by the merchants of that nation, but latterly since the diminution of their commerce, is mostly inhabited by Armenians and other Levantines. It has a small garden in it, now going fast to ruin, and enjoys the privilege of being the only quarter in which no soldiers are permitted to lodge. Mr. Aslin is a little *raf* man, with great volubility of conversation; he has been in Egypt eight years, the whole of which time he has devoted to the study of Arabic and Persian literature, and is a great proficient in both. Last year he sent to Mr. Liston the book of Genesis translated into Abyssinian, begging him to forward it to the Prince Regent, to whom it was addressed with a letter. He tells me that his instructor has since finished the whole Bible, which he (Mr. A.) has by him. The history of his studies in Abyssinian is interesting. When he came to Cairo, he found here, in great poverty and sickness, Abram, the old Abyssinian Christian, who had taught his language to Bruce and Sir William Jones. Mr. A. immediately got him assistance, set him on his legs again, learnt some Abyssinian from him, and set him about translating the Bible. I collected from Mr. A.'s conversation that the old man had done it all or most of it himself, for he said that during the last plague he brought to his door, (within which

he was not admitted,) the last books finished. Poor Abrain died of the plague here last May, aged 83, and was unhappy to his last moment at not being able to lay his bones in Jerusalem."

At Mount Sinai, "On the other side of the rock that overhangs the Greek convent on the east, is another valley of the same width and long shape as that in which stands the convent, and shut in by another ridge of rocks opposite, equally high, in which is shown a large stone, said to be that from which Moses struck out water; and this has been rendered by the artifices of the Greek priests the most plausible theatre of a miracle, that is imputed to the neighbourhood of Sinai. The stone, of a reddish granite, is quietly buried in the ground: what is seen above it is about fifteen feet high, fifteen long, and ten broad. It has twenty-four cracks in it, (twelve on each side,) whence the water is said to have issued; these are in general an inch or an inch and a half deep, and on each side and at the top (which in that part is narrow and shelving,) is a smoothed passage about four inches wide in the narrowest, and ten in the widest part, down which they pretend the water trickled. It was so hard that it required great and continued efforts to knock a piece off it, and loud and long were the echoes round the rocks as we were hammering at it."

#### GERMAN PUBLICATIONS.

Whatever truth there may be in the complaints relative to the difficulties which are still said to oppose the extension of our commercial relations on the continent, it must be admitted that our literary intercourse with the other countries of Europe has rapidly increased since the restoration of peace. If the barter of agricultural articles and manufactures unfortunately languishes, we perceive no want of activity in the interchange of mental productions, notwithstanding that foreign books imported into this country are subject to a very heavy duty. The best works that issue from the British press quickly find their way to Leipzig, the great mart of literature for Germany; and every book of merit which appears in Germany, is to be found at Böhm's, in York Street, within a few weeks after its publication.

Among the recent importations is the first part of a work, which, though at first sight it may seem dry and unattractive, will be found on closer inspection, highly interesting. It is entitled, "Allgemeines Bibliographisches Lexicon," General Bibliographical Lexicon, by F. A. Ebert. This Lexicon gives an exact description of the form, and what may be called the material properties, of all books, old or new, which on account of their literary character, scarcity, or other circumstances, are valued and sought after, with the prices occasionally paid for them at well known auctions or public sales; the name of the sale is sometimes added; but, in ordinary cases, a medium price, calculated on an average of prices at which the book has sold, in different German sales, is given. Works easily obtained at regular prices, in

the booksellers' shops in Germany, are excluded from the Lexicon, as are all the ordinary publications of the trade in that country. The author is keeper of the Royal Library at Dresden; and, in mentioning this, we cannot help remarking as a circumstance not a little singular, that a work lately published with the view of giving an account of the principal libraries of Europe, should not even name the collection of the Saxon capital. Far from being unworthy of notice, the library of Dresden is important and extensive. It occupies thirty-four large rooms, and the plan of arrangement is excellent. Speaking from what we perceive in the small portion of M. Ebert's work, as yet before us, it appears that great numbers of scarce and valuable editions are to be found in this library; for he has marked the copies it contains by an asterisk. To shew the manner in which the work is executed, we extract the examples with which it commences, though they are certainly not the most favourable.

A. a. Pt. v. d., *Edigies u. Gallerie.*

1. Abelard, Pt. et Heloise ap. nunc pr. edita ex MSS. Codd. Fr. Ambrosii. C. ejusd. pref. apolog. et censura doctor. Paris. (cur. And. Duchesne) Par., Buon, 1516, 4to.

There are several copies of the above. The generality have on the title page the name of Fr. d'Amboise, from whom the *pref. apolog.* proceeds. Others (which have Duchesne's name) have, instead of the *pref. apolog.*, a dedication, preface, and testimonials, which are wanting in the first mentioned copy. On large paper, very scarce.

2. — *epistole, a prioris edit. errorib. purgate et c. cod. MS. collate cura Rich. Rawlinson.* Lond. 1718. 8vo. large paper, scarce.

3. — *Lettres d'Héloïse et d'Abailard, nouv. traduct. av. le texte à côté, par J. Fr. Bastien.* Par. 1782. 12mo. two vol. (6 fr.) Also in 8vo. and large paper.

A few copies on parchment (with 2 plates, 792 fr. Paris and 246 fr. McCarthy). — les mêm. en lat. et en fr. (par Armand Fr. Gervaise). Par. impr., de Didot J. 1796. large 4to. 3 vol. with 8 copper plates. (vellum paper, 90 fr.)

There are only 340 copies of the above edition, 90 of which are on very large paper, with proof copper-plates (180 fr.). They cannot, however, be termed splendid copies Gervaise's translation first. Paris, 1726, 12mo. 2 vols.

5. Abano ad Apodis, Pt. de Conciliator differentias philosophorum et principum medicorum. Mantum, Th. Septem. Catenensis et J. Bursari, 1472. large f. 364 sheets. — Together with El. tract. de ventis. ib. eod. f. 7 sheets.

The first edition is extremely scarce. Both treatises belong to one work. The edition of 1471 is spurious. Also that of Venice Gbr. de Tardis, 1476. folio, and often repeated. Among his other works are Liber compilationis phisicorum (under the name of Pt. Paulinus). Padov. Mander, 1474, 4to. *Expositio problematum Aristot.* Mant. P. I. de Pazbach, 1475, folio.

6. Abares, Pt. Los reyes de Aragon en anales historicos. Pt. I. Madrid, 1682. Pt. II. Salamanca, 1684, folio. Contains the years 612—1516.

Abrevilla vide Bernardo da Paggi.—Abbildungungen vide Kilian and Schwan.—Abbot, J. vide J. Ed. Smith.

7. Abet, Th. Vermischte Schr. Berl. and St. Nicolai, 1771.—81. 8vo. 6 vol. (3 Thalers. 8 groschen).

Part I. Von Verdienste. Part II. Fragn. 2. portug. Gesch. u. v. Tode f. Vaterl. Part III. Correspond. Parts IV—VI. Fern. Aufsätze, Br. u. Fragn. There is a 4to. edition of the part entitled Verdienste, ib. 1790. 8vo. (16 groschen).

8. — V. Verdienste. Vienna, Deegen, 1804, large 4to. and large 8vo. (Vellum paper, 24 Thl. and 12 Thl.)

9. Abconfractur u. Bildnis all. Groshering. Chur-u. Fürst, welche v. 842—1586 in Sachs. regier. hab. Dresd. Gmel Berg, 1586, 4to. with woodcuts.

On parchment, with beautiful illuminated woodcuts, Dresden.

10. Abdalme Berdavis Historia Simensis, pers. et. lat. ab And. Mullers. Arc. g. note. Nunc. c. addit. et a Quadraht. Abr. Mullers. Jen. 1689, 4to.

The fullest copies also contain:—Itineraria duo, comm. alphabetica, basilicon Sin. imp. Sin. nomenclator geogr. Some other works of Mullers are collected under the following title.—And. Mulleri opuscula orientalis. Frankfurt on the Oder, 1695, 4to.

11. Abdollatiphi historice Egypti compend. arab. et lat. partim ipse vert. part. a Pocockio versum edend. curat. et notis illustr. Jos. White. Ox., typ. Clar. 1800. 4to. XXXII. u. 321 pp. (1 pound, 4 sh.) Together with Abdollatiphi vita Auct. Ibn Abi Osaima c. eod. MSS. Bodlej. descripts. et lat. vert. J. Monseley. ib. 1808. 4to. VII. u. 78, pp. (6 sh.)

Of Pocock's edition (1691), only 96 pp. in 8vo. were printed. In 1782 White printed the Arabic text, and transferred the copies to Professor Paulus, who published them under the title of *Abdoli. compend. memorabil. Egypti.* Tub. 1789, 8vo. (2 Sh.)

The work is in large 4to. printed in a very close but distinct type. One part is to be published every three months at Leipzig. Eight parts will probably complete it; but it is certain that it will not extend beyond ten. The price of each part is 10 shillings.

Some remains of Kotzebue, consisting of Dramatic Sketches and Fragments, have lately been published\*. A life of the author has also issued from the press at Leipzig. It consists chiefly of extracts from the works in which Kotzebue has spoken of himself, and the transactions in which he was engaged. These extracts are dexterously put together; but they have been selected by no friendly hand; and, with the comments which accompany them, are calculated to produce a very unfavourable impression as to the private character of the author.

\* A translation of this has been published by Bodley and Sons; whose stores of German literary productions form another of our most extensive concerns in that line.

ciples of the deceased. "To those, however, who are interested in the literary discussions of Germany, the book will afford entertainment. It contains an account of the libel, entitled:—"Doktor Bahrdt mit der eisenen stirn," for which Kotzebue was prosecuted, but escaped, in consequence of the protection he received from the Empress Catharine of Russia.

## ORIGINAL ARTICLES.

## INSANITY.

*Parrula nam exemplo est magni formica laboris  
Orc trahit quodcumque potest atque addit acervo.  
Hor.*

The horrors that are invariably associated with the names of a Nero, and a Caligula, are not more terrible than the most afflicting details, that are to follow in a subsequent Gazette; as a very little reflection must convince us, that the number of human beings immolated under the influence of such barbarism and ignorance must have been incalculable. There is, assuredly, no man who will devote an hour to reading these accounts, who will question the utility of education which improves the heart, which expands and opens the compressed faculties of the mind, as nature unfolds the beauties of the Nymphæa alba, and the rose; and thus are a thousand charms and virtues spread around our existence, to which we should otherwise be strangers. When the representation we are about to enter on is contemplated, we are not so much overwhelmed with sorrow, from the actual nature of the malady brought before us, as from the false views of its character, which have indicated such an extent of misery and degradation on our fellow-creatures.

This leads us to consider, with peculiar delight, the labours of the Committee of the House of Commons on Madhouses; but in justice to the course pursued by these able men with so much patience, we must declare that it is necessary that they should not abandon, but continue to advance in the tract which they so vigorously entered upon, with the sole object of protecting the friendless, and the most unfortunate of the human species. There are still many within the British dominions, suffering under miseries little short of those about to be detailed. In the cure of mental derangement much remains to be done in the way of improvement in what respects diet, medical, and moral treatment. This statement is applicable to the private as well as to the public treatment of the malady in our hospitals. It will also apply to the army and the navy, the deranged in which services might be converted into distinct schools of observation and instruction; and thus the nation that supports them be rewarded by the diffusion of correct notions of a disease that has by many able and intelligent men, been hitherto considered incurable. We ought

not to be surprised at the increase of insanity when we consider that no means, generally speaking, have been adopted towards its cure. The reservoir, however large, must run over, where the subducing bears no proportion to the accumulating power. When a patient, labouring under bodily disease, suffers from its increase, he immediately sends for his physician, being fully aware of his condition, (which the excited maniac never is,) and also of the advantages of checking its progress in time, as leading to an ultimate cure. Can any just reason be assigned for not following the same line of conduct towards the diseased in mind as towards those afflicted in body? We believe none; on the contrary, the reasons are more cogent for the latter than the former, by as much as mental is an infinitely greater affliction than bodily disease. Indeed, death is a blessing compared to being the permanent victim of this malady. We are therefore of opinion, that in all recent cases of this complaint, many advantages would result from an extension of the same principles and practice, as far as practicable, in visiting the exacerbations of the insane, as is adopted in the treatment of all bodily diseases. The medical and moral treatment of the deranged, their diet, their clothing, their abodes, have been most shockingly neglected; and their feelings, as men and women, most wantonly and diabolically outraged; in short, the means that have been employed were, in every degree, calculated to destroy the most robust constitution of body, and the firmest character of mind, if subjected to their action; and when directed towards the deranged, they could not fail to overturn what remained of intellect. Do not let it be imagined that the maniac was dead to the shocking spectacles, to those cruel, abominable, and brutal degradations, whether they affected himself or others, that are about to be unfolded. The truest picture of excited madness is before the world, by the powers of the bewitching and immortal Cervantes, whose heart was elevated, undaunted, and whose genius was of the highest order. Here the faculties of the mind are justly portrayed as warped by the imagination; yet mark the extent of sensibility, the extent of observation and of mental faculty that remained. Nothing has led to so much error in the management of insanity, as the supposition that the maniac is inaccessible to the degradations to which he may be subjected. The want of steady attention on the side of the inmate to the objects of his reflection, the vivid, the entertaining, the witty, the rapid and electrical association and succession of extraordinary ideas, render the mind so addicted irrevocably; but while the maniac acts under the immediate influence of any particular idea, however erroneous the premises may be that he adopts, he is by no means unconscious of what is at that instant passing in his mind. This opinion is formed from much painful and patient observation of the phenomena of this malady.

thus called into action, and would here constitute one of the noblest sources of information.

## LEARNED SOCIETIES.

## OXFORD, JUNE 3.

Yesterday the following degrees were conferred:—

BACHELOR AND DOCTOR IN MEDICINE.—C. Littlehales, New College, Grand Compounder.

BACHELOR IN MEDICINE.—F. Hawkins, Fellow of St. John's College.

BACHELORS IN CIVIL LAW.—Rev. B. Pain, Pembroke College; and Rev. C. F. Bampfield, Balliol College.

MASTERS OF ARTS.—Rev. J. A. Parridge, Brasenose College; Rev. John Jones, Jesus College, Grand Compounders; Rev. F. C. Plumtree, Fellow of University College; Rev. C. Hodges, Queen's College; Rev. W. Hutcheson, St. Mary Hall; Rev. Joseph Hordern, Brasenose College; Rev. T. Lea, Trinity College; Hon. and Rev. F. J. Noel, Trinity College; Rev. W. Moss King, and Rev. G. H. Glyn, Students of Christ Church; Joseph Dornford, and S. Rickards, Fellows of Oriel College.

BACHELORS OF ARTS.—J. Marshall, and J. Digby Wingfield, Exeter College; T. H. White, and F. Aston, University College; Poyntz Stewart Ward, and E. H. Wainwright, Wadham College; John Evered, Queen's College; H. Tippetts Tucker, and S. Howe Harrison, St. John's College; Joseph Haythorne, and J. Johnston Hodson, St. Mary Hall; Marmaduke Varnour, C. Ward, W. White, and J. Marsden Wright, Brasenose College; C. Alleyne Anstey, Scholar of Trinity College; J. Williams and Hugh Bold, Christ Church; George Tierney and Henry Wilson, Oriel College; Peter Williams, Scholar of Jesus College; John Wootton, Balliol College.

## CAMBRIDGE, JUNE 2.

The following gentlemen were on Wednesday last admitted to the undermentioned degrees:—

HONORARY MASTER OF ARTS.—Hon. E. Southwell Keppel, of Caius College, son of the Earl of Albemarle.

MASTERS OF ARTS.—W. Wade Gery, of Emmanuel College; the Rev. S. Brereton, of Queen's College; and the Rev. N. Every, of Clare Hall.

BACHELOR IN CIVIL LAW.—Rev. W. H. George, of St. Peter's College.

BACHELOR IN PHYSIC.—G. Leith Russell, of Caius College.

BACHELORS OF ARTS.—F. J. Hilliard and W. C. Faulkner, of St. Peter's College; Jeremy Pratt, Walter Corbett, T. O. Rogers, T. Nash, and W. T. Hudson, of Trinity College; H. Norman, of Oakenhall Hall; J. Hill, of Jesus College; J. E. Everitt, of Corpus Christi College.

June 30th.—The annual prizes of fifteen guineas each, given by the Representatives in Parliament of this University, for the best dissertations in Latin prose, were on Monday last adjudged to Thomas Thorp, of Trinity College, and Edward Boteler, of Sidney College, Middle Bachelors.—Subject,—

*Is GEORGIUM TERTIUM, rei maxime, Oritur Funeris.*

\* Emulation, which is almost unknown in this branch of the Medical Profession, would be

No prize adjudged to the Senior Bachelors.

The Porson prize for the best translation of a passage from Shakspeare into Greek verse, was on Monday last adjudged to Wm. Henry Fox Talbot, scholar of Trinity College. The subject is from Macbeth, Act I. Scene the last. The dialogue between Macbeth and Lady Macbeth, beginning with, "*We will proceed no further*," and ending with "*What the false heart doth know*."

## ARTS AND SCIENCES.

### IONIAN ISLES.

*St. Maure, March 14.*—Since the 15th of February, this island has been a prey to continual alarm, occasioned by earthquakes more or less violent. That which took place on the 21st of February was most disastrous. In the morning a dead subterraneous noise was heard, which was succeeded by a violent storm. These phenomena were followed by the shock of an earthquake so violent, that a part of the great fortress fell down, and the bridge across the channel was shattered in several places. The square situated in the centre of the town, sank sensibly; the Church of Saint Saviour was soon a heap of ruins; the walls of Saint Martin's Church were much damaged; several houses fell down, and others were so much damaged that the inhabitants were unable to shelter themselves from the heavy rain which followed the earthquake.

There is scarcely a stack of chimneys in the town standing; the aqueducts are destroyed, and the roads filled with ruins. The number of the victims of this catastrophe is not yet ascertained; there is reason to hope that it is not very considerable, the chief part of the inhabitants having quitted the town on the preceding evening. The damage, however, which this disaster has occasioned, both in the town and the surrounding country, is incalculable. It is easy to imagine the despair of the inhabitants, who have thus seen the work of whole ages destroyed in a few minutes.

*Corfu, April 19th.*—In the neighbourhood of St. Maure, a little island has recently been discovered, which is supposed to have been produced by the late earthquakes. The English sloop of war, the *Aid*, Capt. Smith, has just sailed to examine the island; if it should prove to have been thrown up by the earthquake, it is to receive the name of the *Lauderdale Rock*. The island of St. Maure is in a most deplorable condition; the soil is in a state of continual oscillation. The few houses that are not entirely thrown down, such as the barracks, are threatened with instant destruction, and their roofs have fallen in. A most violent shock took place on the 6th, in a marshy spot in the vicinity of the town; it was accompanied by a strong smell of sulphur.

## FINE ARTS.

### BRITISH INSTITUTION.

[*Recollections suggested by the Exhibition of Portraits, continued.*]

158. *Queen Elizabeth.*—(*Marquis of Salisbury.*)—Painted by Zuccherro.

"Marville says of this great queen, that she passionately admired handsome persons; and he was already far advanced in her favour, who approached her with beauty and grace. She had so unconquerable an aversion for ugly and ill-made men, who had been treated unfortunately by nature, that she could not endure their presence.

"When she issued from her palace, her guards were careful to disperse from before her eyes hideous and deformed people, the lame, the hunch-backed, &c.; in a word, all those whose appearance might shock her fastidious sensations.

"There is this singular and admirable in the conduct of Elizabeth, that she made her pleasures subservient to her politics, and she maintained her affairs by what in general occasions the ruin of princes.—Her lovers were her ministers, and her ministers were her lovers."

There is an admirable tract on the fatal consequences that have arisen to princes, and the countries which they have governed, written by a Frenchman, about the period when Louis XIV. (then a youth) was called to the throne. The just and severe reflections which it contained, applied so completely to that prince's contemporary, the English Charles II. that it might well have passed for the work of his Lord Chancellor. Charles's intrigues and his worthless favorites proved a scourge to the kingdom. Elizabeth's amours conferred a benefit; and in saying this much, morality is not shocked, for good breeding and the strictest propriety were maintained at her court, altho' its romantic character furnished matter for many stories, the invention of the poet's unlicensed pen.

Waller, the poet, when advanced in life, being one day with King James II. in his closet, his majesty desired him to look at a portrait which was hanging on the wall, and give an opinion upon the performance. "My eyes are dim, Sir," said Waller, "and I do not know who it is." "It is the Princess of Orange," answered the king. "She is," said Waller, "like one of the greatest princesses of the world." "Who do you mean?" demanded the king. He answered, "Queen Elizabeth." "I wonder you should think so," said the sovereign; "but I must confess she had a wise council." "And pray sir," said Waller, "did you ever know a fool chase a wise council?"

The age of the maiden queen, was the last of chivalry; and it may be worth enquiry, whether with her departure, much of the true spirit of nobility did not depart from the country. Her successor kept no Arthur's table, and the lances of gallant knights in his reign became useless ornaments, helping to form radii to a gilt Medusa's head, on the palace chamber walls.

The queen was long past her prime when she became enshrined of the Earl of Essex;—a

\* The same nobleman has, (Number 153) a picture of the Earl of Leicester by Garrard, and others by Holbein and C. Jansen.

† Number 155, is a whole length Portrait of

nobleman, whose merit appears to have obtained for him what does not often happen to a court favorite, whatever be his deserts,—the affection of the people. "There was," said an old writer, "in this young lord, together with a goodly person, a kind of urbanity and innate courtesy, which both won the queen, and too much took up the people to gaze on the new adopted son of her favour."

Her majesty was censured, however, for her too great indulgence to him; he was also indiscreet. "He drew in (of her favour)," says the same author, "too fast, like a child sucking on an over-uberous nurse;" and had there been a more decent decorum observed in both, or either, without doubt the unity of their affections had been more permanent, and not so in and out as they were, like an instrument well tuned, and lapsing to discord.

It was admitted, even by those who loved and honoured this favourite, that he was too bold an engrosser both of fame and favor. The queen was not blind to his ambition, and for all her passion for his graceful person, was not displeased to see him brought to his senses by the indignation of others, who had nobly resented his arrogance.

Sir Charles Blount at length appeared, a rival to the Earl. This elegant youth had the good fortune to distinguish himself at a tilting match, in the presence of the Queen. She had recently seen him by accident, and honoured him with her notice. His address with the lance pleased her majesty; and as a reward she sent him a trinket, "A Queen at chess, in gold, richly enameled," he token of this instance of her royal favor, he gallantly fastened it to his arm, with a crimson ribbon, and wore it about the court. So marked a compliment naturally excited the envy of Essex, who next day approached the new favourite, and under cover of his cloak, examined the queen's gift. "Who is this stranger?" said the Earl. He was informed by Sir Fulke Greville. Lord Essex observed, "Now I perceive every fool must have a favor."

He that has lived within the vortex of a court will not be surprised to find that some chattering spirit whispered this affronting sarcasm in the ear of Sir Charles Blount. He sent Lord Essex a challenge—they met in Mary-le-bone Park—fought with swords—his lordship received a wound on the thigh and was disarmed. The queen missing her gallants, "was very curious to know the truth." When the rencontre was described, she swore "by God's death, it was fit that some one or other should take him down, otherwise there would be no rule with him."

The favourite, also by Zuccherro, and belongs to the Duke of Bedford. He is very tall, and in a strange white dress, resembling one of Aslet's Voltigeurs or Horsemen. Indeed, the costume of the whole of this collection is a subject for observation and study, and suggests many serious reflections. On the side of the room to which our present remarks refer, Elizabeth is surrounded by many of the most distinguished men of her court, the Earl of Edingham, Bacon, Drake, &c. Let fancy animate these pieces of canvas, and what a dream the spectator enjoys!

The queen commanded that they should henceforth be friends. The queen paid off any slight or presumption towards her princely dignity, by exciting such feelings of rivalry among those whom she had particularly distinguished by her favor.

The first notice she took of Sir Charles, was when her majesty sat dining in public at Whitehall. He was a young templar, then about twenty years of age, "brown haired, of a sweet face, and of a most neat composure, tall in his person." The queen demanded of her currier his name, and from whence he came; the enquiry went about, when it was discovered that he was the brother of Lord William Mounjoy. "This enquiry, with the eye of her majesty fixed upon him, as she was wont to do, and to flatter him, she knew not, stirred the blood of the young gentleman in such that his colour went and came," which the Queen observing, called unto him, and gave him her hand to kiss, encouraging him with gracious words and "new looks;" and so diverting her speech to the ladies and ladies attending, she said, "that she no sooner observed him, but she knew there was in him some noble blood." The queen then completely subdued the blushing boy, by uttering loud enough for him to hear, her "tender sympathies for the misfortunes of his house;" and then again demanding his name, she said, "fail you not to come to court, and I will bethink myself how to do you good."

Sir Philip Sidney, that renowned knight, she used to call "her Philip," in contradiction to the Philip of Spain, her sister's husband.

## ORIGINAL POETRY.

[By Correspondents.]

## SONNET.

"Chiare, fresche e dolci acque."

Whilst that I wander in the pleasant fields,  
Where lingers Spring enamour'd of thy green,  
A secret charm each lovely object yields,  
Till Even throws her dasky veil between.  
And when at length the silent shades prevail,  
And Night in sable clouds adown descends,  
The modest Moon emits a lustre pale,  
And to the meads her virgins beauty lends.  
Then softer scenes and chaster thoughts arise,  
As o'er the varied landscape stretching wide,  
The timid zephyr steals with sweet surprise,  
And gently breathes upon the rippling tide—  
Whose murmurs, softly pleasing to the ear,  
Invite me to repose its green banks near.

J. H.

## SONG.

There is not in the whole town a kennel so clean  
As the gutter whose waters in Algate are seen;  
Oh! the lust cup of tea-leaves shall garnish the  
street,

Ere I cease to remember that kennel so sweet!

Yet it is not that cabbage-stalks floating so green,  
With rolling potatoes, like dip-chicks to green;  
'Tis not its soft ripple, or gurgling thrill,  
Ah no! it is something more exquisite still!

\* By sailors called 'Mother Carey's Chickens.'

'Tis the butchers' dogs, basking themselves in  
the sun,  
Or lolling about in the gutter for fun;  
'Tis the fish-heads and oyster-shells, smelling so  
rare,  
And reflecting the sun-beams so glowingly there!  
Sweet fountain of Algate! in thy bright chrysalis  
waves,  
How delighted each morning my trotters I lave!  
Oh! I swear by my shovel, if e'er thou run'st  
dry,  
Like a broken down brewer, in thy pump-trough  
I'll lie!

SCAVENGERIAUS.

## SONNET.

Written on the Tower, Plymouth, June 24, 1820.

Speak not of Italy! she cannot show  
A brighter scene than this: a richer glow  
Becks not the azure of her evening sky  
With rarer tints than those we gaze on here;  
Her zephyrs cannot wing a sweeter sigh  
Than we inhale. Oh, favor'd England! dear  
Art thou to all thy sons; but dearest still  
To me: for I have never wandered forth  
To seek a better home; and yet, each thrill  
Of fond affection, honour, virtue, worth—  
I've found! Old Ocean girds thee round; his tide  
Swells proudly to embrace thy rocky strand,  
And play upon thy shores. Thou art his pride,  
And I exulting boast—Thou art "my native  
land."

J. L. STEVENS.

## EUROPA.

A Painting on Ivory, by Miss L. Sherpe.

Her golden ringlets float around her form,  
In bright but wild profusion; some repose  
In radiant clusters on her stainless breast,  
Like the rich beams of summer's noonday sun,  
On rocks of alabaster; others stream  
(Penonns of beauty to a bark of love)  
Loose to the ocean breeze. Her fair blue eyes,  
Lit with intenser and more passionate thought  
Than would besem the wonted air of peace  
That characters her countenance, dart forth  
Glances of wilderment—it may be fear—  
On the wild waves behind her, and she clings  
Closer and closer to the stately neck  
Of that imperial spurner of the spray—  
That lord of lowing herds, the milk-white bull.

With unremitting speed the rodlike brute,  
Rejoicing in his glorious freight, moves on—  
What are the waves to him? they may not stay  
His ardent course;—the warring winds may  
howl

With fitful violence round the vessel's prow,  
And turn it from its track;—the whirlpool's  
depths

May draw it down to never-ending night;  
But all their powers conjoint may ne'er prevail  
O'er this living, beauty-crested bark,  
Which proudly dashes on—and on—and on—  
(From fair Phœnicia, piloted by Love.)

To where the towers of Crete lift up their heads  
Above the dark blue sea. With what a front,  
A stern unyielding front—he stems the wave,  
And strains each lusty nerve to gain the strand,  
Now swelling on his sight!

Rightly we count.

The boy-god's power omnipotent, since he  
(And sure those witching fables that would prove  
His force on human hearts, we half deem true)  
Could thus step in an immortal's breast  
His deep-pervading passion; and incite  
Even the Almighty Jove to cede his form—  
His own majestic seeming, and imbute  
His mighty spirit in a coil like this,

All for an earthly maiden. Love! oh Love!  
Thou art the essence of the universe—  
Soul of the visible world—and canst create  
Hope, joy, pain, passion, madness, or despair,  
As sueth thy high will! To some thou bringest  
A balm, a lenitive for every wound  
The unkind world inflicts on them; to others,  
Thy breath but breathes destruction, and thy  
smile

Scatters like the lightning;—now a star of peace  
Heralding sweet evening to our stormy day,  
And now a meteor, with far scattering fire,  
Shedding red ruin on our flowers of life!  
In all, (whether arrayed in hues of deep repose,  
Or armed with burning vengeance to consume,  
Our yielding hearts) alike omnipotent!  
June, 1819. C. R. S.

## SKETCHES OF SOCIETY.

## MODERN LATIN TOWN.

M. Olmo, a curate of the Upper-Garonne, has favored the plan of founding a town, in which no one is to be permitted to speak any language except that of Cicero, Virgil, and Horace. This ecclesiastical Romulus invites all the friends of classic literature to assist him in carrying his plan into execution; but he has apparently forgotten that the rigorous condition he imposes on his learned colonists may give rise to some difficulty with respect to the admission of ladies, and that, *Pour être savant on n'en est pas moins homme.*

He should have recollected, that the philosophers of the present day have, in general, a tolerable relish for gastronomy, and that their cooks must be excellent Latin scholars to understand the minute directions they may receive for preparing a dinner.

Our readers will probably be inclined to regard the above as a joke. However, the *Journal de Toulouse* treats the matter seriously, as will be seen from the following paragraph:—

"We understand that there is at present forming in this department a society of the friends of the Latin muse, who propose to raise a subscription through France, and the rest of Europe, for the establishment of a Latin town. This ingenious idea of Maupertuis was developed in a Latin work, which appeared in 1816, and from which the *Hermes Romanus*, as well as the *Almanach des Muses Latines*, gave extracts. The society includes amongst its correspondents several of the first Latinists in France; and a prospectus, which is about to appear, will explain to the learned world the progressive and well-conceived plan proposed."

Should we hear any more of this lunatic project, the account of which we take from a French Journal, we will lay it before our readers.

## THE DRAMA.

DRURY LANE.—A debutante has essayed the town, in the character of Portia, in the Merchant of Venice, with considerable applause. Her figure is good, and her face very finely theatrical. Portia is not a part which affords room for the display of great or of varied attainments: declamation is the essential qualification required; and a little playfulness being added, there is no fear of

failure. When we say therefore that this lady declined with ability, and was sufficiently arch, we say that she succeeded in her enterprise. Future opportunities must however be given for forming a judgment, before we can place her in the foremost ranks of dramatic dignity, which we observe has already been very generously done by several periodical critics.

### VARIETIES.

A whimsical petition has been presented to both houses of parliament by the author of a work directed to trace the topography of *Ossian's* poems (of which see Review in Lit. Gaz. No. 87), and who seems to think he has a claim upon the Highland Society for his labours in this great national design! The Highland Society deny responsibility, and the author asks the interference of the senate, to settle the matter between them. If counsel are heard at the bar, it is hoped, to complete the joke, that their pleadings shall be in Erse. That, if it does not convince, will puzzle, which is generally one of the chief objects of lawyers.

The following anecdote serves to shew the *high wisdom* of the emperor of Morocco.

A Jew had ordered a French merchant to furnish him with a considerable quantity of black beaver hats, green shawls, and red silk stockings. When the articles were ready for delivery the Jew refused to receive them. Being brought before the Emperor, who, as it is well known, administers justice himself, he denied having given the order, and maintained that he did not even know the French merchant. "Have you any witnesses?" said the Emperor to the Frenchman. "No." "So much the worse for you; you should have taken care to have had witnesses—you may retire." The poor merchant, completely ruined, returned home in despair. He was, however, soon alarmed by a noise in the street; he ran to see what it was. A numerous multitude were following one of the Emperor's officers, who was making the following proclamation at all the cross-roads:—"Every Jew, who within four and twenty hours after this proclamation, shall be found in the streets without a black beaver hat on his head, a green shawl round his neck, and red silk stockings on his legs, shall be immediately seized, and conveyed to the first court of our palace, to be there flogged to death." The children of Israel all thronged to the French merchant, and beforeveering the articles were purchased at any price he chose to demand for them. After this, who will presume to question the sovereign equity of the monarchs of Morocco.

The following is another trait of justice. When General Pichegru entered Maestricht, he experienced some difficulty in obtaining quarters for his troops. A merchant, who considered himself very patriotic, called on him and gave him a list of *Orangists*, who had soldiers quartered on them, though not in sufficient numbers, in the opinion of this demagogue, who wished that the aristocrats should

have their houses filled with troops, from the cellar to the garret. "I am obliged to you for this information," said Pichegru; "and have they sent you any soldiers, citizen?" "Yes, General." "How many?" "Four." "That will do." The merchant had no sooner returned home, than forty more soldiers arrived, and took possession of his house. He hastened back to the general to inform him that some mistake had taken place. "Oh no," said Pichegru, "I only removed my men from those vile *Orangists*, who I knew would ill treat them, to place them in the house of a patriot like you, where I am sure they will be received hospitably."

*The House of Peers.*—Of the House of Peers, discharging at present such important functions, the following view is given by a work called *The Peerage Chart*. The whole number of Peers is 371, viz. 6 of the blood royal, 291 lay Peers, 26 Ecclesiastical Peers, (all English,) 16 Representative Peers of Scotland, 28 of Ireland, and 4 Bishops of the same country. Among these are 11 minors, and 6 Roman Catholics; and 3 of the Irish 28 having been created Peers of the United Kingdom since their election, 20 must be deducted from 371, leaving a clear house of 351 members. There are 54 bachelors, 41 widowers, 237 married. Of the 278 of the two latter classes, 60 are childless; the remaining 218 have a progeny of 1068. The Earl of Lindsay, aged 5, is the youngest peer; and the Marquis of Drogheda, aged 90, the eldest. Lord Colchester is the most recent creation. Lord Lansdowne, as a representative of the Barons of Kerry, ennobled in 1181, the most ancient.

*Smoke*.—Mr. M. A. Taylor has presented to the House of Commons the report of the committee, on the invention *enabling* steam engines, furnaces, &c. to consume their own smoke. It is favourable, and notice is given of a bill next session to enforce the adoption of this scheme. We are not very partial to the superabundance of legislation which is now introduced upon every subject. If the plan be useful it will recommend itself—if it is to remove nuisances, nuisances are already removable by the common law of the land: and in these wholesale acts of Parliament we too frequently find very oppressive clauses, as in the same gentleman's Street Bill, which was a tyrannical measure, and gave rise to much dissension, ill-will, and litigation. It will be worth inquiry, too, whether the inconvenient smoke of our sea-coal fires is not an important contributor to the health of the metropolis, as has been held by very high chemical authorities.

*Anecdote.*—The aged and respectable Bishop of D—n has been for some time indisposed, and the following anecdote is related on the occasion. Among the daily enquirers respecting his Lordship's health, no one was more sedulously punctual than the Bishop of E—r; and the invalid seemed to fancy that other motives besides anxious kindness might contribute to this solicitude. One morning he ordered the messenger to be shewn into his room, and thus addressed him:—"Be so good as present my compli-

ments to my Lord Bishop, and tell him that I am better, much better; but that the Bishop of W—r has got a sore throat, and a bad cold, if that will do."

*Method of keeping Cheese.*—We are reminded of another episcopal anecdote, by this, which may not be too stale for our light reading. The late Archbishop of D—n, Lord N—n, who was very penurious in his habits, went one evening, muffled in a cloak, to Moore's, a cheesemonger, and bought a cheese. After completing his purchase, he asked the seller which was the best way to keep it. Moore, who had smacked his Lordship under his masquerade, replied, with true Irish naiveté, "Why, Sir, I don't know how to keep cheeses; any business is to sell them; but if you follow the Archbishop's plan, you will find it answer to admiration." "What plan is that, my friend?" "Faith, by my conscience, neither cut it yourself, nor let any body else cut it!"

### METEOROLOGICAL JOURNAL.

JUNE, 1820.

Thursday, 29.—Thermometer from 54 to 76. Barometer from 30.55 to 30.2. Wind F. S. E. 1. and ½.—The middle of the day clear, morning and evening cloudy. Several flashes of lightning and distant claps of thunder from 8 to 9 o'clock P. M.

Friday, 30.—Thermometer from 52 to 66. Barometer, from 30.15 to 30.22.

Wind E. N. E. 2.—Generally cloudy; a little sunshine at times. Distant claps of thunder in the forenoon.

Rain fallen, .05 of an inch.

JULY.

Saturday, 1.—Thermometer from 46 to 62. Barometer from 30.34 to 30.40.

Wind N. E. 2 and ½.—Clouds passing, with sunshine. In the evening it became clear.

Sunday, 2.—Thermometer from 38 to 66. Barometer from 30.33 to 30.36.

Wind S. W. and N. W. ½.—Generally cloudy with heavy rain in the evening. The sun shone for about an hour, at rising and setting.

Monday, 3.—Thermometer from 45 to 64. Barometer from 30.12 to 30.67.

Wind W. ½ and N. W. 1.—Generally cloudy, with showers of rain; and a little sunshine at times.

Rain fallen, .075 of an inch.

Tuesday, 4.—Thermometer from 48 to 62. Barometer from 30.10 to 30.17.

Wind N. E. 1.—Generally cloudy.

Rain fallen, .125 of an inch.

Wednesday, 5.—Thermometer from 46 to 58. Barometer from 30.26 to 30.28.

Wind N. E. ½.—Generally cloudy.

### TO CORRESPONDENTS.

CHRELTENHAM WATERS. Dr. Newell, and a pamphlet by W. H. Alpin, sent to us from Cheltenham, on the subject of Dr. Noe's publication (with our review) on the qualities of the Cheltenham Waters, shall have immediate consideration and public notice. The inquiry is of deep interest to the thousands who resort to these springs.

Erratum.—4th line of *Tasso*, p. 421, col. 3, insert the word *rumor* before *embellish*.

# Miscellaneous Advertisements, (Connected with Literature and the Arts.)

**British Gallery, Pall Mall.**  
**THE GALLERY**, with an Exhibition of  
PORTRAITS of distinguished Persons in the  
History and Literature of the United Kingdom, is open  
daily, from 10 in the Morning till 6 in the Evening.  
(By order) JOHN YOUNG, Keeper.  
Admission 1s.—Catalogue 1s.—Historical notice 2s.

**MR. HAYDON'S PICTURE** of "Christ's En-  
try into Jerusalem," is now open for Exhibition,  
at Bullock's Great Room, upstairs to the right, from  
ten till six.—Admission 1s. Catalogue 6d.  
"Fear not Daughters, for a beheld thy King cometh,  
—admission on an oak's call."

**MR. GLOVER'S** Exhibition of Oil and Wa-  
ter Colour Paintings is now open, at the Great  
Rooms, No. 16, Old Bond-street, from nine till dusk.  
Admission 1s.—Catalogue 6d.

**THE Exhibition of MONSIEUR JER-  
CAULT'S GREAT PICTURE**, (from the Lou-  
vre) 24 feet by 18, representing the surviving Crew of  
the Medusa Frigate, after remaining Thirteen  
days on a Raft without Provision, at the moment they  
discover the vessel that saves them, is now open to the  
Public, at the Egyptian Hall, Piccadilly. Admission 1s.

**BOYA FISHING**, Painted and Etched by  
William Collins, R.A. Etched, and engraved in  
Mezzotint, by William Ward, A.R.A. is this day  
published, by Francis Collins, No. 11, New Canaan  
Square, Portland Place. Prints, 7s. 6d. Proof, 15s.  
Where may be had, the companion print, Cromer.

**Distinguished Collection of Miniatures, of John  
Webb, Esq.**

**MR. BULLOCK** respectfully informs the  
Nobility, Connoisseurs, and Public, that he has  
received directions to bring to absolute SALE, on Tues-  
day, the 14th instant, and following day, at one o'clock  
in the afternoon, his entire and very valuable COLLEC-  
TION OF MINIATURES, of JOHN WEBB, Esq., formed  
with infinite taste and judgment, at an expense of near  
10,000*l.*, and comprising many of the most beautiful  
and unique productions of English art in miniature, from  
the period of Henry VIII. to the present time; particu-  
larly the brilliant works of Samuel Cooper and Isaac  
and Peter Oliver; also a very fine enamel, by Pe-  
trus and Zucchi; and portraits of British and foreign  
characters of distinction, in water colours and enamel,  
by the following masters, viz.—Bronzino, S. Agnolucci,  
Zuccero, S. Mengs, C. Janssens, Mirevelt, Kneller, Lely,  
More, Van Dyck, Mordaunt, Flaxman, Spencer, Hone,  
Sullivan, Spicer, Bore, Chastillon, Liotard, Denner, Fa-  
vart, Storching, Meyer, Souther, &c. To be viewed, and  
Catalogues had three days preceding.

**Capital Pictures.**  
**MR. BULLOCK** respectfully informs the  
Nobility, Connoisseurs, and Public, that on Fri-  
day, the 14th instant, and following day, at one o'clock  
in the afternoon, he will submit for absolute SALE by AU-  
CTION, at his Egyptian Hall, Piccadilly, the very choice  
and highly valuable Collection of CAPITAL PICTURES  
of DAVID HOLT, Esq. of Manchester, selected with  
superior taste and judgment, at an immense expense,  
from different distinguished Collections, in the course of  
his last thirty years; among which will be found a very  
fine landscape, by Claude, a genuine production in his  
best time; a grand landscape and figure, Wilson; a  
fine in Switzerland, by G. Schlegel; a brilliant and perfect  
cavalier, Gen. a Holy Family, Andrea Solario; a sur-  
prising Christ desseins, from the Collection of Napoleon  
Bonaparte; a romantic view from nature, by Reginald  
Herbert; his Descent, G. Dow; the Flight into Egypt,  
Domestication; Frank and Florenz, Leutburt; a sea-  
scape, Vandervelde, clear and brilliant; a holy family,  
C. Meissner; a moonlight, Vander Meer; the Marriage in  
Cana, Tintoretto; a finely coloured—gallery picture; the  
woman of Samaria, Albano; a hand stone, Gaspar Pou-  
ssin; a landscape and figure, Van Lint; Diana and Acteon,  
L. Goussard; and several other beautiful high finished  
cabinet specimens, of which catalogues are preparing.  
To be viewed three days preceding.

## BOOKS PUBLISHED THIS DAY.

Price 6s.  
**THE EDINBURGH REVIEW; or CRIT-  
ICAL JOURNAL**, No. XLVI. Contents:—  
1. History of Curran, by his Son. 2. Spence's Anecdotes. 3.  
Restrictions on Foreign Commerce. 4. Busby's His-  
tory of Music. 5. State and Prospects of Manufacturers.

**DISCOURSES ON THE PRINCIPAL POINTS  
OF THE SOCINIAN CONTROVERSY.** By RALPH  
WARDLAW, Minister of the Gospel, Glasgow.

We are highly gratified by the appearance of the  
volume before us; we know of none, in the compass of  
our reading, that is at once so condensed and compre-  
hensive; so judiciously selected; so well supported  
by solid reasoning and scriptural criticism, and  
yet so happily relieved by the application of its prin-  
ciples to the conscience and the heart.—*Edinburgh Rev.*  
Printed for Longman, Hurst, Hans, Orme, and Brown,  
London; and A. & J. M. Duncan, Glasgow. Of whom  
may be had, by the same author,  
Unitarianism Inexplicable of Vindication: a Reply to  
the Rev. James Yr's Vindication of Unitarianism. In  
two, 10*l.* 6*l.* 6*l.*

In 2 vols. 8vo. a new edition, embellished with portraits  
1*l.* 4*l.* boards.

**THE LIVES OF BRITISH STATESMEN:**  
By JOHN MACGILLIVRAID, Esq. Containing the  
Lives of Sir Thomas More; Cecil Lord Burleigh; Went-  
worth, Earl of Stafford; and Henry, Earl of Devon.  
The Influence which the conduct of our Statesmen has  
had on our National Character, renders their Biography  
an important and attractive subject. The Plan of this  
work is to unfold the private History and Character of  
the Man, to explain his political Views, and record his  
public actions. The contemporary History, the determi-  
nation of characters, and the state of Knowledge, are in-  
ferred as far as was requisite to illustrate the Biographi-  
cal Picture. London: Printed for Longman, Hurst,  
Rees, Orme, and Brown.

A continuation of the Work in preparation.

*Mr. Adam on Roads, third Edition, 6s. 6d. boards.*

**REMARKS ON THE PRESENT SYSTEM OF  
ROAD MAKING**, with Observations deduced from  
Practice and Experience, with a view to a revision of the  
existing Laws, and the introduction of Improvement in  
the Method of making, repairing, and preserving Roads,  
and defending the Road Funds from misapplication.  
Third edition, carefully revised, with additional Ob-  
servations and Directions, founded on increased experi-  
ence and practice, together with the Report of a Committee  
of the House of Commons on this interesting subject.  
By JOHN LOUDON MADAM, Esq. General Sur-  
veyor of Roads in the Bristol District. Printed for  
Longman, Hurst, Rees, Orme, and Brown, London.

*British Novels.*  
A new Edition, in 40 vols. royal 16mo. uniform with  
the British Emigrants, 10*l.* 10*l.* boards.

No. 182.

SATURDAY, JULY 15, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### *The Rev. George Croly's New Poems.*

#### "THE ANGEL OF THE WORLD."

As the volume whence the following extracts are taken, will not be before the public (as we learn) for a week or ten days, we shall confine our present view of it to the first poem, entitled as above. Of the poetical powers of the author of Paris, and the Elegy on the Death of the Princess Charlotte, it is hardly necessary that we should speak: that the former is one of the most sublime, and the latter one of the most deeply pathetic poems of its kind in the English language, is our unqualified opinion. But while we confess the great genius of the bard, we must acknowledge that, in some things he affords materials for opposite criticism. We think, that he despises as niceties, some of the ornaments of verse; and while he sweeps along with the pomp and majesty of a magnificent river, regards, perhaps too little, the sweet attractive graces of the rill or cascade. Grandeur of conception, and splendour of imagery, are certainly the distinctions of his longer productions; yet, in slight pieces from his pen, we have the finest specimens of the natural and tasteful. At this time, however, our business is with a work of the former class; and we presume to think, that the following quotations will fully justify the high admiration of Mr. Croly's talents which we have ventured to express. Amid the most brilliant glow, the true poetic thought ever and anon sparkles, with a still brighter effulgency.

THE ANGEL OF THE WORLD, is an Arabian tale, founded on the story of Haruth and Maruth, the angels, who, boasting of their superiority to temptation, were sent to try their virtue in the world. A spirit was employed to tempt them; and after failing in many ways, induced them to drink wine; after which they were accessible to all irregularities, and disclosed the words that make inferior creatures angelic. They were sentenced on the spot, and undone for ever: the story was told by Mahomet, as a peculiar warning against wine. Some alterations have been made, as more suitable to the

VOL. IV.

conduct of a poem,—there is but one angel, and at each advance of the temptation, he receives a warning by some phenomenon of earth or air. His chief seduction is preeminent beauty. The severity of his sentence is remitted, and he is not left without return.

The poem opens with a view of Damascus, where the angel of the world has his throne. Its glory and superstitious traditions are nobly described:—

East of the city stands a lofty mount,  
Its brow with lightning delved and rent in  
sunder;  
And thro' the fragments rolls a little fount,  
Whose channel bears the blast of fire and  
thunder;  
And there has many a pilgrim come to wonder;  
For there are flowers unnumbered blossoming,  
With but the bare and calcined marble under;  
Yet in all Asia no such colours spring,  
No such perfumes as in that mountain's rocky  
ring.

And some, who prayed the night out on the  
hill,  
Have said they heard,—unless it was their  
dream,

Or the mere murmur of the babbling rill;  
Just as the morn-star shot its first slant beam,  
A sound of music, such as they might deem  
The song of spirits—that would sometimes  
sail

Close to their ear, a deep, delicious stream,  
Then sweep away, and die with a low wail;  
Then come again, and thus, till LUCIFER was  
pale.

And some, but bolder still, had dared to turn  
That soil of mystery for hidden gold;  
But saw strange, stifling blazes round them  
burn,

And died.—by few that venturous tale was  
told.

And wealth was found; yet, as the pilgrims  
hold,

Thro' it was glorious on the mountain's brow;  
Brought to the plain it crumbled into mould,  
The diamonds melted in the hand like snow,  
So none molest that spot for gems or ingots  
now.

Previously the Angel of the World sat  
here for judgement, and to him came the  
temptress, to wreck his glory and retard  
his appointed flight to heaven. How deli-  
ghtful is the sunset scene, contrasted  
with the gorgeous attributes of the angel  
abode.

The sun was slowly sinking to the West,  
Pavilioned with a thousand glorious dyes;  
The turtle-doves were winging to the nest;  
Along the mountain's soft declivities,  
The fresher breath of flowers began to rise,  
Like incense, to that sweet departing sun;  
Low sank the city's hum, the shepherd's cry:  
A moment, and the lingering disk was gone;  
A moment, and the impatient Angel's task was  
done.

Of! had he gazed upon that lovely vale,  
But never gazed with gladness such as now;  
When on Damascus' roofs and towers pale  
He saw the solemn sun-light's fainter glow,  
He heard the insana's sacred voices below  
Swell like a silver trumpet on the air,  
The vintager's sweet song, the camel's low,  
As home they stalk'd from pasture, pair by  
pair,

Flinging long giant shadows in the sunset glare.  
He raised his sceptre, and a rush of plumes  
Shook the thick dew-drops from the rose's  
dyes;  
And, as embodying of their waked perfumes,  
A sudden crowd of forms, with lightning eyes,  
And flower-crown'd hair, and cheeks of Para-  
dise,  
Circled the bower of beauty on the wing,  
And the rich air was filled with symphonies  
Of seeming flute, and horn, and golden string,  
That slowly rose, and o'er the Mount hung ho-  
vering.

The dervish pilgrim prefers a prayer,  
and is heard: she then throws off her dis-  
guise.

The weeper rais'd the veil; a ruby lip  
First dawn'd: then glow'd the young cheek's  
sleeper hue.

Yet delicate as roses when they dip  
Their buds half opening in the morning dew,  
Then beamed the eyes, twin stars of living  
blue;

Half shaded by the curls of glossy hair,  
That turned to golden as the light wind threw  
Their clusters in the western golden glare,  
Yet was her blue eye dim, for tears were stand-  
ing there.

He look'd upon her, and her hurried gaze  
Was at his look dropp'd instant on the ground;  
But o'er her cheek of beauty rush'd a blaze,  
Her bosom heav'd above its silted bound,  
As if the soul had felt some sudden wound,  
He looked again; the cheek was deadly pale;  
The bosom sank with one long sigh profound;  
Yet still one lip hand upheld her veil,  
And one still press'd her heart—that sigh told  
all its tale.

The Angel becomes the slave of earthly  
charms; and the following admirable apos-  
trophe to beauty follows:—

Beauty, what art thou that thy slightest gaze  
Can make the spirit from its centre roll,  
Its whole long course, a sad and shadowy  
maze;

Thou might'st or thou not'st of the soul;  
One glorious vision lighting up the whole  
Of the wide world; or one deep, wild desire,  
By day and night consuming, sad and sole;  
Till Hope, Pride, Genius, nay, till Love's own  
fire

Desert the weary heart, a cold and mouldering  
pyre.

Enchanted sleep, yet full of deadly dreams;  
Companionship divine, stern solitude;  
Thou Serpent, colored with the brightest  
gleams,  
That e'er hid poison, making hearts by food

Woe to the heart that lets thee once intrude,  
Victim of visions that from life's purpose steal,  
Till the whole struggling nature has subdued,  
Bleeding with wounds the grave alone must  
    heal;  
Bright Spirit 'twas it thine that mortal woe to  
    felt?

The enthralment proceeds, and the do-  
minion of loveliness extends:—

The night-breeze from its mountains had  
begun,  
And as it wisened among the clouds of even,  
That slept aloft the horizon, where the Sun  
Still blaz'd below the fiery verge of Heaven,  
Their volumes in ten thousand shapes were  
    driven,  
Like flaming mountains, mighty palace halls,  
Whose lights, from gold and emerald lamps  
were given;  
Then chang'd to citadels and battled walls,  
Then sank to valleys sweet with silver waterfalls.

How splendid is this picture of the clouds  
of an eastern sky! The landscape is worthy  
of this heaven.

But loveliest of the vision was the vale  
That from the mountain slop'd—the vale of  
    bowers,  
Inlay of all rich hues,—the tamarisk pale  
Dyed with geranium, and the Indian flowers  
Of the spiced clove, and jessamine's white  
    showers  
Like shiver'd silver, and the gorgeous rose,  
And, in the midst, Damascus' ivory towers,  
Bathed in the purple beauty of repose,  
All but the central mosque that in red splendour  
    glows.

He saw the vale reclining in the shade  
Of its bold mountains, like a smiling child  
In its mail'd father's bosom; crag and glade  
Festoon'd with myrtles to their summits wild,  
And villages, and domes of marble pill'd  
On rocks still towering thro' the tender mist,  
That, ting'd with eve, now veil'd that valley  
    mid.

And, as the rising star their foreheads kiss,  
Were lustrous pearl, sweet sapphire, weeping  
    amethyst.

One of the natural warning phenomena,  
is a tempest, thus described—

Was it a dream? the vale was wild and bare,  
And o'er it brooded dark a sulphurous cloud:  
The soil grew red and rifted with its glare;  
Down to their roots the mountain cedars  
    bowed;

Along the ground a rapid vapour flow'd,  
Yellow and pale, thick scann'd with streaks of  
    flame.

Before it sprang the vulture from the shroud;  
The lion bounded from its scared and tame;  
Behind it, darkening Heaven, the mighty whirl-  
    wind came.

Like a long tulip bed, across the plain;  
A caravan, approached the ereving well,  
A long, deep mass of turban, plume, and vane;  
And loveliness came its distant, solemn swell  
Of song, and pilgrim-horn, and camel-bell,  
The sandy ocean rose before their eye,  
In thunder on their bending host it fell,  
Ten thousand lips aet up one fearful cry;  
The sound was still'd at once, beneath the wave  
    they lie.

The impassioned is prevailed upon to  
drink wine, and the whole result is thus  
magically told—

Th' Enchantress smiled, as still in some sweet  
dream,  
Then waken'd in a long, delicious sigh,  
And on the bending Spirit fixed the beam  
Of her deep, dervy melancholy eye.  
The undone Angel gave no more reply  
Than bidding his pale forehead in the hair  
That floated on her neck of ivory.  
And breathless pressing with her ringlets fair,  
From his bright eyes the tears of passion and  
    despair.

The storm of light is on the clouds receding,  
The purple streamers wander pale and thin,  
But o'er the pole an amber flame is spreading,  
In shooting, starry points, and far within  
Revolves a stooping splendour crystalline.  
It opens, but who sits upon that throne?  
The Angel knew the punisher of sin.  
Checked on his lip the self-upbraiding groan,  
Strain'd with wild arms his love, and joy'd to be  
    undone.

And once, 'twas but a moment, on her cheek  
He gave a glance, then sank his hurried eye,  
And pressed it closer on her dazling neck,  
But even in that swift gaze he could espy  
A look that made his heart's blood backward  
    fly.

Was it a dream? there echoed in his ear  
A stinging tone—a laugh of mockery!  
It was a dream—it must be. Oh! that fear,  
When the heart longs to know, what it is death  
    to hear.

He glanced again—her eye was upward still,  
Fix'd on the stooping of that burning car;  
But thro' his bosom shot an arrowy thrill,  
To see its solemn stern, unearthy glare;  
She stood a statue of sublime despair,  
But on her lip sat scorn.—His spirit froze,  
His footstep reel'd,—his wan lip stoop'd for  
    air;

She felt his throb,—and o'er him stoop'd with  
    brows  
As evening sweet, and kiss'd him with a lip of  
    rose.

Again she was all beauty, and they stood  
Still fonder clasp'd, and gazing with the eye  
Of famine gazing on the poison'd food  
That it must feed on, or abstaining die.  
There was between them now, nor tear nor  
    sigh;

Theirs was the deep communion of the soul;  
Passion's absorbing, bitter luxury;  
What was to them of Heaven or Earth, the  
    whole

Was in that fatal spot, where they stood sad,  
    and sole.

Th' Enchantress first shook off the silent  
trance;

And in a voice sweet as the murmuring  
Of summer streams beneath the moonlight's  
    glance,

Brought the desperate one to spread the wing  
Beyond the power of his vindictive King.  
Slave to her slightest word, he rais'd his  
    plume,

A purple cloud, and stood in act of spring  
Thro' that fierce upward sea of storm and  
    gloom,

She wildly kiss'd his hand, and sank, as in a  
    tomb.

The Angel cheer'd her, "No! let Justice  
    wreak

Its wrath upon them both, or him alone."  
A flush of love's pure crimson lit her cheek;  
She whisper'd, and his stoop'd ear catch'd the  
    tone

With mad delight; "Oh there is one way,  
    one,  
To save us both. Are there not mighty words  
Graved on the magnet-throne where Solomon  
Sits ever guarded by the Genii words;  
To give thy errant wings like her resplendent  
    Lord's?"

This was the sin of Sins! The first, last crime,  
In Earth and Heaven, unnamed, unnameable;  
This from his gorgeous throne, before all

Had smitten Eblis, brightest, first that fell;  
He started back.—"What! what urged him to quit?  
What led that soft seducer to his bow?  
Could she have laid upon his soul that spell,  
Young, lovely, fond; yet but an earthly  
    flower?"

But for that fatal cup, he had been free that  
    hour,

But still its draught was fever in his blood.  
He caught the upward, humble, weeping  
    glimp  
Of woman's eye, by passion all subdued.  
He sigh'd, and at his sigh he saw it beam:  
Oh! the sweet frenzy of the lover's dream!  
A moment's lagging, and they both must  
    die.

The lightning round them about a broader  
    stream,

He felt her clasp his knees in agony;  
He spoke the words of might,—the thunder gave  
    reply!

Away! away! the sky is one black cloud;  
Shooting the lightnings down in spire on spire.  
Now, round the Mount its canopy is bow'd,  
A vault of stone on columns of red fire.  
The stars like lamps along its orb expire;  
But thro' its centre bursts an orb of rays;  
The Angel knew the Avenger in his ire!  
The hill-top smoked beneath the stooping  
    blaze,

The culprits dared not there their guilty cy-  
    balls raise.

And words were utter'd from that whirling  
    sphere,

That mortal sense might never hear and live.  
They pierced like arrows thro' the Angel's ear;  
He bowed his head: 'twas vain to fly or strive.  
Down comes the final wrath: the thunders  
    give

The doubled peal,—the rains in catarrhs  
    sweep,

Broad fiery bars the sheeted deluge rear;  
The Mountain summits to the valley leap.

Pavilion, garden, grove, smoke up one ruin'd  
    heap.

The storm stands still! a moment's pause of  
    terror!

All dungeon dark!—Again the lightning's  
    yawn,

Shewing the Earth as in a quivering mirror.  
The prostrate Angel felt but that the one  
Whose love had lost him Paradise, was gone.  
He dared not see her corpse!—he closed his  
    eyes;

A voice burst o'er him solemn as the tone  
Of the last trumpet—he glanced upon the sky,  
He saw what shook his soul with terror, shame,  
    surprise.

Th' Enchantress stood before him; two broad  
    plumes

Spread from her shoulders on the burden'd  
    air;

Her face was glorious still, but love's young  
    blooms

Had vanished for the hue of bold despair;  
A fiery circle crown'd her sable hair,

And as she looked upon her prostrate prize,  
Her eyeballs shot around a meteor glare,  
Her form tower'd up at once to giant size,  
'Twas Ebla, king of Hell's relentless sovereigns-  
gides.

The tempter spoke—"Spirit, thou might'st  
have stood,  
But thou hast fallen a weak and willing slave.  
Now were thy feeble heart our serpent's food,  
Thy bent our burning Ocean's sleepless wave;  
But haughty Heaven controuls the power it  
gave.  
Yet art thou doom'd to wander from thy  
sphere,  
Till the last trumpet reaches to the grave;  
Till the Sun rolls the grand concluding year;  
Till Earth is Paradise; then shall thy crime be  
clear."

The Angel listen'd,—risen upon one knee,  
Resolved to bear the deadliest undimay'd,  
His gold star'd plume hung round him droop-  
ingly,  
His brow, like marble, on his hand was staid,  
Still thro' the auburn locks, o'erhanging shade  
His face shone beautiful; he heard his ban.  
Then came the words of mercy, sternly said;  
He plunged within his hands his visage wan;  
And the first wild, sweet tears from his heart-  
pulses ran.

The Giant grasp'd him as he fell to Earth,  
And his black vases upon the air were flung,  
A tabernacle dark;—and shouts of mirth  
Mingled with shriekings thro' the tempest  
swung;  
His arm around the fainting Angel clung.  
Then on the clouds he darted with a groan;  
A moment o'er the Mount of ruin hung,  
Then burst thro' space like the red comet's  
cone,  
Leaving his track on heaven, a burning, end-  
less zone.

If these verses speak not for themselves,  
we cannot speak for them. There are rhymes
